Edison's experiments were necessarily directed mainly to the material to be rendered incandescent, and the form in which it will afford the best results. The brilliancy of the light depends upon the resistance which the incandescent conductor offers to the passage of the electric current. Expecting the best results from platinum, he found that the light was intensified by incorporating fine particles of this conducting agent in a non-conducting, incombustible, and non-fusible material, which was itself rendered luminous by the heat. By imbedding finely divided platinum in a non-conducting substance, he obtained a light from currents too weak to render the spiral luminous. A large spiral of platinum whose coils were coated and separated by magnesia produced a good light; it was with this form of lamp that he employed the regulator in which a metallic cup at the top of the coil pulled a rod upward, actuating a circuit-closing apparatus. Among the other materials upon which he experimented were the oxides of different metals. He obtained a fine light from iridosmine, a natural alloy of osmium and iridium, which he inclosed in a powdered state in a tube of zircon. He tried also a combination of platinum and carbon, the latter becoming highly incandescent as the current passed to it from the platinum rod, encountering a greater resistance.

Still considering platinum the most promising material, he was startled after a couple of months of experimentation by the discovery that the platinum degenerated, and that its incandescence was seriously affected through the action of the atmosphere. Plates and wires of platinum, and also of iridium and other metallic conductors whose point of fusion is at a very high temperature, he found, when heated while

exposed to the atmosphere to a temperature near their melting-point, by a current of electricity passing through them for a number of hours together, crack and break in innumerable places. These fissures are found under the microscope all over the surface of the metal, running in every direction, and sometimes penetrating to the center of the rod or wire. Holding platinum and alloys of platinum and iridium in the heat of a candle, he observed a loss of weight; and even when they are exposed to heated air there is a diminution of weight. The consumption is sufficient to cause a hydrogen jet to take on a greenish hue. The metal after a while becomes so fractured that it falls to pieces. He thus perceived that the ordinary platinum or platinum and iridium, as sold in the market, is useless for his purpose, and also that the metal can not be employed for illumination by incandescence, as the cracks cause it gradually to deteriorate and eventually destroy it, while they greatly lessen the degree of incandescence of which its surface is capable. The knowledge of the cause of the disintegration of platinum suggested the remedy. Lodyguine, the Russian physicist, invented a carbon-lamp in 1873, in which the cracking and wasting away of the carbon under incandescence, by the action of the oxygen of the atmosphere, was obviated by inclosing the burner in a glass globe from which the air was exhausted. It was necessary to purify the platinum and inclose it in a vacuum to prevent its deterioration when heated to incandescence. Edison devised a method of producing a more perfect vacuum, and at the same time cleansing the platinum burner of all the air and other gases which it contains. A glass globe is connected by an aperture with a mercury air-pump, and the air exhausted. The wires connecting the spiral or other form of burner with the battery pass through holes in the glass which are fused together and hermetically sealed. After the air is exhausted from the glass the current is turned on, heating the platinum to a temperature of about 150° F., at which point it is kept for ten to fifteen minutes. The gases which issue from the platinum are carried away by the air-pump. The current is then increased until the temperature rises to 300°, at which point it is kept again ten or fifteen minutes. It is thus raised by successive stages until the platinum attains a brilliant incandescence, and the glass about the aperture connecting with the mercury pump melts with the heat and fuses together, hermetically sealing the vacuum. The wires purified by this process are found to have a gloss and brightness greater than that of silver. Their light-giving power is increased in a remarkable ratio. The same burner which will give when new a light of only three candles, emits in the vacuum a light of twenty-five. Testing spirals which had been prepared and sealed in a glass vacuum in this manner by subjecting them to sudden currents of electricity which raised them to incandescence a great number of times, no cracks

or breaks were discoverable, nor the slightest loss of weight. Wires of chemically pure iron and nickel were found to give a light in the vacuum equal to that of platinum exposed to the atmosphere; and carbon-sticks, freed from air and inclosed in a vacuum in the same manner, may be heated until they become soft and plastic, and then regain their former consistency when cool again. Edison next tried the combination of platinum and iridium alloy with magnesia in the vacuum. He found that the oxide will unite with the metal, hardening it and rendering it more refractory to such a degree that a spiral so fine that it would melt without the coating of magnesia could be raised to a dazzling incandescence and remain quite elastic. Such a spiral, with a surface of only three-sixteenths of an inch, will give a light of forty candles. He next turned his attention to securing the greatest possible amount of resistance in the conductor. Instead of using lamps of only one or two ohms of resistance, he reached the conclusion that the light could be more economically produced from conductors having two hundred ohms of resistance or more.

The perfected form of the platinum lamp consists of a long coil of wire coated with magnesia, supported in a glass vacuum tube by a rod of platinum, the tube resting upon a metallic frame containing a regulating apparatus in a chamber within. The conducting wires pass through the bottom of the globe and into this chamber, where the circuit can be instantaneously broken and closed again by the regulator. Around the vacuum tube is a glass globe resting upon the frame, with openings into an aneroid chamber below, whose bottom is a diaphragm which distends sufficiently when the air within the globe is heated to a certain degree to press a pin in its center downward against a straight spring, which rests with an upward pressure upon a metallic block, through which the current is transmitted through the spring to the wire which leads it to the incandescent spiral. When the contact between the spring and the block is broken, the flow of electricity is interrupted, to be restored again by the immediate cooling and contraction of the air in the globe and aneroid chamber, which is so instantaneous that no variation in the intensity of the light is perceptible. While bringing the platinum lamp to this high state of perfection, Edison set on foot inquiries regarding a larger supply of platinum; and the miners of the gold regions, incited by his advertisements, discovered such frequent indications of its presence that this exceedingly valuable metal may be expected to be produced in much larger quantities than the present supplies. The vacuum which Edison's method produced was much nearer perfect than had been before attained. One of the reasons for the want of success of lamps in which the light was produced by the incandescence of carbon in a vacuum was the impossibility of

sufficiently exhausting the air in the glass chamber. By the present process it could be reduced to but little over one millionth of an atmosphere.

The inventor thought that he had elaborated a lamp which embodied the best principles, and which was sure to prove a commercial success. He had introduced improvements in the electric machine by which the equivalent of about 90 per cent. of the power expended was returned in electricity. When he was nearly ready to give the lamp in this form to the world, he began, led partly by accident, to experiment with carbon, with results which induced him to alter his whole system and adopt a carbon instead of a metallic burner. A prominent cause for the failure of carbon burners had been the impossibility of obtaining a form of carbon sufficiently pure in substance and homogeneous and even in texture. Edison was encouraged to try new forms from obtaining a remarkably brilliant light in the vacuum by the incandescence of a piece of calcined cotton thread. He placed in the glass a thread of ordinary sewing-cotton, which had been placed in a groove between two blocks of iron and charred by long exposure in a furnace, exhausted the air, and sealed the tube. He then turned on the electrical current, and increased it until the most intense incandescence was obtained before the slight filament broke. Examining then the fragments under the microscope, he found that the fragile substance had hardened under the excessive heat, and that its surface had become smooth and glossy. This led him into a long series of experiments with carbon. After carbonizing and testing a great variety of fibrous substances, he found that paper yielded the most satisfactory results. The burner on which he finally settled was made from Bristol cardboard in the form of a tiny horseshoe. Strips about two inches long and an eighth of an inch wide, curved in the shape of an elongated horseshoe, are struck from a sheet of cardboard, and a number of them laid one upon another, with pieces of tissue-paper between, in an iron mold; this is tightly closed and placed in an oven, which is gradually raised to a temperature of 600°; the mold is next placed in a furnace and allowed to come to a white heat, and then removed and left to cool. The carbonized paper horseshoe (F) is then taken out with the utmost care, mounted in a diminutive glass globe, and connected with the wires. The air is then pumped out and the glass hermetically closed. The form of the lamp is a small bulb-shaped glass vacuum (A), globular above, with an elongated end resting upon a standard (B), through which the wires leading to and from the generator pass, connecting with thin platinum wires (E, E') which penetrate the thick end of the glass; to these the carbon burner is attached by clasps made from the same metal (G, G'). No regulating apparatus is attached to the lamp, as the current can be regulated

at the central station where the electricity is generated.

The inventor has developed a method by which the currents can be cut off from any of the lamps and the lights extinguished, without

affecting the supply of electricity to those which are left burning. He proposes to supply the electricity in cities for lighting the houses and public places, from stations in which a number of electric machines adequate for supplying an area of about a third of a square mile are driven by one or two powerful steam-engines. Each generator is capable of supplying about fifty burners. The wires conducting the electricity from the central station into the houses can be led through the gas mains and pipes, and the burners attached to ordinary gas-fixtures with little labor and expense. The amount of electricity supplied in each household is measured and recorded by an ingenious but simple device. The electrometer, which like a gas-meter may be placed in any part of a house and connected with any number of burners, consists of an electrolytic cell and a small coil of wire. The passage of electricity causes the deposit on a small plate in the electrolytic cell of particles of copper. The weight of this deposit indicates the amount of electricity which has passed through the meter during any period. The apparatus takes up about half the space of an ordinary gas-meter.

The generating machine devised by Edison consists of a magnet composed of two upright iron columns, three feet and eight inches in height, wound with coarse wire and resting upon blocks, which form the magnetic poles. These are made in such a way as to nearly inclose a wooden armature of cylindrical form, wound lengthwise with coarse wire, which is revolved on its axis with great rapidity between the poles of the magnet, which nearly clasp it about. Springs resting upon a metallic portion of the revolving cylinder convey to the conducting wires the electricity which is generated in the wires, which run around the wooden cylinder parallel to its axis.

The system adopted by Edison dates from an invention patented by Edward A. King of London, for obtaining a light from the incandescence of either platinum or carbon. It had before been observed that a thin wire interposed in an electrical current became heated, and that the heat generated was proportionate to the degree of resistance of the metal. Children showed that an electric current passed through a chain composed of silver and platinum in alternate links, caused the metal of low conductivity to be heated to a bright glow, while the silver links remained dark and cool. King's attempt to utilize this property of substances of high electrical resistance was with a strip of platinum leaf or piece of carbon held between conductors, and rendered luminous by a properly regulated current within a glass globe which protected the incandescent substance from air-currents. In 1840 Petrie obtained a fine light from the incandescence of iridium or one of its alloys. In Lodyguine's lamp, in which the light was obtained from carbon rendered incandescent *in vacuo*, one part of the carbon rod was made thinner than the rest; and the thin portion was that which became incandescent, as the electrical resistance was greater here than elsewhere. This renewed attempt to obtain a practical light by incandescence was made long after the labors of King and the other preceding inventors were forgotten, and obtained for Lodyguine the Lomonosoff prize from the St. Petersburg Academy of Sciences. Konn of St. Petersburg devised and patented, in 1875, a lamp in which several carbon rods were held in reserve to replace the incandescent rods automatically as they were consumed. Even in an exhausted chamber it was found that the carbon wasted away. Another Russian inventor, Bouliguine, devised a lamp in which a single rod of carbon was used; it was made of great length, and the lamp was so constructed that this rod was pushed gradually upward through a tubular holder, the portion exposed at the top of the tube alone becoming incandescent, as this part was firmly held between conical jaws of carbon which allowed a free passage to the electricity.

The form of carbon used in Sir Humphry Davy's electric light was ordinary wood-char-

coal. In 1844 Léon Foucault substituted that variety of carbonaceous matter which is deposited in the interior of gas-retorts, and which bears the name of gas-graphite. It is produced by the decomposition of dense hydrocarbons at a very high temperature. It is deposited in layers on the walls of the retorts during the manufacture of coal-gas. It is of a very hard texture, and when sawn into rods or pencils is better adapted to electric lighting than the less dense forms of carbon, like wood-charcoal, being much more durable. It has, however, some serious defects. It varies in its compactness and texture, and with the variations in its density the light obtained from it fluctuates in brightness. Many have attempted before Edison to obtain a carbon of a more perfectly homogeneous texture. Carré and Gaudoin in France have attained a tolerable degree of success in producing carbon of greater homogeneity by artificial processes.

ENGELHARD, JOSEPH ADOLPHUS, was born at Monticello, Mississippi, September 27, 1832, and died at Raleigh, North Carolina, February 17, 1879. His school-days were spent in Mississippi and New Albany, Indiana (principally at the latter place), whence he went to Chapel Hill, North Carolina, in 1850, and graduated in 1854. He studied law first at Harvard, then at Chapel Hill, under Judge Battle, afterward with Judge Fowle, and was licensed to practice in the County Courts in 1856, and in the Superior Courts in 1857, locating in Tarboro, where he remained until the breaking out of the war. In May, 1861, he entered the military service of the State as captain and quartermaster of the 33d regiment. In April, 1862, he was promoted to be major and quartermaster of the brigade of General Branch, and in December of that year was transferred to General Pender's brigade as its adjutant-general. In May, 1863, he became the adjutant-general of Pender's division, afterward Wilcox's division, in which capacity he remained until the surrender at Appomattox Court House. In 1865 he became interested in the "Wilmington Journal," and its editor. In recognition of his services in this position his party nominated him for Secretary of State at the last election. He was elected, and in discharge of the duties of the office at the commencement of his fatal sickness.

ENGINEERING. If one half of the great engineering undertakings which are now seriously proposed, and demonstrated by more or less exact calculations to be feasible, were, by a happy unanimity of private and national will and action, to be carried into effect, then for a generation or two to come all the labor and productive energy of civilized nations would find full scope and employment, and changes would be wrought in the face of nature of greater magnitude than all the physical transformations which human skill has accomplished from the beginning of man's life on the planet. There must be a great future for an art whose

professors offer in sober earnestness to achieve physical miracles the possibility of which in the nearest past was not yet dreamed of. These schemes aim at nothing less than to alter the form of continents and modify the character of climates; to create navigable channels across the bosom of continents, and to burrow dry paths underneath the surging tide of the sea; to turn parching deserts into watery gulfs, and to join a landlocked sea to the ocean system by a rushing artificial river. It is most likely that none of these ambitious projects will be carried out in the early future.

Captain Rondaire's scheme of flooding a portion of the Desert of Sahara with the waters of the Mediterranean is still advanced as a project which presents no extraordinary engineering difficulties, and which will produce a radical improvement in the climate and soil of the surrounding country. A similar plan is warmly advocated by General Fremont for reclaiming a portion of the desert land of the great West. By making two cuttings leading in from the Gulf of California, it is believed that the depression of the alkali desert will be submerged, giving a sea-coast to Arizona and changing the arid region around into smiling corn-fields. The now almost completed St. Gothard Tunnel does not seem to invite the restless spirit of modern enterprise to repose; for a scheme for a still longer tunnel under the Simplon Pass is being pressed, while some propose to bore a passage directly through the mass of Mont Blanc. The improvements in tunneling processes, and the accomplishment of longer and longer bores through all kinds of rock, render the proposal of a tunnel for the passage of masted vessels under the mountains of Panama only a question of stock subscriptions and profits, and deprive of its extravagant or visionary character the scheme of carrying a railway under the British Channel. The engineers are still groping in the chalk ledges under the Straits of Dover for the shortest and best course for the projected tunnel. The air is so full of schemes for new ship-canal and harbor-excavations that the actual progress from year to year in these most important requisites of commercial development is apt to be lost sight of. The modern engineer can make a harbor where none exists, and, with titanic walls against which the tempestuous ocean-surges boom and beat and are broken, he marks his line and compels the sweeping tide to obey the command of thus far and no farther. He can also hollow deep, long channels in the underlying rock, and float the laden sea-craft on the tidal waters within the walls of inland cities. Paris and St. Petersburg are thus to be made seaports. The long-projected scheme of an American inter-oceanic canal will in a few years be an accomplished fact, unless the still more startling but demonstrably less difficult project of a ship railway approves itself a commercial venture of better promise. Ship-canal are pro-

posed in the United States through the States of Maryland and Delaware, to connect navigable waters. A more important project is being considered in Canada for a ship-canal to connect Lake Huron and Lake Ontario, which would greatly shorten the distance between the northwestern wheat-lands and Liverpool, and reduce the cost of transport. The successful construction of bridges across the broad estuaries of the Tay and the Severn, which are to be followed by one across the Frith of Forth, and the sinking of their massive cylindrical piers in the midst of tremendous tidal currents, encourage the belief that the scheme, recently broached by V  rard de Sainte-Anne, of a colossal viaduct across the English Channel from Cape Grisnez to Folkestone, may some day be realized. The enormous public works projected in France by M. de Freycinet seem to meet with public approval, and will probably receive legislative sanction in their entirety. His schemes for railway and canal extension and harbor improvement involve the labor of many years and the expenditure of thousands of millions. The railway network is to be developed beyond that of any other country. A great number of light or narrow-gauge roads are to be constructed as feeders to the main lines. An improvement which is urgently called for by the French public is a ship-canal through the north of France, from Creil-sur-Oise to Beauvais, Amiens, and Albert, with two large branches.

The completion of the great Severn railway bridge, over the estuary of the Severn at Lydney, supplies a link whose want has long been felt in the railway communications of England. The only means of intercommunication for the inhabitants of the districts separated by the Severn River, below Gloucester, has been the irregular and dangerous passage by ferry-boats. The new Severn Bridge Railway furnishes the desiderated connection, and affords an outlet for the iron-ore and coal-production of the Forest of Dean and South Wales, allowing of their easy transshipment from the cars to vessels in the Gloucester and Berkeley Canal. The scheme of this bridge and railway was conceived by G. W. Keeling, who while engaged in a survey of the river in 1859 came to the conclusion that the best and most economical site for a bridge was at this point, where the channel never varies, and where firm foundations are found at no great depth. Several other projects for bridges to meet the pressing demand for communication were advanced and subsequently abandoned, two of them after receiving the authorization of Parliament. Mr. Keeling, in conjunction with G. W. Owen, brought forward the project for the present bridge in 1870; but it was not until 1872 that it attracted sufficient financial support and was authorized by Parliament. The plan, as now carried out, consists of a railroad about five miles long connecting with the Severn and

Wyo and the Great Western Railways at Lydney, crossing the river on a bridge three quarters of a mile long, and terminating at the Sharpness Docks, where it forms a junction with the Midland Railway. After much delay, owing to conflicting pecuniary interests, the works were commenced in 1875. The construction of the bridge has taken four years. Its total cost was £200,000; the railway and approaches, including a tunnel a quarter of a mile long on the Lydney side, cost an equal amount. The total length of the bridge is 4,162 feet. The width of the river at the crossing is 3,558 feet. The bridge is in 35 spans. On the Lydney shore 13 of the spans are arches of heavy hammer-dressed stone, 12 of them semicircular, and one elliptical with a span of 52 feet. They rest in alluvial deposit on foundations of concrete. In the river the spans are bow-string girders. One of these forms a swing-bridge on the opposite side, hanging half over the canal and half over the shore. The length of the swing-bridge is 197 feet, the depth of its girders 19 feet 4 inches; the bridge weighs 500 tons, and turns on an arrangement of conical rollers called a live ring, being carried upon a circular pier of strong masonry. The motive power is supplied by a steam-engine in an engine-house resting on the top of the girders, which contains also a reserve engine connected with reserve machinery to provide for any accidental stoppage of the regular machinery. The turning and locking are accomplished by friction-gearing so arranged that the turning and locking apparatus can never be in gear at the same time. The locking is accomplished by two large iron wedges at each end of the bridge, which are driven home in opposite directions by rods connected by toggle-joints with great iron bars, which advance longitudinally with the bridge, and, extending beyond the wedges, enter sockets in the piers, thus trimming the rails. An indicator in the engine-house, which shows the engineer the position of the wedges, also serves to break the telegraphic connection, so that the bridge-man can not signal a train to advance unless the bridge is in position and locked. Besides the swing-span, the iron part of the bridge consists of 21 spans. The first span, adjoining the masonry on the Lydney side, is 134 feet long, with girders 16 feet deep. This carries the bridge to the edge of the deep channel of the river. Then the two main spans, 327 feet long, with girders 39 feet deep, carry it over the navigable river at a clear height of 70 feet above high water. The next five spans are 171 feet long, with girders 20 feet 4 inches deep; the last 13, 134 feet long, with girders of 16 feet 9 inches. The elevation gradually decreases from 70 feet over the main channel, near the north side, to 50 feet in the clear over the water at the swing-bridge on the Sharpness side. All the girders are on the bow-string principle; the curved boom has a trough section; the tension-chord is composed of flat

bars riveted together; the vertical compression-joints in the side of the girders are 12 feet apart, and are connected with the cross-girders, to which the strong rail-bearers are also riveted. The floor is composed of wrought-iron plates riveted to the cross-girders and the rail-bearers. The swing-span is 24 feet 6 inches wide in the clear; the other spans of the bridge are adapted only for a single track, being 14 feet 6 inches in width. The piers which support the bridge are composed of cast-iron cylinders, 6 to 10 feet in diameter. They were made in 4-foot sections, and bolted together through flanges on the inside. They were sunk to a solid foundation, penetrating the bottom rock from 4 to 15 feet. The cylinders which compose the piers are of cast iron, $1\frac{1}{4}$ to $1\frac{1}{2}$ inch thick. The piers which support the two main spans are formed by four cylinders each, 10 feet in diameter below low water and 7 feet in diameter above; the diameter of the cylinders supporting the five 171-foot spans is 9 feet below and 7 feet above low-tide mark; the remaining piers have a uniform diameter of 6 feet. The piers are composed of two cylinders each, except the three supporting the two long spans. The greatest difficulties were encountered in fastening the scaffolding for the piers and the girders. Beginning to sink the piers on the south side, it was possible to excavate from the interior of the cylinders until the twelfth pier was reached, after which compressed air was employed. From this point, after many unsuccessful attempts to sink the scaffold-piles in the shifting sand, with the strong tide bearing down upon them, the problem was finally solved by the use of Brunlees's system of sinking piles in sand; that is, by carrying a gas-pipe down to the foot of the pile, and forcing a stream of water through it strong enough to displace the sand and allow the pile to sink. While placing the fourteenth and fifteenth piers, the staging and cylinders were swept away together by the tide. Equal difficulties were overcome in sinking the remaining piers. In the channel, with the tide 30 feet high and flowing 10 knots an hour, and a depth from high water to bed-rock of 70 feet, the task seemed almost impossible to accomplish. The sand was scoured away here so that only a few feet remained; but fortunately there was a layer of firm gravelly clay over the rock, which gave the piles of the gigantic scaffolding a firm hold. The staging was swept away once or twice ere it could be secured. When in place the 4-foot lengths of the cylinders were lowered by screws and chains, and excavation was carried on inside them by divers. They were then built up to 12 feet above high water, and until they would sink no deeper in the sand. The air-compressing apparatus by which the piers were sunk to their foundations was in the shape of a bell, and was bolted to the top of the cylinders, and provided with air-locks for the entrance of the workmen; the pressure was from 5 to 40 lbs., the latter pres-

sure allowing the deepest piers to be sunk 4 feet into the bed-rock. The piers, when being lowered were loaded with 150 lbs. of ballast, and when in place were filled up solid with concrete. The swiftness of the currents and the great rise of the tide prevented the ordinary method of floating out the girders and hoisting them upon the piers from being employed. They had, therefore, to be fitted together on the spot by the costly and primitive method of working from scaffolds. The engineers were George W. Keeling and George Wells Owen, with the consulting engineer, Thomas K. Harrison. The amount of iron used in the construction of the bridge was 7,000 tons. The formal opening took place on the 17th of October, 1879.

The longest bridge in Europe will be the bridge now building over the Volga River on the Siberian Railroad in the government of Samara, Russia. The river at the point crossed by the bridge is 4 miles wide in the spring of the year, and 4,732 feet wide in the autumn. The part of the bridge which overhangs the permanent channel will rest on 12 piers, 85 feet high, and placed at the distance from each other of 364 feet. The estimated cost of the entire structure is \$3,500,000. Each pier is guarded by an ice-cutter faced with granite, 35 feet high. Two thousand men are employed in the construction of this colossal work, which will be completed some time in 1880.

Within the last dozen years American bridge-builders have been carrying into practice bolder and bolder plans, and have erected works which far surpass in magnitude anything attempted formerly. Such are Linville's swing-bridge at Raritan, which turns on a column of masonry, and has a length of 472 feet; the Rook Island swing-bridge, designed by C. Shaler Smith, which weighs 750 tons; and bridges with draw-spans of over 360 feet on the Mississippi. Such are the great channel span over the Ohio in the new Cincinnati bridge, which was also designed by Mr. Linville, and which is 520 feet long, and the main spans of 300 to 400 feet in four other bridges on the Ohio. Besides these extensive works, which adhere to the ordinary types of construction, entirely new forms have been developed for the achievement of engineering tasks of even greater magnitude. Such are the steel-ribbed arches for the St. Louis bridge, whose three spans are each about 500 feet in length; such the stiffened suspension bridge at Pittsburgh; and such the Brooklyn suspension bridge with its steel-wire chords, its masonry anchorage, and clear span of 1,600 feet.

Both in Europe and America steel is coming into favor as a material for bridges. The adaptability of steel for bridge construction is much questioned by some engineers. The sudden breakage of pieces of steel of a warranted high degree of tensile strength, and the fact that different bars of high carbon steel, made from the same materials by the same process, will differ

in strength and elasticity, add an element of danger and uncertainty to the employment of steel for bridges which is not encouraging. Other engineers entertain no doubts or fears, and would proceed at once to substitute steel for iron in bridge-making. If there is any such uncertainty in the strength and quality of steel, it can doubtless be removed by improvements in the process of the manufacture. The construction of a bridge built entirely of steel, for the Chicago and Alton Railroad, over the Missouri River at Glasgow, Mo., marks a new departure in American bridge-building. The bridge was designed by D. D. Smith, who carried on experiments for several years in the commission of the United States Government on the relative strength of iron and steel. The project for this bridge is the result of the conclusion, to which his researches led him, that steel bridges equal to iron in durability can be constructed at a smaller cost. The bridge has five spans of 314½ feet each. Its elevation is 50 feet above high-water mark. The quantity of steel used in the whole structure was 1,500 tons, equal in strength to nearly double that weight of iron. The girders are of the Howe truss pattern. The structure, held and braced in mid-air by slender steel rods, presents a very frail and slight appearance, yet it is able to bear a load which few iron bridges could support. Three of the spans are above the grade of the road, and two below. The depth of the trusses is 36 feet from center to center of the pins. The length of the steel bridge is 1,573½ feet. Including an iron trestle 210 feet long, and two deck-spans of iron 140 feet each in the east approach, and an iron trestle 510 feet long and wooden trestle 864 feet long in the west approach, the total length of the bridge is 3,577½ feet.

In the Soodan Railway, which is to connect Wady Halfa, at the second cataract, with Khartoom, and thus bring the regions of equatorial Africa into railroad communication with the Mediterranean, the most important engineering task, the building of an iron bridge over the Nile at Kohé, will soon be completed. The contractors are Appleby Brothers, of Greenwich, England; the designs have been drawn by the well-known engineer, John Fowler. The point at which the railroad, whose gauge is 3 feet 6 inches, is to be carried over the Nile, is 1,170 miles above Alexandria, and 750 miles below the confluence of the White and Blue Niles. The length of this railroad from Wady Halfa to the terminus, Khartoom, which is the chief emporium for the products of Central Africa, is 560 miles; the distance between the two places by river is 910 miles. The construction of the bridge involves no engineering difficulties except such as result from the distance of the site from civilization. The volume of water passing here is even greater than it is at Kasr-el-Nil, 1,000 miles below, so much is lost by evaporation and absorption, and so much is drawn off for

irrigation purposes. Yet, owing to the gentle flow of the river—which at low Nile, with a discharge of 800 cubic metres a second, is seven eighths of a mile, and at high Nile, when the discharge is 14,000 feet a second, becomes 4½ miles per hour—the works required are very light. Owing to a bend in the river at this point, there is slack water for nearly the whole breadth of the river, where the bottom is sandy; and where the current passes near the left bank a rocky foundation is found. The bridge will consist of 16 spans of 20 metres each, supported on cast-iron piles filled with concrete, 6 spans resting on screw-piles, and a continuous girder-bridge with two central spans of 50 metres and two side spans of 39 metres, resting on four pairs of cylinders filled with concrete. The deep portion of the river is crossed by two continuous girders, which are of the lattice type and single-webbed, with deep trusses for cross-girders. The weight of the superstructure of the four large spans is 236 tons, and that of the twenty-two small spans 254 tons. In the piers 600 tons of iron are used, and in the caissons 200 tons.

A new interoceanic railroad is being constructed in Mexico. Edward Learned of Pittsfield, Massachusetts, has obtained for this purpose a land grant from the Mexican Government, together with the complete control of the harbor at the mouth of the Coatzacoalcos River and of the lakes on the Pacific side. The railroad is pushed forward with energy, laborers and engineers having been sent to the spot immediately, and supplies shipped on from Galveston and other places. The work is expected to be completed in three years. The road starts from the harbor, and will terminate at the Upper Lagoon on the Pacific shore, its length being 90 to 100 miles. The creation of a new harbor at Coatzacoalcos is an important consideration to the Government at Mexico, as the harbor at Vera Cruz is rapidly being sanded and will soon be worthless. The mouth of the Coatzacoalcos River where the railroad commences is 110 miles southeast of Vera Cruz. The company is bound to complete annually, to the satisfaction of the Government, 39 miles of road. The track, of 4½ feet gauge, may be either single or double. The path of this road across the Isthmus of Tehuantepec has easy grades and contains no serious natural obstacles; the climate is wholesome and temperate, and the country rich in natural productions. The maximum estimate of cost is \$5,500,000. This route, it is claimed, has substantial advantages over all other lines of communication between the Atlantic and Pacific seaports.

The Canadian Government proposes to expend \$5,000,000 per annum, which is to be raised on bonds, on the Pacific Railway, and to keep the road built after the present year fifty miles in advance of the settlements. For the distance between the head of Lake Superior and Lake Winnipeg the road has been nearly completed; contracts have been awarded

for a stretch of 100 miles beyond Winnipeg; and funds are in hand for 200 miles more. It is expected, therefore, that these 700 miles of railroad beyond Lake Superior will be completed within two years. Fifty or sixty thousand tons of steel rails have lately been purchased in England for this purpose.

The foundation-stone of the new Eddystone Lighthouse, now constructing under the management of John N. Douglass, was laid by the Duke of Edinburgh on the 21st of June, 1879. The plan of the new structure is essentially the same with regard to its general form as that of Smeaton's lighthouse, and is described by the engineer as a concave elliptic frustum, the generating curve of which has a semi-transverse axis of 178 feet and a semi-conjugate axis of 37 feet. While the old tower was built of granite for the outside walls and with blocks of Portland stone for the interior, the new one will be constructed entirely of granite, which is of a quality superior to that used before. The dimensions and illuminating range of the new lighthouse exceed considerably those of the old one: instead of a base of 32 feet and a light 72 feet above high water, with a range of 14 nautical miles, the new tower will have a base 44 feet in diameter, the focal plane of its light will be 130 feet above high water, and its range of illumination 17 nautical miles. The old tower contained four rooms besides the lantern, each 12½ feet in diameter; the new one will have nine rooms, not counting the lantern, the seven uppermost chambers having a diameter of 14 feet. The stone used in the construction of Smeaton's column was 13,343 cubic feet; for the new tower 69,100 feet will be required. Smeaton was the inventor of the process of dovetailing stone, and the ingenuity which he applied to the adapting and fitting of the blocks in the lighthouse was the especial feature which made it the wonder of the age; still he required 636 stone joggles, 1,800 oak treenails, 4,570 pairs of oak wedges, 8 circular floor-chains, and 226 iron clamps, to join and fit the blocks. In the new structure, such improvements have been made upon his system of dovetailing, and such still greater superiority do the modern quick-setting cements possess for hydraulic work over the blue lias and pozzolana lime of Smeaton's day, that no treenailing, joggling, nor other such appliances are used in the new tower, except some composition-metal bolts, slit and wedged at both ends, for anchoring down the foundation-stones. The latest method of dovetailing, invented by Nicholas Douglass, is described as consisting "in having a raised dovetailed band, 3 inches in height, on the top bed and one end-joint of every stone. A corresponding dovetailed recess is cut in the bottom bed and end-joint of the adjoining stones, with just sufficient clearance for the raised band to enter it freely in setting. The work which is cut and fitted in this manner and set in Portland cement is as firm and solid as though it were continuous granite. While

Smeaton had to employ sailing craft to convey his material from Milbray to the rock, which sometimes in unfavorable weather could not approach the rock for days together, the material for the new structure is brought to Eddystone in a twin-screw steamer, whose load is 120 tons, which makes the passage from Oreston in a little more than an hour; the stones are loaded and unloaded by means of a pair of double-barrel steam-winchies, and are raised into position by another winch on the rock. The machinery of the steamer also serves to pump out the water from the foundation at every tide. The rock-drill used in excavating the foundations can do as much work in an hour as ten of Smeaton's Cornish tinniers with their jumpers. By comparing the time required in completing Smeaton's Eddystone Lighthouse with that spent on the Wolf Lighthouse, built in 1869, it appears that it took Smeaton six and a half times as long to accomplish a given amount of labor as it takes an engineer of the present day. The most important advances, however, which have been made in lighthouse engineering since Smeaton's day, are in the illuminating facilities. The old lantern was of the square type, with heavy sash-bars which intercepted nearly half of the light. Until quite lately this kind of lantern was still in use in the lighthouse service of the United States. Considerable improvements were made from the use of inclined framing and other expedients for obviating the obstruction of the frame, by Stevenson and Walker, and in 1864 the type of lantern now universally adopted in British lighthouses was invented; this is the helically framed lantern, which, besides being optically perfect and possessing a maximum of strength, casts no shadow which is distinguishable at a distance of over a hundred feet. The 24 tallow candles, of 67-candle power, which were first used in Smeaton's tower, are now replaced by the 4-wick Trinity House lamp with an illuminating power of 7,325 standard candles, and in the new tower still stronger illumination can be used.

An iron pier constructed by the Ocean Navigation and Pier Company, of which Jacob Lorillard is president, at West Brighton, Coney Island, near New York, was erected under the superintendence of Messrs. Maclay and Davies. It starts at high-water mark, and extends outward 1,000 feet; it is 50 feet in width, with enlargements 100 feet wide at the shore end, the center, and the bulkhead. It is double-decked, and has an iron substructure. The whole is supported by tubular wrought-iron piles of 9 inches diameter, the wall being half an inch thick. These columns are placed in rows 20 feet apart longitudinally and 16 feet 8 inches apart laterally. A circular cast-iron disk, 2½ feet in diameter, sunk 15 or 20 feet in the sand, affords a base for each pile to rest upon. The jet-water system was used in driving the piles. At the top of the columns iron capitals are bolted on, supporting 15-inch

wrought-iron beams bolted together. These uphold the superstructure. Heavy horizontal struts are bolted to the beams transversely, and diagonal rods 1½ inch in diameter brace the structure. The entire structure is supported by 260 iron pillars. The landing-stage is on the lower deck, and is guarded by heavy oaken fenders.

A strong iron tubular pier has been erected at Long Branch. At the end of this new pier, which is about 860 feet long, there is a depth of 22 feet at dead low water. The pier is supported by tubular iron piles 6 inches in diameter for the first 150 feet from the shore, and then gradually increasing to 12 inches in diameter at the end. They are driven into the sand to the depth of from 14 to 17 feet. The pier is 25 feet wide in some parts and 50 feet in others. An approach 94 feet in length leads down to it. The pier is floored with ash, which it is proposed to remove at the end of every watering season, to allow the waves to flow freely among the iron supports without damage.

The large blocks of stone with which the lower ends of the Mississippi jetties were capped have proved entirely insufficient to withstand the tremendous force of the waves. Although they weighed one or two tons each, the first gale swept them all away. This has necessitated a supplementary labor, which has been accomplished in a way that will obviate all necessity of repeating it. As there was no available rock for the purpose within five hundred miles, it was decided to cap the jetties with blocks of concrete. Finely broken rock was brought down from the neighborhood of Rose Clare on the Ohio River, and, with the addition of sand, gravel, and Portland cement, was molded into huge blocks of concrete on the jetties. These are the largest blocks of concrete ever used for such a purpose, some of them being nearly double the weight of the largest masses of artificial stone employed in the great Cherbourg breakwater. The proportion of the ingredients was 15 parts of the broken stone, 4·38 parts of gravel, 8·28 parts of sand, and 3 parts of cement, which were mixed with 10½ per cent. of water. It was decided to be necessary to cap the last 3,800 feet of the east jetty and the last 2,800 feet of the west jetty with solid blocks of this material weighing from 25 to 75 tons apiece. The materials are mixed by steam in revolving iron boxes, and immediately dumped into the molds and left to harden.

On the 18th of October, 1879, the new floating basin of the Bordeaux docks, which has been three years in construction and has cost three millions of dollars, was formally opened. The basin, fed with water from the Garonne and from a very deep artesian well, is 100,000 square metres in area and 10 metres deep. It was made in a marshy spot, where it was necessary to sink solid blocks of masonry to a depth of 12 metres in order to construct the

quay, which is 18 metres broad. The port of Bordeaux has been very deficient in dock facilities, vessels having to wait sometimes a month before they could come alongside the quays. The port has only been able to accommodate 200 vessels. Along the docks which are to be made around the new basin 80 ships of the largest tonnage can lie at the same time. Another basin has been made alongside it for the repairing of men-of-war.

Extensive improvements are in progress in the harbor at Antwerp, under the joint auspices of the Belgian Government and the municipality of the city, designed to unite the purposes of extending the harbor and of obviating the floods which sometimes sweep through the streets of the town. The works, costing according to the estimates \$7,655,000, embrace the straightening of the bank of the Scheldt, the deepening of its channel by dredging, and the building of a quay wall of brick faced with stone 47 feet high, 19.6 feet thick at the top, and 28 feet thick at the foundation, and the construction of three basins with locks connecting them, one 874 by 197 feet, and the others 806 and 738 feet respectively in length and 164 feet in width.

For the projected American isthmus canal, see INTEROCEANIC CANAL. A plan for a ship-railway across the Isthmus of Panama attracts much attention. Captain Eads, who has made a thorough study of the possibilities and difficulties of this plan of transportation, has elaborated designs for its construction, according to which it would cost about \$50,000,000, or not more than one third of the lowest estimate for a canal. It holds out the promise not only of a perfectly practicable, safe, and economical method of transportation, but also of a very profitable financial investment, which can not be said of any of the proposed canals in the present state of commerce. The railway would have a road-bed not over 40 feet wide, and 8 or 10 rails for the car to run on. This would be composed of several separate sections, each about 100 feet long and running on some 200 wheels, some of them driving-wheels propelled by an engine attached to the outside of the section. The number of these sections (every one of which constitutes a locomotive) to be joined together in making up the car would vary according to the length of the ship. Rubber or steel springs should be placed between the wheels and the frame of these sections. Drawn by five such locomotives, a vessel and cargo weighing 10,000 tons could be transported without giving a pressure on the track under each wheel of more than 12 tons, or a pressure on the road-bed to exceed 1,200 lbs. per square foot; this is about double the pressure under the driving-wheels of an ordinary goods locomotive, and not one half the pressure on the ground under ordinary railroad-ties. The grades would be even and moderate. It would be possible to haul vessels over such a railway at a speed of fifteen or twenty miles an hour,

or at the same rate of speed as is run by freight trains over ordinary railways; although it is not proposed to run at a greater speed than eight miles an hour. The cost of transportation would probably be less for the same tonnage of freight than on an ordinary railway, since all the operations would be performed by machinery. The transfer of the ships from the sea to the cradle could be accomplished in two different ways: the platform holding the cradle might be lowered to receive the vessel by means of a lock or by the aid of hydraulic engines. The lock should be in two compartments, a deep one with sea-gates, into which the ship would be floated, and in which after the gates are closed it would be raised by the admission of water to the level of the upper lift, in which it would be floated upon the car. After the ship rests firmly on the cradle in the upper compartment, which is to be on the level of the railroad track and connected with it by a gate, the water is to be drawn off and the gate opened, leaving the car and its burden high and dry on the continuous track. By the other proposed method an iron frame of great strength and solidity, containing the car and a portion of the track, would be lowered in the basin far enough to allow the ship to be floated into the cradle, and then raised by means of hydrostatic cylinders until the track on this platform meets the main track.

The reward offered by the State of New York in 1871 for an economical method of propelling boats on the Erie Canal has not been the means of evoking the new system which it was hoped might be developed by the active brains of American inventors, although a good number of novel schemes of more or less merit have been offered for consideration. The five thousand or more boats which navigate the artificial waterways of the State are still propelled for the greater part by animals, and the rest of them by objectionable methods of steam propulsion. The problem seems now to have found its best solution in the adoption of the Belgian system of towing. The New York Steam Cable-Towing Company have obtained the exclusive privilege for fifty years of laying a cable for this purpose in the Erie Canal, and have been engaged in propelling boats by this means between Buffalo and Lockport. They have now extended their cables as far as Rochester, and will probably before long have them working over the whole extent of the canal, from Buffalo to Albany. This system of towage is not new, having been in use in Europe for eighteen or twenty years; but the substitution of the lighter and cheaper steel ropes for the ponderous iron chains, and the use of a clip-drum or driving-wheel instead of the indented windlass, are great advancements in respect to economy and expedition. Two cables, made of steel wire with a hemp core, are laid in the bed of the canal on different sides. One is used for towing the boats down the canal and the other the boats going in the

opposite direction. The cable is an inch in diameter and weighs four tons to the mile. The tow-boat has an inverted vertical engine. The clip-wheel, which is situated on one side of the boat, is provided with strong clips or jaws, which automatically seize and hold the cable as it goes over and release it as it passes off. The cable passes over a sheave near the forward end of the boat on emerging from the water, and over another one aft on returning. The cable is held taut and firm against the drum by two wheels on either side, under which it passes before and after being drawn over the driving-wheel. The clip-wheel makes one revolution to eight of the engine. The engine has a 14-inch cylinder and a 16-inch stroke. Four or five loaded canal-boats can be towed by one boat at a speed of three miles an hour. The boats are provided with rudders at either end, and a screw for propelling them through the locks. Ten of these tow-boats have been operating, and it is intended to employ about eighty of them on the canal. The boats are 78 feet 6 inches long and 16 feet wide, and draw, when loaded with their supplies of coal, 5 feet of water. The shaft on which the wheel is turned is about on a level with the deck. By the new system the cost of towing is reduced one half and the time consumed two thirds. This method when completed along the whole line will be of great advantage to eastern shippers to the West, as the boats will return fully laden instead of with only part loads as heretofore, and the freights from New York to Buffalo and the West will thus be reduced to merely nominal rates.

A new mode of street-car traction has been successfully employed in San Francisco for some time past. It is said to have proved satisfactory beyond expectations, and to have shown itself well adopted to all kinds of city traffic, and especially where the surface is so uneven that neither horses nor steam-motors can be economically employed. This is the case with many parts of San Francisco, and led to the development of this novel system in that city, where it has already been adopted by three companies. In a tube just below the surface of the ground an endless wire rope is kept in constant motion by a stationary engine. The tube lies in the middle between the two tracks, and has a narrow slot in its upper side through which the gripping attachment that connects the car with the constantly moving rope passes; the rope is kept in position in the tube by means of sheaves. Clay Street, in which the system was first employed, is 5,197 feet long, and has a total rise of 367 feet from Kearny to Jones Street, then an equally sharp descent on the other side of the hill, with a slight incline again from Polk Street to Van Ness Avenue. The steepest grade is 1 in 6.15. As on such a hilly route locomotion by horse-power was very expensive, a more economical motive agency was desired; yet it must be one which did

not involve the use of a motor which would frighten horses or endanger life. A. S. Hallidie's plan of an endless steel-wire rope was finally adopted. In working out such a scheme very serious mechanical difficulties are presented by the conditions that the rope must be worked below the level of the street, and must be safely covered; that the cars shall be started smoothly, and instantly brought to a halt at any point of the road; and that the mechanical apparatus shall be simple and easily controlled. An endless steel-wire rope, 3 inches in circumference, 11,000 feet long, and weighing 16,000 lbs., made of 114 wires hardened and tempered, travels up and down Clay Street in two iron tubes, running on sheaves at the bottom of the tube, placed 39 feet apart, with other sheaves projecting from the top, where an upward incline requires a guard to keep the rope from rubbing on the roof of the tube, and other larger ones around which the rope passes at every change of angle in the road. At the end of the line the rope passes around a sheave 8 feet in diameter, and returns through the other tube. At the engine-house it passes over two angle-sheaves and over the grip-pulleys, also 8 feet in diameter. The patent grip-pulleys by means of which the rope is kept in motion are furnished with jaws at their circumference which automatically grip and release the rope as it passes around them, their action being governed by the pressure of the rope upon them. The whole length of the tubes, on one side of the path of the rope on the sheaves, is a thin slot seven eighths of an inch broad. Through this passes an iron bar, which has at its end the gripping apparatus; this is attached to the dummy which pulls the car, and is fastened to the rope by means of a hand-wheel and screw, by which its jaws are made to close over the rope or to release it again. These operations are accomplished by means of a slide working in a standard and actuated by the hand-wheel. This slide has at its lower end a wedge-shaped block, which moves two jaws horizontally. These operate according to the direction in which the slide moves, closing when it is raised and opening again when it is lowered. When the rope is thus gripped it is raised free from the sheaves into the open center of the tube. The grip is so constructed, and the dummy coupled to the car in such a manner, that the impetus of the car when running on a descending grade is not checked by brakes, except when it is necessary to stop, but the car is held back only by the rope and grip attachment; and so the momentum of the car is utilized to help keep the rope in motion and save power.

A sudden new start has been taken lately in ocean telegraphy, a branch of enterprise which has remained for five or six years at a standstill. Three long ocean-cables have recently been or are being submerged by English companies in the East, and a transatlantic double line by a French association of capitalists. The

Eastern Telegraph Company completed the duplication of their lines from England to Bombay in 1878. The Eastern Extension Telegraph Company also have just duplicated their cables, which extend the connection from Bombay to Australia by way of Madras, to Penang in the Malay Peninsula, and to the East Indian islands. The last year also the Eastern Telegraph Company have been engaged in laying their cable to the Cape of Good Hope. This company entered into an agreement with the British Government to have the line down between Durban and Zanzibar by the end of July, 1879, and to have the whole cable laid and in working order by the end of the year. In consideration of an annual subsidy of \$17,500, the company gives the priority to Government messages, and agrees to transmit them over the cable, which shall be capable of telegraphing fourteen words a minute, at half the rate charged the public. The British Government has also stipulated for the right to take possession of the wires and offices, or to allow any of the colonies so to do, in the event of a war, rebellion, or other public emergency, and to keep possession as long as is seen fit, upon the payment of a reasonable compensation. To guard against the teredos and other mischievous insects which have proved so injurious to the older cables by eating into gutta-percha, the Cape cable is covered with a brass wrapping, except in the deep-sea portions, where these pests are not found. The French Pouyer-Quertier scheme includes two cables from Brest to New York. This new line may partly find its motives in the French national pride, but it furnishes, no doubt, a promising investment for French capital, and may press the present lines hard in competition for the whole English and Continental traffic, besides securing the French. The cables were manufactured at Charlton, England, in the workshops of Siemens Brothers. On the 16th of November the American end of the cable was landed at North Eastham, Mass., on Cape Cod, from the steamer Faraday. No ocean-cable had ever been constructed and submerged at so rapid a rate: the line was completed and messages sent from continent to continent seven months after the French Government had granted the concession to the company. The insulation of the wires was found to be remarkably perfect. A new cable has recently been put down between Germany and Norway, at the cost of the German Government. This line was considered diplomatically, since the only telegraphic communication between Germany and Scandinavia has been through Denmark. It is a three-wired line, and extends from Romoe, an island off the coast of Schleswig, to a point near Arendal. All telegraphic traffic between Norway and Germany, and the greater part of the telegraphic correspondence with other countries, except Denmark, England, and France, will pass over the new wires and be

taken away from the Danish lines. The cable was manufactured by Siemens & Halske of Berlin. Russia has submerged a short cable across the Caspian Sea. The line is 150 miles long, and extends from Cape Gurgian to Krasnovodsk. By it telegraphic communication is established between Tjikislar and Asterabad; so that messages from Tjikislar can be sent, by way of Teheran, over the Indo-European line to Tiflis.

Among the projects of submarine cables is one which promises to be realized at no distant day, and which when accomplished will complete the telegraphic circuit of the earth. This is a cable to be laid from California to the Sandwich Islands, and thence to China and Japan. Cyrus W. Field has obtained the exclusive concession for such a cable from the Government of the Sandwich Islands, and expects to receive similar privileges from Japan and perhaps China. Japan has long been desirous of electric communications as complete as possible with the outer world, and even China is awakening to the advantages of telegraphic intercourse. A still more ambitious project has been talked of for a new cable between America and Europe. This scheme is for a cable running from New York to Flores, one of the Azores, whence two extensions will be carried to the European Continent—one to France, England, and Holland, and the other to Fayal, San Miguel, and Lisbon. The entire length of cabling required to carry out this plan would be 7,300 miles.

Subterranean telegraph wires have been in use for many years on the Continent of Europe, and are regarded with such favor in Germany that they are being constantly extended. At first employed only for shorter distances, now several long lines are laid underground, which appear to work successfully. In England, however, where there are 10,000 miles of underground wires, they do not seem to be attended with the same success. W. H. Preece, the electrician of the postal service, reported lately that, while their cost was three or four times that of overhead wires, their power of carrying currents is only a third or a quarter as great, and that the gutta-percha covering is attacked by rats and mice, and eaten away by an insect called *Tempeltonia crystallina*, and also injured by a fungus. The British public approves the adoption of this system on account of the danger to passengers from the elevated wires. The lines are carried through the cities below ground. Probably in the open country they would be less liable to destructive attacks.

A novel system of insulation for underground telegraph wires, invented by David Brooks of Philadelphia, is said to be open to none of the difficulties which attend this mode of telegraphy, and which have produced such discouraging results from the subterranean wires laid in Great Britain. If wires can be well insulated and protected from destructive

agencies underground, their advantage over the overhead telegraph wires strung on posts is obvious. The substance used as an insulator is a novel one to practically apply to this purpose, although its remarkable properties as a non-conductor are well known. This is paraffine-oil. The wires are wrapped in cotton and bound together to the number of fifty or more in a tight cover of netting, and then inclosed in a pipe. After the pipe is laid in the ground, it is filled with the oil. Elevated reservoirs connected with the pipe keep it constantly full of the oil under pressure. Short lines insulated in this manner have been in successful operation for a couple of years; one of them is laid under the Schuylkill River in thirty-five feet of water. Such a line of underground telegraph will probably soon be working between Philadelphia and New York.

ESPARTERO, DON BALDOMERO, Duke of Vitoria, a Spanish general and statesman, born October 27, 1793, died January 9, 1879. He was the son of a poor wheelwright, and, being of a weakly constitution, prepared for the priesthood. In 1809 he entered the army to take part in the war against France, and soon rose to the rank of lieutenant. After the retreat of the French in 1814 he joined the expedition of General Morillo to the South American colonies, which at that time were carrying on their war of independence. During the ten years in which he remained there he found many opportunities to distinguish himself, and rose rapidly in rank. In 1824 he was sent to Spain by the Viceroy to report on the state of affairs, and after his return was captured and imprisoned for a whole year by the enemy. In 1832 he openly declared himself in favor of the succession of the daughter of Ferdinand VII., and when after the death of the King the civil war broke out, he was appointed Commandant-General of Biscay. In 1836 he was appointed to the chief command of the Army of the North, Viceroy of Navarre, and Captain-General of the Basque Provinces. When in 1837 Don Carlos appeared before Madrid, he saved the capital, drove the enemy beyond the Ebro, completely defeated them in the battle of Luchana (for which he was created Count of Luchana), and relieved Bilbao. In 1838 he completely defeated the Carlist General Negri at Burgos. In 1839, by making good use of the dissensions existing among the Carlists, he carried on negotiations with the Carlist General Maroto, who finally capitulated at Bergara. After this Don Carlos was compelled to retire to France. As a reward for his services, Espartero was raised to the rank of marshal, and was created Duke of Vitoria and a grandee of the first class. In 1840 the Cortes passed a law restricting the municipal charters. Espartero advised Queen Christina not to sanction the law; but she refused to listen to his advice, and he placed himself at the head of the movement against it, which finally com-

elled Christina to resign and go to France. In 1841 he was elected Regent of Spain, and as such conducted the Government with great energy. He opposed the demands of the Church, subdued the Republicans who attempted to create disturbances in Valencia and other towns, prevented the abduction of the young Queen, defeated the attempts to bring about an insurrection in the army made by the Generals Diego Leon and Manuel Concha, and kept in entire subjection the Basque Provinces. He now began to turn toward England, and, refusing to dismiss his favorite, the Secretary Linage, was accused of favoring a commercial treaty with England which was unfavorable to Spain. In a very short time the opposition to him culminated in open rebellion, which soon spread over Andalusia, Aragon, Catalonia, and Galicia. On June 13, 1843, a junta formed in Barcelona deposed him, and declared Queen Isabella of age. After Narvaez had taken Madrid on July 22d, he escaped to Cadiz, whence he went to England. While he was received in England with the honors of a regent, he was deprived in Spain of all his honors and titles. After passing five years in England, a decree of Queen Isabella restored to him all his titles, and he returned to Spain, but for a long time kept himself aloof from political life. In 1854 he together with O'Donnell was the leader of the insurrection, and Queen Isabella, in order to save her throne, placed him at the head of the new Ministry, in which O'Donnell became Minister of War. His first act was to banish Queen Christina for the second time. But the union of parties as represented in his Cabinet could not endure, and he was forced by the intrigues of O'Donnell to resign on July 14, 1856. After this he retired completely from public life, but his influence did not cease with his retirement. In 1869, long after he had taken any part at all in public affairs, a proposition was made in the Cortes to elect him King; and even Alfonso XII., upon his accession to the throne, considered it necessary to go to Logroño in order to secure Espartero's good will.

EUROPE. The area of Europe is estimated at 3,824,240 square miles. Leaving out of account the area of the European dependencies, as well as that of the German-coast waters of the Baltic and North Seas, the Lake of Constantine, and the Sea of Azov, the European states occupy the following relative position in point of area:

COUNTRIES.	Square miles.
1. Russia.....	1,933,734
2. Austro-Hungary.....	241,035
3. Germany.....	208,431
4. Franco.....	204,093
5. Spain.....	193,229
6. Sweden.....	170,979
7. Finland.....	144,228
8. Norway.....	122,860
9. Great Britain and Ireland.....	121,608
10. Italy.....	114,415
11. Turkey.....	105,912
12. Roumania.....	49,263

COUNTRIES.	Square miles.
13. Portugal.....	84,606
14. Bulgaria.....	24,659
15. Greece.....	19,353
16. Servia.....	18,787
17. Switzerland.....	15,981
18. Denmark.....	14,789
19. Netherlands.....	12,781
20. Belgium.....	11,873
21. Montenegro.....	3,642
22. Luxemburg.....	999
23. Andorra.....	191
24. Liechtenstein.....	68
25. San Marino.....	24
26. Monaco.....	6
Total.....	8,766,992

With regard to population they hold the following relative position:

COUNTRIES.	Population.
1. Russia (exclusive of Finland).....	72,018,381
2. Germany.....	42,727,860
3. Austro-Hungary.....	37,712,781
4. France.....	36,905,758
5. Great Britain and Ireland.....	34,517,000
6. Italy.....	28,209,620
7. Spain.....	16,342,996
8. Turkey.....	7,008,000
9. Belgium.....	5,476,568
10. Roumania.....	5,376,000
11. Sweden.....	4,531,863
12. Portugal.....	4,348,551

14. Switzerland.....	2,792,284
15. Finland.....	2,768,626
16. Denmark.....	1,940,000
17. Bulgaria.....	1,830,000
18. Norway.....	1,806,900
19. Greece.....	1,679,775
20. Servia.....	1,576,622
21. Montenegro.....	286,000
22. Luxemburg.....	205,183
23. Andorra.....	18,000
24. Liechtenstein.....	8,664
25. San Marino.....	7,816
26. Monaco.....	7,049
Total.....	313,312,669

In this table the European dependencies of Great Britain, Portugal, and Denmark are not taken into account. They are as follows:

Great Britain (Malta, Gibraltar, Heligoland).....	174,862
Portugal (Azores).....	264,852
Denmark (Faroe Islands, Iceland).....	53,000
Total.....	591,714

Adding these figures to the above sum, the total population of the European states, inclusive of their European dependencies, is found to be 313,834,383.

The execution of the provisions of the Treaty of Berlin progressed favorably during 1879. The new principality of Bulgaria elected a Constituent Assembly, which prepared a Constitution, and elected a Prince in the person of Prince Alexander of Battenberg. (See BULGARIA.) In the autonomous province of Eastern Roumelia, the excesses committed by the Bulgarians in the early part of the year caused some doubts to be entertained as to its stability; but toward the close of the year it appeared as if the Bulgarian part of the population had determined to treat their Mohammedan neighbors with more fairness in future. (See EASTERN ROUMELIA.) In Roumania, the emancipation of the Jews proved to be a difficult question to solve. A settlement, however, was finally arrived at by the adoption of

a compromise which, while acceptable to the Roumanians, also gained the approval of the Powers. (See ROUMANIA.) The work of the different commissions on boundaries proceeded favorably with one exception, that of the Greek frontier. Several skirmishes occurred on the Servian border, while in the new districts of Montenegro attempts at resistance were made by the Albanians. In Turkey the greatest distress prevailed in consequence of the disordered state of the finances. The deplorable condition of Asia Minor led Sir Austen Layard, the British Minister at Constantinople, to make demands for the appointment of able officials to administer the Asiatic provinces of Turkey. This demand was in the end complied with. (See TURKEY.) The negotiations with Greece for a new boundary continued during the year, but no progress was made, as the plenipotentiaries could not agree on what should constitute the basis of the negotiation. (See GREECE.) The Porte in 1879, for the first time in some years, took an active part in the administration of Egypt, by the deposition of Ismail Pasha. (See EGYPT.)

An important change was made in the direction of foreign affairs of the Austro-Hungarian Monarchy. Count Andrassy resigned his position as President of the Common Ministry and Minister for Foreign Affairs on account of ill health, and was succeeded by Baron Haymerle. (See HAYMERLE.) The change in persons, however, did not mean a change of policy. In April a convention was concluded with Turkey regarding the sanjak of Novi-Bazar, and this district was then occupied without resistance. In Austria an important change took place in the government. At the elections for the Reichsrath held in June and July, the Constitutional party, which had ruled the country for a number of years, lost some seats, making the strength of the parties about equal. An important feature in the new Reichsrath was the entrance of the Bohemian delegates for the first time since 1867. The Auersperg Ministry had resigned previous to the elections, and was finally succeeded by a fusion Ministry under Count Taaffe. (See AUSTRIA.)

The senatorial elections held in France on January 5th resulted in a Republican victory, thus making both Chambers Republican for the first time in the history of the third republic. The effect of this was felt in all departments of the Government, and in February President MacMahon resigned, as he no longer felt himself able to govern in accordance with the wishes of the majority. In his place the two Chambers in Congress assembled elected Jules Grévy, the veteran President of the Chamber of Deputies. The Ministry formed by M. Waddington introduced two important bills affecting higher education. Both were passed in the Chamber of Deputies, but were laid over in the Senate until 1880. In the latter part of the year the Ministry of M. Waddington, although sustained in the Chamber

on several occasions by large majorities, was forced to make way for a Ministry composed of more radical members under M. de Freycinet. (See FRANCE.)

In Belgium, the question of Church and secular schools was solved by the adoption of the Government bill providing for the supervision of all schools by the state. (See BELGIUM.) In Spain the year witnessed a struggle for supremacy between General Campos and Señor Canovas del Castillo. The principal question before the Cortes was the pacification of Cuba. An attempt was made on the life of the King shortly after his marriage to the Archduchess Christina of Austria. (See SPAIN.)

The attention of England in 1879 was chiefly absorbed by the wars in Afghanistan and Zoololand. In the latter part of the year the distress in Ireland consequent upon the agrarian depression became very great, and led to a serious anti-rent agitation. Disturbances occurred in different parts of the country, and numerous arrests were made. At the same time strong efforts were used to relieve the distress. (See GREAT BRITAIN.)

The after-effects of the war with Turkey were felt very strongly in Russia during 1879. In spite of the most stringent measures adopted by the Government to suppress it, Nihilism was stronger this year than ever, and another unsuccessful attempt on the life of the Czar was made. Another danger resulting from the late war threatened Russia in 1879, in the form of the plague, which appeared in several governments; but, through the efforts of the Government, it was confined to a comparatively small part of the empire. (See PLAGUE.) The advance of Russia in Asia received a check this year by the defeat of the Russian army by the Tekke Turkomans. (See RUSSIA.)

In Germany a complete revolution in the financial policy took place. The session of the Reichstag in the beginning of the year was occupied almost exclusively with the discussion of the new tariff, which was finally passed by a coalition of the Conservatives and the Catholic Center. This alliance was remarkable from the fact that the Catholics, who had for years been Prince Bismarck's most bitter opponents, had now joined hands with him. The reactionary spirit was also felt in the administration of Prussia, where the Liberal Ministers were virtually forced to resign and a Conservative Ministry was put in their place. The elections for the Diet in Prussia resulted in a large gain for the Conservatives, giving them with their new allies, the Catholics, a bare majority over the united Liberals. (See GERMANY and PRUSSIA.)

EVANGELICAL ALLIANCE. This association has for its object to represent the unity of all those churches which collectively are called Evangelical in all the more important articles of faith, notwithstanding their separation by external organization. It has held general assemblies at London in 1846, at Paris

in 1855, at Berlin in 1857, at Geneva in 1861, at Amsterdam in 1867, and at New York in 1873.

The seventh *General Conference* of the Evangelical Alliance was held in 1879 at Basel, Switzerland, beginning September 1st. On the evening of the preceding day, Sunday, August 31st, a service of greeting between the delegates from the different countries was held in the Vereinshaus, when fraternal addresses were delivered in the German, French, and English languages. Pastor Ecklin spoke in behalf of the citizens of Basel, and as the representative of the German-speaking countries; Professor Vignet of Berne for French Switzerland and France; and the Rev. Philip Schaff, D. D., of New York, for the English-speaking delegates. M. Charles Sarasin, ex-Councilor of State, was chosen President of the Conference, and delivered the opening address. He dwelt upon the necessity of a liberal and wise judgment in theological thought, even though it might sometimes seem to make too many concessions to the demands of science; at the same time, he held, there must be no compromise of the fundamentals of Christianity. He believed that a reconciliation is possible between faith and science, and that one of the duties of the Evangelical Alliance is to find it. Reports were then made by delegates concerning the religious condition of their respective countries. Pastor Gütet of Basel represented Protestantism in Switzerland as divided into parties and suffering from the growth of rationalism. Dr. Cremer, of the University of Greifswald, described Germany as in a condition of religious unrest, enduring a contest between faith and unbelief. He thought that much advance must be made before the masses could be reached and cured of their indifference and infidelity. Pastor Babut of Nismes represented the French Protestant churches. The Rev. E. V. Blich spoke in reference to the religious condition of England, and dwelt especially on the success and progress of the evangelistic meetings which were instituted during the tour of the American evangelists, Messrs. Moody and Sankey, in 1874, and had been continued since. Dr. Van Oosterzee, of the University of Utrecht, described the religious condition of Holland. The Rev. Dr. Philip Schaff described the United States as the land of churches and Christian activity, and ascribed the variety of denominational forms existing there largely to the diverse nationalities from which the people have originated, each tending to transplant the spirit of its own religious life. Dr. Tardy spoke of the growing activity of Protestantism in Austria and Hungary. Dr. Von Scheele gave an encouraging view of the condition of the Scandinavian churches. Among the general addresses was one by the Rev. Dr. Stoughton of London, on "The Connection between Basel and the Early English Protestants." Sectional meetings were held for the reading of papers in the French and English languages.

The theme for special discussion on the sec-

ond day of the session was the "Unchangeableness of the Apostolic Gospel." Papers were read on this subject by Professor Orelli of the University of Basel, and Professor Fr. Godet of Neuchâtel. The address of Professor Orelli attracted an unusual degree of attention, and was considered the most important paper contributed to the meeting. Papers were read in the French section on "Home Evangelization" by the Rev. M. Lelièvre of Nîmes, France, the Rev. H. S. Ashton of London, and the Rev. Dr. Fisch of Paris. Pastor Lelièvre represented that France was undergoing a religious awakening, in the development of which it invoked the coöperation of the whole Protestant family, and spoke of Belgium as being in a similar situation and having similar needs. Mr. Ashton described the evangelistic labors of Mr. and Mrs. McAll in Paris, which, having been begun in 1871, had extended till they embraced twenty-three stations regularly attended by more than five thousand hearers. Professor Emilio Comba, of the Waldensian College in Florence, spoke on evangelistic work in Italy. At another sectional meeting papers were read on "Preparation for the Ministry of the Gospel," by Professor Guest of Breslau and Professor Porret of Lausanne. These speakers held that the present system of education for the ministry is defective, and not adapted to the wants of the age; that it should be more comprehensive and less ecclesiastical, and should rely more on ethical and Biblical than on dogmatical forces. The subject of Sunday-schools was discussed in the Anglo-American section, with addresses by the Rev. Dr. T. D. Anderson of New York, the Rev. Dr. Oswald Dykes of London, several speakers from Germany, France, Switzerland, and Italy, and the Rev. Dr. John Hall of New York.

The most important discussion of the third day was held in the Anglo-American section on the subject of religious liberty. The Rev. Dr. James H. Rigg, ex-President of the English Wesleyan Methodist Conference, gave a survey of the position of the different countries of the world in reference to that question, from which he drew the conclusion that the principle of liberty was becoming better understood by the nations of Europe, and would ultimately be generally recognized. The Rev. Eustace Carder of England presented a paper on the functions of conscience in relation to civil and religious liberty. The subject of "Christian Union" was considered in the same section, in a paper by the Rev. T. D. Anderson of New York, and in an address by the Rev. William Arthur of London.

Social questions were considered on the fourth day, when papers were read on the "Relations of Christianity and Modern Society," by Professor Wach of the University of Leipzig; "Our Duty to the Working Classes," by Mr. G. Steinheil, manufacturer, of Alsace, and the President of the Conference; and "Socialism and Communism," by the Rev. Dr.

Washburn of New York. Other papers were on the "Christian Regeneration of the East," by Dr. Fabri of Barmen, Germany, and "The Christian and Anti-Christian Influence of the Press on the Nation," by the Rev. A. Jonelli, editor of the "Allgemeine Schweizerzeitung," of Basel, the Rev. Dr. E. de Pressensé of France, who spoke of the mission of the Protestant press, and the Rev. L. B. White of London. "The Present State of Religious Liberty" again engaged attention in the consideration of a paper which had been presented on behalf of the Rev. J. P. Thompson, D. D., of Berlin, embodying a memorial of the American Board of Commissioners for Foreign Missions in reference to the interference by the police with persons connected with its missions in Bohemia, and calling attention to restrictions which were imposed on the exercise of religious freedom in Bavaria. The memorial recited that the missionaries of the Board, who had for some years been laboring in Austria, had carefully conformed to the regulations of the Government concerning domestic worship and public religious meetings, and till recently had been allowed to carry on their work of evangelization with only occasional interruption from the police. As teachers of religion they had scrupulously refrained from interfering with the domestic concerns of the state. Their converts had taken the precaution to withdraw from the recognized churches to which they had belonged in the manner prescribed by law, and had submitted to the police a statement of their belief and of their desire to worship together as Biblical Christians, not connected with any recognized confession. The police had allowed them to hold religious meetings in a public hall and in their private dwellings, and, after carefully inspecting these assemblies, had found nothing in them contrary to law. Suddenly, however, and without the assignment of any cause, the authorities began to look upon these assemblies with suspicion. "Gendarmes would enter a meeting and take down the names of all present, by way of warning. They would even go into private houses at the hour of family worship and take notice of any strangers present. At length, on the 20th of March, 1879, in place of the customary permission to hold evangelical meetings, Mr. Adams and his assistant Mr. Horkey were notified that persons belonging to a confession not legally recognized have only the right to hold domestic worship, and that at domestic worship only the family and members of the household may be present. The right to hold public religious meetings, in accordance with the provisions of the meeting-law, was also denied, and the meetings Messrs. Adams and Horkey had announced to the police, both public and private, were forbidden. Mr. Adams and his assistant Mr. Nowak were summoned before the police, and, under a penalty of twenty-five days' imprisonment or a hundred florins' fine, were for-

bidden to hold in private houses any meeting for religious exercises, or to admit to their family worship any person not strictly a member of their own households. They were even forbidden to attend religious worship in each other's houses, or in any society not recognized by law." These acts were considered to be in direct contravention of the fundamental law of Austria, and were supposed by Dr. Thompson to be unknown to the Emperor and his immediate counselors, and "due to the excessive and mistaken zeal of the provincial authorities." Another statement described the case of the people of two villages in which voluntary assemblies for worship had been similarly interfered with. The case was discussed in the Anglo-American section and in meetings of the several deputations, and the following memorial was agreed upon, to be presented to the Emperor of Austria by an international deputation representing the Alliance as a whole:

The seventh General Conference of the Evangelical Alliance, in Basel (Switzerland) assembled, has received from members of a religious community, not recognized by the state, in Prague and its neighborhood, representations, as shown in the documents hereto attached, respecting infringements of the liberty of faith and conscience in particular, even of the exercise of family worship, which they, in contravention of the guarantees contained in the Constitution, have had to suffer, which sufferers, as they inform us, have made due appeal to the supreme Government of Austria; and this Conference of the Evangelical Alliance, under a sentiment of fraternal sympathy, esteems it a duty to associate itself with those petitioners, and begs to present to his Majesty the Emperor of Austria, with profound respect and due confidence, its petition, praying that as speedily as possible it may grant to the request of our brethren in faith an answer, whereby these questions may be decided in a sense favorable to toleration and religious liberty.

The deputation consisted of the President (ex-Councillor Sarasin) and Vice-Presidents of the Alliance, and included among its members Count Bismarck-Bohlen, a cousin of Prince Bismarck and an aide-de-camp of the Emperor of Germany.

The Conference also considered some cases of the restriction of religious freedom which had occurred in Greek territory, where it was represented that the rights of parents not of the orthodox religion to have their children educated without the interference of the authorities of the Greek Church had been infringed upon. This was regarded as in contravention of the provisions of the Treaty of Berlin. It was stated that Lord Salisbury had ordered remonstrances to be made against these interferences, and they would probably cease. Cases of persecution said to have occurred in Spain were referred to the British Committee, to be dealt with as should seem fit to them.

The fifth day was given to the discussion of subjects connected with the work of missions. A paper was read on "Missions to the Jews," by M. de le Roi of Breslau and Professor Christlieb of the University of Bonn; and one of the editors of the "Allgemeine

Missions Zeitung" gave a review of the condition of Protestant missions among the heathen, and was followed by addresses on the general subject of missions, on the "Results of Missionary Labor in India and Africa," and on kindred topics, by the Rev. William Arthur of England, the Rev. Dr. Barde of Geneva, the Rev. Dr. Murray Mitchell of England, and the Rev. Dr. Heman. Professor Christlieb's address embodied a condemnation of the British opium-trade as being one of the greatest hindrances to the progress of Christianity in China, and the following resolution proposed by him was adopted unanimously:

Resolved, That this Conference, prompted by the reports laid before it as to the present state of Evangelical missions in China and India, expresses its full sympathy with the efforts for the suppression of the opium-traffic which have been made during many years past, and desires to support the protests against this trade which from time to time have been raised by various Evangelical and Missionary Churches, and by many distinguished friends of Christian missions. The Conference unites with their English brethren in declaring this long-established trade to be a crying injustice against China, a cause of offense which deeply injures the honor of the Christian name, both in Christian and heathen countries, and especially an immense obstacle to the spread of Christian missionary work. The Conference feels constrained to place on record its conviction that a change in the policy of England as regards this traffic is urgently necessary, and it instructs its president to bring this resolution to the knowledge of her Majesty's Secretary of State for India.

On the last day of the session, Saturday, September 6th, topics relating to Christian union were discussed in papers by the Rev. Dr. Plitt, Professor in the Moravian Theological Seminary at Gnadenfeld, Prussia, the Rev. Th. Fallot of Paris, and the Rev. J. F. Hurst, D. D., President of Drew Theological Seminary.

The deputation appointed by the General Conference to present a memorial to the Emperor of Austria in behalf of religious liberty were received by his Majesty at the palace in Buda-Pesth, and presented the petition of the Alliance to him. The Emperor received the memorial very graciously, promised to inquire into the subject of the grievances to which it related, and assured the deputation that justice should be done if the facts as stated in it were substantiated.

The third biennial meeting of the *Evangelical Alliance of the United States* was held at St. Louis, Missouri, beginning October 28th. The meetings were continued through the two succeeding days, during which papers were read as follows: "Christian Scholarship and Christian Unity," Rev. James S. Bush, D. D. (Episcopalian), of New York; "The Sunday Question," ex-President T. D. Woolsey of Yale College; "Christian Truth and the Periodical Press," Rev. W. Craig, D. D. (Presbyterian), of Iowa; "City Missions and our Foreign Population," Rev. W. V. Tudor, D. D. (Methodist), of St. Louis, Missouri; "Harmony in Essential Doctrines promoted by the Alliance," Rev. J. L. Burroughs, D. D. (Baptist),

of Louisville, Kentucky; "Christian Morals and the Public Schools," Rev. J. M. King, D. D. (Methodist), of New York City; "The Churches and Social Reforms," Rev. T. M. Post, D. D. (Congregationalist), of St. Louis, Missouri; "The Mohammedan Powers and Christian Missions," Rev. Galusha Anderson, D. D., of Chicago, Illinois; "Union of Churches and Union of Church and State," Rev. Stuart Robinson, D. D. (Presbyterian), of Louisville, Kentucky.

The Annual Conference of the *British Organization of the Evangelical Alliance* was held at Edinburgh, beginning October 28th. An address was made at the opening meeting on "The Recent Conference at Basel," by the Rev. Dr. Stoughton of London, who remarked that the statements which had been made at that Conference in regard to the state of religion in the world had impressed on his mind, among other things, that a decided advance had taken place within a few years throughout Europe in what was called religious toleration. To this was largely due the spread of religious infidelity, for men were now allowed to state just what they thought. While, however, much skepticism and infidelity were shown to be prevalent, a very great amount of Christian work also appeared to be going on, not only in England and Scotland, but all over Europe. The sessions of the Conference were continued through three days, during which addresses were delivered on "The Practical Resolutions of the Alliance," by Canon Battersby and the Rev. Dr. W. Robertson; "The State of Religion on the Continent," by the Rev. R. S. Ashton of the Evangelical Continental Society, the Rev. Dr. Jessup of Syria, and the Rev. J. C. Burns; "Home Mission Work," by the Rev. J. N. Wilson of Edinburgh, and others; "Missions to the Heathen," by the Rev. Dr. Murray Mitchell and the Rev. Mr. McCarthy of China, etc.

EVANGELICAL ASSOCIATION. The following is a summary of the statistics of the Evangelical Association as given in its "Christian Family Almanac" for 1879:

CONFERENCES.	Itinerant preachers.	Churches.	Members.
East Pennsylvania.....	87	195½	14,790
Erie.....	27	87	2,685
Central Pennsylvania.....	74	108	11,215
New York.....	85	59	4,101
Pittsburgh.....	61	131	7,967
Atlantic.....	19	20	2,020
Iowa.....	59	53	4,193
Michigan.....	47	67	5,809
Des Moines.....	34	23	8,121
Illinois.....	87	129	10,218
Canada.....	35	67	4,584
Ohio.....	56	131	7,526
Indiana.....	33	99	5,224
Wisconsin.....	63	121	10,054
Minnesota.....	45	50	3,973
Southern Indiana.....	20	32	1,896
Kansas.....	37	24½	2,646
Pacific.....	7	6	658
Germany.....	47	31'	7,477
Total.....	881	1,425	109,762

Number of local preachers, 558; of Sunday-schools, 1,925, with 20,640 officers and teachers, and 118,514 scholars; of parsonages, 416; probable value of the same, \$392,364; probable value of the churches, \$3,030,027; amount of Conference contributions, \$4,718.02; of missionary contributions, \$71,419.74; of Sunday-school and Tract Union contributions, \$1,949.13. The principal periodicals published by the Association are one English and one German weekly general religious newspaper, the latter of which, begun in January, 1836, is the oldest German Protestant newspaper in the United States. Several Sunday-school and other religious periodicals are also published in both the English and German languages. The principal educational institutions are the Northwestern College, Naperville, Ill.; Union Biblical Institute, in the same place; Union Seminary, New Berlin, Pa.; and Ebenezer Orphan Institute, Flat Rock, Seneca County, Ohio, at which 54 children were supported and taught in 1879. The statistics reported to the General Conference differ slightly from those published in the "Almanac," and give totals as follows: Number of itinerant preachers, 909; number of local preachers, 636; number of church members, 109,773; number of churches, 1,434; probable value of churches, \$3,170,602; number of parsonages, 449; probable value of parsonages, \$406,541; number of Sunday-schools, 1,918; number of scholars, 118,640; number of officers and teachers, 20,553.

The mission in Germany is organized into a Conference, with about 8,000 church members and 14,000 Sunday-school scholars. It has a publishing-house and printing-office at Stuttgart, and a theological school at Reutlingen. A mission is supported in Japan, with two missionaries and three female assistants, having small congregations at Tokio and Osaka.

The quadrennial report of the Book Agent to the General Conference showed that in four years the resources of the publishing establishment had been increased by \$92,344; that \$51,492 had been added by improvements; that \$26,951 had been distributed among the Conferences; and that the total profits had been \$92,344.

The annual meeting of the *Missionary Society* was held in Chicago, Ill., during the sessions of the General Conference. A full report was made of the mission in Japan, showing that it included 17 full members, four Sunday-schools with 100 scholars, and a catechetical class with seven scholars. Two adults and seven infants had been baptized during the year, and there were five candidates for baptism. The Board resolved to send another missionary to Japan. It also made an appropriation and arrangements for establishing a mission in Texas.

The quadrennial *General Conference* of the Evangelical Association met at Chicago, Ill., October 2d. Eighty-seven delegates were

present, four of whom were from Germany. The four bishops presided in turn. The proceedings were conducted in the English and German languages. The bishops presented a quadrennial address, which dwelt at the opening upon a decrease in the rate of growth of the Church, which had become evident during the last four years. The fact was illustrated by tables giving the rates of growth in different particulars, by quadrenniums, of which the table of members showed that the rate of increase has been as follows: from 1863 to 1867, 18 per cent.; from 1867 to 1871, 23 per cent.; from 1871 to 1875, 20 per cent.; from 1875 to 1879, 13 per cent. The following resolution was adopted in reply to an invitation from the General Conference of the Methodist Episcopal Church to the Association to take part in an Ecumenical Conference of Methodist bodies accepting the Arminian theology:

1. That we duly appreciate and most heartily reciprocate the fraternal spirit which prompted and which pervades said invitation to participate in the deliberations of said Conference.

2. That, although we are not a "Methodist body," but yet are closely allied to Methodism in doctrine and practice, we herewith accept the invitation and make arrangements to be properly represented at said Conference.

The Committee of Ways and Means was instructed to take steps to have the Church properly represented at the Ecumenical Conference. The need of a more appropriate translation into the English language of the original name of the denomination (*Evangelische Gemeinschaft*) was recognized by the Conference, and a resolution was adopted, to be submitted to the Annual Conferences for approval, ordering that the English name of the Church in the future should be the *Evangelical Church of North America*. A committee was appointed to take in hand the necessary measures to make the contemplated change of name legal. The rule with regard to teaching in theological schools was amended so as to read: "The teachers of the theological branches must be ministers of our Church; for non-theological branches other competent persons may be appointed, whose character and faith are in accordance with the directions of our Church Discipline." The rule concerning the Board of Publication was modified so as to read: "There shall be a Board of Publication consisting of the Bishops and eight other men. The Church shall be divided into eight districts, from each of which one man shall be elected for four years by the General Conference. The Board shall be amenable for its management only to the General Conference." The Committee on Sunday-Schools reported that a gratifying success had been attained in that department of the work of the Church, and that the ministry were manifesting an increasing interest and zeal in carrying it forward. The Conference advised that, in addition to the Conference and district conventions

already often held, Sunday-school institutes be held, as far as possible, at all appointments, under the direction of the pastor, and that normal classes be established, where instructions may be given in the Biblical sciences and the best methods of teaching. A committee was appointed to prepare and publish a course of study for normal classes; and the speedy publication of a catechism for Sunday-schools in the English and German languages, and the preparation and publication of a Biblical geography, in German, were recommended. Articles were approved, to be recommended to the Annual Conferences, providing that the Bishops, except the one who is at the time in the chair, shall be permitted to take part in the deliberations of the General Conference, without having the right to vote, and that such general officers of the Church as were at present members of the General Conference by virtue of their office should have the privilege of choosing the Annual Conferences of which they would be members, or of retaining membership in the Conferences with which they were already connected, while their official membership of the General Conference should cease. The Rev. Jacob J. Esher, the Rev. Rudolph Dubs, D. D., and the Rev. Thomas Bowman, D. D., were reelected to the office of Bishop.

EXODUS OF COLORED PEOPLE. The attention of the country during the past year has been attracted to movements among the colored population, chiefly in the States bordering on the Mississippi. There was no appearance of organization or system among these persons. Their irregularity and the absence of preparation seemed to indicate spontaneity and earnestness. Bands moved from the plantations to the Mississippi River, and thence to St. Louis and other cities, with no defined purpose, except to reach some one of the new States west of the Mississippi, where they expected to enjoy a new Canaan. Their movements received the name of the "Exodus." A large number of these estrays were returned to their homes. Others were sent forward to Kansas, where the welcome was not cordial. There has been much suffering and destitution among them. That there should be a restless and migratory spirit exhibited from time to time by this population, that this should impel to inconsiderate and unorganized efforts for change, and result in unsuccessful experiments, is not surprising. The number of this population is large and increasing. Their place in political and social life is ill-defined, and their merely economical and domestic relations are open to disturbance through the interference and influence of persons unconnected with them socially or economically. Their relations as citizens and voters give them an importance in the eyes of those who are indifferent to them in any other of their relations. A brief retrospect of the history of this race, with a view to ascertain

their present condition and future destiny, may not be amiss in view of the interest this exodus has awakened.

The slavery of the African race upon the American Continent had one feature which distinguished it from any form of slavery that had prevailed elsewhere. The slaves were not captives of their masters, nor slaves because of crime nor of patriarchal authority, nor because of debt and the power of the creditor. The African slave-trade was conducted purely for commercial profit. It was regarded as a prime source of wealth and strength, and treaties were made to secure a monopoly of its advantages. It had been carried on for two centuries before the conscience of the world was fully aroused to its atrocity. The contest for its abolition lasted for nearly half a century before full success was attained. There was an intimate relation between the origin of the trade and the destination of its subjects. The arguments for the suppression of the trade at the place of its origin applied with much force to its abolition at the place where the slaves were employed. The abolition of the slave-trade in 1808 in the United States was followed in a few years by attempts to determine the territorial bounds to which slavery should be confined within the United States, and into this discussion the distribution of political power in the States and sectional aggrandizement largely entered. A continuous agitation for some half-century, commencing with the attempt to delay the admission of Missouri into the Union till slavery was prohibited; the fixing of the line of $36^{\circ} 30'$, and the territory north as free territory; the contests over the territories acquired from Mexico, and upon the admission of Oregon, California, and Kansas to the Union; finally, the civil war and the addition of the Thirteenth, Fourteenth, and Fifteenth Amendments to the Constitution, furnish chapters for the same history. During the period from 1775, when the first motion was submitted for the abolition of slavery (and not then noticed or discussed), until the adoption of the Thirteenth Amendment, in December, 1865, the African race had increased in the United States from less than three hundred thousand to the number of five million persons.

The history of slavery on the eastern continent shows that the progression of the slave population to a condition of freedom and equality was gradual, and that the traces of the progress were indistinct and scarcely discernible, and the fact accomplished without any marked change of law or custom. The abolition of African slavery on this continent has obeyed impulses derived from external forces, and not from the concessions of the master or the demand of the slave.

In 1832 the Ministry of England proposed for inquiry: First, whether the slaves, if emancipated, would maintain themselves, be industrious, and disposed to acquire property by labor? Secondly, whether the dangers of

convulsions are greater from freedom withheld than from freedom granted? Before answers were made, Lord Stanley announced that the Ministers had determined to make the "frightful experiment" of emancipation, and spoke of it as "an unreasoning necessity." The Parliament adopted a measure of apprenticeship of the slaves of four and six years, and voted to pay four ninths of their appraised value, and appropriated £20,000,000 for compensation. The Government of Louis Philippe of France proposed a delay of ten years and compensation; but before the measure proposed was adopted the revolutionary government of Lamartine, in a decree of a few lines, terminated the discussion and abolished slavery in the French Antilles. In 1861 one branch of the Congress of the United States assented to an amendment of the Constitution to prohibit the Federal Government from passing any act of abolition without the consent of the slaveholding States. In 1865, by an amendment of the Constitution, slavery was for ever prohibited in any place within the jurisdiction of the United States. In none of these last instances were there consultations with masters or with slaves. In none was there provision for any consequences to arise from the abrupt termination of existing relations. There was no thought taken for the support of the inferiors in these relations in the performance of the obligations and responsibilities of their changed state. Under the law and custom of slavery, the slave was in a great measure discharged from these. His home in general was upon the lands of the master. His daily life was confined to this habitation. He could not leave it but for a few hours or a few days, and that only by permission. He did not select his vocation or employment; these were provided, and all he did was under supervision. He did not buy, sell, or barter. There were no associations in life or business, nor did he bequeath or inherit. He did not hold property nor perform contracts. The conditions in which he was placed led him to habits of industry, abstinence, and obedience. The gross vices of the world did not have an opportunity to grasp him. It is therefore observable that in all the contentions, controversies, and woes resulting from the existence of these relations, the slave scarcely performed any part whatever—in no instance a conspicuous part. During the civil war in the United States the slaves made no quarrel, no insurrection, and while they remained with their owners they were submissive and obedient. The cessation of hostilities in 1865, and the disruption of the ties which had held the two races in connection, were followed by anarchy and by the disorganization of the economical and domestic relations of the two races. The slaves left their habitations and wandered wildly over the land. They deserted the plantations, their homes, and crowded to the towns and villages. There was no definite aim nor apparent object. They con-

gregated in masses, and spent their days in idleness and vacancy. Then there was a necessity for a Freedman's Bureau, in 1865 and for several years, to furnish them with some guardianship, guidance, and maintenance. The restoration of order and repose, that order and repose which consist in steady pursuits and settled conditions, was not fully attained for many years. In many instances, probably in most instances, the plantation slaves returned for a time at least to their former homes and resumed their accustomed work. The transition from a condition of servitude, where all responsibility and care for themselves was superseded by the control and superintendence of others, to a state of freedom, in which these responsibilities and demands were greatly increased, must have been distressing to the greater part of this population. It would be strange if the majority did not find themselves incompetent to the task. Nor is it surprising that there has not been any marked improvement in their moral or physical condition. The habits and affections acquired in the time of servitude we have mentioned. Sobriety, industry, and domestication we may suppose to have retained a hold upon them, and to account for the absence of any disorder or tumult, and for the maintenance of the existing relations. But a new generation is rapidly rising that did not share in any of the results of this training. They have come into life with instincts to separate from all the associations and to banish the recollections of the life of their progenitors. The seclusion of the plantations, the steady and continuous labor required there, and the absence of excitements and amusements which are found in village and town life, must be repulsive to the sensual natures of this generation. The statesmen of the African race in Hayti seem to have observed this disposition. Toussaint l'Ouverture remanded the laborers on the plantations to their former abodes. He required that they should be supplied with a house and a garden, should have the benefit of a Sunday's market, and should share in the productions of the plantation—generally, one fourth of the gross product. They were prohibited from leaving the plantation without the permission of the owner. The rural code of Hayti in 1826 was more detailed and explicit. "The citizens of the agricultural class" could not be withdrawn from their pursuits except in cases provided by law. They were forbidden to leave the country to reside in towns or villages without permission of the magistrate of their domicile and the consent of the town or village they would reside in. They were prohibited from sending their children to school without such permission. They were not allowed to cultivate a plantation for themselves, and were required to make contracts for service as laborers on the plantations, and were not allowed to leave without permission. The hours of labor were determined, and provisions were made for a house and plot of

ground and means of transportation. Whether this system has been carried into effect, and Hayti is possessed of a sober, industrious, and improving population, may be doubted. The fact is certain that there has been no approximation to the wealth and improvements existing a century ago. In the smaller islands of the British Antilles the relations between the blacks and whites have been harmonious. In Jamaica the tendency has been to estrangement, and the probability is that in the course of a few years there will be none other than the descendants of Africans in that island, as in Hayti.

We have not been able to attribute any particular importance to the movements which have been observed during the past year among the colored population. The publications in the newspapers have been much exaggerated, and the motives for it have been misrepresented. It is quite probable that partisans, eager to accomplish a triumph in an election, may have tempted emigrations from the densely populated districts on the Mississippi River, for a transient and mischievous use of them in some contested election. It may be that some speculators may desire to have a population for waste lands in the far West, and they may have circulated prints and descriptions of a region producing milk and honey, where a black man may bask in the sunshine in idleness between his meals. It may be that there have been instances of wrong and injustice in the dealings of the shopkeepers who besiege the plantations and tempt the laborers to improvident and ruinous dealings, subjecting them to penury and want. It may be that fanatical efforts for establishing large bodies together for religious enterprises or excitements have been operative. It must be remembered that here is a population of about five millions who have been suddenly relieved from restraint and discipline, without being furnished with instruction, and who are without accumulated experience or information of the world and its habits of intercourse. The most improved and advanced are barely able to take care of themselves. The larger proportion are imbecile and incapable for that purpose, and need guidance and guardianship. All of the events of the years following the removal of the restraints we have spoken of, tend to separate this population from those who live in the States where they belonged. There is no reason why there should not be migrations from this part of the country to other portions, and these must be expected. This population will number ten millions of persons within half a century. It is not a population which will add to the intellectual wealth of the country for a long period of time. It is of the utmost consequence that the measures to be adopted in respect to them shall not tend to deteriorate their morals, or fit them to be instruments in the hands of wicked and unscrupulous persons. In so far as projects for a spread of this population

over the land tend to the amelioration of their condition, the promotion of their well-being, none should object. It is probable that the interests of the Southern States would be advanced if there was a distribution of this people. At present their numbers exclude from those States a better population. But to entice them to remove upon hopes that are delusive is vicious and criminal.

The temporary disorganization of labor in limited portions of the South threatened disaster to the growing crops. The excitement spread rapidly among the colored people. On April 17th a colored convention assembled in a Baptist church in New Orleans. There was a total attendance of about two hundred persons, at least one third of whom were colored pastors. The assemblage was ill-organized and tumultuous. They refused to appoint a committee on credentials, on the ground that all present belonged to the classes designated in the call for this convention, viz., "clergymen, teachers, or social directors." In point of fact, the body was simply a mass meeting, composed chiefly of blacks brought down from the country as witnesses in the recent political trials. After a recapitulation of the threadbare story of violence and intimidation, they proceeded to discuss the migration of the African race to the Northwest. They were far from unanimous in regard to the expediency of this movement. Mr. Pinchback (colored), of New Orleans, spoke in opposition. He stated that he saw people in Madison Parish sacrificing their stock and tools, and asked them why they did so. The answer was that they were starving; that they were swindled; that they were afraid of the Constitutional Convention; that the Indians were coming to occupy the soil and drive them off. If any colored man wanted to go, let him go; but, having met to consider the interests of their race, he was opposed to a general movement, and must warn the convention of its ruinous consequences. Another orator cited the published opinion of Frederick Douglass adverse to the exodus. The name of Douglass brought down a storm of yells and hisses. Finally a resolution was passed that it was the sense of this convention that the colored people of the South should migrate. Much of the time of the convention was given to the discussion of correspondence from abroad. One of these communications was from the "Congress of Humanity" in New York, suggesting that the Government should provide the people with industries, etc. The convention closed with an "appeal for material aid to the official and moral influence of the President of the United States," and to the Republican party and the country at large.

The Mississippi Valley Labor Convention met in Vicksburg on May 5th. Its object was "to adopt such measures as will allay the excitement prevailing, or will enable them to supply the places of those laborers who have

gone, or who may hereafter go, to the Western States." Colored delegates were invited to present their grievances and assist in their removal. There was a numerous attendance of planters and of representative colored men. The following resolutions embody the results of their deliberations:

Resolved, That the unrestricted credit system prevailing in all the States here represented, based upon liens or mortgage on stock and crops to be grown in the future, followed by short crops, provoked distrust and created unrest, and disturbed the entire laboring population; and all laws authorizing liens on crops for advance constituted of articles other than those of prime necessity at moderate profits, whether such advances are made by the landlord, planter, or merchants, should be discountenanced and repealed.

Resolved, That this Convention call upon the colored people here present to contradict the false reports circulated among and impressed upon the more ignorant and credulous, and to instruct them that no lands, mules, or money await them in Kansas or elsewhere, without labor or price, and report to the civil authorities all persons disseminating such reports.

Resolved, That it is the constitutional right of the colored people to emigrate where they please, to whatever State they may select for residence; but this Convention urges them to proceed in their movements toward emigration as reasonable human beings, providing in advance by economy the means for transportation and settlement, sustaining their reputation for honesty and fair dealing by preserving intact until the completion of contracts for labor-leasing which have already been made. If, when they have done this, they still desire to leave, all obstacles to their departure will be removed and all practicable assistance will be offered them. Their places will be refilled by other contented labor.

The Nashville Colored Convention assembled in that city on May 7th. It was largely attended by delegates from Alabama, Arkansas, Georgia, Indiana, Illinois, Louisiana, Mississippi, Missouri, Nebraska, Ohio, Oregon, Pennsylvania, Tennessee, and South Carolina. The report set forth the various obstructions to the progress of the blacks during the fifteen years since emancipation. These were attributed solely to the prejudices of color and caste. It recounted the services of the colored people to the Union in freely shedding their blood in defense of its flag and thus securing its victory. It demanded social and political equality as a right. It recommended to the various State Legislatures the adoption of a compulsory system of public education. It insisted that separate schools are injurious to the interests of both races, and foster color prejudices, and that where such schools exist colored teachers alone should be employed. It voted to memorialize Congress to place in the hands of colored regents \$300,000, the amount of unclaimed bounty of the colored soldiers and sailors in the Union army during the late war, to be used in establishing and maintaining an industrial and technical school for colored youths in the unoccupied buildings of Harper's Ferry, or at some other place easy of access. The Committee on Organization reported the constitution of an "American Protective Society," whose objects are to prevent injustice to the colored people, to improve their civil, political,

educational, moral, and sanitary condition, and to solicit contributions everywhere for these objects. The following resolution was adopted: "*Resolved*, That it is the sense of this conference that the colored people should emigrate to those States and Territories where they can enjoy all the rights which are guaranteed by the laws and Constitution of the United States, and enforced by the executive departments of such States and Territories; and we ask of the United States an appropriation of \$500,000, to aid in the removal of our people from the South."

The first refugees to Kansas reached Wyandotte in the beginning of April. By the 1st of August over seven thousand needy and starving persons had arrived in that State. A Relief Society was formed, with its headquarters at Topeka. In spite of strenuous efforts to provide employment, the temporary barracks erected for their shelter were overcrowded, and the association had already expended over \$7,000 in alms. On the 15th of March the Mayor of St. Louis issued a proclamation ad-

vising colored people without means not to come to that city, as it could neither support them nor forward them to their destination. A meeting of delegates from the Kansas Relief Committees published a resolution that, "to prevent want and suffering among our colored immigrants, we hereby express our opinion that proper means should be taken to divert the tide of immigration to other and older States, where accumulated wealth and population afford facilities for their successful settlement." Notwithstanding these discouragements, the exodus has continued intermittently and from various parts of the South. The blacks are an emotional, credulous, and capricious race. Emancipation came to them without preparation or effort on their part. They understood by freedom exemption from labor. Nothing but experience can dispel the delusions and disquiets fostered by their peculiar political education.

In regard to the exodus, public opinion in the South tends to a policy of masterly inactivity.

F

FECHTER, CHARLES ALBERT, a French actor, born in London, October 23, 1824, died at Quakertown, Pa., August 4, 1879. His father, a native of France, was of German lineage; his mother, a native of Flanders, was of Italian lineage; so that in him were united distinct and opposite characteristics of race. In temperament and speech, however, he was decidedly French. He was educated in England and France. His father desired him to become a sculptor, but his tastes were more inclined toward the dramatic profession, and he soon abandoned the *atelier* for the stage. His *début* occurred in 1840 at the Salle Molière in Paris. After this event he studied several weeks at the Conservatory, and then went to Florence, Italy, with a dramatic company, as leading juvenile. Upon his return to Paris, at his father's request he turned his attention once more to sculpture, becoming a student at the Academy of Fine Arts. Within a short time he was again at the Conservatory, remaining, however, but three weeks, when his name was placed on a list of applicants for a *début* at the Théâtre Français. While waiting for an opportunity he modeled a piece of sculpture representing "The Seven Capital Sins," for which he received the grand medal of the Academy. In 1844 he made his *début* as Scide in Voltaire's "Mahomet," and subsequently played Valère in Molière's great comedy. He was next heard of at the Theatre Royal of Berlin, where he acted miscellaneous parts under the management of M. Saint-Aubin. In 1847 he again appeared in Paris, acting in the Vaudeville, and in the same year took a company to London. In 1848 he filled a third engagement

in Paris, and from this time to 1860 was a reigning favorite on the French stage. His great success in those days was gained as Armand Duval in "Les Dames aux Camélias," of which he was the original representative. In 1860 he again went to London, this time with the intention of playing in English. On October 27th he made his *début* in English drama at the Princess's Theatre as Ruy Blas, which was followed by "The Corsican Brothers," "Don César de Bazan," and finally, in March, 1861, by "Hamlet," in which he achieved great success. In 1869 Charles Dickens wrote as follows:

Perhaps no innovation in art was ever accepted with so much favor by so many intellectual persons, pre-committed to and preoccupied by another system, as Mr. Fechter's Hamlet. I take this to have been the case (as it unquestionably was in London), not because of its picturesqueness, not because of its novelty, not because of its many scattered beauties, but because of its perfect consistency with itself. As the animal-painter said of his favorite picture of rabbits, that there was more nature about those rabbits than you usually found in rabbits, so it may be said of Mr. Fechter's Hamlet that there was more consistency about that Hamlet than you usually found in Hamlets. Its great and satisfying originality was in its possessing the merit of a distinctly conceived and executed idea. From the first appearance of the broken glass of fashion and mold of form, pale and worn with weeping for his father's death, and remotely suspicious of its cause, to his final struggle with Horatio for the fatal cup, there were cohesion and coherence in Mr. Fechter's view of the character.

In 1863 he leased the Lyceum Theatre, and brought out there "The Duke's Motto," "Bel Demonio," and other successful pieces. In 1870 he came to New York, and then went to Boston, and at both places he met crowded

audiences. He next attempted to act as manager of the Globe Theatre in Boston, but failed in the venture. He also on several other occasions essayed management, the principal enterprises being the Lyceum and Park Theatres in New York, but generally met with great financial losses. He was, however, eminently successful otherwise, and he was always well received on his appearances in different cities.

FEVER, YELLOW. The first outbreak of the fever during this year was in an unexpected quarter. The United States ship Plymouth sailed from Santa Cruz to Norfolk on the 7th of November, 1878, with several cases of yellow fever on board. In this infected condition she was ordered to Portsmouth, N. H., where she underwent a rigid quarantine. On the 17th of December she entered Boston Harbor. Taking with them their bedding and personal effects, officers and crew left the vessel on the 8th of January, and did not return to it until February 12th. The official report says: "During this period the temperature of the air was generally below the freezing-point, and ice formed and remained solid in buckets throughout the ship. Hatches and air-pipes were left open. Fumigations with sulphurous acids were several times used, disinfectants applied to the bilges, and lime-water was freely used. In fact, the disinfecting agents of cold, fresh air, and fumigation were freely used." The Plymouth sailed for the Windward Isles on March 15th. At sea, on the 21st, yellow fever broke out on board.

On December 16, 1878, a family who had resided for eight months in Chicago took passage in a Pullman palace-car for New Orleans, and arrived there on the 18th. On the 22d one of the children was taken down with an undoubted attack of yellow fever. No cases of fever had occurred in the house occupied by this family. It was new and freshly painted and whitewashed, had been opened to the frosty air for thorough ventilation previous to their occupancy, and was altogether in admirable sanitary condition. The child's case was regular in all its manifestations. It had black vomit, and recovered. There were in this household several unacclimated persons in close attendance upon the patient, but none of them contracted the disease. The thermometer in the sick-room marked 42°. Outside the weather was bitterly cold.

Throughout the South the winter was one of unusual severity; but the cold proved insufficient to destroy the yellow-fever virus.

Memphis.—Memphis was blighted by a recurrence of the scourge. It is difficult to trace the inception of the disease. It must be remembered that many material interests are destroyed by the announcement of a single case. It is not surprising that, acting in all good faith, physicians hesitate to affix this dreaded name so long as there is the slightest doubt. It is probable that there were several

cases in Memphis during the first week of July. There was a death in the Tenth Ward on July 8th, registered as malarial fever. It may be presumed that this was really yellow fever, from the fact that persons residing in the neighborhood, who visited this patient, contracted that disease. On July 8th the first case was reported to the Board of Health. Death occurred on the 10th, and a *post-mortem* examination left no doubt of its genuineness. So soon as this became known, an unparalleled panic broke out. Railroad tickets to the value of over ten thousand dollars were sold in one day. Streets and avenues were blocked, and every available vehicle was pressed into service. On that day a number of suspicious cases were reported, of which five proved to be yellow fever. These six cases appeared simultaneously in widely separated parts of the town. One was in the Sixth Ward, two in the Eighth, and three in the Tenth, at least a mile distant from the other two points. No communication between them has been traced. They were attended by different physicians, who did not meet, and belonged to different social classes not likely to be thrown in contact. It is noticeable that the three houses in which these cases occurred were not inhabited during the previous epidemic. It is said that bedding and clothing used by members of the family who died of yellow fever in 1878 were still preserved in one of these houses, and that in the other second-hand bedding had been purchased. These may have imparted the poison. Strenuous efforts were made by isolation and disinfection to stay the progress of the disease. For a time there was hope of success, but by the 19th of July, thoroughly disheartened, the authorities advised the people to leave. On the 10th of August the pestilence was declared epidemic. No part of the city was then exempt, except the Ninth Ward, an outlying suburb called Chelsea. The condition of Memphis was now gloomy beyond precedent. Yellow flags at every turn betokened the presence of the destroyer. Door after door bore this inscription, "Closed until after the fever." There was no life except on the bluff where the colored troops were encamped. The darkest chapter in the story of this epidemic is the unruly disposition evinced by the negro population. They flocked into the town, attracted by the expectation of free rations, and became not only food for the fever, but a menace to the living. Robbery and incendiarism were of daily occurrence. The white population were insufficient for the care of the sick and the protection of property. The colored companies were called out, and, under the command of Colonel Cameron, aide to the Governor of Tennessee, succeeded in repressing the disturbances. About eight miles from the city refugee camps were prepared for this class of the population. It was very desirable that they should be placed out of risk of starvation and infection, thus freeing the city from riot and pauper sick. It

was with much difficulty, and under the promise of government support, that they were induced to remove.

The epidemic of this year did not rouse public attention to the same degree as the last; therefore there was not the same outflow of sympathy and substantial aid. The Howard Association, fully organized, pursued its labor of charity; but the efficiency of its work was cramped by lack of means. Yet the necessity was great. The mortality in proportion to the unacclimated population was greater than during the summer of 1878, and the suffering was unprecedented. The population when the fever showed itself is estimated by the superintendent of camps at 38,400; of these 20,000 were sent into camp outside the town, within a distance of ten miles. This prompt depopulation left within the city limits about 18,500, of whom 14,500 were black. The following table shows the number of cases and deaths as registered by the Board of Health to the middle of November:

CASES.

MONTHS.	White.	Colored.	Total.
July.....	153	85	188
August.....	320	363	683
September.....	240	203	443
October.....	132	73	205
November.....	8	..	8
Total.....	853	679	1,532

DEATHS.

MONTHS.	White.	Per cent.	Colored.	Per cent.	Total.
July.....	52	33·9	5	14·2	57
August.....	134	41·9	43	11·8	177
September.....	116	43·3	43	20·6	159
October.....	65	49·2	15	20·5	80
November.....	12	1·5	12
Total.....	379	44·4	106	15·6	485

The unsanitary condition of Memphis is admitted, and is in great part attributed to the disorganization occasioned by the plague of 1878. Sickness and death did their work on the *personnel* of the Board of Health itself. Sanitary work, suspended during that epidemic, was not recommenced until the succeeding February. When reorganized, the Board of Health was in a measure paralyzed. The charter of the city of Memphis was abolished by the Legislature in January. The Legislative Council, as the new government was styled, accepted neither the assets nor the liabilities of their predecessors, thus beginning their administration with an empty treasury and without credit. The operations of the Council were further suspended pending a suit to ascertain its legality. Thus for seven months a city claiming a population of 40,000 was without power or means to enforce the most ordinary health ordinance. Its condition needs no description. The necessity for sanitary work was so apparent that, once begun, it was prosecuted with vigor. Much was accomplished

through individual effort. It is said that in July the condition of the city compared favorably with that of the preceding year. Streets and alleys had been cleansed. Proper garbage-carts had for the first time been procured, and they were in daily use. But the evil is beyond the reach of superficial cleanliness. Situated on a bluff, with the current of the mightiest of rivers sweeping below, nature has offered every facility for proper drainage and sewerage. No advantage has been taken of this. The Gayoso Bayou is a fruitful source of miasma. The system of vaults is noisome. The water in wells and underground cisterns is contaminated. The Nicolson pavement is in a state of decay, and a large portion of it had been torn up preparatory to a substitution of stone. The fever has been attributed to the work on this pavement. The uncovered earth and rotting wood may have generated malaria, but the relaying of the pavement can not be the cause of the fever, since it was begun on the 29th of August, after the fever was epidemic, and only on a short portion of a business street leading to the Charleston depot. Much opposition was made to the order prohibiting the traffic in cotton. It is a common opinion that cotton does not carry infection. The French code ranks it also among the second or less dangerous class of fomites, on what scientific grounds is not known. The question was hotly debated, local interests being bound up in the decision.

The yellow fever spread from Memphis to many neighboring points. At Buntyn Station, where it proved severe, there is some doubt as to its importation, a child having died there on June 27th of continued fever ending in black vomit. This case was reported to the Shelby Medical Society on July 2d, but not pronounced yellow fever. Five similar cases among children in Memphis, resulting in recovery, were reported at the same meeting, six days before the first acknowledged case of yellow fever. Near Oak Grove, Miss., thirty miles southeast of Memphis, the outbreak is traced to goods wagoned from that town. A young lady, whose wedding attire was brought in this way, was the first victim. After five days' illness, she died on September 22d. Unfortunately, the disease was not recognized, isolation was not attempted, and it spread rapidly among her relations and friends in this thickly settled section. At Forest City, Ark., out of the first thirteen deaths, nine were females. They attended the funeral of a victim of this unrecognized malady, and probably contracted the disease in the close room where the services were performed. At Vidalia and Concordia the fever ran a short but severe course. In Memphis it gradually declined until October 25th, when pickets and inspectors were disbanded, and the epidemic was declared at an end.

New Orleans.—The year opened with a novel but welcome sight. During several days the pavements were almost impassable. In

the gardens and public squares every blade of grass and the broad banana-leaves were cased in ice, which glittered but did not melt under a brilliant sun. It is conceded that fever does not spread with the temperature below 60°, and it has been the prevalent belief that a cold lower than 32° is destructive of the poison. Houses were thrown open to freely admit this beneficent natural disinfectant. But reliance on refrigeration did not supersede other attempts at sanitation, the lessons of the previous year being too vivid. The city authorities, and the local and the national Boards of Health, were ably seconded by a volunteer organization, the New Orleans Auxiliary Sanitary Association. They collected their own funds by private subscription, cooperated with the municipal authorities, and did much work that the city and Board of Health could not perform. They established a systematic house-to-house inspection. Not satisfied with suggesting disinfection, they undertook it, and it was done efficiently and continually. Pumps, one of which cost \$9,000, were presented by the President of this Association and a public-spirited firm of merchants. With their aid the gutters were constantly flowing with fresh water. The potter's-field, a crying evil, was covered with a deep layer of earth, and a new one was opened. Roused by their appeals, public opinion enforced many reforms. The Common Council undertook the work of filling, not with garbage but with pure river-sand, the "fever-holes" which for over twenty-five years have disfigured the Levee, extending for a mile along the river-front. The magnitude of the work accomplished may be better estimated when it is said that they average six feet in depth. The area to be filled was 644,000 square feet, or about fifteen acres, and required 129,000 cubic yards of sand. Much is due to these energetic and patriotic exertions. The exemption from epidemic is doubtless the result of a combination of causes. The weather throughout the summer was unusually and sometimes unseasonably cool. The tables on page 363 show the relative temperature, barometer, and rainfall of the two seasons. The languor and oppression under which sick and well suffered during 1878 belong evidently to atmospheric conditions not yet tabulated. It is to be regretted, in the interests of science, that the Signal Service does not in New Orleans test the degree of electricity. The alkalinity of the air should also be registered.

In the teeth of much heated opposition, a strong quarantine was maintained by the local Board of Health. Notwithstanding this, the first case of this season entered the city on the 27th of March. The steamship Baltimore, from Rio Janeiro, reached quarantine on March 25th. After due fumigation and ventilation, and two days' detention, she was allowed to proceed. The coxswain was taken down with fever on the evening of the 26th. Removed to the Touro Infirmary, he passed through the

disease to recovery. No infection spread from this patient. The next cases occurred eleven weeks later, in a house on Third Street, between Constance and Camp. Constance Street has been for years the spot where the fever comes earliest and lingers latest. Through this section once ran a sluggish bayou, long since filled up. Possibly its marshy surroundings, or its action as a natural drain to the neighborhood, may cause its unhealthiness. There had been several cases and one death in this Third Street house during 1878. It was rented by an unacclimated family, who had never spent a summer in New Orleans. It had been thoroughly renovated and cleansed, except the vault, which had not been emptied for more than a year. This was done on June 8th. On the 16th one of the children showed fever symptoms. On the 17th the second child was taken. The third was attacked on the 22d, and the fourth on the 27th. On the 12th of July the uncle of these children caught the disease. On the 14th the last child was fever-stricken. On the 17th the father, pilot on board a river-steamer, was prostrated by the disease when the boat was twenty miles below Vicksburg. Of these seven cases all recovered. The symptoms were not so marked as to convince the attending physician, a man of experience and integrity, that they were yellow fever, and they were therefore not reported. A servant employed in this household, after nursing the sick children, went to Mississippi City to visit her family, who reside near this seashore resort, situated a short distance from New Orleans on the Gulf coast. Apparently well when she left New Orleans, on the 6th of July she was seized, before she reached her home on the evening of that same day. On the 10th she died. The fever was communicated to her family. On the 18th two were taken, on the 19th two more, and on the 20th the last brother was attacked. Of these six cases, two died. Some two hundred yards distant from them was the residence of a gentleman whose son was taken ill on July 25th. It is believed that this child played with his little neighbors, and thus contracted the disease. Much difference of opinion prevailed among the physicians who examined these cases. Some classed them as bilious, some as malarial hemorrhagic fever. The question was practically settled when an Italian girl dwelling at the corner of Constance and Second Streets, within a short distance of the house where the seven doubtful cases had previously appeared, died of undoubted yellow fever on July 27th. A washerwoman living in the next yard carried home the clothing of a family in Washington Street, who received the infection. They perceived an odor of carbolic acid, and discovered too late that it was due to disinfectants lavishly used on the adjoining premises.

Within two squares of the first infected house was the mansion of General Hood. Af-

Note.—The rainfall is given in inches and hundredths. The dash (—) signifies that the amount of rainfall on that day was too small to measure.

ter three members of the family had fallen victims to the fever, a careful inspection by the physician of the local Board of Health revealed two ill-constructed and unventilated vaults beneath the basement. These were securely sealed, and, whether as a result or as a simple coincidence, no further cases occurred in this numerous and unacclimated household. The deaths in this family gave an unusual notoriety to the existence of fever in New Orleans. Quarantines were maintained with rigor, and the commercial loss to the city was as great as in years of severe epidemic.

A focus of infection was well established, and round it the disease smoldered slowly. The local Board of Health attacked it promptly, and exhausted the resources of science in disinfection. Always menacing, the disease never attained the mastery, until frost, or the power that controls both pestilence and frost, relieved the people from deadly apprehension.

The infected district lay between Tchoupitoulas and Constance, First and Seventh Streets, comprising in all forty-five squares. From these must be excluded six squares in the southwest corner which were exempted. Within this limited area occurred twenty-four out of the forty-one cases of this year. Of the remaining seventeen cases, five were imported. The twelve others were distributed over different parts of the city. These may or may not have been "original cases." It has been found impossible to trace their causes. They evinced no disposition to spread except in the infected district. This dangerous locality was the scene of the sharp autumnal epidemic of 1876, while the rest of the city was spared. It is the field upon which public-spirited sanitarians should expend all their energies. Its redemption from pestilence would silence opponents sooner than columns of paper argument.

Although there have been cases of doubtful or difficult diagnosis, the faculty have shown a spirit of candor. Suspicious cases have been reported, and due consultation has been held with a single eye to truth. The following table is worthy of acceptance as containing the whole truth and nothing but the truth:

DETAILS.	Males.	Females.	Total.
Total number of cases, diagnosis perfected and recorded as yellow fever.....	22	19	41
Total deaths.....	9	10	19
Cases of children ten years of age and under.....	11	6	17
Deaths of children ten years of age and under.....	4	4	8
Cases of persons over ten years of age.....	12	12	24
Deaths of persons over ten years of age.....	5	6	11

Of the forty-one cases, all were whites; nineteen were natives of New Orleans, two of the State at large, and twenty were persons from abroad. The five imported cases reached

New Orleans, one from Rio Janciro and four from Morgan City.

Morgan City is a port of entry on Berwick's Bay, about eighty miles from New Orleans. It has a fine harbor, used chiefly by the Texas steamers connecting with Morgan's Texas and Opelousas Railroad. The population is about 3,000. It was scourged in 1878. The fever broke out again early in the season. The house in which the Jewish rabbi and his wife died in 1878 was hurriedly closed. Not even was the last meal removed from the table. In May the house was opened and the effects were sold at auction. From this house and its scattered contents the virus spread. From Morgan City the infection was taken to Berwick and thence to Centreville. Persons from Bayou Boeuf who visited Morgan City before the disease was recognized carried the infection home with them. Thence it spread through Assumption Parish, and in a capricious and sporadic manner visited various small settlements and plantations. It followed the lines of travel rather than those of prevalent winds. At the Patout settlement it was generally disseminated, and was fatal during its brief visitation. A social gathering was held at the house of one of the principal families of the neighborhood, a young lady belonging to which had returned from a visit indisposed, but not ill. The festivities went on until a sudden change for the worse occurred, and before the guests could leave the house she died of pronounced yellow fever. Many of them were soon fever-stricken.

In comparison with 1878, the fever record of 1879 is insignificant. A wide field for study and experiment was opened. The warmth of the discussion provoked proves the earnestness of the inquirers. It is to be hoped that preventives or remedy may be found. The question of quarantine is still an open one. Until disproved, its officers should be upheld by opinion and the press. No commercial interests should weigh against the public health. That the virus is transported in ships is known. Many pronounce it a ship-disease. In 1872 there was in the harbor of Pernambuco a frightful epidemic confined wholly to the shipping, no cases whatever being produced on shore. A new ship, built in 1876, the Niagara, became infected in Havana and underwent scientific disinfection. The day after leaving New York, on the return trip, yellow fever broke out on board. From this it is argued that the vessel itself communicated the infection. It is known that infection clings to decayed wood. The captain attributes it to faulty construction, as two inches of her bilge-water can not be pumped out. These are suggestive instances. Refrigeration has not yet been fairly tested. It ought to be fully tried, although Alpine researches have demonstrated that low-class organisms inclosed in ice for an indefinite period have retained vitality.

The most hopeful signs of the times are the vigorous measures taken to confront the foe.

Public interest is aroused. Scientists are grappling with unsolved but not insoluble problems. Sewerage and drainage are discussed. The country at large is receiving advanced instruction in hygiene. Sanitary associations are prosecuting the work of disinfection and cleanliness. The American Health Association is continuing its labors. Railroad managers have met in convention to secure liberty of traffic and security to health. State boards of health are employing local experience and State powers. The Government has undertaken to be the arbiter of inter-State difficulties, and the guardian of the whole water-line in preventing importation. (See HEALTH, NATIONAL BOARD OF.) We may trust that the year is at hand when the land will be delivered from the noisome pestilence.

FINANCES OF THE UNITED STATES.

The improvement in commercial and financial affairs of the previous year was continued during 1879, although the last six months of it passed under a resumption of specie payments. The refunding of the Government bonds was entirely successful, and even a lower rate of interest was suggested as practicable.

In the annual report of the Secretary of the Treasury made in December, 1878, there was presented a statement of the receipts and expenditures of the Government for the first quarter of the fiscal year ending June 30, 1879, and an estimate of the same for the remaining three quarters, as follows :

RECEIPTS.	For the quarter ending September 30, 1878.	For the remaining three quarters of the year.
	Actual.	Estimated.
From customs.....	\$88,863,268 10	\$94,131,731 90
From internal revenue.....	28,572,144 46	86,427,355 54
From sales of public lands..	260,765 63	783,234 37
From tax on circulation and deposits of national banks	3,868,519 08	3,831,430 97
From repayment of interest by Pacific Railway Companies.....	897,737 10	952,262 90
From customs fees, fines, penalties, etc.....	244,833 93	705,166 07
From fees—consular, letters patent, and lands...	508,990 76	1,491,109 24
From proceeds of sales of Government property...	41,127 51	203,879 49
From premium on sales of coin.....	5,441 23	44,553 77
From profits on coinage, etc.	71,968 81	1,738,031 69
From miscellaneous sources	1,060,027 37	1,289,972 63
Total receipts.....	\$78,399,723 43	\$191,100,276 57

In the actual receipts for 1878-'79, given below, there was an increase compared with the previous year of between 16 and 17 millions—in customs revenues, 7 millions; in internal revenue, nearly 3 millions; and from interest from Pacific Railroads, coinage profits, and other sources, over 6½ millions—offset by a decrease in public land sales, profits on sales of coin, bank-taxes, etc., footing up about two thirds of a million.

The expenditures for the same period, actual and estimated, were :

EXPENDITURES.	For the quarter ending September 30, 1878.	For the remaining three quarters of the year.
	Actual.	Estimated.
For civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenue	\$15,044,519 62	\$39,955,430 38
For Indians.....	1,750,517 25	3,049,432 75
For pensions.....	7,802,465 63	21,497,534 37
For military establishment, including fortifications, river and harbor improvements, and arsenals.....	10,253,900 87	23,741,099 13
For naval establishment, including vessels and machinery, and improvements at navy yards.....	4,520,742 84	10,479,237 16
For interest on the public debt.....	33,967,427 06	63,082,572 94
Total ordinary expenditures.....	\$73,344,573 27	\$166,755,426 73

Total receipts, actual and estimated..... \$264,500,000
 Total expenditures, actual and estimated..... 240,100,000

Leaving a balance of..... \$24,400,000 applicable to the sinking fund, which is estimated for the year at \$36,954,607.37.

By this estimate it was expected that the surplus would be \$24,400,000. But the ordinary revenues from all sources for the fiscal year ending June 30, 1879, were as follows:

From customs.....	\$137,250,047 70
From internal revenue.....	113,561,610 68
From sales of public lands.....	924,781 06
From tax on circulation and deposits of national banks.....	6,747,500 32
From repayment of interest by Pacific Railway companies.....	2,707,201 08
From customs fees, fines, penalties, etc.....	1,100,371 66
From fees—consular, letters patent, and lands,	2,136,051 79
From proceeds of sales of Government property.....	181,123 81
From premium on sales of coin.....	8,104 33
From premium on loans.....	1,496,948 25
From profits on coinage, etc.....	2,324,938 67
From revenues of the District of Columbia..	1,741,461 16
From miscellaneous sources.....	3,046,544 05

Total ordinary receipts..... \$273,927,184 46

The ordinary expenditures for the same period were :

For civil expenses.....	\$16,489,997 17
For foreign intercourse.....	1,333,536 13
For Indians.....	5,206,109 08
For pensions, including \$5,373,000 arrears of pensions.....	35,121,482 39
For the military establishment, including river and harbor improvements and arsenals,	40,425,660 73
For the naval establishment, including vessels, machinery, and improvements at navy yards.....	15,125,126 84
For miscellaneous expenditures, including public buildings, lighthouses, and collecting the revenue.....	38,370,205 78
For expenditures on account of the District of Columbia.....	3,597,516 41
For interest on the public debt.....	105,327,949 00
For payment of Halifax award.....	5,500,000 00

Total ordinary expenditures..... \$266,947,883 53

Leaving a surplus revenue of..... \$6,979,300 93

Which was applied as follows:

To the redemption of United States notes, etc.....	\$21,617 50
To the redemption of fractional currency.....	703,133 66
To the redemption of six per cent. bonds for the sinking fund.....	18,500 00
To increase of cash balance in the Treasury..	6,124,024 77
Total.....	\$6,979,300 93

The amount due the sinking fund for the year was \$36,955,604.63, leaving a deficiency on this account of \$30,076,303.70. Compared with the previous fiscal year, the receipts for 1879 have increased \$16,711,159.70, in the following items: In customs revenue, \$7,079,367.50; in internal revenue, \$2,979,985.84; in premium on loans, \$1,496,943.25; in repayment of interest by Pacific Railroad companies, \$1,840,246.67; in profits on coinage, \$1,234,176.34; and in miscellaneous items, \$2,580,440.10. There was a decrease of \$647,853.94, as follows: In sales of public lands, \$154,962.31; in premium on sales of coin, \$308,997.92; in semi-annual tax on banks, \$115,552.64; and in proceeds of sales of Government property, \$68,341.07; making a net increase in the receipts from all sources for the year of \$16,063,305.76.

The expenditures show an increase over the previous year of \$32,223,731.26, as follows: In the War Department, \$8,271,512.88; in the Interior Department, \$8,561,292.11 (Indians \$576,828.80, and pensions \$7,984,463.31); in the interest on the public debt, \$2,827,074.35; and in the civil and miscellaneous, \$12,563,851.92. There was a decrease of \$2,240,174.53 in the Navy Department; making a net increase in the expenditures of \$29,983,556.73.

The receipts and expenditures for the first quarter of the fiscal year ending June 30, 1880, and the estimates for the three remaining quarters, were as follows:

RECEIPTS.	For the quarter ending September 30, 1879.	For the remaining three quarters of the year.
	Actual.	Estimated.
From customs.....	\$44,083,497 98	\$107,916,502 07
From internal revenue....	39,409,691 81	86,590,308 19
From sales of public lands..	117,883 61	862,616 39
From tax on circulation and deposits of national banks	3,860,569 60	3,389,480 40
From repayment of interest by Pacific Railway com- panies.....	252,427 46	1,247,572 54
From customs fees, fines, penalties, etc.....	280,579 26	860,420 74
From fees—consular, letters patent, and lands.....	506,864 29	1,698,185 71
From proceeds of sales of Government property....	55,965 33	144,034 67
From profits on coinage, etc.	469,486 09	2,080,513 91
From revenues of the Dis- trict of Columbia.....	238,864 06	1,461,185 94
From miscellaneous sources	1,109,384 17	1,940,665 83
Total receipts.....	\$79,543,663 61	\$208,156,336 39

The estimated expenditures for 1879-'80 show an increase of 24 millions over those of the preceding year. The unusual charge of arrears of pensions makes up this whole excess. There is a decrease of about 3 millions in the interest account, and another of about 4½ millions in the civil and miscellaneous expenses, offset by an increase in military expenses of over 4 millions, and in regular pensions of 2 millions. The expenditures for the first quarter and estimates for the remaining three quarters of the year are as follows:

EXPENDITURES.	For the quarter ending September 30, 1879.	For the remaining three quarters of the year.
	Actual.	Estimated.
For civil and miscellaneous expenses, including public buildings, lighthouses, and collecting the revenue	\$12,165,764 34	\$39,537,769 66
For Indians.....	2,048,748 62	8,451,251 98
For pensions—regular.....	10,892,742 06	90,480,257 94
For arrears of pensions.....	16,874,249 60	3,252,750 40
For military establishment, including fortifications, river and harbor improve- ments, and arsenals.....	12,104,897 85	21,017,692 63
For naval establishment, in- cluding vessels and ma- chinery and improve- ments at navy yards.....	4,196,569 59	11,808,420 41
For expenditures on account of the District of Columbia	1,163,798 65	9,182,737 85
For interest on the public debt.....	82,736,665 46	61,140,734 54
Total ordinary expendi- tures.....	\$91,683,885 10	\$172,816,614 90
Total receipts, actual and estimated.....		\$288,000,000 00
Total expenditures, actual and estimated...		264,000,000 00
Leaving a balance of....		\$24,000,000 00

After applying the balance of the special deposit of United States notes held in the Treasury for the redemption of fractional currency, amounting to \$8,375,934, to the payment of arrears of pensions, as directed in section 3 of the act approved June 21, 1879, the increased revenue derived during the months of July, August, and September of this fiscal year, 1879-'80, was fully absorbed by current expenses, and the payment of \$16,374,249.60 arrears of pensions accruing under the act approved January 25, 1879. Notwithstanding these unusual demands, the Department was able to purchase and apply to the sinking fund, out of the surplus revenues for the month of October, \$10,050,000 six per centum bonds of 1881, and \$676,050 five per centum bonds, act of March 3, 1864, the latter of which is the excess of redemptions of these bonds over issues of four per cents under the refunding acts; and unless unexpected appropriations, available for expenditure within the year, are made by Congress, the surplus revenues, in addition to paying off the balance of arrears of pensions, will probably enable the Department to apply to the sinking-fund account, during the year, the sum of \$24,000,000.

It is contemplated in the estimates of revenue that the receipts will be about the ordinary amount, and that the increase in the first quarter was abnormal and not likely to continue. They will therefore be sufficient for the demands of the Government unless Congress should make some unusual appropriations, or repeal or reduce existing taxes. Should this be the case, it will be necessary to provide other sources of revenue to meet the deficiency, and for this purpose a moderate duty on tea and coffee and an internal tax upon manufactures of opium are recommended. Opium particularly is recommended, because large quantities

THE FOLLOWING IS A STATEMENT OF THE OUTSTANDING PRINCIPAL OF THE PUBLIC DEBT OF THE UNITED STATES, JUNE 30, 1879.

TITLE.	Length of loan.	When redeemable.	Rates of interest.	Price at which sold.	Amount authorized.	Amount issued.	Amount outstanding.
Old debt (up to 1837).....	1 and 2 years.	On demand.	5 and 6 per cent.	\$57,665 00
Treasury notes prior to 1846.	1 year.	1 and 2 years from date.	1 mill and 6 per cent.	Par.	82,229 83
Treasury notes of 1846.	5 years.	1 year from date.	1 mill and 6 per cent.	Par.	\$10,000,000 00	\$1,687,500 00	6,000 00
Mexican indemnity.....	1 and 2 years.	April and July, 1849.	5 per cent.	Par.	350,000 00	363,373 92	1,194 81
Treasury notes of 1847.....	20 years.	After 60 days' notice.	5 and 6 per cent.	25,000,000 00	26,122,109 00	1,950 00
Loan of 1847.....	Indefinite.	July 1, 1868.	6 per cent.	Indefinite	253,073 00	8,600 00
Bounty-land scrip (1847).	14 years.	July 1, 1849.	5 per cent.	21,700 00
Texas indemnity stock (1850).	10 years.	January 1, 1866.	5 and 6 per cent.	1,700 00
Treasury notes of 1851.....	10 years.	60 days' notice.	5 and 6 per cent.	20,000,000 00
Loan of 1853.....	10 years.	January 1, 1874.	5 per cent.	45,000 00
Loan of 1860.....	10 or 20 years.	January 1, 1874.	5 per cent.	16,000 00
Treasury notes of 1861.....	20 years.	2 years after date.	6 per cent.	15,415,000 00
Oregon war debt (1861).....	20 years.	60 days after date.	6 per cent.	8,000 00
Loan of July and August, 1861 (1881s).....	20 years.	July 1, 1881.	6 per cent.	945,000 00
Old demand-notes (1861-62).	3 years.	On demand.	None.	50,000,000 00
Seventy-thirties of 1861.....	5 or 20 years.	August 19 and October 1, 1864.	7 3/8 per cent.	389,821,350 00
Five-twentieths of 1862.....	5 or 20 years.	May 1, 1867.	6 per cent.	60,000,000 00
Legal-tender notes (1862-63)	Not less than 1 year.	On demand.	None.	140,094,750 00
Temporary loan (1862).....	30 days.....	After 10 days' notice.	4, 5, and 6 per cent.	514,771,600 00
Certificates of indebtedness (1862).	1 year.	On presentation.	None.	\$449,883,902 10
Fractional currency.....	1 year.	1 year after date.	5 per cent.	8,000 00
One-year notes of 1863.....	1 year.	1 year after date.	5 per cent.	561,758,241 65
Coin-certificates (from 1863)	3 years.	On demand.	None.	49,102,669 27
Compound-interest notes (1862-64)	10 or 40 years.	March 1, 1874.	5 per cent. comp'nd.	75,000,000 00
Ten-forties of 1864.....	5 or 20 years.	November 1, 1869.	6 per cent.	44,250,000 00
Five-twentieths of June, 1864.....	8 years.....	August 15, 1867, June 15, 1868, and July 15, 1868.	7 1/8 per cent.	166,450,000 00
Seven-thirties of 1864 and 1865.	Indefinite.	November 1, 1870.	6 per cent.	57,583,400 00
Navy-pension fund.....	5 or 20 years.	November 1, 1870.	6 per cent.	266,565,440 00
Consols of 1865.....	5 or 20 years.	July 1, 1870.	6 per cent.	196,117,360 00
Consols of 1867.....	5 or 20 years.	July 1, 1872.	6 per cent.	138,423,150 00
Consols of 1868.....	5 or 20 years.	July 1, 1873.	6 per cent.	71,500 00
Three per cent. certificates (1867-68)	Indefinite.	On demand.	3 per cent.	80,000,000 00
Five per cent. funded loan of 1861 (refunding).	10 years.	May 1, 1881.	5 per cent.	14,000,000 00
Four and a half per cent. funded loan of 1891 (refunding)	15 years.	September 1, 1891.	4 1/2 per cent.	203,327,250 00
Four per cent. funded loan of 1907 (refunding)	30 years.	September 1, 1907.	4 per cent.	145,650 00
Five per cent. loan of 1881 (for silver).	10 years.	May 1, 1881.	5 per cent.	892,998,950 00
Four and a half per cent. loan of 1891 (resumption).	15 years.	September 1, 1891.	4 1/2 per cent.	1,600,900 00
Four per cent. loan of 1907 (resumption).	30 years.	September 1, 1907.	4 per cent.	379,618,000 00
Five per cent. loan of 1881 (to pay J. B. Eads).	10 years.	May 1, 1881.	5 per cent.	42,539,350 00
Certificates of deposit (from 1872)	Indefinite.	On demand.	None.	85,155,000 00
Silver certificates (from 1878)	Indefinite.	On demand.	None.	486,043,000 00
Refunding certificates (from 1879)	Indefinite.	Convertible into 4 per cent. bonds.	4 per cent.	13,957,000 00
Total existing debt.....							\$2,849,967,489 04

* Including retakings. † Including conversion of Treasury notes. ‡ \$50,000,000 0 per cent. stock issued at a discount of \$5,338,763.09, being equivalent to 1 per cent.

§ Highest amount outstanding January 30, 1864.

prepared for smoking are brought into the country, and the article, being of small bulk and great value, is easily smuggled. A similar article is manufactured in this country from the crude opium, and it is difficult to determine whether the product in any given case is of domestic or foreign manufacture. Therefore an internal tax equal to that on the imported article, \$6 per pound, is recommended on all prepared in this country for smoking.

The payments into the sinking fund have not been kept up to the requirements of the acts of Congress. Those of February 25, 1862, and July 14, 1870, direct the purchase or payment of one per centum of the entire debt within each fiscal year after July 1, 1862, to be set apart as a sinking fund, and the interest to be applied to the purchase or payment of the debt. The loss of revenue consequent on the general depression of business during the last few years rendered it impossible to comply with these acts and meet the appropriations of Congress.

The resumption of specie payments, as required by act of Congress, took place on January 1, 1879, on United States notes, at the Assistant Treasurer's office in New York. The reserve of coin over and above all matured liabilities at that date was \$133,508,804. The operation of the resumption act is thus described by the Secretary of the Treasury in his report to Congress:

Previous to that time, in view of resumption, United States notes and coin were freely received and paid in private business as equivalents. Actual resumption commenced at the time fixed by law, without any material demand for coin and without disturbance to public or private business. No distinction has been made since that time between coin and United States notes in the collection of duties or in the payment of the principal or interest of the public debt. The great body of coin indebtedness has been paid in United States notes at the request of creditors. The total amount of United States notes presented for redemption, from January 1 to November 1, 1879, was \$11,256,678. But little coin has been demanded on the coin liabilities of the Government during the same period, though the amount accruing exceeded six hundred million dollars. Meantime coin was freely paid into the Treasury, and gold bullion was deposited in the assay-office and paid for in United States notes. The aggregate gold and silver coin and bullion in the Treasury increased during that period from \$167,568,734.19 to \$225,133,558.72, and the net balance available for resumption increased from \$133,508,804.50 to \$152,737,155.48.

To meet the local demand for coin in places other than New York City, persons applying have been paid silver coin for United States notes, the coin being delivered to them on established express lines free of expense; and for some time gold and silver coin has been freely paid out at the several sub-treasuries upon current obligations of the Government. There has been, however, but little demand for coin, and United States notes and the circulating notes of national banks have been received and paid out at par with coin in all business transactions, public or private, in all parts of the country.

The specie standard, thus happily secured, has given an impetus to all kinds of business. Many industries, greatly depressed since the panic of 1873, have revived, while increased activity has been shown in all branches of production, trade, and commerce.

In his opinion the provisions of law now existing are ample to enable the Department to maintain the resumption.

The question whether United States notes ought still to be a legal tender in the payment of debts has not escaped the notice of the Secretary. His views are thus expressed:

The power of Congress to make them such was asserted by Congress during the war, and was upheld by the Supreme Court. The power to reissue them in time of peace, after they are once redeemed, is still contested in that Court. Prior to 1862, only gold and silver were a legal tender. Bullion was deposited by private individuals in the mints and coined in convenient forms and designs, indicating weight and fineness. Paper money is a promise to pay such coin. No constitutional objection is raised against the issue of notes not bearing interest to be used as a part of the circulating medium. The chief objection to the emission of paper money by the Government grows out of the legal-tender clause, for without this the United States note would be measured by its convenience in use, its safety, and its prompt redemption. In war, and during a grave public exigency, other considerations may properly prevail; but it would seem that during peace, and especially during times of prosperity and surplus revenue, the promissory note of the United States ought to stand like any other promissory note. It should be current money only by being promptly redeemed in coin on demand. The note of the United States is now received for all public dues, it is carefully limited in amount, it is promptly redeemed on demand, and ample reserves in coin are provided to give confidence in and security for such redemption. With these conditions maintained, the United States note will be readily received and paid on all demands. While they are maintained, the legal-tender clause gives no additional credit or sanction to the notes, but tends to impair confidence and to create fears of over-issue. It would seem, therefore, that now and during the maintenance of resumption it is a useless and objectionable assertion of power, which Congress might now repeal on the ground of expediency alone. When it is considered that its constitutionality is seriously contested, and that from its nature it is subject to grave abuse, it would now appear to be wise to withdraw the exercise of such a power, leaving it in reserve to be again resorted to in such a period of war or grave emergency as existed in 1862. The Government derives an advantage in circulating its notes without interest, and the people prefer such notes to coin, as money, for their convenience in use and their certain redemption in coin on demand. This mutual advantage may be secured without the exercise of questionable power; nor need any inconvenience arise from the repeal of the legal-tender clause as to future contracts. Contracting parties may stipulate for either gold or silver coin or current money. In the absence of an express stipulation for coin, the reasonable presumption would exist that the parties contemplated payment in current money, and such presumption might properly be declared by law and the contract enforced accordingly.

The Secretary therefore respectfully submits to Congress whether the legal-tender clause should not now be repealed as to all future contracts, and parties be left to stipulate the mode of payment.

Since November 23, 1878, there have been refunded of the bonds of the United States \$370,848,750 six per cent., and \$193,890,250 five per cent., into bonds bearing interest at four per cent., making an annual saving of interest hereafter of \$9,355,877.50.

The following table shows the transactions in refunding since March 1, 1877, and the annual saving of interest therefrom:

TITLE OF LOAN.	Rate per ct.	Amount refunded.	Annual interest charge.
Loan of 1858.....	5	\$260,000	\$9,707,512 50
Ten-forties of 1864....	5	193,590,250	
Five-twenties of 1865..	6	100,436,050	
Consols of 1865.....	6	202,668,100	
Consols of 1867.....	6	810,622,750	
Consols of 1868.....	6	87,478,500	
Total.....		\$845,845,950	\$48,779,254 50

In place of the above bonds there have been issued bonds bearing interest as follows:

TITLE OF LOAN.	Rate per ct.	Amount issued.	Annual interest charge.
Funded loan of 1891....	4½	\$185,000,000	\$6,075,000
Funded loan of 1907, including refunding certificates.....	4	710,345,950	28,413,838
Total.....		\$895,345,950	\$34,488,838

making a saving in the annual interest since March 1, 1877, of \$14,290,416.50.

These transactions have been accomplished without the loss of a dollar, and without appreciably disturbing the current business of the country.

The entire transactions in refunding since 1870 have been as follows:

TITLE OF LOAN.	Rate per ct.	Amount refunded.	Annual interest charge.
Loan of 1858.....	5	\$14,217,000	\$10,405,362 50
Ten-forties of 1864....	5	193,590,250	
Five-twenties of 1862..	6	401,143,750	
Five-twenties of March, 1864.....	6	1,327,100	71,234,322 00
Five-twenties of June, 1864.....	6	59,185,450	
Five-twenties of 1865..	6	100,144,500	
Consols of 1865.....	6	211,987,050	
Consols of 1867.....	6	816,428,500	
Consols of 1868.....	6	87,077,050	
Total.....		\$1,895,345,950	\$81,639,684 50

In place of the above bonds there have been issued bonds bearing interest as follows:

TITLE OF LOAN.	Rate per ct.	Total issued.	Annual interest charge.
Funded loan of 1881....	5	\$500,000,000	\$25,000,000
Funded loan of 1891....	4½	185,000,000	8,325,000
Funded loan of 1907, including refunding certificates.....	4	710,345,950	28,413,838
Total.....		\$1,395,345,950	\$61,738,838

making an annual saving hereafter in the interest charge on account of refunding operations of \$19,900,846.50.

The following-described bonds will mature in 1880 and 1881:

AUTHORIZING ACTS.	Rate of interest.	Date of maturity.	Amount.
February 8, 1861.....	6	Dec. 31, 1880	\$18,415,000
July 17 and August 5, 1861.....	6	June 30, 1881	182,605,550
March 3, 1863.....	6	June 30, 1881	71,787,000
March 2, 1861.....	6	July 1, 1881	623,800
July 14, 1870, and January 20, 1871.....	5	May 1, 1881	508,440,350
Total.....			\$782,071,700

Of these bonds, the loan of February 8, 1861, maturing December 31, 1880, is payable upon the demand of the holders, and can probably be provided for from the surplus revenues.

Under the refunding acts of July 14, 1870, and January 20, 1871, bonds for refunding purposes were authorized in the amount of \$1,500,000,000. Of this amount there have been issued, as above stated, \$1,395,345,950, leaving available for future refunding operations \$104,654,050.

A distinctive paper has been adopted for printing public securities. It has for its special feature a continuous silken thread and distributed silk fiber of different colors, both of which are incorporated with the pulp in the process of manufacture.

The value of the coinage executed during the year was:

Gold.....	\$40,956,912 00
Standard silver dollars.....	27,227,500 00
Subsidiary silver coin.....	882 50
Minor coin.....	97,798 00

Total..... \$68,812,592 50

Gold and silver were separated in the refineries of the mints and the assay-office at New York in the amount of \$20,759,549.97 in gold, and \$10,687,526.97 in silver, a total of \$31,447,076.94, and fine and unparted bars were made in the amount of \$12,976,812.68 of gold, and \$9,045,802.11 of silver. The coinage of standard silver dollars has been kept fully up to the requirements of law, notwithstanding the difficulty experienced in procuring silver bullion for the mints at San Francisco and Carson, at market rates. The amount of silver coin of less than a dollar provided for by law having been executed, the coinage of this money has been suspended. The demand for minor coins, particularly for the one-cent piece, has been pressing. The bullion production from the mines of the United States for the last year is estimated by the Director to be nearly \$80,000,000, the proportions of gold and silver being about equal. The year's total production is less than that of the preceding year, caused by a diminution in the yield of the mines of Nevada, which was not compensated by increased production in other places. The Director estimates the coin in the country on October 31, 1879, at \$305,750,497 of gold, and \$121,456,355 of silver. The bullion in the mints and New York assay-office at that date awaiting coinage amounted to \$49,931,035 of gold, and \$4,553,182 of silver, making the total amount of coin and bullion \$481,691,069.

The market value of the bullion in the silver dollar has been during the past year from 10 to 16 per cent. less than the market value of the bullion in the gold dollar. The total amount of silver dollars coined to November 1, 1879, under the act of February 28, 1878, was \$45,206,200, of which \$13,002,842 was in circulation, and the remainder, \$32,203,358, in the Treasury at that time. No effort has been spared to put this coin in circulation.

Owing to its limited coinage it has been kept at par.

The number of banks in operation on October 2, 1879, was 2,048, and the aggregate capital \$454,067,365; surplus, \$114,786,528; individual deposits, \$719,737,568; specie, including United States coin certificates, \$42,173,731; legal-tender notes and certificates, \$95,973,446; loans, \$875,013,107; circulation, \$337,181,418.

The monetary transactions of the Government have been conducted through the offices of the United States Treasurer, 9 assistant treasurers, 510 depositaries, and 222 national-bank depositaries.

The receipts of the Government from all sources have amounted during the last year, as shown by warrants, to \$1,066,634,827.46, of which \$792,807,643 have been received from loans, \$137,250,947.70 from customs, \$113,561,610.58 from internal revenue, and \$23,015,526.18 from sales of land and from miscellaneous sources. These receipts were deposited as follows: In independent-treasury offices, \$413,363,508.43; in national-bank depositaries, \$653,271,319.03.

The receipts from the several sources of taxation under the internal-revenue laws for the fiscal year ending June 30, 1879, were as follows:

From spirits.....	\$52,570,254 69
From tobacco.....	40,135,002 65
From fermented liquors.....	10,729,320 08
From banks and bankers.....	3,198,888 59
From penalties, etc.....	279,497 80
From adhesive stamps.....	6,706,854 06
From arrears of taxes under repealed laws....	299,094 00
Total.....	\$113,918,466 87

The following is a list of subjects of taxation under the internal-revenue law:

Deposits in bank, or with persons, etc., engaged in the business of banking.

Deposits in savings banks. [Savings banks are now exempt from tax on \$2,000 of savings deposits made in the name of and belonging to any one person, thus exempting the percentages of all poor persons.]

Capital of banks, etc., and capital employed by any person in the business of banking beyond average amount invested in United States bonds.

Circulation issued by any bank, etc., or person, per month.

Banks, etc., on amount of notes of any person, State bank, or State banking association, used for circulation and paid out.

Banks, bankers, or associations, on amount of notes of any town, city, or municipal corporation, paid out by them.

Every person, firm, association other than national bank associations, and every corporation, State bank, or State banking association, on the amount of their own notes used for circulation and paid out by them.

Every such person, firm, association, corporation, State bank, or State banking association, and also every national banking association, on the amount of notes of any person, firm, association other than a national banking association, or of any corporation, State bank or State banking association or of any town, city, or municipal corporation, used for circulation and paid out by them.

Bank-check, draft, order, or voucher for the payment of any sum of money whatsoever, drawn upon any bank, banker, or trust company.

Medicines or preparations, perfumeries and cosmetic-

les, friction-matches, wax-tapers, cigar-lights, playing-cards.

Spirits distilled from apples, peaches, or grapes.

Spirits distilled from materials other than apples, peaches, and grapes.

Rectifiers of any quantity less than 500 barrels.

Rectifiers of 500 barrels or more.

Wines, liquors, or compounds known or denominated as wine, and made in imitation of sparkling wine or champagne, but not made from grapes grown in the United States, and liquors not made from grapes, currants, rhubarb, or berries grown in the United States, but produced by being rectified or mixed with distilled spirits.

Retail liquor-dealers, wholesale liquor-dealers, manufacturers of stills, stills or worms, manufactured.

Stamps for distilled spirits intended for export; stamps, distillery warehouse; stamps for rectified spirits; stamps, wholesale liquor-dealers; stamps, special bonded warehouse; stamps, special bonded warehouse (rewarehousing); stamps for imported spirits.

Cigars and cheroots; cigarettes; manufacturers of cigars; snuff of all descriptions, domestic or imported, and snuff flour sold or removed for use, per pound; tobacco, chewing and smoking; dealers in leaf tobacco; retail dealers in leaf tobacco; dealers in manufactured tobacco; manufacturers of tobacco; peddlers of tobacco.

Fermented liquors; brewers; retail dealers in malt liquors; wholesale dealers in malt liquors.

The total tonnage of the country on June 30, 1879, was 4,169,600 tons. Of this tonnage 1,491,533 tons represented 2,717 vessels registered for the foreign trade, and 2,678,067 tons represented 22,494 vessels enrolled and licensed and engaged in the coasting or domestic trade. There has been an increase of 94,350 tons employed in domestic trade, and a decrease of 137,514 tons employed in the foreign trade by sea, as compared with the tonnage of 1878.

The vessels built during the year are classed as follows:

VESSELS.	Number.	Tonnage.
Sail-vessels.....	468	66,567
Steam-vessels.....	335	56,361
Canal-boats enrolled.....	36	4,069
Barges.....	293	23,733
Total.....	1,132	193,030

The total tonnage of vessels entered at the seaboard ports from foreign countries was 11,530,527 tons during the year ended June 30, 1878, and 13,768,137 tons during the last fiscal year, showing an increase of 2,237,610 tons, or about 19 per cent. The American tonnage entered exhibited an increase of only 40,306 tons, or 1 per cent., while the foreign showed an increase of 2,197,304 tons, or nearly 26 per cent. Of the total amount of merchandise brought in at seaboard, lake, and river ports, during the last fiscal year, an amount of the value of \$143,599,353 was imported in American vessels, and \$310,499,599 in foreign; of the exports, a value of \$128,425,339 was shipped in American, and \$600,769,633 in foreign vessels. Of the combined imports and exports, 23 per cent. only of the total value was conveyed in American vessels.

The great financial and other events of 1879—such as the resumption of specie payments;

the negotiation of \$540,000,000 of United States four per cent bonds, mostly at home; an excess of exports over imports of \$270,000,000 in the fiscal year ending June 30th; a net import of gold amounting to \$78,000,000 in five months from August 1st; and crops estimated at 448,755,000 bushels of wheat, 1,544,899,000 bushels of corn, and 5,500,000 bales of cotton—gave rise to extraordinary movements in commercial and financial affairs. The prices of merchandise and all classes of securities

rapidly advanced. A state of buoyancy, activity, and speculation at the chief centers of trade ensued, which has never been equaled when the country was on a specie basis. The following summary, from the "Financial and Commercial Chronicle," shows the condition of the New York Clearing-House banks, the premium on gold, rate of foreign exchange, and prices of leading securities and articles of merchandise, on or about the 1st of January in each year, from 1878 to 1880, inclusive:

FINOTTI, JOSEPH M., was born in Italy in 1817, and died at Central, Colorado, January 10, 1879. He was of a distinguished family, and his early and ardent desire for knowledge raised him to a high position as a scholar. His studies were pursued in the best universities in Rome. He became a member of the Society of Jesus, and was ordained a Catholic priest in 1842. He discharged the duties of his office, and was sent to the missions of America with other fathers. But his health failing, he received dispensation of his vows, and for sixteen years occupied, as a secular priest, a very important parish in the diocese of Boston. He was for a short period the principal editor of the "Boston Pilot," and before and since that time wrote several works and contributed largely to different reviews and monthly and weekly Catholic papers. He was at one time a professor in Mount Saint Mary's Seminary of the West, near Cincinnati, and just prior to going to Colorado was appointed to the presidency of the new college at Omaha. But the

climate of Nebraska being unfavorable to his health, he offered his services to Bishop Macheboeuf of Colorado, who cheerfully accepted them. He remained three or four months as assistant at the cathedral of Denver, and was then sent as pastor to the church at Central, where, by his zeal and piety, he gained the esteem and affection of all.

FISH, ASA I., a distinguished lawyer, born in Philadelphia in February, 1820, died in that city May 5, 1879. He graduated at Harvard College in 1842, studied law at the Harvard Law School, and was admitted to the bar in Philadelphia in 1846, and opened an office for practice. From the year 1853 to 1862, he was one of the editors of the "American Law Register." Among his many contributions to legal and general literature are "Trowbat and Haly's Practice," "Tidd's Practice," "Selwyn's Nisi Prius," and "Williams on Executors and Administrators." As a student of Shakespeare's works he was eminent. For twenty-six years he held the position of Dean

of the Shakespeare Society in Philadelphia, and was also a member of the new Shakespeare Society of England. In 1844 he received the degree of LL. B. from Harvard, and in 1852 the same degree from Pennsylvania College. In 1867 Kenyon College conferred on him the degree of LL. D. During the last fifteen years of his life he filled the office of Treasurer of the Philadelphia Law Association, of which he was an active and prominent member.

FLORIDA. The biennial session of the Legislature commenced on January 7th. In the Senate Lieutenant-Governor Hull presided; in the House Charles Dougherty was elected Speaker.

One of the first resolutions adopted in the Senate was the following:

The people of the State of Florida, represented in Senate and Assembly, do resolve as follows: That the recent employment of Federal officials, especially deputy marshals, appointed in great numbers for the purpose of supervising and influencing elections held under State laws, meets our emphatic condemnation as subversive of the foundation of popular government, and tending toward dangerous centralization of power, and that the Senators and Representatives in Congress from Florida are hereby requested to secure all possible legislative safeguards against its recurrence.

In answer to an inquiry of the Senate as to the amount of money received during the previous year by the State from various industrial pursuits for licenses, the following statement was furnished: From merchants selling general merchandise, \$8,200; from liquor-dealers, \$22,700; from practicing physicians, \$1,010; from druggists, \$1,040; from keno and pool tables, \$155; from public exhibitions, \$380; from land agents, \$15; from boarding-houses, \$400; from eating-houses, \$435; from peddlers, \$240; from hotels, \$1,075; from butchers, \$410; from billiard-tables, \$510; from practicing lawyers, \$290; from livery stables, \$350; from insurance agents, \$380; from express agents, \$120; from banks, \$400; from photographers, \$60; from dentists, \$90; from undertakers, \$20; from bakers, \$20; from auctioneers, \$60; from sewing-machine agents, \$30; total, \$38,390. To this sum should be added \$11,598 unapportioned to the different pursuits.

On January 21st Wilkinson Call was chosen a United States Senator by the Legislature. The vote in the Senate was 23 for Call, 4 for Senator S. B. Conover, and 3 scattering. In the House it was 46 for Call, 18 for Conover, and 7 scattering. Senator Call was born in Kentucky, but went to Florida early in life. He is about fifty years of age, a lawyer by profession, of much political experience, and a fluent speaker. In 1867 he and Judge Marvin, then Provisional Governor of Florida, were elected to the United States Senate, the former drawing the long and the latter the short term, but were never permitted to take their seats in that body in consequence of the subsequent passage of the act of reconstruction.

In the Assembly the following resolution relative to the manner of choosing Presidential electors was adopted:

Whereas, Interference by officers of the United States in popular elections is justly regarded by the people of this State as an evil of great magnitude; and whereas, the manifest purpose of such interference, in part at least, is to influence and control the action of the State in selecting electors for President and Vice-President of the United States for the year 1880; therefore, be it

Resolved, That the Judiciary Committee be instructed to inquire into the expediency of providing by law for the selection of electors for President and Vice-President of the United States in the coming election of the year 1880 by the General Assembly, until the acts of Congress authorizing interference by Federal authority are repealed.

In the Senate a bill was introduced to provide for the appointment of the electors.

On the death of Mrs. Hugh A. Corley, the wife of the Commissioner of Lands and Immigration, who was a member of the Governor's cabinet, both Houses of the Legislature adjourned for the day as a "tribute of respect to the deceased, and an indication of sympathy with the bereaved husband."

To secure a revision of the State Constitution, it is necessary, in the first place, that a resolution to that effect should be adopted by a majority of all the members of two successive Legislatures. Such resolution was adopted by the Legislature of 1877, and again by its successor in 1879. The next step is for the Legislature to recommend to the electors, at the next election for members of the Legislature in 1881, to vote for or against a Convention; and, if it shall appear that a majority of the electors, voting at such election, shall have voted in favor of calling a Convention, the Legislature shall, at its next session, provide by law for a Convention, to be holden within six months after the passage of such law, and such Convention shall consist of a number of members not less than both branches of the Legislature.

In the House a resolution was adopted, which instructed the Finance Committee to inquire into the mode and manner in which the bonds issued in pursuance of the law of 1873 were disposed of; whether the same was in accordance with law; whether the bonds of 1868 and 1869, under hypothecation in New York, were properly chargeable with the amount allowed, and whether any portion of said bonds were exchanged for the bonds of 1873; whether, if it shall be found that the said bonds, or any portion thereof, were disposed of in violation of law, the State is legally bound to pay such bonds. The resolution was subsequently modified so as to require a joint committee of both Houses to make the investigation. On March 7th they reported that in 1868 and 1869 there were issued \$500,000 in State bonds bearing interest at 6 per cent., which were authorized to be sold at not less than seventy-five cents on the dollar. Seventy-nine thousand dollars of these were sold or

exchanged for former indebtedness. Of the remainder, \$413,000 were hypothecated in New York in 1869 for temporary loans amounting in the aggregate to about \$100,000.

In 1871, \$350,000 of 7 per cent. bonds were issued under a law which was passed over the Governor's veto, and the bonds were absorbed in redeeming the floating debt of the State.

At an extra session of the Legislature, called by Governor Hart for the special purpose, one million dollars more bonds were issued, five hundred thousand of which were directed to be used for the exchange for and redemption of the valid bonds of the State outstanding, "except the bonds of 1871 and the hypothecated bonds of 1868 and 1869."

The remaining five hundred thousand were directed "to be sold by the Governor and Comptroller at New York or elsewhere, as might be deemed best for the interests of the State, at a sum not less than eighty cents net on the dollar, United States currency, but in no case to be hypothecated; and out of the proceeds, to be deposited with the Treasurer, or to his order, the Treasurer shall first pay the amount necessary to redeem the bonds of 1868 and 1869 under hypothecation, and next pay the indebtedness of the State accruing after the first day of July next ensuing." The law also provided that "in no event shall any agent be employed in negotiation and sale of said bonds," and it prohibited the levying of any tax for interest until one fourth of the bonds were sold. In these particulars this law was violated: First, in appointing an agent in New York for the sale of the bonds; second, in not selling the first quarter million bonds for cash and depositing the money with the State Treasurer, or to his order, as required in the law as a condition precedent to a levy of a tax for the interest; and, third, in exchanging the bonds for the hypothecated bonds of 1863 and 1869. The committee said:

We are of the opinion that the passage of the law was procured through the influence of a firm of New York brokers, L. P. Bayne & Co., who were in personal attendance at Tallahassee, with two attorneys; and who, failing to get a bill passed directly authorizing the employment of an agent, at a commission of five per cent., for the sale of the bonds, procured from Governor Hart the calling of an extra session of the Legislature and the passage of the present law, with an understanding afterward carried out that Bayne & Co. were to have enough bonds to pay their claim against the President of the Jacksonville, Pensacola, and Mobile Railroad Company in exchange for the hypothecated bonds of 1868 and 1869, held by them for money advanced, or said to have been advanced, to the said President, and also have the control of the half million of bonds authorized to be sold, for a specific time, which enabled them to obtain the \$80,000 from the sale of the Agricultural College scrip which had been negotiated, and thus to carry out the contract to take the quarter million bonds necessary to enable the Comptroller to levy the tax for interest on the bonds. Of the avails of this quarter million bonds, less than \$10,000 was paid into the Treasury, the remainder being disposed of in violation of law.

By this conspiracy between the Comptroller and L. P. Bayne & Co., to which the Governor afterward became a party, we find that the State was defrauded

of over \$100,000 in the bonds of 1873, and we therefore recommend the passage of the accompanying resolution:

Resolved. That the Attorney-General is hereby directed to examine into the circumstances of the origin and disposition of the bonds issued in 1873, and to ascertain whether suits should not be instituted against the late Comptroller, C. A. Cowgill, and L. P. Bayne & Co., for the recovery of the amount of the bonds illegally sold, and also for conspiracy to defraud the State.

The resolution was adopted by the Legislature.

An act was passed fixing the rate of taxation for 1879 and 1880 at seven mills. For ordinary county purposes it was fixed at two mills, with a proviso that it might be raised to four mills if it was proposed by a grand jury of the county.

The State Comptroller estimated the amount required for the expenses of 1879 to be \$284,303. In making up this amount he estimated as outstanding jurors' and witnesses' certificates issued between 1867 and 1877, amounting to \$44,706. This was receivable for taxes, and it was expected an amount equal to \$10,000 would thus come in. Still, as other items of expense outside of his estimate might be added by the Legislature, it was concluded that his estimate was low enough.

The following were the sources of revenue from which it was expected to meet the wants of 1879: There were first the uncollected taxes of 1878. The gross assessment for that year was \$147,356; deducting 10 per cent. for failures to pay, leaves as net \$132,621, of which \$9,195 was collected and paid in 1878, which left to be collected on the 1st of January, 1879, \$123,426. Again in 1878 there was received as back taxes \$26,820, and it was anticipated an equal amount would be received in 1879. The licenses collected in 1877 amounted to \$59,985.03; in 1878 the receipts were \$55,804.01, showing a falling off of \$4,181.02. A proposed change in the license law was expected to increase the income from this source and make the receipts for 1879 reach \$65,000. The change proposed in the liquor law put all those persons who sold liquor by the quart on the same footing with those who sold by the glass, and each class is to be charged \$100. In 1877 there were estimated to be 172 retail dealers and 191 wholesale dealers in the State, and this was the number of licenses issued respectively during that year.

The miscellaneous sources of revenue include an auction-tax, tax from commissions, redemption of lands sold for taxes, etc. In 1878 the receipts from this source were \$5,162, and the same amount would probably be received in 1879. The tax-box of 1878 returns 43,100 polls, on which there is a tax of one dollar. The State is entitled to one half this tax, and the counties to the other half. But only property-owners pay the tax, so that the amount likely to be received by the State is estimated at \$8,000. The only remaining source of income available to meet the expenses of 1879 will be the small

amount that may be collected between November and December of the tax assessment of the year. In 1878 there were only \$9,195 collected of the assessment of that year, and a like sum may be collected in 1879 from the assessment of 1879. There was a balance in the Treasury on the 1st of January of the present year of \$21,149, which will enter into the available means for 1879.

These estimates left a deficiency of \$25,000, on a basis of taxation of five mills. But as the Legislature was providing revenue for the two years, 1879 and 1880, similar estimates applied to the latter year showed that there would be a deficiency at its termination of \$70,962. No other resource was left but to advance the rate of taxation to seven mills. Of this tax, one mill as provided in the Constitution goes to the schools; three mills are required to pay the interest on the State debt without the sinking fund, which leaves three mills for the State expenses. The valuation of taxable property in the State is about \$30,000,000.

A change was also made in the law so as to secure a fairer valuation. It required every person to render to the assessor, between the first days of March and August in each year, a list of the taxable property of every kind owned by him or which he should return for taxation, and such list shall contain a description thereof, and a statement of the value of each parcel of land and of the different kinds of property, and the same shall be made under affidavit that the same is just and correct, which shall be made before the assessor, or any officer authorized to administer oaths. Any person who shall fail to render such list, or when it shall be demanded by the assessor, shall be liable to a double tax, and his property shall be assessed by the assessor at double the usual rates; and any person failing to render such list shall not be permitted to reduce, or have reduced, the valuation made of his property by such assessor.

An extensive system of railroads was devised after the close of the war, and it was contemplated that their construction should be aided by donations of State lands. Some lines have been in part built, public lands have been lost to the State, and many roads sold by the courts. In the Senate the Committee on Railroads were instructed to investigate the cause, manner, and legality of the sales of the roads constructed under the provisions of the Internal Improvement act of January 6, 1855; and all matters connected therewith, and to recommend such action as may be necessary for the interest and protection of the Internal Improvement Fund.

They reported that the sales of the Florida, the Pensacola and Georgia, and the Florida, Atlantic, and Gulf roads were unconstitutional, and recommended the passage of bills by which legal proceedings could be instituted by the present Board of Trustees to recover and reestablish the rights of the Improvement

Fund in all of these roads. Bills were accordingly passed for this object, but the Governor vetoed them on the ground that the companies had for twelve years acquiesced in the sales, and also that the trustees were not prepared to meet the expenditures they would encounter, and that the measures would prove injurious to the fund and the State.

Three other bills were also vetoed by the Governor, but these were intended to aid in the construction of railroads. One was entitled "An act to grant certain lands to the Tampa, Pease Creek, and St. John's Railway Company"; the second, "An act to grant certain lands to the Gainesville, Ocala, and Charlotte Harbor Railroad Company"; and the third, "An act to incorporate the Chattahoochee and Pensacola Railroad Company." The first proposed to grant to the railroad named the alternate sections of the swamp and overflowed lands granted to the State by the act of Congress of September 28, 1850, lying along and adjacent to its projected line of railway from Tampa to the St. John's River, a distance of about one hundred and ten miles, to the extent or quantity of ten thousand acres per running mile, and further provided that if any of such lands were sold before a survey of the route was filed in the office of the Secretary of State, then that the quantity so sold should be made up from the even-numbered sections of such land or any State lands lying nearest the line. The second proposed to grant to the railroad named the alternate sections of swamp and overflowed lands for fifteen miles on either side of its projected road, including its branches, to the amount or quantity of eight thousand acres per mile. The length of this line, including branches, is at least four hundred miles. The third bill proposed to grant to the railroad named, being two hundred and seventy-five miles in length, the aid provided for in the Internal Improvement act and its amendments, including those which may be passed at this session, and also the swamp and overflowed lands lying along and adjacent to said line, its extension and branches, to the amount of ten thousand acres per lineal mile. The amount of land which these bills proposed to donate is seven millions of acres. The Governor in stating his objections presented a distinct view of the claims on these lands. He says that the lands hereby to be appropriated are those granted to the State by the United States by the act of September 28, 1850, and are commonly known as the "swamp and overflowed lands." These lands, and the five hundred thousand acres of internal improvement lands granted to the State by the act of Congress of September 4, 1841, were, by the act of the Legislature entitled "An act to establish a liberal system of internal improvement in this State," approved January 6, 1855, vested in the Board of Trustees of the Internal Improvement Fund of the State. To this Board was given power to make arrangements for reclaim-

ing swamp and overflowed lands as contemplated by the act of Congress of September 28, 1850, and decided by the Supreme Court in the case of the Trustees of the Internal Improvement Fund *vs.* Gleason (15 Florida), and to manage and sell the lands. The net proceeds of the sales of these lands, over and above the amounts necessary for the purpose of management and reclamation, were, by this act of January 6, 1855, pledged to the payment of the interest on the bonds which might be issued by railroad companies which should undertake the construction of any part of the line of railroad from the St. John's River to Pensacola Bay, with an extension from suitable points on this line to St. Mark's River, or Crooked River at White Bluff on Apalachicola Bay in Middle Florida, and to the waters of St. Andrew's Bay in West Florida, and a line from Amelia Island to Tampa Bay, with an extension to Cedar Key. Certain companies constructed railroads on these lines from Jacksonville, on the St. John's River, to Quincy, in Middle Florida, and from Tallahassee to St. Marks, and from Amelia Island to Cedar Key. To aid in their construction, the companies issued bonds, which were endorsed by the trustees of the fund, with an agreement guaranteeing the payment of the interest thereon out of the proceeds of the land. Thus these lands became pledged to the payment of this interest. It was a provision of this act of January 6, 1855, that no bonds issued after the end of eight years from its passage should be so guaranteed.

The reare now outstanding of the past-due coupons representing the interest on these bonds about \$367,000; and as these coupons, like other negotiable paper, bear interest themselves, there is now due upon these about \$650,000. There are additional coupons. It was the evident intent and purpose of the internal improvement law that these lands or their proceeds should be applied to no purposes of internal improvement other than those named in the fourth section of that act, until the coupons had all been paid, or at least placed on a safe basis of payment. That this was the contract between the coupon-holder and the State, is not only plain from the language of the act, but it has several times been adjudged by the courts, and it is shown by the history contemporaneous with the enactment of the law. Therefore, he concludes that neither the Legislature nor the Trustees can divert the lands from the payment of the interest on the bonds.

The whole quantity of land so far selected in the State as swamp and overflowed lands is about 15,000,000 acres. Of this, about 1,600,000 have been heretofore disposed of, leaving about 13,400,000 acres selected. Only, however, 11,794,000 acres have been confirmed by the United States Government, and taking from this the amount disposed of, there is on hand, under the control of the Board, only

10,200,000 acres. The act of Congress above mentioned granted to the State all the lands within its limits which were swamp and overflowed, and too wet for cultivation without artificial drainage. But, before the lands so granted could be ascertained and set apart to the State, a large quantity claimed as swamp was entered at the United States land-offices. Not wishing to disturb the possession of purchasers under these circumstances, Congress passed the acts of March 2, 1855, and March 3, 1857, which confirmed to such purchasers the lands entered by them between the date of the grant and the passage of the last-named act, agreeing to pay over to the State the purchase-money received from such lands. The amount due the State as indemnity for these sales is about \$200,000, and frequent efforts have been made on the part of the State to procure an adjustment, but, thus far, without success. At last, however, the United States authorities have consented to send out three agents to examine the lands for which indemnity is claimed, and they have commenced the investigation. To enable the State to get the purchase-money paid for any tract sold by the United States, proof must be made of the swampy character of the land at the date of the grant (1850), and two witnesses are required for each tract.

The Lieutenant-Governor, Noble A. Hull, was a candidate for Congress at the election on November 5, 1878. After this election it was asserted that frauds were committed in Brevard County, and grave charges were made against Mr. Hull in connection with them, and an indictment was found against him in the United States Court. A committee of five was appointed in the Senate to investigate the charges. The committee reported, on February 27th, that "they had assumed, for the purpose of this inquiry, that such a fraud was committed, and confined themselves to the inquiry whether Lieutenant-Governor Hull was in any way connected with it, or had any knowledge of it."

The report is lengthy, and concludes in the following words: "Your committee respectfully submits that the evidence in this case proves that Lieutenant-Governor N. A. Hull had no connection with the alleged election frauds in Brevard County; that he had no knowledge of them, either before or after their alleged commission; that there is no reason for even a suspicion of any complicity on the part of Governor Hull in them, either directly or indirectly; and that there is no reason for any further action on the subject by the Assembly."

The competitor of Lieutenant-Governor Hull, Mr. Horatio Bisbee, contested the declared result at every point. (For the inspectors' return of votes, see "Annual Cyclopædia," 1878—FLORIDA.) On his application the Supreme Court issued a peremptory mandamus under which the County Canvassers of Ala-

chua County made a canvass embracing returns from all the precincts in the county, which was filed in the Clerk's office of the Supreme Court. The canvassers conclude their certificate with this statement: "We certify that the precinct returns are so irregular, false, and fraudulent that we are unable to determine what the true vote of Alachua County is for Representative in Congress and for members of the Assembly." The returns made by the inspectors were canvassed, and the names for whom the votes purport to have been cast are given precisely as they appeared in the inspectors' certificates for Representatives in Congress: Noble A. Hull, 1,178; Horatio Bisbee, 735; Horatio Bisbee, Jr., 751; Horatio Bisby, Jr., 68; Horache Bisbee, 191.

The decision of the Court, rendered in January, 1879, on a demurrer of the relator to objections of the respondents, embraced the following points:

1. It is not a valid objection to the jurisdiction of State courts in mandamus proceedings, relating to the canvass of election returns, that the office affected is that of Representative in Congress.

2. A return by election inspectors, in which the votes cast for a person are given twice or repeated, constitutes no ground for refusing to include such return in the statement and certificate by the county canvassers, it being on its face a mere verbal repetition, and not an attempt to misstate the votes cast. The fact that the statement sent to the Clerk contained such repetition, while that sent to the County Judge did not contain it, does not create such a variance between them as to authorize their rejection.

3. When the jurat to the oath of inspectors of election is not signed, or when the inspectors have not been sworn, but have acted as such and made proper returns, their acts are valid and their return of election should be counted.

4. A statement in the caption of inspectors' returns forwarded to the Judge that the election was held under an act of 1868, and the amendments thereto (without giving the dates of the amendments), while that sent to the Clerk gave the date of the act and also of the amendments, does not render the returns indefinite, uncertain, contradictory, or in any sense repugnant to each other, but they are regular and conformable to law. The difference is immaterial.

5. County canvassers can not look beyond the inspectors' returns, except to determine their genuineness as being signed by inspectors appointed or elected as such of the precinct. Ballots found in a ballot-box can not be considered by the county canvassers.

6. Where the County Judge and Clerk have called in a Justice of the Peace, who acts with them in canvassing election returns, the Justice becomes a member of the Board of County Canvassers, and is, like the other members, amenable to the writ of mandamus to control or correct their action.

Demurrer sustained. Judgment for relator.

Again, on the application of Mr. H. Bisbee, Jr., the Supreme Court issued another peremptory writ to the Board of State Canvassers, being the Secretary of State, the Comptroller, and the Attorney-General, commanding them to reconvene and canvass and count the true returns, etc., etc. The respondents filed a demurrer to the alternative writ on the ground that the relator did not show that he was twenty-five years of age, and that the writ showed that the return from Madison County

did not represent the true vote cast. The Court overruled the demurrer, and decided the following points:

1. It is not good ground of demurrer to an alternative writ of mandamus directing a canvass of votes for Representative in Congress, that the relator does not show that he is qualified to take the office; the question of eligibility belonging exclusively to Congress to determine.

2. The statute authorizes the Board of State Canvassers to lay aside and not include in their canvass the county returns or papers purporting to be county returns, when it appears to them that such returns are "so irregular, false, or fraudulent" that the Board can not "determine the true vote" for any office, i. e., the vote actually cast. The law requires the county canvassers to canvass the precinct returns received on the sixth day after the election, whether the precinct returns from all the precincts are then in or not; and further requires the County Board to certify the result of this canvass to the State canvassers, to be included in the State canvass, unless they are shown or appear to be of the character above described. The returns from one county were shown to have been complete, except that no return had been made to the County Board of votes cast at one poll, and no vote from that poll was included in the county canvass and return to the State Board; and for this reason the State Board did not include the vote returned from that county, on the ground that it was so irregular or false that it did not show the "true vote." Upon this state of facts, it was held: That the county return was in no wise so irregular or false, within the meaning of the law, that the State canvassers could not determine the "true vote" from such return; that the county return, being genuine, regular, and strictly legal in all respects, and required to be made for the purposes of the State canvass, and included only votes actually cast, could not be condemned as "false," but was a return expressly required by law to be counted.

Mr. Bisbee next applied to the Governor to issue the certificate of election to him. Governor Drew replied that it was impossible, as he had already issued and signed a certificate to another person as member of Congress from the district. Subsequently Mr. Bisbee instituted mandamus proceedings in the Supreme Court against the Governor to compel him to issue the writ as requested. The counsel of the Governor moved to quash the alternative writ, on the ground that the Court had no power to issue it against the Governor. This motion brought squarely before the Court the question of the Governor's independence of the judicial department in the performance of his executive duties. The decision of the Court, delivered by Chief-Justice Crandall, embraced the following points:

1. The courts have no power to control the action of the Governor in the discharge of any duty pertaining to his office under the laws of the State.

2. The issuing of a commission or a certificate of election, required by law to be issued by the Governor, though ministerial in its nature, is yet an executive act pertaining to his office as the Chief Magistrate of the State.

3. Each department of the government of the State is independent of the other in the performance of its own duty, and one can not control the other in such performance without destroying this independence.

4. The person of the Governor is subject to the process of the courts only in reference to private acts and acts not pertaining to executive functions imposed by the Constitution or laws.

5. In respect to his executive duties as Governor,

he alone may judge of the manner in which he will perform them, and the judicial department may determine the effect of acts performed.

Alternative writ dismissed.

Whether the issuing of a second certificate by Governor Drew might have operated as a revocation of the first does not appear to be decided; but in the case of a commission issued to a person on a partial canvass of votes, the commission can only be vacated by an appeal to the courts. This was settled in Missouri, where the Secretary of State, in a canvass of votes cast for Judge, had refused to open and count the returns from two counties, and had certified the result to the Governor, who issued the commission on this partial canvass. An application was made by Congressman Bland to the Supreme Court of that State for a mandamus to compel the Secretary to open and canvass the returns from the two counties, whose votes, if counted, would have elected him instead of the other candidate. The Court held that, though the Secretary of State had no right to refuse to open and canvass the returns from the two counties, nevertheless, as the commission had already been issued, it would not direct him to do so. The Court said: "The officer derives his title to the office by virtue of his election, and the commission is *prima facie* evidence only. The case has passed beyond the control of this Court, and the only redress the relator has, if he considers himself aggrieved, is by legal contest made in pursuance of law." This question of a contested seat came up in the House of Representatives in Washington on December 18th, and it was given to Noble A. Hull—yeas 140, nays 136.

Many resolutions were presented in the Legislature to provide for the assembling of a State Constitutional Convention. These were referred to a joint committee of both Houses, who agreed upon a report recommending some less important changes.

Three important bills relating to railroads were presented on the same day in each House. The first would have aided in the construction of new roads, and under the others all necessary steps would be taken to bring the existing roads to account and to enforce the penalties they may have incurred.

A complicated case of railroad litigation was decided in the United States Circuit Court by Justice Bradley. The parties were the Western North Carolina Railroad against the Florida Central, and the Jacksonville, Pensacola, and Mobile Railroad Company, and others; also the case of J. Fred. Shuette and others against the same defendants. The cases were tried together. These suits were founded upon claims against the defendants. The effect of the decision was to award to the parties interested their rank as claimants and the amounts to which they were entitled. The roads were ordered to be sold, and as a result of the sale the formation of a new organization was anticipated.

A requisition from the Governor of North Carolina upon the Governor of Florida for the delivery of a person indicted in the former State for "obtaining money under false pretenses" was not granted by the latter Governor. Upon being arrested, the party sued out a writ of *habeas corpus*. After a hearing, the Judge made an order discharging him from arrest, holding that there was a variance between the charge named in the requisition and warrant and that specified in the indictment; and, also, that he was not a fugitive from justice within the meaning of the Constitution and statutes of the United States.

The power of the judiciary to review the action of the Governor in such cases is recognized by some courts, at least to the extent of deciding whether the party is a fugitive from justice. (Jones vs. Leonard, decided in the Supreme Court of Iowa, December term, 1878, page 112 of "Albany Law Journal" of February 18, 1879; in the matter of Manchester, 5 Cal., 237.) In this case there was a judicial determination of the question of his being a fugitive from justice, and the Governor declined to assume that the judicial decision was erroneous.

An action of ejectment brought to recover possession of two lots of land in St. John's County was taken to the United States Supreme Court. It was entitled George Burt, plaintiff in error, against Maria M. Ponjoud. Among the errors assigned was a ruling of the lower Court to the effect that a certain Henry Holmes, called to be a juror in this case, was not obliged to answer any questions touching his qualifications as a juror, under section 820 of the Revised Statutes. Under this ruling Holmes declined to say whether he did or did not participate in the rebellion. He was challenged on the ground that he was disqualified under the aforesaid section of the Revised Statutes, and the Court overruled the challenge. Upon this point the Supreme Court held that a juror was no more obliged than a witness to disclose on oath his guilt of any crime, or of any act which would render him infamous, in order to test his qualifications as a juror. The question asked him, if answered in the affirmative, would have convicted him of the crime of treason. Whether pardoned by a general amnesty or not, the crime was one which, in the opinion of the Court, he could not be required to disclose in this manner. If he were guilty, the challenger had the right to prove it by any other competent testimony. As he did not offer to do this, and as the juror's incompetency was not proved, the Court was not bound to exclude him. As to the ownership of the lots, this Court held that there was sufficient evidence of defendant in error's prior possession, and that she was entitled to them both. Mr. Justice Miller delivered the opinion.

Mr. Justice Field delivered a separate concurring opinion with regard to the test-oath

demanded of the juror Holmes, as follows: "I agree with the Court that the juror Holmes in this case can not be required to answer the questions put to him, but I go further. I do not think that the act of Congress which, by requiring a test-oath as to past conduct, excludes a great majority of the citizens of half the country from the jury-box is valid. In my judgment the act is not only oppressive and odious, and repugnant to the spirit of our institutions, but is clearly unconstitutional and void. As a war measure, to be enforced in the insurgent States when dominated by the national forces, the act could be sustained; but after the war was over and the insurgent States were restored to their normal and constitutional relations to the Union, it was as much out of place and as inoperative as would be a law quartering a soldier in every Southern man's house."

In a subsequent case of *Atwood vs. Weems*, from the Circuit Court of the District of Florida, the Supreme Court held on the question of jurors' test-oaths that the right under section 820 of the Revised Statutes to require a panel of jurors called to serve for a term to take the oath therein prescribed, or be discharged, is a right which can be exercised only by the District Attorney; that it does not belong to either of the suitors in the case about to be tried. Justice Field, in concurring in the opinion, reiterated his previously expressed belief that section 820 of the Revised Statutes was unconstitutional and void. He held that Congress might undoubtedly prescribe the qualifications of jurors in the Federal courts, but if any of the causes for disqualification was the commission of an act which the law had pronounced a public offense, it was not competent for the Court to go into an investigation to determine the guilt or innocence of a juror; that is to be ascertained only in one way—by a separate trial of the party upon an indictment for the offense, and the only competent evidence in such a case is the record of his conviction or acquittal.

The products of the State, as shown by the returns of the assessors for 1877, which are somewhat defective, as seven counties made no reports, nevertheless amounted as follows:

Cotton, upland, bales	14,007
" Sea Island, lbs.	5,344,575
Corn, bushels	1,628,988
Oats, " "	346,310
Wheat, " "	608
Rye, " "	11,098
Rice, " "	26,852
Sugar-cane, gallons of sirup	601,208
Sugar, lbs.	963,910
Tobacco, lbs.	16,572
Orange-trees in grove	20,481,541
" bearing	18,821
Oranges produced	16,084,558
Lemons " "	344,498
Citrons " "	23,789
Limes, bushels	3,739
Guavas " "	6,217
Bananas, bunches	17,970
Pineapples	586,800
Peaches, bushels	293,250
Apples, " "	7,095
Pears, " "	117

Grapes, bushels	18,312
Wine, gallons	8,518
Garden-peas, crates	7,997
Beans, crates	7,790
Potatoes, Irish, bushels	28,756
" sweet, " "	1,084,704
Melons	2,084,206
Cucumbers, crates	7,207
Tomatoes, " "	6,154
Hay, tons	37,570

The number of the convicts in the State Prison at the beginning of the year was 163. Of these 24 were white males, 1 white female, 135 colored males, and 3 colored females.

The expense of the prison for 1877 was \$5,962.27, of which \$3,159.10 was for conveying prisoners and \$927.60 was for repairs of the buildings at Chattahoochee. The expense of 1878 was \$6,616.03, of which \$4,514.53 was for conveying prisoners to the convict camps. This expense, by the contract since made, is hereafter to be borne by the contractor.

The proposition for a ship-canal across the State was revived again during the year. In 1877 General Q. A. Gillmore, in charge of the river and harbor improvements on that portion of the line of coast which embraces the shores of the States of Florida, Georgia, and South Carolina, submitted a report in answer to a resolution of the Senate directing the Secretary of War "to communicate all information in his possession concerning a water-line of transportation from the mouth of the St. Mary's River, between the States of Georgia and Florida, through Okefenokee Swamp and through the State of Florida to some suitable point on the Gulf of Mexico, embracing the probable nature and character of such a water-line, and the extent of country and population to be benefited by its construction, and an estimate of the cost of the necessary surveys or examinations therefor."

The main purpose sought to be attained by the proposed water-line is assumed to be a cheap means of sending eastward the products of the Mississippi Valley over a route that shall shorten the time and avoid the danger of the trip through the Gulf of Mexico and the Florida Straits.

Two methods of accomplishing these objects have been suggested:

1. By a water-line of barges across the peninsula of Florida, continued westward to the Mississippi River by another inside barge route through the landlocked sounds and bays bordering the Gulf of Mexico in the States of Florida, Alabama, Mississippi, and Louisiana.

2. By a ship-canal across the State of Florida, of dimensions sufficient to pass large ocean-going vessels.

In determining the western terminus for a peninsula barge-canal from St. Mary's River, through Okefenokee Swamp, to the Gulf of Mexico, the advantages offered by the harbor of St. Mark's become at once apparent.

From St. Mark's westward to Lake Borgne or Lake Ponchartrain there exists a nearly

continuous natural landlocked water route, by means of tidal sounds, bays, and connecting streams, requiring improvement by dredging in some places, but only a comparatively short aggregate length of solid cutting. The selection of a terminal point to the eastward of St. Mark's would render the connection with this western branch to the Mississippi less direct.

The chief object that would be attained by this canal is barge transportation for the grain and cotton of the Mississippi Valley, and a portion of the cotton, timber, and lumber of the Gulf States, to some suitable harbor on the Atlantic coast for reshipment to foreign and domestic markets.

The needed supply of water for the summit level of the canal and the service of its two locks, and for all the various losses incidental to such works, is expected to be drawn from the Okefenokee Swamp.

A straight line, measured on the map, from the mouth of St. Mary's to St. Mark's, has a length of about one hundred and sixty-five miles. By taking advantage of the natural watercourses in proximity to that line, which are either navigable or can presumably be made so by slack-water dams for the largest class of barges destined to pass the canal, the length will of course be augmented.

The total length of St. Mary's River, from its mouth to Ellicott's Mound, where the head of one of its branches is found, is about one hundred miles.

The feasibility of a ship-canal for large ocean-going vessels, that shall connect the St. Mary's River with the Gulf of Mexico through Okefenokee Swamp, is more uncertain than that of the barge-canal above mentioned. The project must provide for a suitable harbor at each terminus of the line. On the Atlantic this could possibly be accomplished by the enlargement for ships of the existing inside passage between St. Mary's River and Brunswick, making this point the shipping port. On the Gulf side the choice would probably have to be made between St. Mark's and Cedar Keys, as they are the only harbors at all near the direct line possessing sufficient natural depth of water approach to encourage any attempt to enlarge them to the required capacity by the construction of artificial works. On the St. Mark's bar there is a depth of eight feet and on the Cedar Keys bar a depth of nine feet at mean low water. If St. Mark's should be selected for the Gulf terminus, the general location of the route would probably not vary greatly from that of the barge line; while if it should run to Cedar Keys, the Suwanee River, from the western end of the summit-level division to some point near its mouth, would most likely form a part of it. It was estimated that such a work would shorten the navigable distance to Europe and coastwise, in respect to the commerce of the Mississippi and the Gulf of Mexico, nearly eight hundred miles, and that the commercial advantages would be very

great. A company sustained by French capital was investigating the work.

The number of Indians in Florida is about 300, divided into four bands or camps. About one third are Creeks, the remainder Seminoles. They avoid all intercourse with the whites, are no expense to the Government, and are opposed to any closer relationship to the inhabitants.

Some discussion on the subject of emigration took place among the colored people of Leon County in October, but no movement followed.

The Florida school system comprises the following officers:

Superintendent of Public Instruction; State Board of Education; County Superintendents; County Boards of Public Instruction; School Trustees. Seminaries: East Florida Seminary, Gainesville; West Florida Seminary, Tallahassee. These institutions were established for the purpose of training persons in the art of teaching. School age, between six and twenty-one; attendance, voluntary.

The Superintendent of Public Instruction is appointed by the Governor for a term of four years; is President of the Board of Education, etc.

The State Board of Education consists of the Superintendent of Public Instruction, the Secretary of State, and the Attorney-General; has charge of all lands and public educational funds belonging to the State, etc.

The County Board of Public Instruction consists of from three to five members, appointed by the State Board of Education, who hold office for four years. They receive, pay out, and account for school moneys; build or otherwise provide schoolhouses, employ teachers, etc.

The County Superintendent of Schools is appointed for two years by the Governor; visits and inspects schools at least once in every three months; is secretary and agent of the Board of Public Instruction; makes annual statistical reports to the State Superintendent, etc.

School trustees are appointed for four years by the County Board of Public Instruction on the recommendation of the patrons. They recommend parties to be employed as teachers to the County Board, and have charge and oversight of the building, grounds, and other property belonging to the school for which they are appointed.

<i>Statistics.</i> —1878. School days in the year, average	106

FLOYD, SALLY BUCHANAN, born in 1802, died in Abingdon, Va., May 7, 1879. She was the widow of the late General and Governor

John B. Floyd. Her grandmother was Elizabeth Henry, the sister of the famous orator Patrick Henry, and the wife of General William Campbell, who commanded at the battle of King's Mountain in the Revolutionary war. Their only child, a daughter, became the wife of General Frank Preston of Abingdon, who was a member of the first three Congresses. Their children were all more or less distinguished. One son, Mrs. Floyd's brother, was William C. Preston, Senator from South Carolina, of which State he had become a resident. In the Senate, some years before the late war, he was one of the most eloquent speakers. She was a sister of Colonel John S. Preston, the Commissioner of South Carolina to Virginia in 1861. Mrs. Floyd was also the last of a family of distinguished sisters, viz.: Eliza, wife of General Edward C. Carrington of Halifax County, Va.; Susan, wife of Governor James McDowell of Lexington, Va.; Sophonisba, wife of Rev. Robert J. Breckenridge, D. D., of Lexington, Ky.; Maria, wife of John M. Preston of Washington County, Va.; and Margaret, wife of General (now Senator) Wade Hampton of South Carolina. Mrs. Floyd had no children, but early adopted two orphaned relatives of both herself and her husband—John Preston Johnston, afterward a gallant young artillery-officer of the army, who was killed on the field of battle at Contreras in the Mexican war, and his sister, Mrs. Judge Hughes of Norfolk.

FOLEY, THOMAS, D. D., born in Baltimore, Md., March 6, 1822, died in Chicago, Ill., February 19, 1879. His education was obtained at St. Mary's College, Baltimore, and the Theological Seminary of St. Sulpice, where he was ordained a priest on August 16, 1846. Subsequently he was appointed to take charge of the Catholic missions in Montgomery County, Md., officiating there four months. He was made assistant pastor of St. Patrick's in Washington, D. C., his senior being the venerable Father Matthews. In that parish he passed two years, and was then called to the Baltimore Cathedral, where he labored twenty-two years. In 1851 he became secretary to Archbishop Kenrick, and was also Chancellor of the archdiocese of Baltimore; while later he held similar positions under the late Archbishop Spalding. In 1867 he became Vicar-General of the archdiocese of Baltimore. In 1869 he was appointed by Pius IX. coadjutor of the Bishop of Chicago and administrator of that diocese. He was consecrated Bishop of Pergamus in *partibus infidelium* at the Cathedral of Baltimore, February 27, 1870, Bishop Duggan of Chicago having retired on account of infirm health. Bishop Foley was then in the forty-seventh year of his age and the full vigor of life. Of commanding stature, he possessed at the same time benignant and winning manners. Physically he was a splendid type of manhood, and his virtues and piety endeared him to hosts of friends in Baltimore, irrespec-

tive of religious faith or predilection. He was also a man of great capacity for business, and his enterprise was proverbial. After he became administrator he erected twenty-five churches, schools, etc., and saw various other institutions come into existence under his benign rule. The great work of his life was the rebuilding of the Cathedral of the Holy Name. To raise this edifice from its ashes cost nearly \$300,000, and it is one of the finest churches in the country, and the largest and most costly edifice of the kind in Chicago. As an orator he was exceedingly graceful and persuasive, and on this account he was selected to deliver discourses on several occasions of public interest. A severe cold increased to pneumonia, which became typhoid, and was so aggravated by abdominal inflammation that his physical system could not hold out, and he quietly and peacefully passed away. In the Legislature of Illinois, which was in session at the time of his death, a resolution was adopted, stating that the death of this eminent Catholic prelate is learned with deep regret, recognizing that in his death the Catholic citizens of the State have lost an able and dignified executive, and a divine who was beloved by people of all denominations for his sanctity, piety, and true Christian charity, and closing by expressing sympathy with the Catholic people of Chicago and the family of the late Bishop.

FORMATION OF MOUNTAINS. One of the most controverted subjects in dynamical geology has been the problem of the formation of the mountain groups, plateaus, ridges, and sierras which form a prominent feature in every continent, producing some of the meteorological conditions which are most favorable to life, and which vary not less the profile of the submerged portions of the earth's surface, the higher elevations forming the rows and groups of islands which dot the sea. Distinct from these great symmetrical congeries of rocky elevations are the mountains of volcanic origin, formed by the outpouring of molten rock through craters, which are usually of a conical form and stand isolated or in rows without connecting ridges, and also the inferior eminences which have been left after glacial action and denudation have swept away the materials between them. The mountain systems are generally supposed to be corrugations which have resulted from the contraction of the earth's mass. This is now the accepted theory; but there is still some dispute as to the effects of the contraction, some holding that the elevations are produced by forces which draw the intervening mineral masses inward, some that they are upheaved by forces pushing them outward, and a third and more numerous school believing that the direction of the dynamic forces is lateral, and that the elevated masses are the plications produced by horizontal compression attending the secular subsidence of the earth's crust. Professor Alphonse Favre of Geneva has recently terminated

a series of experiments on the effects of lateral pressure, in which the conditions of nature were better preserved than in the famous experiments of Sir James Hall with various cloths folded and held down by the superposition of heavy weights, which he made to assume shapes analogous to the disposition of masses of rocks by squeezing them from each side. M. Favre used a homogeneous and plastic material, and left the upper surface free to assume the forms which would result from lateral contraction, and which resembled hills and mountains. He took sheets of India-rubber, 16 millimetres in thickness and 40 by 12 centimetres in area. Stretching them to a length of 60 centimetres, he covered them with a layer of soft potters' clay, which varied in thickness in the different experiments from 25 to 60 millimetres. The contraction of one third which he produced in most of his experiments corresponds to that which has actually taken place in certain parts of Savoy. The strata in the mountains between Dessy and the Col du Grand Barnaud, for instance, are folded and contorted into two thirds the compass which they had before compression when lying horizontal. If the solid crust of the earth rests upon a pasty nucleus whose volume is slowly and constantly diminishing, then the hard, rocky mass will be broken and thrust out of shape as the interior supporting mass contracts.

Such a dislocation of the external strata has

taken place at different geological periods and in all parts of the world. In many places the lower strata are distorted, while the more recent overlying formations are unbroken and horizontal. Often the contraction has been much greater than that obtained in the experiments. In some places the folds are very close together and their sides nearly vertical. These disturbances must have occurred with imperceptible slowness, as they follow the contraction by minute degrees of the earth's radius.

Drawing horizontal lines on the side faces of the clay to indicate the position which strata would take after compression, and confining the extremities of the clay band within vertical wooden strips, he allowed the caoutchouc to contract, thus producing lateral compression by the double means of the adhesion of the clay to the caoutchouc and the pressure of the wood supports. The contraction of the caoutchouc alone would produce only slight wrinkles on the surface of the clay, and the action of the wooden ends alone would only cause the clay to bulge at the extremities, producing no effect in the center. The pressure secured in Professor Favre's experiments produced contortions of strata very similar in configuration to the earth's surface. In some places the plane surface of the clay was elevated without being broken or thrown much out of the horizontal position; in others vaults and plications were produced which resemble hills, mountains, and valleys. The ridges some-

FIG 1.

times approached the perpendicular; at times they were complete folds, at other times they separated at the summit in a longitudinal fracture increasing in width downward, and at the base in a complementary fracture widest at the mouth. The strata are broken in places, producing fissures and caverns below the surface, or are crossed by clefts or faults, sometimes vertical, sometimes inclined. The contortions do not extend perpendicularly across the clay band, but take various directions, the opposite sides showing different deformations.

The experiment shown in Fig. 1 was with a band of clay about 25 millimetres thick, which after compression attained a thickness at the culminating point of 62 millimetres. It reproduces many of the common features of the Jura, the Alps, and the Appalachians. At *a* is a vault slightly broken at the summit, covering a cavern; *b* is a valley open at one end and closed at the other; *c* is a vault, nearly straight and of even elevation; *g* and *h* are twisted and slightly broken vaults; and *i* is a ruptured fold whose sides are nearly vertical.

In Fig. 2 the clay was 40 millimetres thick originally, and 65 after compression. At *a* is a very perfect vault. At *b*, *c*, *d*, and *e* are spots where the pressure found the least resistance, and where the strata were violently

broken and their ends often separated. One of these vaults is replaced on the opposite side by a single fault. M. Favre calls these places of extreme pressure *zones de refoulement*.

In Fig. 3 an experiment with a band of va-

Fig. 2.

riant thickness is represented. The division *a* was 33 centimetres long and 25 millimetres thick; *b* was 25 centimetres long and 65 millimetres thick; a gentle slope 35 millimetres thick at *b* connected them. After compression the mean thickness of *a* and *b* was 45 and that of *c* 75 millimetres. In this experiment he sought to obtain the effect of compression at a

point where a mountain meets a plain. The height of the mountain *c* has been increased; the five or six upper layers have encroached upon the plain; but the resistance of the plain has been sufficient to cause the strata of the mountain to be strongly inflected. The first hill *d*, at the foot of the mountain, is the result of the struggle between the mountain and the

Fig. 3.

plain; as also is the vault *b*, the elevation of which has caused the strata of the plain to be deflected and depressed at contact with the mountain. Such a phenomenon as the depression of the strata of a lower elevation under the foot of a mountain is often observed in the Alps at the junction of the first calcareous chain and the hills of the *molasse*.

In Fig. 4 the thickness of the clay band was

45 millimetres, and after compression the highest elevation was over 100. The object of the experiment was to reproduce the effect of lateral pressure on moist strata at the bottom of the ocean, near two solidified mountain masses. Two semi-cylinders of wood were inserted under the clay at equal distances from the extremities and the same distance from each other. After pressure a valley *c* was formed

above the semi-cylinder *a* by a deflection of the beds to the right and by a little mountain *d* on the left. On the semi-cylinder *b* an enormous elevation has taken place, attended by a violent

rupture in which on one of the sides, *f* and *g*, the strata have been completely reversed, turning over as if on a hinge at the point *h*. On the line between *x* and *z* the strata are found

FIG. 4.

to overlie each other in a treble series, once in the natural order, once inverted, and again in their original position. If the disjoined and inverted section were pushed away, the five layers would be found doubled. Such examples of superimposed and inverted stratification are not uncommon geological phenomena.

FRANCE, a republic of Europe. President at the close of 1879, François Paul Jules Grévy, elected January 30, 1879. The French Cabinet was at the close of 1879 composed as follows: M. de Freycinet, President of the Council and Minister of Foreign Affairs (see FREYINET); M. de Lepère, Minister of the Interior and of Worship; M. Cazot, Minister of Justice; M. Magnin, Minister of Finance; General Farre, Minister of War; Admiral Jauréguiberry, Minister of Marine; M. Jules Ferry, Minister of Public Instruction; M. Varroy, Minister of Public Works; M. Tirard, Minister of Commerce; M. Cocher, Minister of Posts and Telegraphs. The President of the Republic is elected by the Senate and Chamber of Deputies, united in National Assembly. The term of his office is seven years, and he is eligible for re-election. The Senate is composed of 300 members, of whom 75 hold their seats for life, the vacancies being filled by the votes of the Senators. The remaining 225 seats are divided by lot into three classes of 75 each, one class going out at successive periods of three years. The election of these 225 Senators is by an indirect process. In the first instance, the communes and municipalities of France, 14,200 in number, elect a fixed number of *electeurs sénatoriaux*, who in their turn, after a lapse of two months, meet together to choose the Senators. The Chamber of Deputies is elected by universal suffrage under the *scrutin d'arrondissement* adopted by the Na-

tional Assembly, November 11, 1875. The law orders every *arrondissement* to elect one deputy, and, if its population is in excess of 100,000, an additional deputy for each 100,000 or portion thereof.

The area of France, according to the latest official calculations, is 204,092 square miles. The population, according to the census of 1876, was 36,905,788. The table on page 383 exhibits the area of each department, its population according to the censuses of 1872 and 1876, and the movement of population in 1876.

The movement of population from 1867 to 1876 was as follows:

YEARS.	Births.	Deaths.	Surplus of births (B.) or deaths (D.)	Percentage of increase (I.) or decrease (D.) of population.
1867...	1,007,515	886,887	B. 120,628	I. 0.31
1868...	984,140	922,088	B. 62,102	I. 0.16
1869...	948,520	864,320	B. 84,200	I. 0.21
1870...	944,115	1,046,909	D. 91,794	D. 0.28
1871...	826,121	1,271,010	D. 444,889	D. 1.22
1872...	966,000	793,064	B. 172,936	I. 0.48
1873...	949,864	844,688	B. 95,776	I. 0.28
1874...	954,682	781,706	B. 172,946	I. 0.48
1875...	936,975	845,062	B. 105,913	I. 0.28
1876...	966,682	884,074	B. 182,608	I. 0.36

The relation of marriages to the total population from 1870 to 1876 was as follows:

YEARS.	Total population.	Marriages.	Number of marriages to 100 inhabitants.
1870.....	36,985,912	229,705	0.60
1871.....	36,544,067	262,476	0.72
1872.....	36,102,921	262,754	0.75
1873.....	36,260,923	321,288	0.89
1874.....	36,883,481	208,118	0.58
1875.....	36,542,910	300,427	0.82
1876.....	36,905,788	291,386	0.79

* Formerly called Belfort (territoire de).

Of the 966,682 children born in 1876, 66,306 were illegitimate. The relation of births to the total population from 1870 to 1876, and the number of still-born children for the same period, were as follows:

YEARS.	Total population.	Births.	Births for 100 inhabitants.	Still-births.
1870.....	86,985,212	943,515	2.55	45,169
1871.....	86,544,067	826,121	2.26	40,815
1872.....	86,102,921	966,000	2.67	43,967
1873.....	86,230,928	946,864	2.61	44,457
1874.....	86,338,451	954,652	2.62	44,613
1875.....	86,542,910	950,975	2.60	43,524
1876.....	86,905,788	966,632	2.62	44,680

The proportion of deaths to the total population from 1870 to 1876 was as follows:

YEARS.	Total population.	Deaths.	Number of deaths to 100 inhabitants.
1870.....	86,985,212	1,046,909	2.88
1871.....	86,544,067	1,271,010	3.48
1872.....	86,102,921	798,064	2.19
1873.....	86,230,928	844,558	2.83
1874.....	86,338,451	751,706	2.16
1875.....	86,542,910	845,062	2.81
1876.....	86,905,788	884,074	2.62

The receipts and expenditures in the general budget for 1880 were estimated as follows (in francs):

REVENUE.	
Direct taxes.....	421,077,160
Stamps and registration.....	628,548,000
Produce of forests.....	38,102,600
Duties.....	238,982,000
Indirect taxes.....	1,095,997,600
Produce of posts.....	108,763,000
Telegraphs.....	18,532,000
Miscellaneous receipts.....	163,997,654
Total.....	2,701,080,014

EXPENDITURES.	
Ministry of Justice.....	34,312,000
“ of Foreign Affairs.....	12,919,000
“ of the Interior.....	89,096,626
“ of Finance.....	21,212,382
“ of Public Instruction.....	116,882,354
“ of Agriculture and Commerce.....	34,059,692
“ of Public Works.....	150,819,678
“ of War.....	552,941,362
“ of the Navy.....	190,961,498
Administration of colonies.....	190,961,498
Public debt.....	1,175,319,656
Dotations.....	28,262,353
Chambers.....	10,321,000
Expenses of collection.....	269,629,826
Reimbursements.....	17,850,000
Total.....	2,700,087,792

The interest on the public debt, according to the budget of 1879, was as follows:

Consolidated debt.....	746,586,867
Capital that may be called in.....	298,093,902
Dette viagère.....	180,689,387
Total.....	1,175,319,656

On January 1, 1873, the new army law of July 27, 1872, went into operation. Its first article enacts universal liability to military service. Every Frenchman capable of bearing arms must serve for 20 years, namely, 5 years in the standing army, 4 years in the reserve of the standing army, 5 years in the territorial army (Landwehr), and 6 years in the reserve of the territorial army (Landsturm). By a law of

July 24, 1873, on the reorganization of the army, France is divided into 18 districts, each of which is occupied by an army corps. One army corps is also organized in Algeria. Each of the 18 army corps consists of 2 divisions of infantry, 1 brigade of cavalry, 1 brigade of artillery, 1 battalion of engineers, 1 squadron of the train, a general staff, and the subordinate staffs. The composition of the army in time of peace will be as follows:

ARMS.	Men.	Horses.
Infantry (156 regiments, 641 battalions, 2,575 companies).....	251,601	2,649
Cavalry.....	68,617	59,028
Artillery.....	66,331	82,690
Engineers.....	10,960	733
Train.....	9,392	7,650
Staff.....	88,782	4,452
Gendarmes.....	27,014	18,667
Total.....	502,697	120,894

According to an estimate of the “Journal des Sciences Militaires” for January, 1879, the strength of the French army on a war footing would be as follows:

Infantry:		
51½ battalions of the active army.....	817,300	
449 battalions of the territorial army.....	449,900	
Total infantry.....	1,266,500	
Cavalry:		
332 squadrons of the active army.....	58,800	
79 squadrons of the territorial army.....	11,850	
Total cavalry.....	70,650	
Artillery:		
312 field batteries of the active army. }		
57 mounted batteries “ “ “ }	124,000	
88 field batteries of the territorial army.....	56,000	
Total.....	180,000	
407 batteries with 2,442 cannon.....		180,000
Engineers:		
Active army.....	26,000	
Territorial army.....	19,000	
Total engineers.....	45,000	
Pontoniers, active army.....	5,000	

This gives a total of 1,031,300 men for the active army, and 535,850 for the territorial army; in all, 1,567,150 men. For the train, the administration, and the sanitary troops, there would still be necessary 155,000 men for the active and 58,150 for the territorial army; which would give the following result:

Active army.....	1,186,800
Territorial army.....	594,000
Total.....	1,780,800

The navy on January 1, 1879, comprised 258 vessels. Of these, 66 were ironclads (32 large war vessels and 34 for coast defense), 156 steamers (44 cruisers, 29 transport vessels, 40 dispatch-boats, 36 gun-boats, 7 torpedo-boats), and 36 sailing vessels.

The foreign trade of France is officially divided into “commerce général,” which comprises the entire imports and exports, including goods in transit, and “commerce spécial,” which embraces the imports consumed and the exports produced within the country. The following table exhibits the movements of French commerce from 1859 to 1878:

YEARS.	GENERAL COMMERCE.		SPECIAL COMMERCE.		GOLD AND PRECIOUS METALS.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1878			4,461,000,000	3,869,500,000	546,000,000	189,600,000
1877	4,570,000,000	4,371,000,000	3,669,800,000	3,436,300,000	683,100,000	141,200,000
1876	4,908,800,000	4,547,000,000	3,988,400,000	3,575,600,000	804,000,000	234,000,000
1875	4,461,800,000	4,807,000,000	3,536,600,000	3,872,600,000	228,000,000	219,000,000
1874	4,422,500,000	4,702,100,000	3,507,700,000	3,701,100,000	952,000,000	159,000,000
1873	4,576,400,000	4,822,300,000	3,554,500,000	3,787,300,000	565,000,000	492,000,000
1869-1873	4,107,000,000	4,061,300,000	3,842,500,000	3,259,700,000	462,000,000	371,000,000
1864-1868	3,818,800,000	3,988,800,000	2,858,700,000	2,961,800,000	799,000,000	451,000,000
1859-1863	2,846,600,000	3,088,200,000	2,121,100,000	2,271,000,000	607,000,000	513,000,000

The special commerce of France in 1877 was as follows :

COUNTRIES, ETC.	Imports.	Exports.	COUNTRIES, ETC.	Imports.	Exports.
Great Britain	574,300,000	1,059,000,000	Spanish-American colonies	13,900,000	15,500,000
Belgium	408,900,000	446,400,000	Japan	13,600,000	7,600,000
Germany	372,500,000	895,100,000	Venezuela	12,600,000	5,500,000
Italy	841,900,000	185,500,000	Portugal	11,500,000	23,600,000
United States	257,800,000	216,600,000	Senegambia	11,200,000	4,900,000
Russia	202,200,000	15,900,000	British possessions in America	9,000,000	6,500,000
Turkey	157,600,000	86,600,000	British possessions in Africa	8,600,000	8,200,000
British India	149,500,000	8,400,000	United States of Colombia	7,900,000	17,700,000
Algeria	122,100,000	183,100,000	Mexico	5,900,000	18,400,000
Argentine Republic	112,000,000	75,700,000	Africa not enumerated	5,000,000	700,000
Spain	109,200,000	132,500,000	Philippine Islands	4,600,000	1,300,000
Switzerland	96,100,000	287,200,000	Cochin-China	3,500,000	4,400,000
Peru	61,500,000	19,700,000	Greece	3,100,000	15,200,000
Brazil	56,200,000	77,800,000	Oceania	2,400,000	4,800,000
Sweden	55,700,000	11,700,000	Mayotte, Nossi-Bé, etc.	2,100,000	300,000
Austria	53,800,000	20,400,000	Malta and Gibraltar	1,800,000	4,000,000
Egypt	53,400,000	24,900,000	French possessions in India	1,400,000	1,100,000
China	36,600,000	8,100,000	Bolivia	1,200,000	300,000
Dutch Indies	35,900,000	8,100,000	Guatemala	1,800,000	2,600,000
West Coast of Africa	34,600,000	8,000,000	Denmark	1,100,000	4,500,000
Netherlands	34,200,000	85,200,000	Ecuador	1,000,000	2,400,000
Uruguay	32,600,000	20,700,000	Siam	700,000
Havai	30,800,000	12,000,000	St. Thomas	600,000	10,900,000
Saint Pierre and Miquelon	27,800,000	5,900,000	Goods picked up at sea	600,000
Norway	27,000,000	12,500,000	French Guiana	300,000	5,400,000
Barbary States	22,600,000	11,700,000	Dutch colonies in America	200,000	1,200,000
Réunion	22,300,000	8,100,000	Australia	1,400,000
Guadeloupe	20,800,000	11,800,000			
Martinique	20,000,000	14,000,000			
Chili	15,100,000	23,300,000			
			Total	3,669,800,000	3,436,300,000

The principal articles of imports and exports in 1877 and 1878 were as follows :

CLASSES.	IMPORTS.		EXPORTS.	
	1877.	1878.	1877.	1878.
Articles of food	1,456,456,000	1,320,865,000	1,005,507,000	1,543,805,000
Raw materials	1,814,468,000	1,867,142,000	2,050,421,000	2,251,776,000
Manufactured goods	163,380,000	181,500,000	419,437,000	447,188,000
Other merchandise			194,400,000	218,757,000
Total	3,436,304,000	3,869,507,000	3,669,845,000	4,460,974,000

The number of vessels entered and cleared in 1878 was as follows :

NATIONALITY.	TOTAL.	
	Vessels.	Tons.
French	16,859	5,571
Foreign	36,443	10,544
Total	53,307	16,115

The commercial navy in 1878 was as follows :

CLASSES OF VESSELS.	Vessels.	Crews.	Tons.
Sailing vessels	14,884	84,801	758,824
Steamers	565	10,837	230,804
Or—			
Fishing vessels	9,756	18,077	188,721
Coasting vessels	2,529	10,336	111,567
Long voyage	2,180	29,218	702,961
Vessels out of use or probably lost	954	2,507	35,849
Total, 1878	15,449	95,188	989,128
" 1877	13,407	96,164	1,011,128

All the railroads in France are private roads, which are assumed by the Government at the expiration of their charters. The number of kilometres in operation on January 1, 1878, was as follows :

Main roads	21,223
Local roads	2,570
Total	23,798

The statistics of telegraphs were as follows :

Length of lines in 1877, kilometres	87,110
Length of wires in 1877, "	150,506
Government stations in 1877	2,984
Private and railroad stations in 1877	1,477
Inland dispatches in 1877	8,584,909
International dispatches in 1877	2,877,208
Official dispatches in 1877	1,460,000
Total dispatches in 1877	12,422,119

On December 31, 1876, there were 534 authorized savings banks. Of these, 162 had 736 branches. The number of books out on December 31, 1876, was 2,625,209, and there was due

to depositors 769,034,686 francs. According to a report of the Minister of Commerce on the savings banks in France, the number of depositors in 1870, before the war, was 2,130,000; in 1872, 2,016,000; in 1875, 2,642,000; in 1877, 2,863,000; and in 1878, over 3,000,000. The deposits in this interval rose correspondingly from 711,000,000f. in 1870 to 1,010,000,000f. in 1878. From 1851 to 1870 (18 years) the whole progress made was 1,500,000 in the case of the number of depositors, and 553,000,000f. as regards the deposits.

The French colonies and dependencies had, according to the latest official reports, the following area and population :

COLONIES AND DEPENDENCIES.	Area, sq. m.	Population.
Algeria (1877).....	258,217	2,867,626
I. COLONIES.		
<i>Asia.</i>		
1. India: Pondichéry, Chandernagor, Karikal, Mahé, Yanam (1876).....	191-35	235,022
2. French Cochín-China (1876)...	21,716-49	1,523,836

Total dependencies.....	35,481-59	922,100
Colonies and dependencies.....	373,000-00	6,459,000

The resignation of General Borel, the Minister of War, was accepted on January 13th, and General Gresley was appointed in his place. General Gresley was formerly head of the War-Office General Staff, and some of the most important military reforms, particularly the organization of the territorial army, are attributed to him. On February 5th a new Cabinet was formed as follows: M. Waddington, Presi-

dent of the Council and Minister for Foreign Affairs; Léon Say, Finance; M. de Marcère, Interior; M. Leroyer, Justice; Jules Ferry, Public Instruction and Fine Arts; M. Lepère, Agriculture; M. de Freycinet, Public Works; General Gresley, War; and Admiral Jauréguiberry, Marine. On March 3d M. de Marcère resigned, and was replaced by M. Lepère, who was succeeded by M. Tirard in the department of Agriculture. This Cabinet was succeeded on December 28th by that of M. de Freycinet (see above). For a biographical sketch of Freycinet, see FREYCINET.

CAZOT, THÉODORE JULES JOSEPH, Minister of Justice, was born February 11, 1821. In 1870 he was Secretary of the Home Ministry, accompanied the delegation to Tours and Bordeaux, and followed Gambetta in his retreat. He was elected to the Senate from the department of Gard in 1876, and is a member of the Extreme Left.

LEPÈRE, EDMÉ CHARLES PHILIPPE, Minister of the Interior, was born February 1, 1823. He was a member of the National Assembly of 1871, and in 1876 was elected to the Chamber of Deputies from the department of Yonne, and has retained his seat at each succeeding election. He is a member of the Extreme Left, and was for a long time President of the Republican Union. He was also at one time Vice-President of the Chamber, and held the same position he now holds in the Waddington Cabinet.

MAGNIN, JOSEPH, Minister of Finance, was born January 1, 1824. He was chosen Minister of Commerce and Agriculture, September 4, 1870, and rendered valuable services to Paris during the siege. He was elected a Life Senator in 1875, and belongs to the Republican Left. (See "Annual Cyclopædia" for 1875, page 321.)

VARROY, HENRI AUGUSTE, Minister of Public Works, was born March 25, 1826. He is well known as an able engineer, was a member of the National Assembly, and was elected to the Senate from Meurthe-et-Moselle in 1876. He has always voted with the Republican Left.

FARRE, General, Minister of War, was born in 1816. He belongs to neither Chamber. He was selected for the post he now holds in the Dufaure Cabinet when General Borel resigned, and was put forward by M. Gambetta; but Marshal MacMahon refused to appoint him, as he had never held the position of chief of an army corps.

JAURÉGUIBERRY, Admiral, Minister of the Navy, is a member of the Senate, of which he was elected a life-member on May 27, 1879.

TIRARD, PIERRE EMMANUEL, Minister of Commerce, was born September 27, 1827. He was a member of the Commune, but resigned at the first session; was a member of the National Assembly for Paris, and afterward of the Chamber of Deputies; and always acted with the Left, belonging to the Republican Union.

COCHERY, LOUIS ADOLPHE, Minister of Posts

and Telegraphs, was born in 1820. In 1848 he held an office in the Ministry of Justice. He was elected a member of the Corps Législatif in 1869, and was one of the 84 who voted against the war with Germany. In the National Assembly he was one of the best friends of M. Thiers. He has been a member of the Chamber for Loiret since 1876, and acts with the Republican Left.

FERRY, JULES FRANÇOIS CAMILLE, Minister of Public Instruction, was born April 5, 1832. He was a member of the Corps Législatif in 1869, was Prefect of the department of the Seine in 1870, and in 1871 was elected to the National Assembly, and in 1876 to the Chamber of Deputies. He gained considerable celebrity in 1879 by his higher education bill, on account of which he was retained in the Cabinet of M. de Freycinet. He is a member of the Republican Left.

Elections were held on January 5th for one third of the members of the Senate. As indicated by the elections on October 27, 1878, of the delegations who choose the Senators, the result was a complete victory for the Republicans. Of 82 Senators chosen, 66 were Republicans and only 16 belonged to the opposition. The new Senate therefore would contain 177 supporters of the Government, against an opposition of 123.

The Chambers resumed their sittings on January 14th. In the Lower House M. Grévy was reelected President, the members of the Right abstaining from voting; and in the Senate M. Martel was elected President by a large majority.

M. Senard in the Chamber of Deputies demanded the sacrifice of Procurators-General, District Prosecutors, and some Prefects. A murmur of dissent was raised when he proposed that the Ministers should convene a joint meeting of the Deputies and Senators, to settle in conjunction with the former the dismissals deemed necessary. M. Dufaure, in reply, said that the Ministry regarded the recent elections as finally establishing the republic as the government of the country, and as consolidating republican institutions. Now more than ever they must require from public functionaries a really republican spirit, and this the Government intended to insist upon. Those officials, however, who had conducted themselves under the preceding Government as the docile instruments of their ministerial chiefs, and those, on the contrary, who had resisted their wishes, could not both be treated in the same manner. He enumerated the officials who had already been dismissed, and said that the work had never been considered as at an end. He concluded by expressing the hope that 1880 would pass as peacefully as the previous period of the republic. M. Madier de Montjau, representing the Extreme Left, and M. Floquet, representing the Republican Union, both spoke against the ministerial programme, which they characterized as incomplete and

unsatisfactory; and at the conclusion of M. Floquet's speech the sitting was suspended. During the interval an understanding was arrived at between the Government and the Republican Left and Left Center; and on the resumption of the sitting Jules Ferry proposed the following resolution:

The Chamber of Deputies, confiding in the declarations of the Government, and convinced that the Cabinet, henceforth in possession of its full liberty of action, will not hesitate, after the general vote of January 5th, to give the Republican majority the legitimate satisfactions it has long demanded on behalf of the country, especially as regards the administrative and judicial staff, passes to the order of the day.

This resolution was adopted by a vote of 223 to 121, after a motion of M. Floquet for the order of the day pure and simple had been rejected by a vote of 168 to 222. On January 25th M. Léon Say submitted to the Cabinet Council the list of changes he proposed to make among the Treasurers-General. President MacMahon said nothing, but asked M. Dufaure to remain after his colleagues. When they were alone the President said: "I will not sign those decrees. M. Léon Say is a Minister who gets into a passion. These changes must not be made. There must be no going into a passion." M. Dufaure replied that M. Say was not a Minister who goes into a passion; that the Cabinet at a previous meeting had taken a formal pledge to carry out the changes demanded, and that they were resolved to act up to it. He added that each Minister had his list of dismissals ready, and he hoped the Marshal would sign them; "for by not signing, so far from screening the functionaries, you would perhaps expose them, seeing that what we do not do others will do still more energetically; and if you prefer, as you tell us, to retire, not only will you not save those you wish to protect, but you will jeopardize those whom we are now really protecting." The following day the President signed the financial changes. On the 28th M. Dufaure laid before him the decree affecting six public prosecutors. He examined it, and then turning to M. Dufaure said, "I am going to sign this decree, but I leave the responsibility of it to you." General Gresley in turn submitted his list on the morning of the 29th. It dealt with nine generals, of whom four, including the Duc d'Aumale, were to be transferred, and five generals—Bonrbaki, Lastigues, Bataille, Du Barail, and Montaudon—definitely relieved of their command. The Marshal declared he could not sign this decree. "I can not," he said, "sign a decree suspending brave generals, my own friends and companions, whose legal term of command only expires in five or six months. There is no danger in my refusal. I can not consent to stay at such a cost. I blush at the thought of it. I assure you on my honor I will not do it. It will have to be another who does it. Political categories must not be created in the army. I would prefer to resign if I am forced to it. My chil-

dren would not forgive me for such an act. I can not, where the army is concerned, for which I am responsible before the nation, obey the injunctions of newspapers like these," and the Marshal showed some Republican papers which for some days past had been publishing lists of officials classed in political categories. At a meeting on the same afternoon, the Cabinet determined to maintain their resolution. At 10 o'clock on the morning of the 30th they were individually informed of the Marshal's resolution to resign, and at 1 o'clock, in the Cabinet Council at Versailles, he officially announced it. The Ministers then proposed to hand in their resignations if he thought any other Cabinet could obtain the confidence of the Chambers without obliging him to rigorously observe the engagements accepted at the sitting of the Chamber on January 20th. The Marshal replied, with some emotion, that he deemed such a step useless, and endeavored to show them that he had not been aware of the full bearing of the engagements to which his Government stood pledged by the order of the day voted on that occasion. The Ministers then took their departure, and waited on the Presidents of the Chambers to acquaint them with the letter of resignation, and to concert with them the measures thereby rendered necessary. The Chambers met at 3.20 P. M., and M. Grévy read the letter. It was as follows :

At the opening of this session the Cabinet laid before you a programme of measures which, while satisfying public opinion, could seemingly be voted without danger to the security and good government of the country. Waiving all personal ideas, I had given it my entire approbation, for I was not sacrificing any of the principles to which my conscience bound me to remain faithful. The Cabinet, in the belief of responding to the opinion of the majority in the two Chambers, now proposes to me as regards the great commands general measures which I deem contrary to the interests of the army, and consequently to those of the country. I can not subscribe to them. In view of this refusal the Cabinet resigns. Any other Cabinet taken from the majority of the Chambers would impose the same conditions on me. I accordingly think it my duty to curtail the duration of the trust with which the National Assembly invested me: I resign the Presidency of the Republic. In leaving office, I have the consolation of believing that during the fifty-three years I have devoted to the service of my country as a soldier and as a citizen I have never been guided by other sentiments than those of honor and duty and by perfect devotion to my country. I beg you, sir, to inform the Senate (or Chamber of Deputies) of my decision.

M. Grévy next read to the House the articles of the Constitution providing that the Chambers shall immediately meet in convention in case of a vacancy, to proceed to the election of a new President of the Republic. Pending that appointment, the Cabinet remains charged with the executive power. M. Grévy then announced that the Congress would meet at 4.30 in the Chamber of Deputies, and the session closed. At the stated time, 4.30 P. M., the two Chambers assembled in Congress and proceeded to elect a President. Out of 713 votes, M. Jules Grévy received 563, and

General Chanzy 99. On January 31st M. Gambetta was elected President of the Chamber of Deputies by 314 votes out of 405. Immediately upon the election of President Grévy, the Dufaure Cabinet resigned, and on the 5th of February a new Cabinet was formed under the presidency of M. Waddington. (See above.)

On February 6th President Grévy sent the following message to the Chambers :

The National Assembly, by raising me to the Presidency of the Republic, has imposed great duties on me. I shall unceasingly strive to fulfill them, happy if, with the sympathetic coöperation of the Senate and the Chamber of Deputies, I am able not to fall short of what France has a right to expect from my endeavors and my devotion. Sincerely submissive to the great law of the Parliamentary system, I shall never enter into conflict with the national will expressed by its constitutional organs. In the bills it will present to the Chambers and in the questions raised by Parliamentary initiative the Government will be inspired by the real wants, the indubitable wishes, of the country, and by a spirit of progress and pacification. Its especial anxiety will be the maintenance of tranquillity, security, and confidence, the most ardent of the desires of France, and the most imperative of her requirements. In applying the laws which give the general policy its character and direction, it will be imbued with the ideas which dictated them; it will be liberal and just to all, the protector of all legitimate interests, the resolute defender of those of the state. In its solicitude for the great institutions which are the pillars of the social fabric, it will devote a large share to our army, the honor and interests of which will be the constant object of its dearest preoccupations. Always taking vested rights and services rendered into fair account, now that the two great powers are animated by the same spirit, which is that of France, it will take care that the republic is served by functionaries who are neither its enemies nor its detractors. It will continue to uphold and develop the good relations existing between France and foreign Powers, and thus contribute to the consolidation of general peace. By this liberal and truly conservative policy, the great powers of the republic, ever united, ever animated by the same spirit, ever advancing with prudence, will produce the natural fruits of the government which France, enlightened by her misfortunes, has given herself, as the only one capable of insuring her repose and promoting the development of her prosperity, force, and grandeur.

In the Chambers the reading of the message was preceded by M. Gambetta's inaugural speech. He said :

In taking possession of the post of honor which the Chamber has entrusted to me, I address to you my warm thanks. Allow me to add that the historical circumstances which preceded and determined this mark of your confidence have rendered it at once more precious and more formidable for me. I am, indeed, succeeding the great citizen, the statesman whom the suffrages of the representatives of the country have spontaneously called to the Presidency of the Republic, whither the irresistible adhesion of France, the unalterable fidelity of Parliament, and the esteem of everybody follow him. If he is now the chief of the nation, he is still our instructor and model here. We shall follow his lessons and his example without presuming to replace him, with the steadfast design, however, of reproducing the principal features of his magistracy: vigilant attention to all your discussions, impartiality toward all parties, scrupulous care of our rules, and jealous watchfulness over the liberties of the tribune. Elected by the Republican majority, a resolute guardian of your rights

and prerogatives, I know my duties of protection toward minorities. I hope to be able unflinchingly to combine them with the respect every one owes here to the Constitution and powers of the republic. We may, we ought all of us now to feel that governments of combat have lived out their time. Our republic, having at length issued victorious from the strife of parties, must enter the organic and creative period. I beg you, moreover, gentlemen, especially to concentrate your ardor, your intelligence, your talents, your every effort on the great educational, military, financial, industrial, and economic questions before you, the solution of which is legitimately expected by the rising generation, the army, the producers, the whole nation. Twice elected by universal suffrage, you have obeyed the first of its wishes by saving the republic. You will carry out the rest of its wishes by insuring it, in accord with the Government, the benefits of peace, the guarantees of liberty, and the reforms demanded by public opinion and founded on justice.

In the Senate the Presidential message was much applauded. The proposed memorial on the site of the sittings of the National Assembly from May to October, 1789, was then discussed. M. de Gavardie indulged in a tirade against that body and the Revolution in general, and offered to support the proposal if Louis XVI.'s name was inscribed on the memorial as the restorer of French liberty. To this M. Henri Martin replied that Louis XVI. was to be pitied, but he had already a memorial, the Chapelle Expiatoire, which successive revolutions had respected. In the Chamber, after M. Gambetta had read his speech and M. de Marcère the President's message, the Franco-Italian and Franco-Austrian conventions were ratified.

A Cabinet Council was held on February 11th, at which the amnesty bill was definitely adopted, and the decrees appointing new procureurs-générales and new commanders of the army corps were signed. The amnesty bill was presented to the Chamber on the same day. The amnesty was to apply to all persons condemned for acts relating to the insurrection of 1871, who had been or might be liberated or pardoned by the President within three months after the passing of the act. On the 13th the bureaux in the Chamber of Deputies elected the Committee on the Amnesty Bill. Seven of the members were favorable to the Government measure, while four desired a full and complete amnesty. The committee met on the 16th. It subsequently communicated with the Government, who consented to the introduction of a clause extending the amnesty to all political crimes committed before or after the insurrection of March 18, 1871. The bill as amended by the committee and accepted by the Cabinet was as follows:

1. The amnesty is accorded to all those condemned for acts relating to the insurrections of 1871, and to all those condemned for crimes or offenses relating to political acts who have been and shall be liberated, or who have been and shall be pardoned by the President of the Republic within three months after the promulgation of the present law. 2. The punishments pronounced by default for the same acts may be remitted by way of pardon. 3. From the promulgation of the present law the prescription of Article 637 of the Code of Criminal Procedure shall apply to

acts relating to the insurrections of 1871 which shall not yet have been the subject of condemnations by default or otherwise. 4. From the date of the notification of the letters of pardon virtually involving an amnesty, the condemned persons who shall have returned to France shall no longer enjoy the benefit of Article 476 of the Code of Criminal Procedure. 5. The present law shall not be applicable to persons who, independently of the acts which it has in view, shall have been condemned in person or in default for common-law crimes or offenses of the same nature, involving a sentence of more than twelve months' imprisonment.

The debate on the bill began in the Chamber on the 20th. The principal amendment, that of M. Louis Blanc, proposing an unconditional amnesty, was rejected by 363 to 105 votes; and, after some other amendments had been disposed of, the Government bill, as amended by the committee, was passed by 340 to 99 votes. The bill was placed on the table of the Senate on the following day. On the 27th M. Rivière read the committee's report on the bill. It declared that, while indulgence should be shown, measures of defense and protection should be taken, and the committee would not have agreed to a plenary amnesty. Pity should neither in politics nor in morals stifle the voice of justice. On the other hand, they rejected M. Bérenger's counter-scheme, because it did not even contain the word "amnesty," and implied fears which there was nothing to justify. They likewise rejected M. de Gavardie's proposal that the Communist ringleaders should be excluded from the amnesty, and a list of them be published by the Government. They agreed to the bill as it stood. The bill was discussed in the Senate on the 28th, and, notwithstanding a vehement speech from Victor Hugo, was carried by 163 to 86.

In the Chamber M. de Marcère, Minister of the Interior, replied to an attack on his conduct in relation to accusations made against the police. On March 3d M. Clémenceau, after hearing M. de Marcère's explanations, moved an order of the day expressing the regret of the House at the insufficiency of the explanations. The Chamber then suspended its sitting. On reassembling, the order of the day pure and simple was proposed. M. Clémenceau adopted it, as being virtually the same as his own, and it was carried by a large majority. M. Marcère thereupon resigned, and was succeeded by M. Lepère, Minister of Agriculture and Commerce, who in turn was succeeded by M. Tirard.

On March 8th M. Drisson presented to the Chamber the report of a committee appointed to consider the question of the impeachment of the De Broglie Ministry. The report charged the late Government with various unconstitutional acts, and with an intention to bring about a *coup d'état*. At the request of the Government the debate was postponed until the 13th. Marshal MacMahon wrote a letter to President Grévy, in which he declared that he assumed the responsibility for

the acts of his Ministers of May 16th, and if they were to be impeached he declared his intention of placing himself beside them at the bar of the High Court of Justice. The debate began on the 13th, and the bill was defeated by 225 votes of the Left to 187 of the Extreme Left and Right combined. M. Clémenceau then proposed the order of the day pure and simple, seeing that the Chamber, having abandoned the impeachment, had no right to brand the Ministers in question. This proposal was rejected by 225 to 187; and M. Rameau then brought forward a resolution declaring that the Ministers of May 16th and November 23d, by their culpable schemes against the Government of the republic, betrayed the Government which they should have served, and that the Chamber accordingly delivered them over to the judgment of the nation. M. Rameau further proposed that the resolution should be placarded in every commune in France. This was carried by 240 to 157.

On March 15th M. Jules Ferry submitted two important bills to the Chamber, one on higher education, the other on the Supreme Council of Public Instruction. The former abolishes the mixed jury of examiners for degrees instituted by the law of 1875, and confines academic degrees to candidates registered and examined in the state universities. It also precludes free or non-state institutions from assuming the title of university or faculty, which is to be reserved for state establishments. No member of a religious community not recognized by the state may henceforth act as a teacher, and the declaration of public utility which accords the compulsory purchase of sites and other advantages will be conceded only by a bill sanctioned by Parliament, instead, as at present, of being granted by the Council of State on the recommendation of the Supreme Council of Public Instruction. The second bill reorganizes the Supreme Council, the law of 1872 on that subject having just

HAVRE.

expired. It excludes from the new Council the four prelates elected by the episcopate, as also the representatives of the other state churches. It likewise excludes the three representatives of the Council of State and those of the Court of Cassation and the Ministries of War and Marine. Fifteen members are to be nominated by the Government from professors and school inspectors; five *ex officio* members will also be appointed; these twenty holding office for life; while twenty-six others are to be elected for six years by various educational bodies, and four representatives of non-state education are to be nominated by the Government. The preface to the higher education bill showed that the intention was to disqualify

from all classes of teaching religious communities not recognized by law. This was justified on the ground that foreigners were not allowed to teach, and that the same exclusion should apply to "an order essentially foreign by the character of its doctrines, the nature and aim of its statutes, the residence and authority of its chiefs." This passage referred to the Jesuits, who, according to the statistics given by the "Temps," have 27 colleges in France, with 848 teachers, viz.: St. Affrique, 25; Marseilles (two colleges), 33; Aix, 41; Dijon, 18; Brest, 25; Toulouse (three colleges), 76; Montpellier, 8; Tours, 20; Dôle, 40; St. Etienne, 21; Vals, Haute-Loire, 101; Rheims, 27; Vannes, 34; Montgré, Rhône, 24; Paray-le-Monial, 8;

Le Mans, 34; Paris, Vaugirard, 44; Paris, Rue Lhomond, 30; Paris, Rue de Madrid, 19; Amiens, 62; Avignon, 48; Poitiers, 63; Algiers, 22; and Oran, 13. The disability would also affect 26 other communities, having 61 establishments and 1,089 teachers. The recognized communities, whose establishments would not be interfered with, but whose members would eventually be subjected to the same examinations as lay teachers, instead of obtaining episcopal certificates, called "letters of obedience," are 28 in number. They have 2,443 schools, 768 colleges, and 22,769 teachers. Most of the clauses of a bill were voted on March 19th, which provided that within four years normal schools for the instruction of primary schoolmasters and schoolmistresses should be established in every department of France.

M. Paul de Cassagnac's election was on the 19th declared valid. On the 23d the Chamber of Deputies decided by 330 to 131 votes in favor of convening both Houses of the Legislature in Congress, with a view of revising that article of the Constitution which fixed the seat of the Legislature at Versailles. On April 1st a motion brought forward by the Government in the Senate was adopted, postponing until after Easter the consideration of the question. The Chambers adjourned on April 5th. The Senate met again on May 8th, but adjourned until the 12th, and again until the 15th, when the Chamber also reassembled. On May 23d the Senate adopted a bill adding eight members to the Council of State. On May 27th Admiral Jauréguiberry and General Gresley were elected life-members of the Senate. In the Chamber, on the same day, M. Clémenceau proposed a resolution for the liberation of Blanqui, to enable him to appear to defend his election; but the Government opposed, and the motion for urgency was rejected by 272 to 171. On June 5th the time expired in which President Grévy had the power of amnesty, without this privilege having been applied to Blanqui, and he was therefore ineligible for the Chamber. The debate on Blanqui's liberation was marked by one of the stormiest meetings of this session. In the course of it M. Le Royer, Minister of Justice, said that M. Clémenceau could not share the Cæsarean doctrine of right *versus* legality, invoked by a man who, violating all the laws of his country and exulting in his crime, dared to say, "I depart from legality to reënter into right." M. Paul de Cassagnac here interrupted the speaker, demanding that he should withdraw the word crime; and when the President attempted to call him to order, a perfect uproar arose. After this had ceased, M. de Cassagnac disclaimed having disputed the authority of the Chair, but complained that M. Le Royer had insulted the Bonapartists by declaring that the Empire had originated in a crime. If the President would condemn that expression, he himself would withdraw anything too strong he had uttered.

He regretted the scene, but hoped the President would censure M. Le Royer's words. The President said he should not have hesitated to condemn any insulting or offensive term such as the word "criminals," but M. Le Royer had simply spoken of an historical event according to his right and his conscience. A censure was then voted on M. de Cassagnac.

On the 14th the Senate took up the discussion of the bill for the return of the Chambers to Paris. M. Waddington, who opened the debate, said: "The Government, after having examined the question under every aspect, and with every means of inquiry at its disposal, declared, without the slightest hesitation, that the return of the Chambers to Paris involved no inconvenience and no kind of danger." The principal speech against the return was made by M. Laboulaye. He summed up the arguments on his side as follows: "When we speak of Paris, the great industrial and commercial Paris must first be taken into consideration. Do you think that commerce and industry derive any advantage from, I will not say revolutions, but from a certain agitation, from orders falling off, from anxiety creeping up on every side, and labor being less in demand? You have not received a single petition on the part of commercial and industrial Paris." He pointed out that the Exhibition did not fail for want of the Chambers; that the Paris of arts and sciences got on as well without as with them; that foreigners flocked thither as usual, and did not ask for their return. Political Paris remained, for he would not assert that there were not certain persons who did desire the return, but even political Paris was far from unanimous. M. de Freycinet answered M. Laboulaye. He concluded as follows: "By making Versailles the seat of government after every preceding *régime* has had Paris for its seat of government, you proclaim that the republic does not seem to you in a position to do what preceding governments have done. In saying that you would consent later to do what does not seem to you prudent just now, you are declaring that the present situation is not satisfactory. Well, the whole Cabinet says the danger which alarms you does not exist. We have thoroughly examined the situation you dread, and we assure you there is nothing that ought to prevent the return to Paris." The bill was finally passed by 149 votes to 130. The majority comprised 143 Republicans, 4 Bonapartists, and 2 members of the Right not inscribed in any particular group. The minority consisted of 108 members of the Right (that is, almost their entire force) and 22 Republicans.

On the 16th the discussion of the Ferry bill was resumed. M. de Cassagnac again became violent and insulted the Government; so that M. Gambetta asked for an exclusion from the Chamber for three days, which was granted by the Chamber, the first instance of the kind under the republic. On June 28th the general debate was brought to a close. On the

30th the Chamber declared urgency for the bill, the effect of this declaration being that a single reading would suffice to procure its definite adoption. The Chamber then proceeded with the discussion, and negatived the counter-project of MM. Langle and Mitchell, Bonapartists, and afterward rejected by 350 votes to 176 the amendment of M. Bardoux, who proposed to restore to the state the right of conferring degrees, but to concede to religious fraternities the liberty to teach under state control. Clause 1 of the bill was adopted on July 3d, clauses 2 to 6 on the 4th, and clause 7 on the 9th, and finally the bill itself by a vote of 362 to 159, after an amendment introduced by M. Madier de Montjau, aiming at the prohibition of all religious orders to teach, had been defeated by 381 to 78. Article 7, which was most bitterly attacked, disqualifies members of religious bodies not recognized by the state from teaching. The principal unauthorized teaching bodies in France since 1820 are enumerated as follows: In 1820 the Jesuits numbered 162; in 1840, 226; in 1850, 565; in 1860, 689; in 1870, 974; and in 1878, 1,502. The number of their establishments rose, from 1820 to 1878, from 5 to 59. The Dominicans numbered 14 in 1820 and 327 in 1878. There are in all 136 establishments belonging to unauthorized bodies, of which 16 are congregations of men and 120 of women. The figures are contained in replies sent in officially under returns ordered by the law of 1876, and may be relied upon as nearly accurate. The congregations have between them 555 establishments for the instruction of female students and 81 for men and boys, and there are employed in the educational work no less than 4,857 female and 1,556 male teachers. The pupils amount to about 61,000, the women and girls being about twice as numerous as the men and boys, and of these some 3,500 boys and 6,000 girls are in receipt of pecuniary assistance by way of what we shall call scholarships or exhibitions. The expenses of providing this aid amount to nearly \$300,000 a year. M. Spuller, the official reporter of the bill, in his report said: "The invasions of Ultramontanism have reached their term. The Government of the republic severs itself from a policy which has hitherto closed men's eyes to these invasions when it has not favored them. That is the meaning of the bill; that is its aim; that is what France must see in it. And this very considerable event explains the excitement of the reactionary parties, of whom Ultramontanism is the bond of union, and the warm sympathy manifested by republican democracy to measures of reparation long awaited." The Chamber on July 15th, by 363 to 140, passed the bill, which, as Monseigneur Freppel complained in the "Univers," would put a body composed of forty-six representatives of state education and four of Catholic education over the inspection of Catholic schools, over the books used in them, and over the teachers em-

ployed. The bill on the return to Paris was adopted in the Chamber on the same day, after it had previously passed the Senate. It had to be returned to the Senate, on account of an amendment empowering the President of either Chamber to make requisition for troops for defense, instead of demanding them of the Minister of War; and on July 19th the Senate concurred in the amendments. The Chambers were prorogued on August 2d.

The new session of the Chambers opened on November 27th. For the first time since 1870 the National Legislature met in Paris. The buildings appropriated for the use of the Chambers are the Luxembourg for the Senate, and the Palais Bourbon for the Chamber of Deputies. M. Gambetta, on taking the chair, addressed the Chamber as follows:

GENTLEMEN: The second National Congress, by bringing back the public powers to Paris, has restored to our incomparable capital the legal title of which it had too long been deprived, without, however, being discredited. The sovereign Assembly by this vote of reparation has drawn closer the tie of national unity. It has placed the seat of government at the only point of the territory whence one governs with authority. It wished at length to show the world that the nation had confidence in the patriotic population of Paris, which is still, after so many ordeals, the head and heart of France. Henceforth, relieved of fatiguing daily journeys, we shall be able to devote in labor to the country the hours thus wasted in locomotion. The great tasks undertaken by you in scholastic, financial, economic, military, and political reforms are about to derive a fresh impulse from your residence in this marvelous laboratory of Paris, where all the intellectual resources accumulate, whither flow all the living forces of society, all the data of internal and external policy, made fruitful by a public spirit, the vivacity of which does not impair its judgment or good sense. You have prepared many materials for reconstruction; you have elaborated many projects. They must be carried out. I adjure your committees to work with redoubled energy to lay before us at the proper moment—which I hope will be soon—the results of their internal discussions. At this great tribune mature and practical reforms will enforce themselves; the country, daily enlightened in regard to its affairs, will at last see its constancy rewarded. As regards my own labors, gentlemen, believe me, I will do my utmost, scrupulously confined to the special duties with which you have charged me, to perform them with all the impartiality, activity, and zeal of which I am capable. Let us, then, all set resolutely to work, let us place ourselves above private interests, let us avoid useless or violent incidents, and concentrate all our faculties and efforts on our great aim—the greatness of our country, the consolidation of the republic.

On December 2d M. Baudry d'Asson, a Legitimist, withdrew a question he had given notice of, which had been looked forward to as likely to afford the Ministers an opportunity of explaining their policy. M. Waddington thereupon complained of the custom which had been introduced of giving notice of a question and afterward withdrawing it. The Ministry was said to be in extremity, but it was not at private conventions, but openly from the tribune, that questions relating to it ought to be brought forward. It was for the House to proclaim whether the Ministers did or did

not possess its confidence. If they did not, they were ready to retire.

On the 8th M. Jules Simon in the Senate presented the report of the Committee on the University Bill, but it was not to be discussed until January. On the 12th M. Le Royer, Minister of Justice, resigned; but on the 16th he was interpellated by M. Lockroy regarding the manner in which the partial amnesty law had been executed. M. Lockroy said the law had not been carried out in accordance with the intention of the Chamber, and he accused M. Le Royer of having considered the persons—

notably Henri Rochefort—and not their offenses, in drawing up categories of those who should be excluded from the benefits of the bill. M. Le Royer replied that the power of granting amnesty rested with the President of the Republic. He read a number of offensive letters to President Grévy, sent by some of those who had been deported, and also the manifesto of twenty-eight convicts who were excluded from amnesty, in which they assume the responsibility for the assassinations during the Commune. M. Le Royer said the Cabinet would not have fulfilled its duty if it had pardoned such people as the writers of these documents. M. Jules Ferry, Minister of Public Instruction, stated that the whole Ministry shared M. Le Royer's opinion. M. Clémenceau vehemently attacked the Ministers, accusing them of inaction. Premier Waddington having refused to accept the order of the day pure and simple, as implying censure upon the Government, M. Clémenceau fell back on that motion, which was rejected by a vote of 276 to 109. The Chamber then, by a vote of 255 to 57, adopted an order of the day, which was accepted by the Cabinet, declaring that the Chamber adopted the views of the Ministers, and, approving their explanations, passed to the order of the day. A report published by M. Le Royer on November 28th showed that of the 4,311 Communists still unpardoned at the end of last January, 3,113 were admitted to the benefit of the partial amnesty, while 203 had their punishment commuted. Of the remaining 1,198, 368 have been pardoned since the expiration of the amnesty law, and 209 have received a commutation of sentence, thus leaving only 830 excluded from clemency. Of these 830, 554 were tried in person and 276 by default; 65 were members of the Commune, 89 had committed common-law crimes against the person, 104 had com-

mitted common-law crimes against property, 521 had been previously convicted for non-political offenses, and 51 belonged to the class described by M. Le Royer as "persons who, irrespective of all political considerations and for causes of unquestionable unworthiness, ought to be excluded from a measure of clemency, or men who, seriously implicated in the insurrection, evince abroad, according to all the information obtained, such an attitude as to render any measure of clemency toward them impossible."

CHERBOURG.

On December 21st M. Raynal, after having unsuccessfully asked General Gresley, the Minister of War, in private, to dismiss from the army M. de Carayon-Latour, lieutenant-colonel in the territorial army, for the part he took at a Chambord banquet on Michaelmas day, publicly demanded it from the tribune, and pointed out that while M. Latour remained unpunished two of his subordinates, who were present on the same occasion, had been removed from their commands. The Minister of War replied: "I in no wise either approve or excuse the conduct of the officers of the territorial army who were present at the Legitimist banquets at Bordeaux or elsewhere. I took with regard to these officers the disciplinary measures within my power: I suspended them. Toward M. de Carayon-Latour I acted differently, because I thought that, he being a superior officer, and deprived of his position as mayor, what I had to obtain was his dismissal as lieutenant-colonel. I handed him over with a view to this to the council of officers; the decision it gave did not permit me to cause his being superseded. I hold myself wholly responsible; but as to reversing my decision as you desire by setting at naught the decision given by the council, I refuse, and will never consent to do so." General Gresley

then went direct to the Elysée and offered his resignation, which was followed by that of the entire Cabinet. Messrs. Waddington, Léon Say, and De Freycinet were all called upon to form a new Cabinet. The negotiations continued for several days, until on the 28th a Cabinet under M. de Freycinet (see FREYCINET) was formed, composed entirely of members of the Republican Union and of the Republican Left, and excluding the Left Center. This Cabinet was regarded as a victory of Gambetta over Grévy, as all its members are strong friends of the former, and the majority of them were members of the Government of National Defense at Tours. On the other hand, President Grévy desired to retain Messrs. Waddington and Say, who are members of the Left Center, but finally yielded to M. Gambetta.

The death of the Prince Imperial in South Africa (see BONAPARTE) led to considerable speculation as to who should in future be the recognized leader of the party, and in the event of a restoration of the Empire should become Emperor. Article IV. of Chapter II. of the *senatus consultum* of 1870 declared: "In default of a legitimate or adopted heir, Prince Napoleon Bonaparte and his direct heirs, natural and legitimate, from male to male by order of primogeniture, and to the perpetual exclusion of women and their descendants, are called to the throne." (See "Annual Cyclopædia" for 1870, page 311.) But the Prince Imperial in his last will had designated the oldest son of Prince Napoleon, Prince Victor, as his successor. This caused dissensions to arise in the party, one section looking to Prince Napoleon as the new head of the family, while others, in accordance with the last will of the Prince Imperial, recognized Prince Victor as such. Among those who took the latter view were several of the most influential members of the party, including M. Paul de Cassagnac. Prince Napoleon, who at first was more unconcerned than his own followers, took a decided stand in the beginning of November, and constituted his "pretendental" household with a care denoting a resolution to depart from his previous attitude of indifference.

The anniversary of the Count de Chambord's birth, which took place September 29, 1820, was selected as the occasion of a great Legitimist manifestation. Encouraged by the death of the Prince Imperial, and by the momentary extinction of Bonapartist hopes, the leaders of the party resolved to celebrate the birthday of Henry V. by banquets in twenty arrondissements of Paris, and also at Dijon, capital of the department of Côte-d'Or, where the Princes of Condé had their palace and the earlier of the Bourbon kings their castle; at Marseilles, which has never shown strong allegiance to the family; at Perpignan, in the Pyrénées-Orientales; at Montauban, capital of Tarn-et-Garonne, one of the first towns to embrace the Reformation, and consequently

one of the most subject to royalist persecution; and at Chambord, a village near Blois, from whose castle, presented by Louis XV. to Marshal Saxe, and by Louis XVI. to the family of Polignac, the self-styled Henry V. took his best-known name. The price of tickets to the banquets was fixed at five francs. By setting the price so low, the leaders hoped to attract orators from the working classes and partisans from the disaffected of every stripe. The *menus* of all the banquets were precisely identical, having on one side the subscriber's name, on the other a photograph of Henry V. To avoid the possibility of dissension or disturbance from such troublesome Orleanists as M. Hervé of the "Soleil," it was agreed that no speeches should be delivered, and that the toasts should be replaced by addresses to Chambord, uniform in text, expressing devotion to the Count and his cause, and to be read precisely at the same hour at the banquets, by delegates named beforehand. The most notable of the Parisian banquets were held in the Faubourg St. Germain, the Champs Elysées, the Palais Royal, the Marais, at Montmartre, Belleville, Menilmontant, Passy, and Charenton. Notwithstanding the prohibition, there were personal toasts and speeches at all the celebrations. The Ferry education bill was the principal theme of denunciation. The gatherings comprised, as was intended, all classes, from the workingman to the noble. To the other banquets in the provinces, at Bordeaux and Marseilles, and Perpignan, Poitiers, and the rest, crowds came from all parts of the country. At Chambord service was held at noon in the beautiful village church. The banquet was attended by a large number of Senators and Deputies, and a number of enthusiastic speeches were made.

FREYCINET, CHARLES LOUIS DE SAULCES DE, a French statesman, born in 1828. He was educated at the Polytechnic School, and graduated in 1848, the fourth in his class. In the same year he was appointed Engineer of Mines at Mont-de-Marsan, in 1854 at Chartres, and in 1855 at Bordeaux. In 1856 he was appointed *chef d'exploitation* (manager) by the Railway Company of the South. He held this important office for five years, and left a set of orders and regulations which are in force to the present day, and have to a great extent been adopted by the other railroad companies. It was at this period that he published his works, "Traité de Mécanique rationnelle," "Étude sur l'Analyse infinitésimale," and "Théorie Mathématique sur la Défense des Rampes de Chemins de Fer." Having reentered the service of the Government, he was charged during several years with a series of scientific and industrial missions, the results of which were published in official reports, several of which were awarded premiums by the Institute. In 1870, after the revolution of September 4th, he was appointed by the Government of National Defense Prefect of Tarn-et-

Garonne, and was soon after charged with the supreme direction of the war, with the title of personal delegate of the Minister in the Department of War. His efforts in this sphere, although not attended by success, were marked by great ability; and even his political opponents, like General Borel, attested to the rare talent displayed by him in this position. After the armistice, M. de Freycinet retired from the administration of the War Department, and laid down his experience in "La Guerre en Province pendant le Siège de Paris." In 1876 he was elected to the Senate from the department of the Seine, and he has on several occasions held the post of Minister of Public Works. In December, 1879, he was intrusted with the formation of a Cabinet by President Grévy, after the Waddington Ministry had been compelled to retire. He was selected mainly on account of his intimacy with M. Gambetta, the leader of the French Republicans. The favorite idea of M. de Freycinet's life has been for the Government to take the control of all the railroads. He is now in a position to give effect to the scheme, or at least to bring it fairly before the country.

FRIENDS. A meeting of Friends appointed by some of the American Yearly Meetings was held at Indianapolis, Ind., December 10th and 11th, to consider and act upon a proposal which had been made by the Ohio Yearly Meeting for the formation of an American Board of Friends' Missions. The Ohio, Western, North Carolina, Iowa, Kansas, Indiana, New York, and New England Yearly Meetings were represented by twenty-six delegates. Fifteen of these delegates were from Yearly Meetings which had fully agreed to the proposal of the Ohio Yearly Meeting. A plan of operations agreeable to that proposal was adopted, to be laid before the Yearly Meetings at their annual gatherings for approval by them, of which the principal features are as follows: The Board of Missions, to be constituted after approval by the Yearly Meetings, shall be called the *American Friends' Missionary Society*. Its object shall be "to promote the work of missions and advance the cause of Christ in the earth by effecting a general and more specific coöperation of Friends everywhere." The Board shall consist of two members appointed by each Yearly Meeting of the Association, with a like number from such Association of Friends in Philadelphia as may unite in the scheme, and shall meet annually, and oftener if necessary. Its duties shall be to procure information in regard to the needs of the various missionary fields, and exercise a general supervision over the work and workers under its care; to receive and consider applications from persons who may desire to engage in the work, and recommend them to such fields for labor as may seem to them to be the best, and under such regulations as it may determine; to recommend to the Missionary Committees of such Yearly Meetings as may have committees

of this kind suitable fields for their labor and suitable workers for those fields; to correspond with such committees upon the general and particular needs of the work, and report to the Yearly Meetings through their committees all information that may be of interest to them, or may aid them in furthering the interests of the cause; and to keep Friends generally advised, through the press, of the progress of the work, and make such application of the funds intrusted to its care as may seem best, either in the establishment of new missions, or in the assistance of those already established by individual Yearly Meetings. The expenses of the Board are to be borne by means of voluntary contributions. The meeting recommended that a corresponding secretary be appointed by each Yearly Meeting. It also voted that "such Yearly Meetings as are already engaged in missionary work are encouraged to continue in their respective fields; but when they wish to engage in other fields, it is recommended that they do so only with the sanction of the Board, that the work may be properly distributed and the best results obtained by the committee." The committees of the Yearly Meetings were requested to make reports to the Board. Among the fields for missionary work spoken of in the meeting were the American Indians, the colored people, the Chinese, and people of other nationalities that are similarly situated.

The *London Yearly Meeting* of the Society of Friends was opened May 28th. Epistles were read from most of the American Yearly Meetings, giving accounts of the condition of the Society, of its work among the Indians, and of the relations borne by the meetings and the members to the questions of education, temperance, etc. Reports were also read from Friends in Australasia, the south of France, Germany, Mount Lebanon, and Denmark. Mr. Barnabas C. Hobbs of Indiana gave an account of visits which he had made to the Governments of Russia and Germany in the interest of religious liberty and of universal peace. A Friend just returned from South Africa gave an account of his visit, and of the religious labors of Mr. Sharpe and his companion at the Cape of Good Hope. A deputation was appointed to visit the Friends in Ireland. The reports of the Tract Societies showed that the London Society had issued during the year 126,866 tracts and leaflets, making a total of 8,282,663 tracts and leaflets issued by it since its formation.

The thirty-second report of the *Friends' (English) First-day School Association* shows that there are connected with the Union 110 schools in 66 places, with 1,300 teachers and 20,713 scholars; and 22 other schools not connected with the Union in 21 places, with 128 teachers and 1,521 scholars. Of the scholars, 12,363 are adults. The returns show an increase of 298 junior and a decrease of 40 adult scholars during the year.

The Friends of England support, at an annual outlay of about £6,000, three missions, viz., one in Madagascar, one in Hoshungabad, India, and one in Syria. The mission in Madagascar includes many schools and about one hundred congregations. The preaching is almost entirely by natives. In India, the work is carried on by three missionaries, and two native converts were reported in 1878. The Syrian mission embraces stations at Ramallah, near Jerusalem, and at Brumana, on Mount Lebanon, with schools. The meeting at Brumana has fourteen members.

The Yearly Meeting of *Friends in Ireland* was begun April 30th. The meeting decided not to adopt the changes which the London

Yearly Meeting had some years before made in the constitution of the Meeting of Ministers and Elders, but determined to retain its Meeting of Ministers and Elders intact, and also to institute an Overseers' Meeting. It advised that the Meeting of Ministers and Elders and the Overseers' Meeting should hold a conference at least once in three months, to consider the care of their flocks. It also decided that elders and overseers should be appointed, not as formerly for life, but once in three years. A minute was approved, recognizing the right as having always existed, under the direction of the Holy Spirit and subject to the judgment of the Church, to use the Bible in worship.

G

GARRISON, WILLIAM LLOYD, an editor and abolitionist, born at Newburyport, Massachusetts, December 12, 1804, died in New York, May 24, 1879. The early loss of his father and the straitened circumstances of his mother made it necessary to place him as an apprentice to a shoemaker at the age of ten years, and subsequently to the publisher of the "Newburyport Herald." At the age of eighteen he began to write some pieces for the paper. After the termination of his apprenticeship he was connected in an editorial capacity with several newspapers, notably the "Journal of the Times," at Bennington, Vermont, in 1828, when he advocated the reelection of John Quincy Adams to the Presidency, supported Mr. Clay's American system, and took advanced ground on the questions of international peace, total abstinence from intoxicating drinks, and the ultimate abolition of negro slavery. His views on the last-named subject led to his association with Benjamin Lundy, the Quaker philanthropist, in conducting the "Genius of Universal Emancipation" at Baltimore. Mr. Lundy had participated in the memorable struggle of 1820-'21 against the admission of Missouri to the Union as a slaveholding State. The fire then kindled in his bosom had never gone out. He had started the paper above mentioned seven years previous to his knowledge of Garrison. He favored the gradual emancipation of the colored race, and was a moderate advocate of their colonization in Africa. Garrison was for immediate abolition, and against colonization. He became joint editor of the "Genius" with Lundy in the fall of 1829. In 1830 he was convicted of a libel on Captain Francis Todd, for denouncing as a "domestic piracy" the action of the ship Francis in carrying slaves from Baltimore to New Orleans, and sentenced to pay a fine of \$50 and costs. He was unable to pay the costs, and was put into jail. The owner of the ship also obtained judgment of \$1,000 damages in a civil suit, but it was never enforced. His arrest and imprisonment created

much excitement. He remained in jail forty-nine days, when he was released by the payment of his fine by Arthur Tappan, who thus anticipated by a few days a like generous purpose on the part of Henry Clay of Kentucky.

Mr. Garrison now commenced a lecturing tour on emancipation, with the hope of obtaining means to establish an abolition journal of his own. He lectured in New York, Philadelphia, New Haven, Hartford, and Boston. His intention was to commence his publication in Washington, but it was finally located in Boston. The intelligent sentiment of the country at this time was antislavery, and such it had been from the close of the war of the Revolution. The constitutional provision that the importation of slaves might cease after 1808; the donation of the immense Northwestern Territory by Virginia to the Union on the express condition that slavery and involuntary servitude, except for crime, should be there unknown; the gradual but complete emancipation which had taken place in all the Northern States above Maryland; the establishment of the Missouri compromise line; the passage of an emancipation bill through one House of the Virginia Legislature, and its bare failure on a second trial in the other; movements in Kentucky looking forward to ultimate liberation of the slaves; the frequent acts of emancipation by individual masters—these were all undeniable facts of history. In 1809 the importation of slaves from Africa ceased, and in the ensuing short period of twenty years all these facts, except the donation of Virginia and some State emancipations, had followed. Such was the sentiment and such the progress of the country. Incident thereto, not a drop of blood had been shed, nor a life lost. On January 1, 1831, Mr. Garrison commenced the publication of the "Liberator." It struggled for existence for some time, but gradually secured kindred instrumentalities by which it was carried along. A weekly paper, advocating simple emancipa-

tion, in a State where slavery had been unknown for many years, could not expect to survive expenses unless it introduced and presented some novel features. Such were soon to be found in the columns of the "Liberator." It did not advocate, but it demanded, the immediate emancipation of every slave in the land. There it stopped on that point. It did not advocate or present any system of measures for the support, maintenance, occupation, protection, or education of the slaves thus suddenly to be set free. The intelligence of the country at that time revolted at such a doctrine as barbarous and inhuman. The logic of the "Liberator" was of this sort: Slavery is a sin against Almighty God; therefore it should cease instantly. On this position all was based. If it was pointed out that no provision was made for the emancipated, the answer came that sin against God should cease immediately; and it was further added, in effect, that those who are fighting for the destruction of such a huge and horrible sin have no time to look after consequences. Mercy was not an ingredient of the contest. Whoever pool-poohed the doctrine, as was often done at that time, was a foe to God and man. The manner adopted by Mr. Garrison in which to conduct his cause was that of "moral suasion"; but it was to be used with such a force and vim of invective, such reproach, denunciation, and extravagance of language, as would put his mother-tongue to its utmost tension. After an existence of two or three years, the paper reached the conclusions to which its doctrine led. Therefore every arrangement of society, every institution, organization, or individual, that was socially, politically, or professionally an obstacle unwittingly to the success of this vehement effort for the extermination of the sin of slavery, or was deemed to be such an obstacle, was not spared. The Constitution of the United States, under which the institutions of the States were sheltered from the interference of non-residents, was denounced as "a league with hell"; and the Union which flourished under it was declared to be a "covenant with death." The Christian clergy of the country were branded as "a brotherhood of thieves"; and the American church was stigmatized as "the bulwark of American slavery," and American Christianity as "the forlorn hope of slavery." Sensitive and scrupulous consciences in country parishes, who read these statements, were moved in all parts of the North to manifest their innocence by a call for a public meeting to denounce slavery and slaveholders. This awoke the Union sentiment of the people, and, without distinction of party, they turned out to suppress all such "disunion agitators," as they were called. Antislavery societies were formed, and in 1834 an antislavery lecturer from England, George Thompson, was introduced. This caused scenes of mob violence in Boston and in every other place where meetings were held. A mob of

"gentlemen of property and standing" in Boston broke up the meeting there, caught Garrison as he was hiding in the loft of a carpenter's shop, let him down by a rope from the window to the ground, took off most of his clothes, and dragged him through the streets with a rope to the City Hall, where he was rescued by the orders of the Mayor, Harrison Gray Otis, and sent to jail as "a disturber of the peace." Riots broke out in all directions. Portions of 1834, and all of 1835, were a reign of terror. Sober, sensible men lost their heads. Abolitionists, however respectable in church and state, talked they ever so mildly for the negro, were hunted from city to city. Arthur Tappan's house in New York was gutted. Unoffending colored men were shot. Antislavery presses were thrown into the streets. Antislavery assemblies, gentle and orderly, were broken up. The halls wherein they met were stormed and shattered, and even church edifices were burned to the ground. Thompson, in the mean time, fled the country. These scenes resulted from the agitation among the people of the Northern States, not through any hostility to emancipation, not through any sympathy for slavery or the interests of slaveholders as such, but because it assailed the Union sentiment of the people. The issue it presented was immediate abolition or disunion, and separation from all fellowship with those who were guilty of such sin. The epithet "Union-saver" was early manufactured and applied to those who opposed the doctrines of Mr. Garrison. But the violence of the agitation soon ran its course after this manifestation of the decided and irresistible opposition in the heart of the people to whatever threatened to endanger the Union. The activity of Mr. Garrison and his immediate friends, however, did not slacken. Moral suasion was applied to tender consciences with blistering strength, and the number of champions gradually increased. At one of the anniversaries of the Antislavery Society in New York a proposition was made, chiefly by members from that city, to carry the question into politics. This was opposed and condemned by Mr. Garrison. A warm discussion ensued, but the New York members came off successful. Mr. Garrison was the President of a "non-resistant" society, and disposed to eschew politics, and probably had no confidence in an attempt to obtain results by political action. He returned to Boston, and confined himself to his adopted manner of agitation, which he continued until the close of the war. The section of the members who adopted political action commenced simply another method of effort, and based it on another and sympathizing organization. They put forward their candidates for offices and gave them their votes. But their progress was slow. They gave up the cognomen of Abolitionists, and called themselves the "Liberty party"; but what tended more than anything else to increase their numbers was the

avowed purpose to bring their action against slavery within the limits of the Constitution and the laws, instead of proceeding in antagonism to that instrument and denouncing the Union formed under it. They saw the fatal mistake early made by Mr. Garrison, and avoided it. The Liberty party grew. Some of its members were seen in legislative bodies. Distinguished editors threw crumbs to it; others espoused it. Its Senators took seats in Congress. Its candidates appeared for the Presidency, and, though with no hope of an election for themselves, they decided which one of the other candidates should be elected. The most important subsequent events are to be found in the preceding volumes of this work. Wiser and shrewder men than Mr. Garrison had taken the conduct of this crusade into their hands.

During his life Mr. Garrison made four or five visits to England for antislavery purposes, and was received with much distinction. On one of these occasions the Duchess of Sutherland, the Mistress of the Robes—a kind of female prime minister—invited him to sit for his portrait, and subsequently placed it among the pictures of nobles and statesmen that adorn the walls of Stafford House. While abroad in 1867 the Duke of Argyll, John Bright, John Stuart Mill, Earl Russell, and other prominent persons, gave him a banquet in London; while the Lord Provost of Edinburgh, in obedience to a vote of the civil authorities, conferred upon him the freedom of the metropolis of Scotland.

In 1843 Mr. Garrison was chosen President of the American Antislavery Society. He held the position till the anniversary meeting in May, 1865, when, the war being over and the negroes free, he counseled the dissolution of the Society on the ground that its work was done, insisting that an American antislavery society was a misnomer after American slavery had ceased to exist. He failed to carry his point, and thereupon he resigned the office of President. On the same grounds he suspended the publication of the "Liberator" at the close of the war. Its work was done.

GEOGRAPHICAL PROGRESS AND DISCOVERY. The largest geographical areas yet unknown which now invite exploration, excepting the regions surrounding the poles, are found in the central portions of the continent of Asia and in the interior of Africa. The greater part of New Guinea, the second largest island in the world, is also a *terra incognita*, which still incloses secrets of great probable importance to commerce and to science alike. The most important accessions to geographical science to be chronicled are the fruits of two national expeditions into the interior of Africa from the western coast. The advance from this side is notoriously more arduous than from the eastern coast; and both the French and Portuguese expeditions have encountered obstacles and dangers of the most trying description.

The former has settled the question of the source of the Ogowé, finding its basin to be of much smaller extent than was supposed. The latter traversed the continent by a southeasterly route from Angola to the Transvaal, passing through the regions in which Livingstone took up his abode, and obtained a solution, which, however, can hardly yet be accepted as final, of a hydrographical question of equal importance, that of the discharge of the great river Cubango. The geographical data obtained by the Portuguese explorer are more complete, and probably more trustworthy, than those of the other transcontinental travelers. D'Albertis, the naturalist whose devotion to science led him to pass many years as a hermit among the savages of New Guinea, and who has contributed more than any other traveler to our knowledge of the interior regions of that strange tropical island, is able since his return to Europe to furnish a detailed and most interesting narration of his experiences and observations in geography, natural history, and ethnology, in all which branches he is an acute and able investigator. From the new Russian possessions in Asia a dozen or more expeditions composed of learned and experienced specialists are now sent out into the unexplored regions of Central Asia every year, nearly every one of which has something to contribute on its return to the knowledge of these vast and interesting regions. The very thorough geodetic and topographical surveys of the English approach this same wide domain of unexplored territory from the south. Great interest is felt in the lands of Thibet, highly interesting from geographical, naturalistic, and ethnographical reasons, and of even greater importance from a commercial standpoint. This country, whose peculiar natural products are of exceeding value, has been completely closed to the outside world, and is still, by the jealous and exclusive restrictions of the Chinese territorial government; but there are indications that these rigid barriers, which can not possibly be long upheld, will soon give way to the inevitable progress of civilized commerce. The achievements of the most striking and transcendent interest, however, have been within the last couple of years, and promise to be in the immediate future, in the domain of Arctic discovery. The accessions in this fascinating field for research have not been of a scientific character solely. The icy regions of the north which have been unlocked to the world by the efforts of courageous polar navigators yield many products which are highly prized in the commerce of the world, and which the labors of these hardy pioneers will have rendered soon more abundantly accessible. The vast alluvial lowlands of Northern Asia possess an excellent soil for cereal crops, and perhaps in the not distant future the enormous plains of Siberia and the prairies of the Hudson Bay Territory, two regions which have been looked upon as hopeless frozen wildernesses,

will furnish bread for the whole commercial world.

ASIA.—In Central Asia the important expedition of Severtzov has brought to light the principal features of the Pamir and revealed its relations to the Thian-shan range. The party started from Osh. While the topographers were taking down the route to the Kara-kul and the outline of its basin, Severtzov studied the geological characters of the Pamir and the Thian-shan at the sources of the Kashgar Darya. Meeting again at the Kara-kul, they started out on an unexplored route, lying between Forsyth's and Kostenko's, following up the northern Ak-baital, and crossing a pass 15,000 feet high to the southern Ak-baital River, which they descended to its confluence with the Ak-su. An excursion into the unexplored Ran-kul Pamir disclosed the true nature of the disputed orography of the east Pamir. It does not consist in a ridge of mountains, as Hayward supposed; there is also no abysmal wall, as Fedtschenko reported, but a broad mountain system. The peaks of the Kysyl-yart, from 21,000 to 25,000 feet in altitude, are in separate groups of snow-covered mountains, between which extends the valley of the Little Kara-kul with a diameter of about 50 kilometres, which is formed by a very complex system of lower mountains 14,000 to 15,000 feet in height. After fixing an astronomical point on the Ran-kul, and returning to the Ak-baital, which they followed down to the Ak-su, they sought the unknown region of the Alitshur Pamir by way of the Kara-su and the pass of Naisa-tush, 14,000 feet high. They crossed the Alitshur to the Jashil-kul River, which intersects it, discovering in its eastern part a group of lakes. Their provisions failing, they were forced to return to the Kara-kul. This lake lies in an expanded portion of a very long valley, whose eastern opening leads into the valley of the Kak-shai River, and which opens at its west end into that of the Ak-su. Both of the outlets which in former ages connected with these rivers are now dried up; although in times of high flood, but not every year, an overflow still takes place by the southwestern outlet into the Kudara, a confluent of the Murgab. The scientific observations and collections made on this expedition were much more extended than those of its predecessors. The region between the Pamir and the Thian-shan was also explored. The geological material collected suffices for working up the whole geology of the Pamir. Many specimens of about 1,000 different species of plants were gathered. The zoological collection was particularly complete, increasing the fauna of the Pamir from 10 to 60 species of mammals, from 4 to 20 species of fish, and from 110 to 350 species of birds.

One of the most interesting questions of Asiatic geography has advanced another step toward its final solution through the enterprise of one of the native Indian surveyors employed in the British geodetical operations in South-

ern Asia. The identity of the Sanpoo, or great river of Thibet, with the Brahmapootra, has been accepted by most geographers; yet it has never been established, and the course of the Sanpoo through the mountains, where it makes a curve from an easterly to a south-westerly course as laid down on the maps, is purely conjectural. Klaproth published an hypothesis that the Irrawaddy instead of the Brahmapootra was the continuation of the Sanpoo, and others have sought to identify the latter with the Subansiri. The exploration of the Indian topographer has practically settled this much-debated question, and leaves no room for doubt that the Sanpoo emerges under the name of the Dihong, as the Brahmapootra is called where it issues from the mountains into the Assam Valley. The energetic native explorer was instructed by Lieutenant Harman to go to Chetang, whose position was determined by the pundit Nain Sing in 1875, and explore the Sanpoo downward as far as he could. On the north bank he followed the river a distance of about 30 miles to a point where a small river called the Mikchoo flows into it from the northeast. He was obliged to make a detour up the valley of this stream and over the Lung-la Pass in the range of mountains which forms the eastern boundary of the Lhasa basin, and then down a valley in which he passed two monasteries to the town of Gyatsa-jong, where he again struck the Sanpoo at a distance of 20 miles from where he had left it. Following the left bank for 30 miles, he then crossed near Thak Nong-jong, not far from which a river joins the Sanpoo from the south. This latter, he learned, flows by a town named Tsari, which is probably identical with D'Anville's Chai. Nain Sing saw the course of the river for 30 miles below Chetang, which is to the southeast. A short distance below Gyatsa-jong the course changes to due east. After following it in that direction for about 50 miles, he found that it turned then to the northeast, and flowed 80 miles in a northwesterly course, reaching its northernmost point in about latitude 30° and longitude 94° E., about 12 miles from a town called Chamear, doubtless the same as the Tchumca of D'Anville. It here takes a sharp and sweeping turn and flows in a southeasterly direction. He followed it for 15 miles to a place called Gya-la Sindong, where he was obliged to discontinue his explorations. He saw its course for a long distance beyond, to an opening in the mountains through which it passed to the west of a high peak called Jung-la. The distance from Gya-la Sindong, according to its position as determined by the explorer, to the highest point on the Dihong attained by Wilcox, is only about 100 miles. The distance to which the present exploration extends east of Chetang is some 200 miles. The altitude of Gya-la Sindong he determined to be 8,000 feet above the level of the sea, showing a fall of 3,500 feet in the 200 miles of its course from Chetang. The

fall between Gya-la Sindong and the junction of the Dihong with the Brahmapootra, a distance of 160 miles, must be 7,000 feet. This is equalled by the fall of other rivers of the Himalayas; yet such a descent in a river of such magnitude must present scenes of imposing grandeur. The conjecture that the Sanpoo was the upper course of the Subansiri was based on the supposition that the volume of the Subansiri was greater than that of the Brahmapootra, and on the difficulty of accounting for the size of the Subansiri with the area of drainage to which it seemed confined if it were not identified with the Sanpoo. Harman has proved that the volume of the Dihong is really two or three times as great as that of the Subansiri. The discovery of a considerable area within the great bend of the Sanpoo greatly increases the probable drainage area of the Subansiri.

The English advance into Afghanistan has been productive of valuable geographical results. The route of Colonel Prendergast to Candahar, through the Sulimani Mountains and the Chacar Pass and across the Vatakri Plain (the same route by which General Biddulph returned), was over new ground. Lake Ab-istada, which was supposed to have no outlet, is found to overflow into the northern branch of the Arghasan River, a tributary of the Helmund.

The directors of the trans-Himalayan operations of the Indian Trigonometrical Survey—Ryall, who surveyed the regions about the sources of the Sutlej, and Kinney, whose field was the neighboring region from which the western feeders of the Ganges spring—have given some interesting information upon the character and customs of the people of this part of Chinese Thibet, as well as regarding the hydrography and orography of the country. The western district of Thibet, which borders upon British India and is drained partly by the upper Sutlej and Karnali Rivers, is called Nari-Khorsam, or sometimes Hundes. The snow-line, Ryall supposes, is rarely below 20,000 feet in any part of Hundes. He laid down 38 different peaks covering an extent of country 100 miles in length. The most remarkable of these, besides Leo Pargial, described by Andrew Wilson, were Gurla Mandhata (25,360 feet) and Kailas, which lie on opposite sides of the lakes of Manasarowar, Cho Mapang and Lang Cho. Kailas, although inferior in altitude to Gurla Mandhata, presents probably the most magnificent aspect of any part of the Himalayas excepting Nanga Parbat. It resembles in form a Pandoo temple with the tip of its conical summit broken off, and is therefore invested with a sacred character by the Hindoos of Northern India. Its extraordinarily huge mass overtops by several thousand feet all the other summits for forty miles around. The Hundes Valley, viewed from an elevated position, presented the appearance of a wide plain interrupted at intervals by low ridges in its eastern portion to the west of the

Manasarowar lakes. The plateaus and mountains of this sterile country, which produces no trees except poplars on the borders of streams, are composed of clay, slate, and fossiliferous limestone. Kinney ascended from Nilang to the main watershed of the Himalayas, and sketched the district of Tsaparang, one of the three districts of Hundes, the others being named Daba and Purang. The entrance to the Nilang Valley from Bhairongati is through a terrific gorge, inclosed between snowy peaks over 20,000 feet in height, which seem to directly overhang the river-bed. The Bhotias of Kumaon and Gurhwal are the traders between Thibet and India. The principal exports from Hundes are borax and shawl-wool; trade in the former has suffered much from a fall in price of 70 per cent., and that in the wool, which is called *pashm*, has also greatly fallen off in late years, and numbers of the shawl-goats are sold in India for sacrificial purposes. The shawl-wool is sold at Gartok to Cashmere merchants, who take it to the manufactories of Cashmere and to Amritsar and other markets in the Punjab. The finest pashm is grown in the neighborhood of the Manasarowar lakes. Gold is found in the gold-fields at Thok Jalung and on the shores of the lakes, but it is not brought in any quantity into India. The wild and tame varieties of the yak furnish a useful kind of soft wool. The inhabitants of the higher plateaus of Hundes are nomads, and those on the arable lands along the Sutlej and its tributaries are partly nomadic in their habits. Their herds are composed of goats, sheep, and yaks. The people of Hundes are of purely Tartar origin, and are very strongly marked with the physical characteristics of that race. They are hideously wrinkled, even the young having furrowed faces. The Hunias, as they are called, are uncleanly in their habits, fond of tea, which they mix with butter, and much addicted to a beer brewed from rye without any bitter ingredient, which is called *chang*. The brick-tea which they use is the monopoly of the Lhasa Government, and is dealt out to the provincial governors at a fixed price, who force the people to take it in quantities regulated by the wealth and standing of each family, at the rate of about one rupee per pound. Salt and borax can be dug up in any quantity near the Thok Jalung gold mines. The inhabitants of the Bhotia Mehals of Kumaon and Gurhwal are of mixed race, the Tartar blood predominating. The Bhotias are enterprising and intelligent, and not infrequently good-looking. The inhabitants of the Nilang Valley differ in no way from the Hunias. The Bashahris of Independent Gurhwal are said to be the only foreign traders allowed to travel without hindrance all over Thibet.

The present state and future prospects of trade between Bengal and Thibet were the subject of a paper read by Lieutenant-Colonel Lewin before the British Association. The present difficulties which are thrown in the

way of the entrance to Thibet are due to the interested fears of the Lamas or governing class, who now possess the monopoly of the commerce, that their revenues would be destroyed if the markets were opened to foreign traders. The jealousy of the Chinese authorities has its grounds in political and commercial motives, and is in no way due to religious prejudice, since the people are Buddhists. The principal wealth of Thibet consists in her flocks and herds. From ancient times she has been known as the best wool-growing country in the world, and now produces the wool of the finest quality. The principal exports to India at present are coarse blankets and carpets, wool, yak-tails, borax, musk, and rhubarb. The country abounds in minerals; but they are not worked, except gold, which is made into rude ornaments. The gold-fields run along the base of the southern watershed of the Sanpoo. A still more important export than the others is brick-tea, which is obtained from a coarse-flavored leaf grown in Sze-chuen, which is preferred by the Bengalese, as it is by the inhabitants of the hill countries and the Punjaub, to the bitter-tasted products of the valleys of the Himalayas and Assam. The taxes and profits from the sale of this tea are one of the principal sources of revenue to the Lhassa Government and the official class. A trade route over the Himalayas would not only be an outlet for the valuable products of the Thibetan highlands, but would open up the great province of Sze-chuen also, with its silk, tea, amber, jade, musk, rhubarb, and cinnabar. The Thibetans are a peaceable, well-instructed, and commercially inclined people. The route to Lhassa and China by way of Darjeeling is now the best, and will be so until a railway shall be built up the Assam Valley.

AFRICA.—The French expedition to the Ogowé, under Savergnan de Brazza and Dr. Ballay, has succeeded, by the exercise of courage and perseverance, in making some geographical discoveries of unusual value. This party set out from France in the summer of 1875, and at the commencement of 1876 were ascending the Ogowé River in canoes to Lopé. After exploring the country of the Fans, they advanced to the village of Donmé, about 50 miles south of the equator, where the course of the river is northwestward. Brazza was obliged to return to the coast on account of illness, but rejoined the party in the following spring, and advanced to the Poubara Falls, in latitude $1^{\circ} 45'$ south, where the river is an insignificant stream coming from the south. Having thus finished their explorations of the Ogowé, Brazza boldly resolved to penetrate the unknown interior. Journeying to the eastward, they crossed the water-parting, and followed the course of a stream which led them to a large and unknown river called the Alima, which flows eastward and is undoubtedly an affluent of the Congo. Leaving this river, they traveled northward, crossing several streams which flow to the east,

and striking another large river on the equator, which is called the Licona. At a place called Okango, 30 miles farther north, they were obliged to turn back again on the 11th of August, 1878, reaching Gaboon on the 30th of November. The distance between the Ogowé and the Alima is about 50 miles; the country is crossed by ridges of hills with easy passes. This region was devastated by famine. The tribes on the Alima, whose breadth was about 160 yards and its depth 16 feet, were ferocious and predaceous, attacking them from every village. The cupidity and impudent behavior of the blacks gave the travelers constant trouble from the beginning to the end of their three years' explorations. The course of the Ogowé may be divided into three sections—the middle one flowing parallel to the equator, the lower one inclining about a degree and a half to the southward, and the upper one trending northwestward and making about the same angle with the middle course. After Brazza had settled in the negative the question of a connection between the Ogowé and the great lakes, and, in spite of his diminished supplies, had determined to leave the river on an exploring expedition into the interior, he found himself obliged, from the deceitful and thievish character of the hired porters, to purchase forty slaves to carry the baggage. With these they were enabled to traverse the countries of the Oudoumbo, Umbété, and Batéké, and pursue their explorations until shortness of provisions and the reduction of the stock of merchandise obliged Brazza to send Dr. Ballay and Quartermaster Hamon back to the Ogowé, and the approach of the rainy season compelled him for the sake of safety to follow not long after. The new country explored by Brazza extends about 160 geographical miles south of Lopé and 240 miles to the eastward, reaching half way to where the Zaire crosses the equator. The point where he abandoned the Ogowé was as much as 150 miles beyond the farthest point attained by Dr. Lenz, and 75 miles beyond that reached by Marche the year before. When the French and Portuguese expeditions started forth on their explorations, the secrets of the interior, the problems of the Congo and the lower lake region, had not yet been unsealed through the labors of Cameron and Stanley. When Brazza arrived at Lopé in the beginning of 1876, near which place Marche and Compigné had been obliged to resort to arms to defend themselves against a murderous attack of the natives three years before, he resolved to enter this dangerous region without an escort. This proved the best and safest course. He gained the good will and confidence of the Ossyeba, whose incessant feuds with the Adouma and the Okanda are prompted by jealousy of their commercial operations up and down the river, as they themselves possess no skill in navigation. In June, 1876, he was in Doumé, in the country of the Adouma, in company with the Austrian traveler, Dr. Lenz; and here

his companions, Marche, Ballay, and Quartermaster Hamon, found him dangerously ill some weeks after. Regaining his health, he advanced with his associates (except Marche, who had returned to Europe broken down by fever) to the bifurcation of the river formed by the junction with the Passa, which comes from the southwest. The Ogowé above this point, latitude $1^{\circ} 36' S.$, flows from the south, and is named the Rebanayi by the natives. Both streams are obstructed by cataracts and rapids a short distance above. The fall at Poubara, about latitude $1^{\circ} 45' S.$, longitude $11^{\circ} 5' E.$ from Paris, is 30 to 40 metres. Three or four days' march farther up the Ogowé is easily fordable at low water; and the same is true of the Passa. Having thus satisfactorily solved the problem of the source of the Ogowé, they were attracted by the unknown interior to the east. They could find no carriers to accompany them into these dread regions, whose barbarism the blacks depicted in the darkest hues. They therefore felt driven to the purchase of their forty slaves. Leaving the well-wooded banks of the river, they struck out into a sandy and waterless country, intersected by deep ravines, destitute of provisions, and inhabited by what were reported to be quarrelsome and ferocious cannibals. A few miles this side of the village of Obanda, which is in latitude $1^{\circ} 34' 59'' S.$, longitude $11^{\circ} 59' 48'' E.$ from Paris, they crossed the water-parting. In the inhospitable region which they now entered, sprinkled with sand-hills, with occasional rocks jutting out, were encountered the Batéké, a tribe which Stanley found living on the Zaire. In the new hydrographic basin in which he found himself, Brazza crossed four different rivers, all easily navigable and varying from 60 to 140 metres in breadth. In descending the Alima they were stopped by the fierce Apfurus, and only saved themselves by escaping into a marshy jungle. Thirty or forty miles farther north, near the Lebaingoco River, the sickness of many of the men induced Brazza to send them all back with Dr. Ballay and Hamon, and to continue his explorations entirely alone, which he pushed to Okanga, $0^{\circ} 30'$ north latitude, longitude about $12^{\circ} 45' E.$ from Paris, reaching there the 11th of August, 1878. North of the Lebaingoco the desolate country covered with sand-hills ends, and when the Licona River is reached vegetation is abundant. The country of the Ashimbo, north of the equator, is covered with dense forests. The villages of the Batéké and Umbété, who occupy the arid region, are few and wretched. These tribes resort to very singular tactics to ascertain the disposition of strangers approaching their villages. The men conceal themselves behind the village, leaving the women in their houses and sending out the children toward the strange party. If the children are not molested, they lead the strangers into the village, and the men come from their hiding-place and receive them cordially. If, however, they attempt to lay

hands on the children, the latter dexterously elude them, while the warriors wait until the foe has entered the village and scattered in search of plunder, and then, descending from their ambush, have them at their mercy. The houses in these countries are all rectangular in form, built of bamboo, and roofed with the same. A multitude of petty independent chiefs govern these tribes. Cannibalism is universally practiced by the victors in battle. On the upper Ogowé they worship fetiches and the skulls of their ancestors. Elephants and enormous gorillas are found on the upper Ogowé. The dominions of the chiefs were of greater extent down the Alima.

The English are much interested at present in opening up the shortest routes in the lake and Upper Nile regions of Africa, and in establishing communication between their missionary stations. An able and ardent young explorer, Keith Johnston, was commissioned by the Royal Geographical Society to explore a direct route from Dar-es-Salaam, near Zanzibar, to the north end of Lake Nyassa, and then to push across to the southern end of Tanganyika. These are two connections which are of the highest importance for missionary operations in these parts of Africa. The country which he was to have traversed is very interesting as a field for scientific exploration also, and he was instructed to make as complete observations as he could in the zoology, ethnology, botany, geology, and meteorology of these regions, and to study the phenomenon of a sudden rise in the waters of Lake Tanganyika, alleged by Stanley to have taken place in recent times. Keith Johnston reached Zanzibar on the 5th of January, with one companion, Mr. Thomson. He was able to obtain the services of Dr. Livingstone's favorite attendant, Chuma, as head-man. In May the party left Zanzibar: it consisted of the leader and his European companion and 138 native attendants. Before he had accomplished one third of the distance between Dar-es-Salaam and the head of Lake Nyassa the accomplished explorer fell a victim to the deadly climate at Behobebo, in latitude $8^{\circ} N.$, longitude $38^{\circ} E.$ The expedition proceeded under the command of Mr. Thomson. The country traversed up to the place in which the leader breathed his last was of a monotonous description, consisting of level sandy plains varied by marshes. The route taken was to the Lufigi River, which was found to be quite unnavigable except for canoes, being full of sand-banks, islands, and snags, although in places it is deep and the current is strong. They struck the Lufigi near the village of Mzetusa, from which they marched in a west-northwesterly direction to Behobebo. Here the country began to grow much better. Thomson's plan was to proceed in a westerly direction for seven days to the large Khutu village of Mgunda, and then to march southward for two days through the jungle to the Ruaha, to ford this and reach the Uranga

in two days, and in two days more to arrive in Ubena. The country which this route would take him through was reported to be well peopled and well supplied with food.

The traveler Otto Schütt, who was sent out on an expedition to Central Africa by the German African Society, has made some very interesting discoveries in the basin of the Congo. Between the two known affluents of the Congo, the Quango and the Kasai, he discovered four others, whose names are the Quengo, the Marata, the Cinlu, and the Kwanger. He reconnoitred a portion of the Kasai River which had not before been visited, that between the eighth and ninth parallels. The lake which was called Sankora by the English explorers, and is named Mucaruba by the natives, is situated on the fifth parallel of south latitude. South of this lake there lives a tribe of dwarfs. The tribes dwelling along the banks of the Quengo and the Kasai are cannibals. The traveler, being forbidden by the Muata Janva to cross the Loulona River, returned to Loanda.

Interesting accounts of the political and physical condition of the southeastern interior of Africa, the same countries which were traversed by Serpa Pinto, and which have been studied by one of the most deserving of modern explorers, Dr. Emil Holub, are contained in the papers of the late Captain Patterson, who was sent by Sir Bartle Frere in 1878 to Lobengule, the King of the Matabeli, as an envoy, and who died from drinking the water of a spring which was probably poisoned for the purpose of killing game. There was suspicion that he and his companions were the victims of a murderous conspiracy. Matabeli-land is a large kingdom with a strong and tyrannical political system, containing about 200,000 inhabitants, who are spread over a fertile and well-watered territory of about 150,000 square miles. The boundaries are the Zambesi River on the north, the Shasha on the south, the Sabia on the east, and the Zonga on the west. The population is divided into three classes. The Abazunzi, descended from the Zooloo conquerors of the country, form the aristocracy, and are about one fourth of the population, and the Abeatla, the sons of Bechuana prisoners taken on the march into these regions from the southeast, form another fourth. The Amacholi, the original inhabitants conquered by the late King Masilikatze, composed of different tribes, are now the servants of the conquerors. The people are assigned to their settlements by the King, who collects about him the young men of the country, and, after putting them through a course of military training, settles them over the country, each regiment, after it has passed through its four years' drill, being made the nucleus of a new town. The principal occupation of the men is warfare with the neighboring tribes. The women till the soil, which is very productive. They possess a few cattle, goats, and sheep. They are ruthless and cruel in their

wars, slaying all but the children, whom they carry off as slaves. The King rules with a rod of iron, inflicting the punishment of death for the slightest offense. He visits the same dread penalty upon all who threaten to become too powerful by amassing property or advancing in any way. The governors of towns, called *indunas*, report all offenses to the King, who reserves to himself in all cases the power of passing judgment. The capital, Gubuluwayo, situated near the center of the kingdom, is only occasionally the residence of the King. The greater portion of the year he wanders about the kingdom, living in temporary towns constructed at his pleasure. During the life of Masilikatze, his father, and for some time after he became King, Lobengule affected the society of white people and wore the European dress. Of late years he has adopted the ways and habits of a savage, and does all that he dares openly and secretly to exclude the whites and restrict their influence. The whole country of Bamangwato on the west, as far as Lake Ngami, is claimed by the Matabeli by right of conquest. They are constantly encroaching also on the territory of their neighbors on the east. The Banyaia, a southeastern tribe, who occupy the Mashona Mountains, are able to successfully withstand them. The Mashona can offer no resistance. They are a peaceful and industrious race, skilled in the working of iron, in making excellent baskets, and in weaving a good cloth from the cotton which they grow. They occupy a fertile, well-watered country, with large level plateaus like the Orange Free State. In the Mashona and Tati districts gold is found in quantities and iron is abundant. The vegetation of Matabeli-land is very luxuriant. Mapene, mimosa, and baobab trees attain an enormous size. There are large and fine forests. The breadfruit-tree, palms, cotton, olive, and numerous wild fruits grow prolifically. The people of Bamangwato, ruled by a Christian chief, are rapidly taking on the customs of civilization. The country is comparatively barren, the soil sandy, and covered with stunted bush. The Limpopo, Zambesi, and Zonga traverse the country, as well as the Tati, Shasha, and Makalapogo, which are sand-rivers in which water can only be obtained in the dry season by digging. The inhabitants outside the towns in Bamangwato are of two classes, the Bakala and the Masawa, the latter being slaves without the right to own property. Shoshong, the capital, once contained 30,000 inhabitants; but, owing to the hostile inroads of the Matabeli, its population is reduced to 10,000. The people often emigrate to the other Bechuana nations. The women cultivate gardens near the town and the men follow the chase. They are temperate in their habits. The European dress is common. Khame, the chief, is a wise ruler, sincerely attached to principles of humanity and justice. The country over which Khame claims jurisdiction is an irregular triangle, with the Makarakari salt

lake in the center; one of its angles is the junction of the Shasha and Limpopo Rivers, another the junction of the Chobe with the Zambesi, near the Victoria Falls.

Andrew A. Anderson, like Dr. Holub, has spent many years in southern Central Africa, and has collected interesting data regarding the countries of the South African plateaus and their inhabitants. East of the Mashona country, which he counts as belonging to Matabeli-land, is the Makombe country, about 40,000 square miles in extent, reaching to the Portuguese possessions. South of this is a territory extending to the Limpopo, with an area estimated at 70,000 square miles. Parts of this are inhabited by a tolerably thick and industrious population, who grow and weave cotton. South of Bamangwato, which has an extent of about 70,000 square miles with a population of about 45,000, is Secheli's country, which extends from the Limpopo on the east to the Kalihari Desert on the west, whose population, exclusive of Bushmen, is about 45,000; this region has an area of about 30,000 square miles; the capital town is Molopololo. In the same country two independent chiefs rule over about 30,000 people. Immediately south of this country, between the Transvaal and the desert, is Gasietsise's country, 60,000 square miles in extent, with Kanya for its chief town, and a population, exclusive of Bushmen, but including the followers of two chiefs who live there by sufferance, amounting to 35,000; and to the east, bordering on the Transvaal, is the territory of the chief Macasi. South of Gasietsise's dominions Monsiwe rules over about 20,000 square miles of territory, with a population of perhaps 15,000. Below this country and north of Griqualand West is about 30,000 square miles of territory, occupied by several petty tribes, numbering some 20,000. West of Bamangwato, the region about Lake Ngami is governed by a son of the late Lechuatabele, whose kraal is at the foot of the lake, where the Zouga or Botletle issues. His territory has an extent of about 40,000 square miles; the people number about 20,000. The countries west of the Kalihari Desert are Ovampo-land, Damara-land, and Great Namaqua-land. Ovampo-land, on the north, would be an excellent grazing country for cattle and sheep, having plenty of water and very fine veldt; the mountains are reported to be rich in minerals. This country contains about 60,000 square miles, and supports a population of only 30,000; the people are industrious, and raise grain and vegetables. Damara-land lies to the south and west of Ovampo-land and north of Great Namaqua-land, extending in its southern portion from the sea to the desert. It has lately been annexed to Cape Colony. Along the coast the country is a sandy desert, but its eastern portion is mountainous and rich in mineral products. The same is true of Damara-land, running from Great Namaqua-land to Orange River on the south, and from the Atlantic Ocean

to the desert of Kalihari, and containing an area of some 70,000 square miles. In the east, near the Great Fish River, are also good grazing-grounds. The population is very mixed, embracing Namaquas, Hottentots, Bushmen, Griquas, and Damaras, with different varieties of half-breeds called Kurumas, Veldskoendrawers, Bundle-Swaarts, and Africanders, and a good number of Caffres who have run away from the Cape. The latter, numbering about 20,000, live under arms and are given to plunder. The great Kalihari Desert is 900 miles long, and in some places 500 miles broad; it contains 260,000 square miles, besides a tract of 20,000 square miles on the Orange River. Between 1864 and 1872 Mr. Anderson explored and surveyed the desert of Kalihari. He was always accompanied by a large following of Bushmen, who, he says, are the best behaved but the worst treated of all the black races he has met in Africa. The desert is rich in minerals: coal is abundant; copper is found in considerable quantities on the west side; and gold was discovered by him in two mountain ranges. Those parts of the country in which water is always to be found are well adapted for farming. Near the large sand-rivers water is always obtainable. The rainy season is from January to May. Sheep and cattle fatten well on the herbage. The fine grassy pastures are full of large game. There are large forests of bush and timber. The cotton-growing region in the Mashona country is described by Mr. Anderson as embracing an area of 25,000 square miles. Lobengule now bars the way to this rich field for European settlements. Transportation to the coast is everywhere easily to be accomplished by the numerous watercourses. Rice is also cultivated in this district; spices of all varieties thrive exceedingly; and oranges, lemons, citrons, and many vegetables attain the highest degree of perfection. Gold is found in this same country, as well as silver and other minerals. Portions of the Mashona district and other parts of Matabeli-land are absolutely free from fever, which is unknown in the elevated and mountainous regions. West of Lake Ngami, in Kalihari and the Ovampo, Damara, and Namaqua countries, there is no fever. The fever districts of this part of Africa are principally confined to the valley of the Zambesi and the regions east of Lake Ngami, in the low country along the Zouga and Mababe Rivers from the great salt-pan of Makarakari up to Victoria Falls, and along the Chobe or Cuando River. The sickly season begins when the mapane-trees, which grow to a great size and have a frond and flower like those of the orange-tree, send out their young shoots; from May to October the whole country is free from fever.

One of the most important geographical achievements of the year was accomplished in south Central Africa by Major Serpa Pinto, an energetic and accomplished young Portu-

guese explorer. The expedition was sent out by the Portuguese Government, and had for its object the exploration of the interior of the African Continent, particularly the river systems of the Zambesi and the Congo. The commander of one division of the expedition, Major Albert da Rocha Serpa Pinto, was eminently fitted for his task by his experience in African life, by his knowledge of the languages, and by his scientific attainments. Born in 1846 and educated for the Portuguese military service, he took part in 1869 in the campaign against the rebellious chief Bonga in the region of the Zambesi, and on that occasion ascended that river as far as the Victoria Falls. He then spent a considerable time among the Comore and Seychelle negroes, hunting on the shores of Lake Nyassa, and returned by way of Goa to Europe. The expedition arrived at the mouth of the Congo in August, 1877, where they encountered Stanley just at the completion of his trying march through the dark continent. Stanley's attendants, after their terrible experience, could not be induced to encounter the toils and hardships of another overland journey with Serpa Pinto. The expedition consisted of two others besides Serpa Pinto, Brito Capello and Ivens. Not finding carriers in Loanda, they went to the banks of the Congo in search of some. It was while on this errand that they fell in with Stanley. His exploration of the Congo River obliged them to considerably modify their plans, the ascent of the Congo and determination of its sources having been one of the principal objects for which they were sent out. They started from Benguela for the interior on the 12th of November, 1877, accompanied by an escort of fourteen soldiers and fifty-seven carriers. Traversing the districts of Dombe, Guillenguez, and Caconda, they reached Bihé in March, 1878, after painstaking observations in the little known regions through which they passed. The positions assigned to some of the localities by Sá da Bandeira differ in some cases five or six degrees from the positions determined by Pinto: according to the latter, Benguela is situated in latitude $12^{\circ} 34' 17''$ S., longitude $13^{\circ} 25' 21''$ E. from Greenwich, and has an elevation above the level of the sea of 7 metres; Dombe Grande is in latitude $12^{\circ} 55' 12''$ S., longitude $13^{\circ} 7' 45''$, with an absolute elevation of 98 metres; Guillenguez is in latitude $14^{\circ} 3' 10''$ S., longitude $14^{\circ} 5' 3''$, and is 900 metres above the mean tide-mark; Caconda is in latitude $13^{\circ} 44'$, longitude $15^{\circ} 1' 51''$, with an elevation of 1,678 metres; and Bihé is in latitude $12^{\circ} 21' 40''$, longitude $16^{\circ} 49' 24''$, and has an elevation of 1,670 metres. At Bihé the explorers decided to separate, Brito Capello and Ivens journeying to the northward to explore the river Cuanza, while Serpa Pinto was to push on into the interior to the eastward. Senhor Pinto had enjoyed good health until his companions left him; but, after they had parted he fell ill of rheumatic

fever, and was compelled to remain in Bihé for three months, nearly consuming the whole of the share of supplies which had fallen to him on the division. His attendants abandoned him, and he had to organize another party; and in May he made a start, although still suffering extreme weakness and prostration.

On the way from Benguela to Bihé they had already made a geographical discovery of interest, in finding the source of the Cubango to the west of that place, instead of to the east, as has been supposed. They obtained no water until they reached Caconda, except by wringing their tents when they were wet with the *cassimba* or heavy night-dews. The district of Dombe Grande is the most fertile portion of Angola, and furnished corn for the whole province during three years of drought. At Caconda they fell in with an eminent naturalist, Anchieta, who has preserved, during the twelve years which he has passed among the wilds of Central Africa, the elegant habits of city life, receiving them in evening dress and offering them tea in Sèvres china. He has a library well stocked with modern works, in which he seeks relaxation from his engrossing naturalistic researches and collections. Besides the head-stream of the Cubango, Pinto passed two affluents before arriving at Bihé, and also the river Cuqueima, which is marked on the maps as an affluent of the Cubango, and was supposed to be one by Ladislaus Magyar, but which Pinto was surprised to find running north; it curves afterward toward the southwest, and is a tributary of the Cuanza. This stream forms the boundary-line of the territory of Bihé, the greater part of which country is governed directly by the chief, and the remaining portions by chiefs who are subject to him. Starting from Bihé, he soon entered a most interesting region, the magnificent plain of Cangala, in which within a few miles of each other all the great rivers of South Africa take their rise. This is a plateau about 1,700 metres in altitude. A very remarkable phenomenon is here exhibited. The sources of great rivers flowing in different directions are dovetailed between each other without any perceptible water-partings. On this one spot rivers which soon assume magnificent proportions, and which finally empty thousands of miles away from each other, in the Atlantic, in the Indian Ocean, and in the thirsty sands of the Kalihari Desert, all take their rise within a few miles of each other, flowing in opposite or diverse directions, only separated by short stretches of the same level plain. In some spots only a few paces separate streams which feed the Congo, the Zambesi, and the Cubango. This plateau is the southern limit of the Benguelian highlands. Its climate is exceedingly salubrious; and its remarkable agricultural and commercial capabilities render it one of the most promising regions in Africa for colonization. In this plain, which is transected by the twelfth par-

allel, rise the Cuito, an important affluent of the Cubango, which flows southward and unites with the main river at a place called Darico; the Ouiba, a tributary of the Cuanza; and the Lungo-e-ungo, an important river flowing eastward, and emptying into the Liba—all close together; and in the neighboring regions other affluents of the Cuanza and the Cubango, and the head-waters of the Cuando, the Quango, and the Cunene, take their rise. The Cuando rises in latitude 13° S., longitude 19° E., east of the Cuito. This is a large and deep navigable river, receiving several affluents as navigable as itself, watering a great area of fertile and inhabited country. It was this same river which Livingstone called Chobe, and which is the principal affluent of the Zambesi, uniting with the main stream in about latitude 18° S., longitude 25° E., after a navigable course of 500 miles. The standard of size must be taken differently in Africa from that applied to European rivers, as the smaller rivers in Africa exceed those which are usually called great in Europe. The rise of rivers in Africa is a singular and apparently mysterious process. A trickling rill is observed and followed down a short distance, and is seen to wax rapidly, without receiving any visible affluents, into a flowing, navigable river. From the head-waters of the Cuando, Serpa Pinto took a course which would lead him to the Liba or Upper Zambesi. He traversed a region covered with forests, in which the elephant still abounds. Here he came across a singular race of people, whose skins are yellowish-white, paler in fact than the average European, and whose head is covered with a tufted growth of short woolly hair. He observed one day that one of his carriers had a white skin, and upon inquiry he learned of this anomalous people that they were a nomadic race who live upon roots and the products of the chase, wandering in bands of from four to six families in the region between the Cuchi, one of the affluents of the Cubango, and the main river, and eastward as far as the Cuando. They are extraordinarily muscular, burying their arrows entirely in the flesh of the elephant. They are the only African people who devour their food without cooking. They hold no intercourse with the neighboring tribes, except when they are threatened with famine, on which occasions they exchange ivory for the necessaries of life with the Anguellas. They never stay a second night in the same encampment. This tribe are called Cassequeres. Their tufted hair might warrant the conjecture that the Bushmen of the south are descendants of this race intermarried with the blacks. Their faces are very prognathous, and their eyes are set obliquely in their heads like those of the Chinese. As none of the Portuguese traders have ever made mention of this strikingly marked people, it seems not unlikely that Senhor Pinto has permitted himself to be misled by an albino. In one of Petermann's maps, published

in 1858, a tribe of Bushmen named Kassakarrie are put down in the region between the Cunene and the Cubango. Another nomadic tribe, called the Mussambas, inhabit this country. Their wanderings extend as far as the country of the Sulatebele. They are a black race, entirely distinct from the Bushmen of the Kalihari Desert, called Massaruas. The regions lying between Bihé and the Zambesi are inhabited by three distinct races, the Kimbandes, the Luchares, and the Ambuellas; while a fourth, the Kibokwes, are migrating at present from the north to the banks of the Cubango and the Cuando, where they find a soil more productive than that which they have occupied. The whole country is exceedingly fruitful. The people of all these tribes are lively and capable of learning quickly; they show a remarkable fondness for dress. They are governed by chiefs whose power is absolute. Different tribes join together in confederations. They had never seen a European before the arrival of Serpa Pinto, but him they received very cordially. Between the Cuando and the Liambai he encountered no important river. In this eastward journey through the valley of the Lungo-e-ungo the expedition was put to severe straits, going without food at one time for 103 hours, and repeatedly for nearly 48 hours, and then breaking fast only with some *alpista* or canary-seed. The country traversed was very marshy, but contained no trace of game, and not even the turtles which are so abundant in the marshy spots along the Zambesi. Crocodiles, however, were so numerous that bridges had to be constructed over some of the streams to avoid them. After troubles and hardships without number he reached at last the town of Lialui (probably the same as the Katongo of Livingstone), on the Liambai, or Upper Zambesi, in latitude 15° 12' S., longitude 22° 48' E.

Serpa Pinto had intended to proceed from here to the northeast. In that direction he hoped to discover the true source of the Luabala, which, according to a map drawn for him by a Bihean, is not the Luapala connecting the lakes Bangweolo and Moero and the Chambeze, but the true Luabala, which rises, like the other great African rivers, in about the 12th degree of south latitude, between the Liambai and the Luengwe or Cafuque, the river which was called by Livingstone Cafue. In this same region live the Chuculombe, a ferocious race of savages, who will not suffer either whites or Arabs to set foot within their territories, but who carry on considerable commerce through the agency of native traders. Although warned by Stanley not to enter the dominions of these relentless barbarians, he intended to push his way in that direction; but the sudden desertion of his followers compelled him to alter his plans. In the night of the 6th of August, while encamped at Lialui, a fire suddenly broke out in the camp, and simultaneously they were attacked by the natives. His men were very

active and vigorous in rescuing his instruments and in repulsing the assailants; yet the morning after the victory he found that his carriers had abandoned him in a body, all the Bengueans leaving, and only a handful of Bibeans, seven in number, remaining with their leader. Pinto was forced to turn his course to the southward, into the country which has been made very familiar to the world by the writings of Livingstone. Yet important political changes have taken place since the sojourn of the Scotch traveler with Sebituane, the able King of the Makalolos. That kingdom has been overthrown, and the very nation itself has been completely exterminated. Livingstone foresaw its decay on his second visit to the Makalolos under the second King, Sekeletu. The empire which Sebituane had founded, by conquering the nations around and consolidating them into a strong kingdom, was destroyed by the former possessors of the land, who rose suddenly in the reign of the third King, and put the greater part of their masters to death, subsequently destroying the rest, who fled to Bihé and made from there an incursion in January, 1878. The hardy and brave nation which Sebituane had formed from all the different races of South Africa owed their decay and final destruction to the enervating effects of fevers and to licentiousness and the use of *bang*. On the Zambesi Serpa Pinto met Mechua-na, Livingstone's companion, who was then a Luina slave of Sekeletu, but who is now a prominent man in the nation. The banks of the Zambesi were at first covered with woods, and pulse was everywhere plentiful. Soon he reached basaltic formations and uninterrupted cataracts and rapids down to the Victoria Falls. There are 72 of these falls and rapids between the 16th parallel of latitude and the Victoria Falls, a distance of 220 geographical miles. The only affluents of the Zambesi from the west were the Lungo-e-ungo, the Uhengo, and the Cuando, except a small one close to the Victoria Falls. The Uhengo is formed by the junction of three rivers, the Ninda, the Loati, and the Luanginga. The level of the land declines between Bihé and the Zambesi about 1,200 feet; but south of the Cuando the land begins to rise again, and a luxuriant vegetation is met with; yet the country is almost uninhabited. The country south of the Zambesi is not attractive to settlers, although exceedingly fertile, both because of the hostile attitude of the Matabeli, who regard the Zambesi as their natural frontier, and because of the malarial climate. Down to the Victoria Falls, with the exception of the barren region of the rapids, the country is well peopled. East of the river live the fierce and warlike Makalakas, many of whom are taken captive in their constant wars, and serve the surrounding tribes as slaves. At Linyanti, on the Cuando, he expected to find an English mission; but the mission was deserted, the missionaries having fallen victims to the deadly climate,

and he was confronted, ill and exhausted as he was, by hostile natives. Fortunately, he did encounter Europeans at this juncture. The first was an English naturalist, Dr. Bradshaw, whose life and circumstances contrasted strikingly with the elegant hermitage of his Portuguese compeer in Angola; for, inured to wild life, and supporting himself by the chase, he was found pursuing his vocation barefoot and coatless among the ceaseless perils of this wilderness. While in the company of this gentleman the negroes surrounded their habitation one night, prowling about with evil intent while they held a vigilant watch. In the morning the Portuguese traveler found that they had robbed him of the remainder of his baggage. He then went in search of a French missionary who lived with his wife and sister at Guiyama, and, falling very ill on the way, he was tenderly cared for by this brave family. Recovering from the fever, he set out to find the solution of the problem of the discharge of the Cubango. Pastor Coillard and the ladies insisted on bearing him company in the toilsome excursion into the Kalihari Desert. Kalihari is nowhere strictly a desert, as trees and pastures, water and game are found, and people live in all parts of it; yet water in many portions is only to be had at certain seasons of the year, and the inhabitants are obliged to follow a nomadic life, changing their abode as the waters come and go. The explorer did not succeed in reaching the Cubango; but, from what he observed and learned from the natives, he believes that he has settled the question of the discharge of that river, a question of great importance in the hydrography of Southern Africa. The Cubango is laid down variously on recent maps as flowing into the Cunene, to lagoons near Lake Ngami, or to the Chobe. Its upper course has been made known by Portuguese traders, and is traced on Sá da Bandeira's map as far as latitude 17° S. C. J. Andersson struck this river in 1859 in latitude 17° 47' S., longitude 18° 51' E., and navigated it up and down for a distance of 100 miles. It was here called the Okavango, and was 200 to 300 yards broad, very deep, and flowing at the rate of 2½ to 3 miles an hour. Baines and Andersson both supposed that it flowed into the Chobe and formed the principal branch of the Zambesi. At the upper end of the Kalihari Pinto came upon the great Macaricari salt-pan. The Macaricari is connected with Lake Ngami by the Botletle River. The Cubango River, according to Serpa Pinto's reports, has no connection whatever with the Cuando or the Zambesi, but its waters, considerably reduced in volume by evaporation, are entirely absorbed by the Kalihari Desert. It empties into Lake Ngami, which in very rainy seasons overflows into the great salt-pan. The Macaricari and the Botletle both exhibit some very mysterious and complicated phenomena, according to Serpa Pinto's statements. The salt-pan is sometimes a perfectly

dry and empty basin, whose bottom is covered with a glittering saline incrustation; but at other times it is filled with water, forming a broad and deep lake. Other similar basins present the same phenomenon; but this one differs from them all in that its changes seem to have no connection with the seasons of rain or drought in the surrounding regions. The behavior of the Botletle is even more surprising and unusual. Livingstone reported it as flowing westward, and Baines represented it as flowing to the east. Serpa Pinto affirms that both statements are true, and that its current at certain seasons is toward Lake Ngami, while at others it carries the waters of that lake into the Macaricari, according as rainfall occurs in the country of the Matabeli or in the valley of the Cubango. If the outlet of the Cubango is into Lake Ngami, and there is no regular connection with the Cuando—which can not yet be accepted as proved, notwithstanding the positive convictions of Serpa Pinto, since the identity of the Okavango, as the middle course of the Cubango which Andersson explored was called, and the Tioghe, which empties into the lake, is not yet established, and neither the Cubango nor the Cuando has been explored over its whole course—there may yet be a periodical overflow into the Cuando from Lake Ngami; as Baines asserts that the Tamalukun, which discharges into the Botletle, and the Mababe, which flows in an opposite direction into the Cuando, are joined in especially wet seasons by a navigable channel.

Serpa Pinto next visited the cataracts to which Livingstone gave the name of Victoria Falls, and which the natives call Mosi-vatonia. He found the height of the fall to be 180 metres. He then took leave of the Coillard family, and made his way to Shoshong, where the people, among whom the missionaries Mackenzie and Price long resided, are Christians, and use gold currency, and even have a credit system. Thence he was able to send dispatches to Europe on the 2d of January, 1879. A few more weeks brought him to Pretoria, the capital of the Transvaal; and he arrived at Durban on the 14th of April, sixteen months after he had left the opposite coast. Of the four hundred men who formed his escort when he left Benguela, only eight remained faithful to him, and accompanied him throughout the toilsome and perilous journey. These he took with him to Lisbon, to be returned from there to their native country.

Major Serpa Pinto made no extensive collections of the fauna and flora, nor any special naturalistic studies. He observed in the upper Cuando two species of antelopes, whose singular habits make them a curiosity in natural history: although true antelopes, they live altogether in the water like the hippopotamus. He made a particular study of the ethnology of the countries traversed, besides his thorough geographical and meteorological observations.

The Italian naturalist, Signor D'Albertis, who has spent a large portion of the last six years, secluded from civilization and surrounded with dangers, studying in the wilds of New Guinea the wonderful fauna of that island, has contributed more perhaps than any other man to our information of this land of marvels, which has been reserved until the present to be explored, although known to be one of the most interesting regions of the earth. D'Albertis arrived for the first time in New Guinea in 1872, in company with Dr. Beccari. Unable to make a landing at the mouth of the Wamuka River, in longitude $136^{\circ} 15' E.$, latitude $4^{\circ} 40' S.$, and to ascend that river and reach the Charles Louis Mountains, according to their intentions, they landed, after touching at several points along the coast, at Serong, a small island between Salwatti and the mainland, latitude $0^{\circ} 52' S.$ Obligated to depart from here on account of the unwholesomeness of the climate, they proceeded to Dorei, a trading-post on the northwestern peninsula, and established their quarters at the village of Andai, a few miles distant, where there was a Dutch mission. This is the country of which Wallace wrote in his accounts of the birds-of-paradise. D'Albertis explored the regions around in search of specimens of this bird, but only found ordinary and uninteresting varieties. The rare and richly feathered species, which are only known to naturalists from mutilated specimens that have been prepared for commerce by the native hunters, live farther inland, in the Arfak Mountains, to the foot of which the naturalist's earlier explorations extended. He was the first European to ascend into the highlands which are the habitat of this most beautiful creature in the feathered race. Because of the dread in which the coast natives hold the mountain tribes, who are reputed to be cannibals, no attempt (if any had been made) to penetrate this region had yet succeeded. D'Albertis was the first civilized being who studied the bird-of-paradise in its native woods. The Arfak range is of volcanic origin. The highest peak, Mount Arfak, is not far from 9,000 feet in height. From this the range runs in a southerly direction until it joins the central ridge of the interior. Numerous streams roll down the side of the mountain-chain into Port Geelvink and Geelvink Bay. The whole range, even the highest summits, are thickly clad with magnificent forests of lofty trees. To his astonishment he discovered among the vegetation a species of oak and a cbnifer, identified by Dr. Beccari with the *Araucaria*. In this spot, in $184^{\circ} E.$ longitude, and almost upon the equatorial line, the flora of all climates, from that of the torrid to that of the upper temperate zone, is found in a variety nowhere else to be met with. The climate here is humid, but, to judge from the vigorous and well-proportioned frames of the inhabitants, must be exceedingly healthy. These people possess in the most marked de-

gree the characteristics of the Papuan type, and may be taken as the purest examples of this race, which, however, is not in the least entitled, in the opinion of D'Alberty, to be considered a distinct variety of the human species. This fine race of mountaineers held themselves jealously aloof from the outside world until the most recent period. Before D'Alberty visited them they bore universally the reputation of cannibalism. They live in tribes, each under the headship of a chief called Korano. They live in large houses partitioned off to accommodate several families, in which the men and women occupy separate sides. These Papuans are agricultural, cultivating tobacco, yams, sweet potatoes, and bananas, possess savage arts of a superior character, and are tolerably industrious. They have no religious ideas, but are superstitious about death, believing in the continuance of life after death and in the transmigration of souls. They place tobacco and food on the graves of their dead, for them to arise and consume in the night-time. In spite of the earnest dissuasion of the missionaries, D'Alberty was determined to visit the Arfak Mountains. Attended by an interpreter, under the protection of a friendly Korano, he entered the mountains in the beginning of September, 1872, escorted by eight or ten Papuans from the village of Andai. He passed a month in one of the Papuan houses, exploring the woods in quest of the bird-of-paradise, and ascending the mountains in his excursions to the height of 5,000 feet. The fickle and ferocious character of the savages made this expedition a really dangerous venture. They are extremely jealous and capricious, and the very intimacy which he was able to establish with some tribes was enough to excite the animosity of others. They have a mania for collecting human skulls, and think nothing of taking life; so that the daring scientific enthusiast was in constant peril. His bold adventure terminated fortunately, however, and the tact which he exercised in his intercourse with the natives was the means of rendering the visits of subsequent explorers secure. He was compelled by the premonitions of disease to leave his task uncompleted, but not before he had observed the birds-of-paradise in their native haunts, and made a collection of fine examples of rare and brilliant species. He left New Guinea on the Italian naval vessel which was sent to take them off, with a settled purpose to visit the southern part of the island as soon as his health should be re-established. This purpose was inspired and strengthened by the discovery of a new and beautiful species of the bird-of-paradise, the *Paradisaea raggiana*, and the sight of mountain-peaks far to the east close to the coast.

In the month of March, 1875, D'Alberty was back again in New Guinea, settled this time off the southern coast of the mainland on Yule Island, near Point Moresby. Absolutely

nothing was known of the interior before he came. The natives had never caught sight of a white skin, except on the crew of the Basilisk, with whom they had had no dealings. He chose Yule Island for his residence because it seemed a healthy spot, and was near the mainland and the range of high mountains which runs southeastward from Mount Yule to the high peak called Mount Owen Stanley. Without possessing a word of the language, D'Alberty was left entirely alone. His object was to study the inhabitants, who belong to a different race from the Papuans of the other half of the island, and to ascertain whether this entirely unknown country offered any advantages for colonization or commerce, as well as to collect objects of natural history. Although at first unable to communicate with the natives except by signs, his relations with them were generally most satisfactory. His stay on Yule Island lasted eight months, at the end of which period his failing health, impaired by the climate, notwithstanding its salubrity compared with other parts of New Guinea, obliged him to depart in November.

In the winter of 1875 D'Alberty, notwithstanding his reduced condition of health, joined the missionary expedition up the Fly River in the Ellengowan. Constantly attacked by the hostile natives, they made their way up the river for 150 miles, and then were obliged to put about just as they were entering the most interesting region. D'Alberty determined to make another attempt to explore the Fly River, and, repairing to Sydney, he enlisted the interest of the Government and private citizens in the design. Furnished with a steamboat drawing but $3\frac{1}{2}$ or 4 feet of water, he succeeded in 1876 in ascending the river to its head-waters, 500 miles from its mouth. He was carried too far to the westward by the river, and his crew were suffering too much from disease and privation, for him to strike across the mountains to Yule Island, as was his intention. The Fly River rises in the lofty chain called the Charles Louis range, which traverses the center of the island, and the party had ascended to where the mountainous country begins. After spending three months in making collections, he returned to Sydney, determined to make one more expedition up the Fly River. Obtaining the loan of the same vessel he had used before, the *Neva*, but paying the expenses of this expedition out of his own pocket, he started on the third expedition to the Fly River in the beginning of May, 1877. The crew of ten persons consisted of the explorer and engineer, the only white members, and five Chinamen and three South-Sea Islanders. Along the lower course of the river the natives, who had attacked the preceding expeditions and had been given exhibitions of the powers of firearms, now kept away or came as friends; but in the upper part of the river, in a country which they had supposed to be totally uninhabited, they were fiercely assailed

in the middle of an intensely dark night from the shore and in canoes. The assailants were on the point of boarding the steamer when D'Albortis awoke. He was obliged to fire upon the savages in order to save his life and that of his crew. Continuing to ascend the river, he spent two months in making collections, the few inhabitants whom they encountered fleeing at their approach. The insubordination of the crew now gave the explorer trouble, and finally obliged him to return. The Chinamen deserted, and the three South-Sea Islanders mutinied. Moreover, the drought had greatly reduced the volume of the river, and made it probably impossible to carry out his plans. After chasing the Chinamen down the river, he attempted to ascend again to the point where a bar of pebbles had stopped the passage, and there wait until the rains came. The natives attacked them, and he was reluctantly obliged to use guns to frighten them off. In a tropical thunderstorm the boat was driven upon a sand-bank and left high and dry by the receding tide, while the natives, summoned by horns and drums, assembled from far and near and were dancing their war-dances a few rods away. They did not attack, however, before the next tide carried the boat off. Two of his sailors deserted; and the remaining one and the engineer were both sick, and D'Albortis himself in a low condition, when they made the perilous return voyage across Torres Straits again to Thursday Island. The highest point reached in this third voyage up the Fly River was 475 miles from the mouth, or 45 to 50 miles this side of the farthest point touched in the preceding year's voyage. There are probably other large streams emptying into the delta of the Fly River. This part of New Guinea does not appear promising as a field for colonization, on account of the slight elevation of the vast plain of which it is made up, which is covered with interminable forests and grassy meadow-lands, and is to a large extent submerged during the wet season. Although very fertile, the lowlands at the mouth of the river would probably never do for the abode of white settlers. The depth and length of the Fly River adapt it admirably for navigation, and the mountainous regions toward its source, between 5° and 6° south latitude, are probably wholesome and are rich in many natural products; yet it is questionable whether, unless valuable minerals should be discovered there, it would prove a profitable field for either colonization or commerce. Its products, as far as is known, are vegetable substances, several of them quite valuable. There are numerous commercial woods; the nutmeg grows in abundance, and gums and resins of value are found in the woods. The fauna of New Guinea is yet far from being fully known. Large animals are of course absent.

D'Albortis recommends Yule Island and the neighboring coast as the most favorable spot to plant a colony—the island on account of

the salubrity of the climate, its convenient situation, and its harbor; the adjacent mainland on account of its well-watered lands and its intelligent, well-conditioned, and industrious inhabitants. From a hill-top about 1,200 feet high, a level plain sprinkled with lagoons, through the middle of which courses the Amama or Hilda River, which flows from the north into the Nicura a short distance above its mouth, carpeted with succulent grasses, stretches out as far as the eye can reach. The Amama is deep enough for navigation, but is rendered impassable by innumerable snags. The rivers and lagoons abound in fish of many kinds, and some of them of large size. These form the principal nourishment of the inhabitants of the villages on their banks, who also pursue diligently the cultivation of bananas, yams, and taro (*Arum*). Breadfruit-trees are also abundant. The inhabitants of the village of Bioto, containing four or five hundred souls, were the finest-looking and strongest people that he saw in all New Guinea. They were very good-natured, and exceedingly garrulous, chattering the whole night through. A few miles away is another large village, containing forty or fifty houses bordering a long street, in the midst of extensive plantations of bananas. In the middle of the village are two roomy *mareas* facing each other. These are the reception-houses in which the hospitalities of the village are exercised, and belong to the four chiefs, who eat their meals therein. The village bachelors sleep in these large huts; and they also serve as places of reunion, where the talkative villagers gossip away many an hour. Their walls are hung with nets, weapons, and old shields. The toilet of the young men is a long process: their hair is carefully combed, their faces stained with black, red, or yellow colors, and their ornaments carefully arranged. The houses are built on the stumps of trees, with their floors about ten feet above the ground; their walls are of wood, and their roofs of the leaves of the *nipa* palm. They are lower in the rear than in front, and present the appearance of inverted boots cut in two. After dressing, the men spend the cool hours of the morning in twisting cords for their nets, and the women in cleaning the huts and cooking the early meal. Four meals a day are eaten. Their food consists of bananas, yams, taro, sago, and breadfruit, the flesh of the emu and the kangaroo, and fish; but, notwithstanding the abundance of these articles, they eat also snakes, frogs, fresh-water turtles, and the larvae of different insects. They are very fond of a fresh-water mussel called *ebe*, whose shells furnish a variety of implements; with these they clear their path in the forest, cutting down a thick bamboo-stalk as quickly as with a hatchet; with them they clean the fiber of which they make the cords for their fish-nets; they use them for spoons; and with pieces of them they bore holes in wood, or with great dexterity draw out splinters and thorns. The

lower jaw of the kangaroo is also a very useful tool, which is employed in carving and decorating the bones of the emu, of which they make combs, forks, etc. These people are exceedingly vain and fond of their ornaments of feathers, mussel-shells, and grasses, their necklaces and bracelets. The chiefs wear breast-plates of mother-of-pearl mussel-shells. The beard- and body-hairs are plucked out by the roots, by twisting threads around each hair. They tattoo themselves with care; the chiefs and the women are tattooed all over. Their infants are carried in sacks of netting. They are fond of public discussions, and listen for hours to one of their village orators as he dilates upon the events of the day; and when his harangue is finished another will rise and respond. They are always in the mood to talk, to laugh, or to dance. When they have had remarkably good luck in the chase, or have made an unusually large catch of fish, it is the custom to invite the people of a neighboring village to a feast, at which they appear in their finest ornaments, the feathers of the bird-of-paradise, necklaces of shells and mother-of-pearl, artificial flowers made of feathers and shell, and the highly treasured tail of the kingfisher. The sons of chiefs drill the boys in hurling the spear. In the same vicinity were three other villages which were almost cities in size. The street in Mou was covered with white sand. The huts and *mareas* were built with a variety of designs and ornamented with wood-carvings and paint: lizards, doves, and human figures with bird-claws were some of the decorative designs. D'Alberris supposes the inhabitants of Yule Island and the coasts to the east and westward, who belong to a race entirely distinct from the Papuans, to have invaded the island and driven the latter back into the mountains. They are physically and morally superior to the Papuans of the western peninsula and the mixed races of the interior. Their hair is chestnut-brown, their eyes of a clear brown, and their skins of a chocolate color, which is deeper in the parts exposed to the sun. The height of the men is 5 feet 6 inches to 5 feet 9 inches; of the women, 5 feet 4 inches to 5 feet 6 inches. Their hair is curly, but never woolly like that of the Papuans. The lips are usually well formed; the chins and foreheads recede; the limbs and body are muscular and symmetrical. The sexual differences are very salient. Each village has three or four chiefs, who exercise a sort of feudal lordship, and who differ from the rest in build and appearance. The temper of these people is kind and peaceable. They are not remarkably courageous. They are very sensitive and quick to take offense, but easily conciliated again. Quarrels between husbands and wives are frequent. In some of the villages the women have the upper hand. The men and women are both industrious, the latter doing the lighter kinds of work. They carry on commerce among each other to

some extent, holding markets for sale and barter at certain seasons. Theft is unknown. To what race these gentle and intelligent savages belong can not be determined with certainty. They have many of the characteristics of the Polynesians, and yet differ from them in important marks.

Raffray, the French naturalist who spent about a year on the northern peninsula of the island of New Guinea, describes the Papuans of the Arfak Mountains as of a very greedy and covetous disposition. He says that they are also cannibals. The same traveler visited the Molucca Islands, where he observed that the fauna differs on each of the islands, the birds and insects on Ternate, Tidor, and Gilolo belonging to completely distinct though allied species.

ARCTIC EXPLORATION.*—The geographical event of the year has been the successful termination of Professor Nordenskjöld's expedition in search of the northeast passage. We begin the narrative at the point where it was left in the "Annual Cyclopædia" for 1878. The Vega arrived September 27, 1878, near the promontory which bounds Koljutehen Bay on the east. During the day the ship passed through several patches of newly formed ice, but the temperature was very little below zero, while the weather was calm and fine. On the 28th the Vega proceeded under steam, intending to take advantage of a narrow open channel, which, on the previous day, had been observed to extend between the shore and the masses of drift-ice which were beginning already to press closely upon the promontory. When little more than a mile to the eastward the water became muddy, nor could deeper water be found among the drift-ice, which during the night had become firmly bound together by newly formed ice. All attempts at further progress were fruitless, until a southerly wind should disperse the ice which barred the way. The position of the Vega was by no means a safe one. She lay frozen in, but not anchored, in a roadstead quite exposed to the north, and only moored to a mass of ground-ice which had stranded in a depth of about thirty feet of water and about three quarters of a mile distant from land. This iceberg was the vessel's only protection against the enormous ice-pressure which winter storms produce in the polar seas. It was about three hundred feet long, eighty feet broad, and its highest point rose twenty feet above the level of the sea. During the fierce storms which assailed the vessel in the autumn and winter, the ship, the ground-ice, and the sheet of newly formed ice in which she was held fast, were all moved together considerably nearer the shore. The spot where the Vega was frozen in is situated in latitude 67° 7' N., longitude 173° 30' W. from Greenwich. The neighboring land was a wide, undulating plain, bounded

* The following section on Arctic explorations is from the pen of Captain H. W. Howgate, U. S. A.

on the south by hills which rise gradually in the distance, and attains farther inland a considerable elevation. At the time of the Vega's arrival the ground was frozen and covered with hoar frost, but still free from snow, so that the botanists of the expedition were able to obtain specimens of the flora of this hitherto unknown region. Nearest to the shore they found dense beds of *Elymus*, interspersed with patches of *Helianthus peploides*. A barren gravelly plain farther inland was covered in spots with a black lichen, *Gyrophora proboscida*, and a few flowering plants, among which *Armeria sibirica* was the most common. South of this was a tract covered with lagoons and small lakes, whose shores produced a luxuriant growth of varieties of grass and sage. On the neighboring high ground, where the soil, derived from weather-worn strata of gneiss and dolerite, is richer, the vegetation is more varied. Here were thickets of willows, extensive patches of *Empetoura nigrum* and *Andromeda tetragona*, and large tufts of a species of *Artemisia*. Here were found also the frozen remains of the red whortleberry, the cloudberry, *Taraxacum officinale*, and other plants peculiar to the far north. In the interior it was observed that on the driest portions of the land the most common plants were *Aira alpina* and *Poa alpina*; on the lower places, *Glyceria pedicularis* and *Ledum palustre*. *Petasites frigida* and a species of *Salix* occurred everywhere, the latter growing in large, compact masses, covering spots several hundred square feet in extent, the bushes in some places being three and four feet high.

At the time the ship was frozen in, the water nearest to the shore was covered with thin ice, which would not bear a man's weight; while to seaward the drift-ice was so firmly bound together by newly formed ice that the ship could make no impression upon it. On the 2d of October it was possible, with some precaution, to walk on the ice close to the ship, and on the 3d some of the native Tchukches came on board on foot. On the 13th Dr. Almqvist started on foot over the ice in a northeasterly direction, following the track of some natives who had gone out walrus-hunting; but after a very laborious journey he was compelled to return without having reached open water. He ascertained that the Vega was hemmed in by a belt of drift-ice about eighteen miles wide, and all hope was abandoned of being released before the following summer. Upon the narrow belts of sand which separated the lagoons from the sea were two Tchukches' settlements. The one situated nearest to the Vega's winter-quarters was called Pitlekaj, and numbered originally seven tents; but, in consequence of the scarcity of food, the inhabitants in the course of the winter moved to a district near Behring Strait, which offered a more abundant supply of fish. The other settlement, Jinretlen, lay nearer to the promontory. It also contained seven tents, but the inhabitants appeared

to be better off than those of Pitlekaj. Four other encampments, named Pidlin, Koljutchin, Ryratinop, and Irgunnuk, were situated at a greater distance toward the east, yet near enough to enable the inhabitants to make frequent visits to the ship. It was difficult to ascertain the number of persons belonging to each tent, as the Tchukches were continually going from tent to tent, but the average number was about five or six. In all there were about two hundred natives in the vicinity of the Vega's winter-quarters. Their complete ignorance of the value of money, and the small store at the disposal of the expedition of articles suited to their wants, necessarily increased the price of the latter. To the great disappointment of the natives, the usual articles of commerce in the polar regions, skins and blubber, were not to be had on board the Vega. Partly by giving food in return for small services rendered on board, partly by distributing it as a gift, the Vega was the means of alleviating the famine which usually prevails during the winter. A complete collection of native weapons, garments, and household utensils was secured by the expedition. None of the natives in the vicinity of the vessel were Christians, nor did any of them speak any European language except an occasional English or Russian word. Lieutenant Nordqvist studied their language with so much zeal and success that after a few weeks he could make himself understood. He brings back to Europe a complete vocabulary of the language, and also an outline of its grammatical structure.

The temperature during the winter was recorded as follows, in degrees centigrade:

MONTHS.	Minimum.	Maximum.	Mean.
October.....	-20° 8'	+0° 5'	- 5-21°
November.....	-27° 2'	-6° 3'	-16-59
December.....	-37° 1'	+1° 2'	-22-81
January.....	-45° 5'	-4° 1'	-25-05
February.....	-49° 8'	+0° 2'	-25-08
March.....	-39° 8'	-4° 2'	-41-65
April.....	-33° 0'	-4° 6'	-18-93
May.....	-26° 8'	+1° 8'	- 6-97
June.....	-14° 8'	+6° 8'	- 0-60

The most remarkable observations which the wintering of the Vega has yielded appear to relate to the aurora. During the winter of 1878-'79 it never appeared with the splendid bands or draperies of rays so common in Scandinavia, but always in the form of faint luminous arches, which remained unaltered in position hour after hour and day after day. They were constantly visible when the sky was not clouded nor their feeble light dimmed by the rays of the sun or the full moon. The tidal observations, when compared with other series made in the Arctic seas, give important indications regarding the distribution of land and sea in the polar basin. The greatest range at the Vega's winter-quarters was only eighteen centimetres, which shows that the sea north of Behring Strait forms a marine basin of limited extent, connected with the

ocean only by sounds. The variations in the height of the water produced by winds were much greater, amounting nearly to two metres. Still greater irregular changes in the position of land and sea appear to have occurred within the memory of man; for the Tchuktches were at one time afraid that the Swedes would cause inundations along the coast. This appears to show that the sudden changes in the position of the earth, which are well known in the volcanic regions farther south, had extended so far north. As most of the Tchuktches' villages are situated close to the sea, one of the mighty waves which earthquakes give rise to would completely destroy an immense number of them. The magnetical observations made during the winter, in an observatory built of ice and snow, which, being necessarily on land, was at a very inconvenient distance from the vessel, consisted of (1) absolute determinations whenever opportunity offered; (2) observations of the changes in the strength and direction of the magnetic forces, made along with necessary absolute determinations every hour between November 27th and April 1st; (3) five-minute observations on the 1st and 15th of every month, from and including January 15th.

The natural history of the region in which the Vega wintered is very poor in the higher plants and fungi, but lichens are abundant. The number of insects and other invertebrate land animals was very small. Land and freshwater mollusca were completely wanting. Of coleoptera only twenty species were found, belonging principally to the families *Carabi* and *Staphylini*, with two *Curculiones* and *Chrysomela*; and the other orders appeared to be equally poor, with the exception perhaps of the *Diptera* and *Podurida*. On the other hand, the sea-bottom, though covered with a stratum of water always about 2° C. below the freezing-point, swarmed with a large number and a great variety of the lower animal types, of which the dredging-boat almost daily made a rich collection in the channel which opened early in summer in the neighborhood of the vessel. Birds here occur in much smaller number but in a much greater abundance of types than in Nova Zembla, Spitzbergen, and Greenland; and the bird-world in its entirety has thus quite a different stamp. The birds common on Greenland, Spitzbergen, Nova Zembla, and the coast of Northwest Siberia—*Larus glaucus*, *eburneus*, and *tridactylus*, *Harrelda glacialis*, *Somateria spectabilis*, *Plectrophanes nivalis*, *Phalaropus fulicarius*, and *Tringa maritima*, the common raven and several other species—are found here. But in addition to these the following uncommon birds are met with: The American eider (the common eider, *Somateria mollissima*, being absent); a grayish-brown goose with bushy yellowish-white feathers round the neck; a swan-like goose, white with black wing-feathers; a species of *Fuligula*, marked in white

and green, with a fine black-velvet head; the beautifully marked, uncommon *Larus Rossi*; a little brown snipe with a bill widened spoon-like at the point; several beautiful singers, among them *Sylvia Evermanni*, which for some days visited the coast in great flocks, probably on their way to breeding-places farther north, or waiting till the bushes in the interior should be free of snow. A portion of the purely Scandinavian species here exhibit some variations in color-marking and size. The most common mammal is the hare. It differs from the common Scandinavian mountain hare by its greater size (its weight often rising to fourteen pounds), and by the nasal bone not diminishing so rapidly in size. The mountain fox (*Vulpes lagopus*, L.) is very common. The common fox (*Vulpes vulgaris*, Gray) appears also to be common. A red fox, shot in October, differs considerably from the common, and approaches the mountain fox in several particulars. The fox's food during winter appears to consist of hares, ptarmigans, and lemmings. Of lemmings three species were met with, *Myodes obensis* (the most numerous), *M. torquatus*, and *Arvicola obscurus*. The Tchuktches state that a little mouse also occurs, which Nordqvist supposes to be a *Sorex*. The two lemmings often showed themselves above the snow during winter, which was not the case with *Arvicola obscurus*. The wolf was seen only twice. The wild reindeer was also uncommon, traces of it having been seen only once. Traces of the land-bear were also seen, and the natives stated that it was not uncommon in summer. The marmot (*Arctomys*) occurs in abundance. An animal described by the natives as living by the banks of streams is supposed to be the common otter. Two weasel-skins were obtained from the natives. It is not certain whether the ermine occurs there. Only two marine mammals were seen during the winter, the polar bear and the ringed seal (*Phoca fetida*). The latter is caught in great numbers, and, along with fish and various vegetables, forms the main food of the natives. Of land-birds, there winter in this region only three species, viz., *Strix myctea*, *Corvus corax*, and *Lagopus subalpina*. The last mentioned is the most common. On December 14th two large flocks of ptarmigan, one numbering about fifty, were seen about ten miles from the coast. The raven is common at the Tchuktches' villages. Its first egg was obtained on May 31st. The mountain owl was seen for the first time on March 11th, but the natives say that it is to be met with all winter. In open places on the sea there occur during winter, according to the natives, two swimmers, *Uria Brünnichi* and *Uria grylle*. Besides these, there possibly winter on the sea a species of *Mergulus* and one of *Fuligula*, a specimen of the former having been obtained on November 3d and of the latter on March 9th. During the wintering of the Vega large quantities of the bones of the

whale were found on the beach. These at first were supposed to be the remains of whales that had been killed by the natives or by American whalers, but on examination it was found that they must be sub-fossil. This was confirmed by the natives, who stated that no whale had driven on land in the memory of man. The remains were found to belong to four or five different species, of which *Balæna mysticetus*, or a nearly allied type, was the most common.

Along the coast, from the White Sea to Behring Strait, no glacier was seen. During autumn the Siberian coast is nearly free of ice and snow. With one exception there were no rocks along the coast precipitous enough to be suitable breeding-places for sea-fowl, but a large number of these birds were seen during spring flying farther to the north. A warm current, as in Europe, was found to flow along the northwestern coast, and to create there a far milder climate than that which prevails on the Asiatic side. The limit of trees, therefore, lies a good way to the north of Behring Strait, while the whole of the Tehukteh Peninsula appears to be devoid of trees.

For the use of future Arctic expeditions Professor Nordenskjöld gives the following description of those parts of their winter equipment which were found to be most serviceable: According to the meteorological observations, the winter was not particularly cold when compared with the winters experienced in the Franklin Archipelago and in the coldest regions of Siberia. On the other hand, the Vega's winter station proved unusually stormy, and day after day and night after night the officers had to walk in a heavy gale of wind to the observatory, nearly a mile distant from the ship, and with the thermometer ranging from -30° to -46° C. In calm weather a temperature of from -40° to -50° was not felt so severely, but even with a slight breeze a temperature of -35° and over became quite dangerous to those who tried to walk against it, or incautiously exposed parts of their faces, hands, or wrists. Without giving warning by any violent pain, frost-bites occurred, which, if not thawed in time by rubbing the injured part with the hands or with melted snow, soon become serious. Most of those who were wintering in the Arctic regions for the first time were more or less frost-bitten as soon as the cold set in; and in several cases large blisters, an inch in diameter, made their appearance, but happily no serious calamity occurred. Nor was there a single accident of frost-bitten feet, owing to the excellent foot-covering used by the expedition, which consisted of large canvas slippers with soles of leather lined with a layer of prepared sedge (*Carex vesicaria*). Each foot was incased in one or two pair of stockings and a covering of felt. This arrangement was a compromise between the foot-covering introduced by Parry for Arctic traveling and the boots filled with hay used by the Laplanders.

All who used it were of the opinion that it left nothing to be desired. On long journeys in the wet snow this foot-covering is preferable to leather, which becomes heavy and soaked, and hardly dries in the open air during the night, while canvas shoes filled with hay dry readily. Even when wet they are light and healthy on account of the air which circulates through the hay. For protecting the hands, gloves were used made of sealskin and chamois, lined inside with sheepskin and with a border of long-haired fur round the wrist. They were generally suspended by a string round the neck, as children are made to carry their gloves. Besides these, for out-of-door work, thin woolen gloves were always worn. The rest of the costume consisted of the ordinary Swedish winter clothing, perhaps a little heavier and warmer than usual. Reindeer coats and reindeer leggings were provided for every man, besides a variety of furs; but they were seldom used, even when the thermometer stood at 45° C., the men preferring a loose canvas suit worn over the ordinary sailor's dress, which afforded a welcome protection against snow and wind. The head was similarly sheltered by a hood worn over the Helsingör cap, a supply of which had been procured from St. Petersburg.

Observations on the weather were taken until the 1st of November every fourth hour; from that date until the 1st of April, every hour; and afterward again, six times a day. Between the 27th of November and the 1st of April the instruments were placed on the land at the magnetic observatory; before and after that time, on board the Vega or in the immediate neighborhood of the ship. During the winter the superintendence was intrusted to Dr. Stuxberg, who, when everything around was covered with ice, had to abandon his own zoological researches. The meteorological observations made in the Vega's winter-quarters form the first complete contribution to our knowledge of the climatic conditions which prevail in the peninsula that separates the Frozen Sea of Siberia from the Pacific Ocean; and the information obtained regarding the monsoon-like northwest winds which steadily blow in this part of the world during the winter is of importance, not only as regards the climatology of Siberia in general, but also in connection with the study of the typhoons and monsoons encountered on the coasts of China and Japan. The greatest cold during the several months was observed on the following days: October 24th, -20.8° C.; November 30th, -27.2° ; December 23d, -37.1° ; January 25th, -45.7° ; February 2d, -43.8° ; March, 29th, -39.8° . Twice the barometer rose to an unusual height, viz.: December 22d, at 6 A. M., 30.78 in.; February 17th, at 6 A. M., 31.03 in. The lowest barometer up to April 1st was observed December 31st, at 2 A. M., 28.69 in. The weather during the winter was in general very stormy, and the direction of

the wind nearest to the earth's surface almost constantly between N. W. and N. N. W. Judging from the direction of the clouds, a similar uninterrupted current, but from S. E., prevailed in the upper strata of the atmosphere, which, when it descended now and then to the surface of the earth, brought with it a warm and comparatively dry air. While the temperature was falling to -40° C., both the mercury and the spirit thermometers were read off, but below -40° C. only the latter was used. None of the mercury thermometers used by the expedition suffered any injury from the alternate freezing and thawing of the mercury. The latter when freezing always contracted into the bulb, although -40° C. on the scale was marked a good way up the tube. It is therefore probable that mercury, like water, requires a greater degree of cold in order to freeze when it is inclosed in a fine tube.

With regard to the possibility of establishing regular navigation in the Polar Sea of Siberia, Professor Nordenskjöld has come to the following conclusions: 1. The voyage from the Atlantic to the Pacific Ocean, along the north coast of Siberia, can be accomplished in a few weeks by a suitable steamer manned by experienced sailors; but, so far as the conditions of the Siberian Sea are known at present, this route is not likely to be of any practical importance to commerce. 2. It may now be asserted that there is no difficulty in establishing communication by sea between the Obi-Yenisei and Europe for purposes of trade. 3. In all probability the voyage by sea between the Yenisei and the Lena, and between the Lena and Europe, may be utilized for trading purposes; but the journey there and back, between the Lena and Europe, can not be made in the same summer. 4. Further explorations are necessary to decide whether a practicable communication by sea between the mouth of the Lena and the Pacific Ocean can be established. The experience gained up to the present time shows that at all events machinery, heavy tools, and other goods which can not be easily conveyed by sledge or on wheels across Siberia, may be sent round by this new sea-route, from the Pacific Ocean to the estuary of the Lena.

On the morning of July 18, 1879, after having been imprisoned in the ice for 294 days, the *Vega* weighed anchor, or, more correctly, cast off from the large piece of ground-ice to which she had been moored during the winter, and which had sheltered her from the most violent storms and ice-pressure. Having first steamed a few miles to the northwest in order to clear the ice-fields, she steered her course along the coast toward the most eastern promontory of Asia, the East Cape. Her progress was impeded not so much by the ice as by the misty weather. Now and then the fog lifted, and revealed the same castellated cliff formation which had been already observed in several places on the north coast of Eastern Siberia. As regards beauty of scenery, the north

coast of Siberia is much inferior to Spitzbergen, with its deep fiords surrounded by steep, black, and boldly shaped mountains, and its dazzling white or azure-blue glaciers. Nor has the north coast of Asia been at any time cut up by glaciers into fiords and cliffs like Greenland, Spitzbergen, and Norway. Along the whole of the enormous distance between the White Sea and Behring Strait there is not to be found at present a single glacier reaching down to the sea, and in autumn the north coast of Siberia is almost free from ice and snow. Only in the high mountains on the east side of the Taimyr Peninsula, and between Behring Strait and Cape Jakan, are there some valleys filled with snow during the late autumn; but it is doubtful whether any of them form the bed of a real glacier, which in any case would be of small extent and terminate at a considerable height above the level of the sea. Nor does one see any snowy summits or mountains covered with snow all the year round, although some of the mountains—for example, those on the western side of Koljutchin Bay—attain a height of 2,000 feet and more. If we may apply the conception of a snow-line derived from the study of mountains in more southerly regions to countries situated in the far north, an assumption which can not be quite taken for granted, the snow-line of the north coast of Asia must lie at a height of over 1,500 feet.

On July 20th, at 11 A. M., the entrance of the *Vega* into Behring Strait was celebrated by the hoisting of flags and a Swedish salute. From the East Cape her course was shaped toward St. Lawrence Bay, a large fiord which at a distance of about forty miles to the southward of the cape penetrates the Tchukteh Peninsula. Some days after the ship anchored in Konyam Bay, in latitude $64^{\circ} 49' N.$, longitude $172^{\circ} 58' W.$ Here reindeer-owning Tchuktches were met with. It was Professor Nordenskjöld's intention to penetrate as far as possible into St. Lawrence Bay, in order to give the naturalists an opportunity of completing the study of the physical conditions of the Tchukteh Peninsula, which they had carried on during the autumn of 1878 and the spring of 1879; but the entrance to the bay was found so full of ice that the *Vega* was obliged to anchor off the settlement of Nunamo, situated immediately north of the mouth of the fiord. Extensive, though quite thin and rotten, ice-fields drifted past the ship in such quantities that it was not deemed advisable to remain in this place longer than necessary, and the *Vega* only stopped here until the afternoon of July 21st. The encampment of Nunamo is not situated, like other Tchukteh settlements, low down on the beach, but rather high up on a promontory between the sea and a river which empties here, and seems to be full in the season when the snows melt. Immediately above the strand-terrace rises a high mountain, the slopes of which are occupied by immense boulders, the abode of numerous

marmots, and of *Lagomys alpinus*, a species of gnawing animal the size of a large rat, and remarkable for the care with which during the summer it gathers provisions for the winter. The mountain is separated from the sea by a narrow terrace, from fifty to one hundred feet high, on which stood a few tents, and which, as it happened, was adorned with an extraordinary display of flowers. In a very short time and within the space of a few acres Dr. Kjellman here collected a hundred different species of flowers, many of which he had not previously found on the Tchukteh Peninsula. On the sides of the mountains there were still some patches of snow-drift, and from the summits one could see large masses of ice continually drifting backward and forward on the Asiatic side of Behring Strait. Dr. Stuxberg made the ascent of one of the neighboring mountains. On the way he came across the dead body of a native laid out upon a stone grave of the usual Tchukteh form. By the side of the dead lay a broken gun, a spear, arrows, a tinder-box, pipe, snow-screen, *issil* (a tool used for removing the ice-rubbish when cutting an ice-hole), and sundry other things considered necessary for the departed in a better world. The body had been lying here since the previous summer.

From Nunamo the course of the Vega was shaped for Port Clarence, on the American side of Behring Strait, where the ship anchored in the afternoon of July 22d, after a passage across a sea covered with drift-ice on the Asiatic side and quite free from ice on the American side. Port Clarence is a very large but excellent harbor, situated immediately to the southeast of Cape Prince of Wales. It was the first real harbor in which the Vega had anchored since she left Actinia Harbor on Taimyr Island, August 18, 1878. On the 26th the Vega steamed out of Port Clarence, and, favored by good weather, proceeded to recross Behring Strait, her next destination being Senjavin Strait, situated about 115 nautical miles to the southwest of East Cape. During the passage across, soundings were taken, also samples of water for analysis, as well as the temperature at various depths. The dredge or trawl was lowered frequently, with the most satisfactory results. In the course of the 28th the Vega stopped, not, as had been at first intended, in Glasenapp Harbor, which was filled with unbroken ice, but at the entrance of the most northerly fiord, Konyam Bay. The inner part of this bay was also covered with ice, the breaking up of which on the 30th nearly brought the Vega's voyage to an abrupt conclusion by pressing her against the land. Happily the movement was seen in time, and the ship removed to a part of the fiord free from ice. The southeastern shore of Konyam Bay, near which the Vega was anchored for a few days, was a waste bog, the breeding-place of numerous cranes. Farther inland, the low-lying hills were composed of granite, and above them rose several mountain-summits of trachyte for-

mation, about 2,000 feet high. The zoölogists and botanists, finding the harvest on the neighboring strand but scanty, proceeded in the steam-pinnace to the north side of the bay, where they discovered grassy slopes decked with tall shrubs and a great variety of flowers; and Dr. Kjellman increased his collection of the larger plants of northern Asia by more than seventy species. Here also the first land mollusca on the Tchukteh Peninsula were met with. Three reindeer Tchukteh families had set up their summer tents at the outlet of a deep brook on the northwestern shore of Konyam Bay. Their manner of life differed but little from that of the coast Tchukthes near the Vega's winter-station, and their dress was also the same, with the exception of small bells which they wore on their belts. On July 31st the expedition anchored off the northeastern shore of St. Lawrence Island, called by the Tchukthes *Engna*. At some distance from Senjavin Strait the last drift-ice was seen. The island seemed to offer no good harbor; so, after devoting a few days to an exploration which yielded an abundance of zoölogical and botanical specimens, the Vega continued her journey on the 2d of August, and on the 14th dropped anchor in an indifferently sheltered harbor on the northwest coast of Behring Island. Here again the naturalists succeeded in gathering a rich harvest of interesting specimens, among others a large collection of the bones of the supposed extinct sea-cow (*Rhytina Stelleri*). The Vega left Behring Island in the evening of August 19th. During the early part of her cruise toward Japan, and while the ship was sailing with the cold current which flows from the north, the wind was favorable, the weather mild, and the temperature of the sea-surface between 9° and 11° C. But on the 25th, when in latitude 45° 45' N. and longitude 156° E., the temperature of the water began to rise rapidly; and on the 28th, in latitude 40° N., longitude 147° 41' E., the thermometer recorded a surface temperature of 23·4° C. This showed that the Vega had left the Arctic current which had hitherto aided her progress, and had entered what has been called the Gulf Stream of the Pacific Ocean, known as the Kuro-Siwo. The winds now became less favorable, the weather oppressively hot in spite of violent squalls accompanied by thunder and showers of rain, and on the 31st the mainmast of the Vega was struck by lightning. In the evening of September 2d the Vega anchored in the roadstead of Yokohama, and on the 15th the three learned societies of Japan, viz., the Tokio Geographical Society, the Asiatic Society of Japan, and the German Asiatic Society, received Professor Nordenskjöld and his companions at a great banquet given in Tokio, in the large hall of the Koku Dai Gaku, and presided over by H. I. H. Prince Kita-Shirakawa-No-Miya.

The Dutch Arctic Expedition, consisting of the schooner William Barents, commanded by

Captain De Bruyne, sailed from Amsterdam June 3, 1879, on her second attempt to reach Franz-Josef Land. The crew numbered nine men. H. M. Speelman had charge of the magnetic observations. Mr. W. G. A. Grant again accompanied the party as photographer, and Mr. L. De Jude, student at Utrecht, as zoölogist. Captain De Bruyne was assisted by two officers, Mr. Broeklurjon, Lieutenant first class, and Mr. Kalmeyer, Lieutenant second class. The cruise was successful, as on the 7th of September Mount Brunn on McClintock Island (a part of Franz-Josef Land) was sighted; the first time that the newly discovered continent had been seen from a sailing vessel. The Barents began her return voyage on the same date, and reached Hammerfest on September 18th. A number of scientific observations were made during the cruise.

Captain A. H. Markham, R. N., and Sir Henry Gore Booth made a pleasure excursion to the Barents Sea in the *Isbjorn*, a sailing vessel of about 43 tons burden. They left Tromsø on the 18th of May, and, passing through the fiords to the southward of North Cape, made the first ice on June 4th, forty miles from the "Goose Coast" of Nova Zembla. The Matoshkin Shar was found to be impassable on the 26th, so they shaped a course northward along the west coast of Nova Zembla until they were stopped by the ice off Cape Nassau. On July 31st they passed through the Matoshkin Shar, but found the Kara Sea full of heavy floes, and therefore returned by the same strait. On August 18th they met the Dutch expeditionary vessel *William Barents*. The *Isbjorn* was then steered northward along the west coast once more, and this time succeeded in rounding Cape Nassau, and reaching as far as Cape Mauritius, the extreme northeastern point of Nova Zembla. Finally pushing due northward between Spitzbergen and Nova Zembla, on the meridian of 47°, they met the ice in latitude 78° N., and succeeded in penetrating through loose streams of it as far north as 78° 24', thus reaching within eighty miles of Franz-Josef Land. Returning, they arrived at Tromsø on September 22d. The explorers made a good natural history collection, and did some useful geographical work by adding to our knowledge of the drift and nature of the ice along this important route to the pole.

The steamer *Jeannette*, fitted out through the liberality of Mr. James Gordon Bennett, sailed from San Francisco on July 8, 1879, via Behring Strait, for the purpose of exploration and discovery. She measures 420 tons, carries thirty-two men, and is provisioned for three years. The officers of the expedition are: Lieutenant George W. De Long, U. S. N., commander; Lieutenant Chipp, U. S. N., executive officer; Lieutenant Danenhower, U. S. N., navigating and ordnance officer; Dr. Ambler, surgeon; chief engineer, Melville; ice-pilot, Dunbar; Mr. Newcomb, collector of specimens of natural history, etc.; and Mr.

Collins, meteorologist and scientific observer, also "Herald" correspondent. The *Jeannette* reached Onalaska August 2d, and was last seen in the neighborhood of Herald Island on September 3d. It was expected that she would winter at some harbor on the coast of Wrangell Land.

The Franklin Search Expedition, which sailed from New York on the 19th of June, 1878, went into winter-quarters on the 9th of August of the same year, on the northern shore of Hudson's Bay, in about latitude 64° N. and longitude 90° W. Reports from Lieutenant Schwatka indicate that the information in reference to the missing relics of Sir John Franklin, which formed the basis of the expedition, was untrustworthy. It is probable that the expedition will return to the United States during the year 1880.

GEOLOGY, EXPERIMENTAL. In the article on the **FORMATION OF MOUNTAINS** an example has been given of the occasional value of experimentation in seeking an understanding of the processes of nature in the geological evolution. Although most of the conditions under which the geological processes have taken place can not be reproduced in the laboratory, yet in individual cases new light can be thrown on geological problems by chemical and physical experiments. When Sir James Hall was able to obtain in his crucible a stony mass, instead of the vitreous substance which had been predicted, from the chemical constituents of basalt, he established Hutton's proposition that the basalts were of volcanic origin. Bisehoff in Germany and Sénarmont in France have studied experimentally some of the chemical processes through which the mineral masses of the earth have been formed with considerable success. One of the most enthusiastic students in this field is M. Daubrée, Director of the French School of Mines, who has been engaged for over thirty years in investigating geological phenomena by the application of the experimental method, and has just published a volume containing the results of his work.

One of the most valuable successes obtained by Daubrée was the artificial production of quartz crystals. Like most of his chemical experiments, this one was conducted by subjecting the substance operated upon to extraordinary pressure. This is necessary in order to fulfill the conditions of the chemical changes which take place far down under the earth's surface, under an enormous weight of superincumbent rocks. The operation is, however, attended with much danger, and only after many failures from the rupture of materials of insufficient resistance can a successful result be reached. Heating water in closed glass vessels to a temperature at which the steam would often rend the strongest vessels apart like tinder, he observed the action of the superheated water on those which were able to withstand the pressure for several days. The glass on the inside of the tubes was found to be partly con-

verted into hydrated silicates of the type called zeolites, minerals which occur in the cavities of volcanic rocks and sometimes in mineral veins. Another product found in the walls of the glass was the common constituent of rock formations, the anhydrous silicate which is called augite. But the most interesting result was the occasional production of silica in a crystalline form, with all the characteristics of quartz. The quartz usually obtained in the laboratory is a pasty substance which dries up into an amorphous powder. The silica obtained by Daubrée was perfectly crystallized, and corresponded in every respect to quartz crystals, except that, owing to the short duration of the experiment, the crystals were extremely minute in size.

The pressure and the heat under which many of the geological changes of the earth have occurred can not be repeated artificially in physico-chemical experiments. Another condition which the experimentalist is still less able to compass is the secular duration of the chemical processes of nature: if all the natural conditions could be artificially produced, the mineral transformations could not be observed, as in most instances the chemical action must be prolonged far beyond the life of man. Fortunately, however, this important element has been supplied in certain instances, and we are able to read the results of experiments which, none the less fruitful because accidentally begun, have extended over definite periods of many centuries. Most valuable opportunities for watching mineral changes are offered by the thermal springs used by the Romans, in which various mineral substances have been left exposed to the action of the heated water for sixteen or eighteen centuries. The chemical decompositions and combinations which have resulted afford an invaluable experimental illustration and revelation of the process by which mineral lodes or veins are formed. The richest discoveries of this nature were made in the excavations of the hot springs at Bourbonne-les-Bains, in the department of Haute-Marne in France. In the deposits at the bottom of the old Roman baths nearly five thousand Roman coins, most of them of bronze, but three or four of gold, and a considerable number of silver, were unearthed, and also pins and rings, statuettes, and other objects in bronze, gold, lead, and iron. Underneath the mud containing these metallic relics was a layer of conglomerate formed of sand and fragments of sandstone cemented together by mineral substances which had been produced by the solvent action of the water, heated to a constant temperature of from 58° to 68° C., on the metallic objects during the sixteen centuries that they had been exposed in the spring. These products were identical with the minerals which occur in veins, and in numerous cases they had taken on perfect crystalline forms indistinguishable from those of like substances occurring in natural veins. A great

variety of these products were detected in the agglutinated mass. One of the most common was cuprite, or red oxide of copper, occurring in octahedral crystals, which was one of the products of the bronze. Chalcosite, or sulphide of copper, in well-formed crystals, was also found. The yellow copper ore (copper pyrites, the ordinary ore of the copper-mines), the purple copper ore, in which the crystallization is more perfect, and the gray copper ore, a rare mineral which occurs in beautiful tetrahedral crystals, and is thence called tetrahedrite, were all three present. The leaden pipes of the ancient springs yielded a similar list of products, including the ordinary minerals contained in lead-veins, and also some rare varieties of minerals, among which may be mentioned phosgenite. From the decomposition of the iron resulted pyrites and other ferruginous substances. Even the bricks and concrete of the masonry were wrought upon by the action of the hot water continued through so long a period, and yielded various silicates which are identical with native minerals.

An important but thus far unsolvable problem in geology is that of the formation of the vast quantities of limestone rock in which there is no trace of organic structure, but which are made up of fine granular particles of carbonate of lime. They may be formed of the decomposed substance of shells, but in the absence of structural remains the supposition is equally warrantable that they are merely chemical deposits of grains of carbonate similar to the concretions formed in hot calcareous springs, which are called in Germany *Sprudelstein*, and to the species of limestone rock called oölite. If the rock were formed simply by the precipitation of granular particles of carbonate of lime, the question would remain whether or not the material was derived from the decomposition of older rocks which had been built up of organic remains. The researches of the English geologist Sorby into the nature of limestone rocks belong to the department of experimental geology. It is possible to distinguish by their different density and hardness, and by their different optical properties—one being optically biaxial, or having two directions in which double refraction does not take place, and the other transmitting the ray undivided in one direction only—between the two forms of the dimorphous crystallization of carbonate of lime, even when the external form is hidden. Sorby shows that it is an important consideration regarding the preservation of shells in a fossil form, whether they are composed of carbonate of lime crystallized in the dimorphic form of calcite or in that of aragonite. The latter is an unstable form, whose particles are easily disturbed, and under the action of heat tend to recrystallize in the form of calcite. In a rock composed of shells whose composition was of aragonite the traces of organic forms would entirely disappear. The true corals seem to be principally aragon-

ite. The greater number of the shells of gasteropods are composed of the same; while the shells of brachiopods are invariably built from calcite. Some shells show no trace originally of organic structure. Such is the case of the tube of the teredos. In all shells composed of aragonite the organic forms would become effaced. The absence of corals or other such shells in limestone formations is therefore no evidence that such organisms did not enter into the original composition of the rock. The preservation of calcite remains, such as the shells of sea-urchins, and the rarity or entire absence of corals and other fossils of aragonite composition, do not prove that the latter did not exist in large numbers, since, their substance being in a state of unstable chemical equilibrium, the latter would have fewer chances to be preserved.

The metal *lithium* was supposed until quite recently to be one of the rarest of all minerals. By the aid of the spectroscope chemists have recently established its presence in a considerable variety of mineral compounds—in feldspars and micas, in the ashes of tobacco and a number of other plants, and quite abundantly in many mineral springs. Dieulafait, a French geologist, has added to the list of substances unexpectedly containing lithium. He finds it in all the primordial rocks, and also in the waters of the ocean and inland seas. It was before detected in sea-water by Bunsen; but Dieulafait finds it so diffused as to show its presence in a cubic centimetre of water from the Mediterranean, and in the waters of the Atlantic and the Indian Oceans, the Red Sea, the China Sea, and the Arctic and Antarctic Oceans. In certain mineral springs he detects it in a single drop of the water. He concludes that the salt lithia is no less frequent in mineral waters, and in the mineral kingdom generally, than potash, soda, and the other kindred alkalies, though present in smaller quantities.

On the great and mysterious question of the condition of the interior of the earth, the experimental method has been appealed to, and the latest theories are chiefly based upon actual observations of the behavior of substances analogous to the mineral constituents of the earth during solidification. The theory that the central nucleus is a solid and not a molten mass is founded on the experiments of Bunsen, Hopkins, and others, which seemed to prove that silicious substances contracted during solidification. From this fact the deduction would be evident that pressure would counteract the effect of heat to keep them in a liquid state, that their melting-point would be raised by pressure, and that they would be solid under pressure at temperatures where they would fuse when allowed to expand. The question as to the liquid or solid state of the central portions of the globe would then depend on the extent of the contraction of the materials at solidification and the relative degrees of heat and pressure to which they are subjected. Without such con-

traction the solidification of the earth would commence at the surface, the masses which first hardened and sank into the liquid mass fusing again as they descended, until the whole became sufficiently viscous to prevent the solidified portions from sinking; then a solid crust would form over the whole surface, which would become thicker and thicker as the cooling process went on, until the globe parted with all its internal heat, and became entirely refrigerated. But if the melting-point of the materials were elevated under pressure to such a degree that solid portions sinking into the liquid mass would not fuse, the conclusion would be that at the center, where the pressure was greatest, the process of solidification commenced, and extended gradually outward, another solidification taking place at the surface at the same time, perhaps.

The calculations of Sir William Thomson on this subject were based on experiments of Bischoff, which went to show that solid rocks are twenty per cent. denser than the same materials in a molten state. Yet Mallet found that the blast-furnace slags contract only six per cent. Mr. Siemens has recently published a series of experiments made by his brother, which reconcile the discrepancies between these different results, and which, with his arguments based on the phenomena of volcanic eruptions, furnish a strong body of proof in favor of the old doctrine that the interior of the globe is filled with a semi-fluid mass of molten rock. Friedrich Siemens found that when glass fused to a thin liquid was allowed to cool, the contraction was marked and rapid until it approached a plastic, viscous consistency; but that after that the contraction was slight in amount, and became less and less; and that at the point of solidification a slight reëxpansion seemed to take place. Mr. Siemens insists on the impossibility, on Sir William Thomson's hypothesis of a solid nucleus, of accounting for the sedimentary strata, many thousand feet in thickness at the earth's surface. The theory of a solid globe fails also to account for the eruptions of volcanoes, since the assumption of pockets of liquefied lava existing at different depths below the surface does not explain the overflow of lava at the surface. Siemens assumes that the hydrous and alkaline lavas which are discharged from volcanoes are less dense than the silicates with which they are associated in the interior of the earth, and than the solid materials of the earth's crust; and that they are forced into the cavities and narrow fissures of the crust by hydrostatic pressure, and, when the channel communicates with the surface, are forced out with a pressure which is increased by the inclosed vapor and gases, unless the height of the column is so great that hydrostatic equilibrium is attained before the lava reaches the surface. In harmony with many other recent thinkers, Siemens supposes the ocean-beds and lower portions of the earth's surface to be composed of

a crust of denser materials than the elevated continental areas. The difference in elevation between the Central Asian plateau and the bottom of the Pacific Ocean amounts to 12,000 metres, representing a difference of pressure on the viscous magna of about 1,000 atmospheres, which could not be maintained unless there are adhering to the crust partially solidified masses of sufficient thickness and density to compensate for the difference. The theory of Siemens of a difference in the specific gravity of the rocks which form the continental elevations and those in the depressed portions of the surface of the globe is borne out by some observations made during the measurement of the great arc of a meridian in the Indian Trigonometric Survey. The deviation of the plumb-line in the neighborhood of the Himalayas was found to be greatly less than the computations of Archdeacon Pratt, showing that the density of the rocky mass of the mountains was inferior to that of the plains. It has been ascertained also in geodetical surveys that gravity at the coast is generally greater than at the corresponding stations in the interior of continents. The general tendency among men of science in England, as well as on the Continent, is to return to the old doctrine that the earth consists of a spheroid of molten, viscous matter, supporting a thin solid crust.

GEORGIA. The recess of the Legislature of this State, which commenced on December 14, 1878, came to an end on July 1, 1879, when that body resumed its labors. The session was then continued until the final adjournment on October 15th. More than 1,000 bills were introduced and read the first time. Of these nearly 600 were discussed. Of those discussed, 320 were passed. Of those passed, the whole 320 received the Governor's signature and thus became laws. Of these there are over 40 that change sections of the Code, and over 100 that are public bills, or bills of general application.

The largest bill that passed was the military bill, and the most important was the railroad bill. The title of this measure, which expresses its object very fully, is "An act to provide for the regulation of railroad freight and passenger tariffs in this State; to prevent unjust discrimination and extortion in the rates charged for transportation of passengers and freight; and to prohibit railroad companies, corporations, and lessees in this State from charging other than just and reasonable rates, and to punish the same, and prescribe a mode of procedure and rules of evidence in relation thereto; and to appoint commissioners, and to prescribe their powers and duties in relation to the same." The State Constitution makes it the duty of the Legislature "to pass laws from time to time to regulate freight and passenger tariffs, to prohibit unjust discriminations on the various railroads of this State, and to prohibit railroads from charging other than just and reasonable rates, and enforce the same by adequate penalties." The act provides for the

appointment of three Commissioners, one of experience in the law and one of experience in railway business, whose terms will ultimately continue six years. Neither of them shall have any interest in any way in any railroad, and shall so continue during the term of office. Any railroad company doing business in the State that shall charge, collect, demand, or receive more than a fair and reasonable rate of toll or compensation for transportation of passengers or freight of any description, or for the use and transportation of any railroad-car upon its track, or any of the branches thereof, or upon any railroad within this State which it has the right, license, or permission to use, operate, or control, the same shall be guilty of extortion, and upon conviction thereof shall be dealt with as hereafter stated. If any railroad corporation shall make any unjust discrimination in its rates or charges of toll or compensation for the transportation of passengers or freights of any description, or for the use and transportation of any railroad-car upon its said road, or upon any of the branches thereof, or upon any railroads connected therewith, which it has the right, license, or permission to operate, control, or use, within the State, the same shall be deemed guilty of having violated the provisions of the act, and upon conviction thereof shall be dealt with as hereafter stated. The fifth section requires that the Commissioners shall make reasonable and just rates of freight and passenger tariffs, to be observed by all railroad companies doing business in the State on the railroads thereof; shall make reasonable and just rules and regulations, to be observed by all railroad companies doing business in the State, as to charges at any and all points for necessary hauling and delivering freights; shall make such just and reasonable rules and regulations as may be necessary for preventing unjust discriminations in the transportation of freight and passengers on the railroads in the State; shall make reasonable and just rates of charges for use of railroad-cars carrying any and all kinds of freight and passengers on said railroads, no matter by whom owned or carried; and shall make just and reasonable rules and regulations, to be observed by said railroad companies, to prevent the giving or paying any rebate or bonus, directly or indirectly, and from misleading or deceiving the public in any manner as to the real rates charged for freight and passengers. Nothing in the act shall be taken as in any manner abridging or controlling the rates for freight charged by any railroad company in the State for carrying freight which comes from or goes beyond the boundaries of the State, and on which freight less than local rates on any railroad carrying the same are charged by such railroad; but said railroad companies shall possess the same power and right to charge such rates for carrying such freights as they possessed before the passage of the act, and the Commissioners shall have full power by

rules and regulations to designate and fix the difference in rates of freight and passenger transportation, to be allowed for longer and shorter distances on the same railroad, and to ascertain what shall be the limits of longer and shorter distance. If any railroad company, by its agents or employees, shall be guilty of a violation of the rules and regulations provided and prescribed by the Commissioners, and if, after due notice of such violation given to the principal officer thereof, ample and full recompense for the wrong or injury done thereby to any person or corporation, as may be directed by the Commissioners, shall not be made within thirty days from the time of such notice, such company shall incur a penalty for each offense in the sum of not less than one thousand dollars nor more than five thousand dollars, to be fixed by the Judge presiding. An action for the recovery of such penalty shall lie in any county in the State where such violation has occurred or wrong has been perpetrated, and shall be in the name of the State of Georgia. The Commissioners shall institute such action through the Attorney-General or Solicitor-General, whose fees shall be the same as provided by law. The three Commissioners appointed by the Governor were ex-Governor Smith, Samuel Barnett, and Major Campbell Wallace.

There was a large number of local-option laws passed, and the tendency of the legislation shows that the cause of prohibition is gradually gaining ground. In many counties the prohibition is made absolute, and in many others it is left to the vote of the people. In the northern part of the State the interest is the most decided.

The highest rate of interest that may be exacted in the State is eight per cent., but only in specified cases. When no rate is named in a contract, the legal rate remains at seven per cent. A violation of these conditions brings a forfeiture of the interest and excess of interest charged.

A military bill was passed, which provides for a reorganization of the State volunteer system. There are to be no regiments, but all the companies are to be formed into battalions. The Governor is to enforce such organization. The white and colored battalions are to be kept separate, and are to be organized in different series, so that each series will have its senior officers. A State flag is adopted for the first time. Not a dollar is to be expended on the military except what may arise from the fines and forfeitures of the military courts-martial, which will be nominal. The proposition urged by the Military Commission that a per capita tax of fifty cents be levied for military purposes was rejected by the Judiciary Committee as unconstitutional. The Governor remains the Commander-in-Chief of the army and navy of the State, and the Superintendent of Public Buildings, who is Mr. John B. Baird, was made Adjutant-General of Georgia.

An act was passed appropriating \$60 a year for five years to every soldier of the State who lost an arm or a leg in the late war. The appropriation was made for the purpose of allowing the disabled men to buy a leg or arm for themselves. It is estimated that the cost to the State will be between \$50,000 and \$100,000.

The most important measure relating to education was the passage of an act creating a normal school. The law requires that the State shall furnish an appropriation of \$8,000 per annum whenever the agent of the Peabody fund may furnish a like amount. The school shall then be located in the city or town of the State that offers the most liberal inducements to it.

An act was passed to define the crime of lobbying, and to prescribe penalties for the same. It declares two classes of persons to be lobbyists: 1. Persons who misrepresent the nature of their interests in any matter pending in either House; and, 2. Persons who are employed for a consideration, by any person or corporation interested in any measure, to favor or oppose such measure. These two classes are prohibited from any personal solicitation of a member of either House, by private interview, letter, message, or other means and appliances not addressed to the judgment. All others may approach members in any manner, but the above classes are prohibited from doing so under penalty of being guilty of a felony. The man who approaches a member under false colors, or who comes with a fee or other reward, becomes a felon.

Previous to the recess of the Legislature in December, 1878, a committee was appointed to make an investigation into alleged frauds in the disposal of wild lands on the part of the office under the charge of Comptroller-General Goldsmith. These are lands not in cultivation or use, and of course bringing no revenue to their owners. They are scattered throughout the State, and the taxes are scarcely ever paid on them. The law provides that they shall be sold in default of taxes. Hundreds of thousands of acres have been sold within the past year or two, bringing only about enough to pay the taxes. It was found that the *fi. fas.* for these lands had been transferred by the Comptroller to four men, who, as speculators, bought in thus probably 300,000 acres of land for little more than the taxes, and less than one per cent. of their assessed value. The speculation was a gigantic one, and an investigation was ordered. The Comptroller claimed that he had made the transfers under the written opinion of the Attorney-General, which was true. The committee made their report on July 7th. The majority said they could find no evidence that the Comptroller had any interest in the transactions, except his charge for costs, and added: "In view of the wholesale frauds committed in these transactions, we respectfully recommend that the Legislature do pass an act

declaring all these sales had under transferred *fi. fas.* null and void, as some of the courts have already decided, and another to withdraw all protection of any statute of limitation or law of prescription from all such titles, or others founded on them or emanating from them; and this committee beg leave to continue their organization for the purpose of preparing these bills, and reporting them as soon as possible." The minority report opposed such a law as unconstitutional, and said: "But the greatest objection to the course recommended by the majority is, that to pass such act would be to usurp the prerogative of the judiciary, a coördinate branch of the government. This we can not do. The Constitution forbids it, and any such act, if passed, would be *ipso facto* void. It would be far wiser to attempt no retroactive legislation, but leave all these intricate legal questions to be decided by the courts, the tribunals established by the Constitution to interpret and administer the law." The Comptroller then addressed a letter to the committee, in which he said:

I do not propose to discuss the legality of the transfers or the recommendation which you make to declare them void, because these recommendations are concurred in by a majority of your committee, and because, if they are valid, no legislation can make them void, and, if they are void, no legislation can make them valid. The law of 1874 fixes their status, and what that is the courts, I presume, will determine in reference to the law as it then existed. Being doubtful myself as to the transfers, I applied to the Attorney-General, and acted on his opinion. If the transfers are declared void by the courts, I shall have no sympathy with any one except such *bona fide* purchasers as may have been, under the opinion of the Attorney-General, misled in the investment of their money. Beyond this, I shall rejoice with the committee in the defeating of any frauds that may have been perpetrated by any one.

The portion of your report that does not express what I understand to be the views of a majority is the omission to state that it was in evidence that before the appointment of your committee I had taken official action through the Solicitor-General in Dodge and Montgomery Counties to compel the sheriffs by rule to account for the entire sales in those counties, less the legal costs and amount of taxes paid to the State by the transferees; and at the time of your investigation it was in evidence that I had directed rules to be issued against every sheriff who had failed to make proper returns. In doing this I exhausted my power as Comptroller, and if any unnecessary delay has occurred, the fault, if fault there be, is not in my department. These views, I understand, were concurred in by a majority of your committee, and were to be embodied in the report. If these facts were stated, I should have no complaint; but their omission leaves an inference that I had left undone what I ought to have done, in order to compel an accountability by the sheriffs.

I also understand that the committee agreed to report, instead of what was reported, that, "after thorough investigation, nothing could be found to implicate the Comptroller-General, directly or indirectly, in any fraud or speculation whatever." All these facts are borne out by the evidence and my statement before the committee, and I understood were to be covered by the report. They have been omitted, and as the omission subjects the report to misconstruction, I ask you respectfully to indicate by your concurrence in this statement the truth of the facts set forth. I make this request because I feel confident

that it will be your pleasure to do for me this act of justice.
W. L. GOLDSMITH.

The paper exonerating the Comptroller, of which the above is an extract, was presented to members of the committee with a request for them to sign it. Two of them did so, two refused, and the chairman was not approached. A friend of Goldsmith went to the two members who refused to sign the paper and pleaded with them to do so. They still refused. He then offered one of them \$250 and the other \$100 and a suit of clothes, to sign the paper. They indignantly refused, and reported the attempted bribery to the chairman. The committee made a supplemental report, stating among other matters that an attempt had been made by bribery to induce two of its members to sign a paper prepared by the Comptroller. "This paper had for its object the acknowledgment by the members of the committee that certain things had been omitted in the report which ought to have gone into it, and that certain other things embraced in the report were couched in language different from that in which a majority of the committee had agreed should be employed, thus doing the Comptroller-General unintentional injustice." He reported it to the Legislature, and the whole city was soon greatly excited over it. The House of Representatives ordered the arrest of Hinton Wright, the man who had offered the bribes, and appointed a new committee of investigation. In a few days this committee reported that they had discovered a series of gross frauds in the office of the Comptroller-General, and recommended the impeachment of that officer. The House elected six managers of the impeachment, who presented at the bar of the Senate the following series of charges:

ARTICLE 1. That Washington L. Goldsmith, Comptroller of the State of Georgia, did, on the 1st day of October, 1877, illegally, wrongfully, and corruptly collect fifty cents on all *fi. fas.* against wild lands.

ART. 2. That said Goldsmith, on the 25th day of September, 1877, did, illegally, wrongfully, and corruptly, issue writs of *fi. fa.* against lands in certain counties.

ART. 3. That said Goldsmith extorted from W. P. Anderson \$4 on eight *fi. fas.*, although said lots had not been advertised thirty days according to law.

ART. 4. That said Goldsmith did, illegally, wrongfully, and corruptly, refuse to receive from W. P. Anderson taxes on wild lands, compelling said Anderson to pay \$4 on eight *fi. fas.*, although said land had not been advertised the requisite thirty days.

ART. 5. That said Goldsmith did, on or before the 31st day of October, 1877, for and in consideration of \$100, paid by Daniel Lott, issue *fi. fas.* on the lands of Rondeau & Co.

ART. 6. That said Goldsmith, on divers occasions after October 11, 1877, did illegally pay out to divers parties money aggregating in amount \$8,175.73, without the consent or warrant of the Governor.

ART. 7. That said Goldsmith, unmindful of his duties, etc., did illegally issue to the sheriffs of the State circulars delegating to the same certain trusts and duties intrusted to him by the State.

ART. 8. That said Goldsmith, on the 1st day of June, 1879, without the color of right, and in disregard of the duties of his office, did fail to turn over to

the Treasurer large sums of money, aggregating \$4,582.50, which had been collected by him as taxes upon wild lands, keeping, holding, and retaining in his possession said money.

ART. 9. That said Goldsmith, between March, 1874, and February, 1875, did make and present to John Jones, Treasurer, fraudulent returns concerning moneys collected by him on account of wild-land taxes.

ART. 10. That said Goldsmith collected as insurance fees the sum of \$12,678.06, and paid into the Treasury of this sum only \$2,457.60, keeping in his possession the sum of \$9,720.46, the law requiring him to pay immediately into the Treasury all sums thus collected.

ART. 11. That said Goldsmith did, in the month of May, 1879, permit to be fraudulently changed and altered certain records used in the Comptroller-General's office.

ART. 12. That said Goldsmith does keep and employ in his office one James M. Goldsmith, after knowing of his unlawful acts in changing records in the Wild-Land Office.

ART. 13. That said Goldsmith did, on the 1st of October, 1878, make and prepare false and incorrect statements and exhibits of money collected by him to the Governor and Legislature.

ART. 14. That said Goldsmith has appropriated to his own use money belonging to the State.

ART. 15. That said Goldsmith did, on the dates of the 10th, 12th, and 15th of July, 1879, collude, combine, and conspire with one Hinton P. Wright to control and influence P. D. Davis, a member of this body.

ART. 16. That said Goldsmith did, on the — of July, 1879, employ one Hinton P. Wright to bribe the Hon. Lewis Strickland, a member of this body.

ART. 17. That said Goldsmith, by the proceedings and conduct as set forth in preceding sections, for the sake of lucre and self-aggrandizement, has set a miserable precedent to those in high office.

Charges of impeachment against the Comptroller were made by the House to the Senate, and that body organized into a court for the trial of the same, with the Chief Justice of the State in the chair, on August 21st. The trial was, however, postponed to the first Monday in September. Its result is stated in the following sentence read by the Chief Justice:

The House of Representatives and all the people of Georgia *vs.* Washington L. Goldsmith, Comptroller-General. Impeachment.

Whereas, it appears from the record of the trial had in the above-stated case, now before the Court, that the defendant was guilty of the charges contained in the first, third, fourth, fifth, tenth, thirteenth, fourteenth, and seventeenth articles of impeachment preferred against him by the House of Representatives, and was found not guilty of the charges contained in all the other articles; whereupon it is considered, ordered, and adjudged by the High Court of Impeachment of the State of Georgia, now here, that the defendant, the said W. L. Goldsmith, Comptroller-General of the said State of Georgia, be and he is hereby removed from the said office of Comptroller-General, and that the same be and is hereby declared to be vacant; and that the said W. L. Goldsmith be and is hereby declared to be disqualified to hold and enjoy any office of honor, trust, or profit within the State of Georgia during his natural life.

HIRAM WARNER,

Chief Justice Supreme Court of Georgia.

September 19, 1879.

On August 11th, in the House, four committees of nine members each were appointed to investigate the Treasury Department, the Agricultural Department, the office of the prin-

cipal keeper of the penitentiary, and the office of the State School Commissioner.

The committee on the investigation of the Treasury Department made majority and minority reports on September 15th. The majority say that they "have found at the very threshold of their investigations such conclusive evidence of malfeasance in office by J. W. Renfro, Treasurer of the State, that they feel it their imperative duty to lay the same before the House without delay." They then proceed to state instances in which he deposited money in certain banks, under an agreement with his sureties, and received some interest on such deposits for his own use. Then they say:

The testimony shows this to have been the understanding and agreement, but the committee are of the opinion that in this matter the Treasurer has been guilty of a plain, direct, and palpable violation of the law and breach of his official duty. Prior to the adoption of the present Constitution the law controlling this question is contained in the eleventh paragraph of section 12 of the act of the General Assembly approved February 25, 1875, which is in these words: "The Treasurer shall not under any circumstances use himself, or allow others to use, the funds of the State in his hands; and for every violation of this section he is liable to the State for the sum of five hundred dollars as a penalty, or a forfeiture of his salary, if such forfeiture will pay the penalty incurred." While, therefore, it is true that the stipulations already recited were made between the Treasurer, the sureties, and the banks, and were intended to meet the letter of this law, yet the contract between the sureties and the banks for the payment to the sureties of interest on the State deposits, and the receiving by the Treasurer of his portion of those payments, is clearly and unquestionably a violation of the law in its spirit and substance.

Again, more than one half the entire amount received by the Treasurer from this source was paid to him subsequently to the 5th day of December, 1877, on which day the present Constitution was ratified and adopted by the people and became the organic law of this State; and whatever justification or excuse may be set up by the Treasurer under the language of the statute just cited, he certainly could not mistake or misconstrue the plain, positive, and comprehensive provision of the Constitution upon this subject. Paragraph five of section two of article five of that instrument provides that "the Treasurer shall not be allowed, directly or indirectly, to receive any fee, interest, or reward from any person, bank, or corporation for deposit or use in any manner of the public funds; and the General Assembly shall enforce this provision by suitable penalties."

They further reported that the Treasurer, for signing officially the coupons on the bonds of the Northeastern Railroad Company, endorsed by the State, charged said railroad company therefor 1½ cent per coupon, and did on the 2d of January, 1878, receive from the officers of the company \$247 in payment of that claim, which sum of money he converted to his own use and benefit. And they concluded by recommending that he be impeached for high crimes and misdemeanors in office, and that a committee of seven be appointed to announce the matter to the Senate.

The minority of one took an entirely different view of the case, saying that he felt compelled to submit his report "in deference to

my views of the true interests of the State, and to my sense of justice to a public officer." In his report he says:

The committee have submitted the Treasury Department to the closest scrutiny, and have ascertained that the condition of the accounts, as shown by the records and books, is satisfactory to the most exacting. The method observed by that officer is calculated to secure correctness, and is at the same time simple and easily understood. The funds of the State have either been expended upon proper vouchers, or have been at all times deposited in banks in conformity to law.

It has been demonstrated that the Treasurer has spared no efforts at all times, and upon all occasions, to protect the public interests confided to him. There are two matters, however, which I deem proper to bring to the attention of the House.

On the day of the assembling of the committee, we received from the Treasurer a communication, requesting the closest scrutiny of his department and of his official conduct, whether the investigations be based "on rumor or otherwise." After we had thoroughly examined his office, his books, his bank accounts, etc., and found everything in admirable condition, we summoned him before us, and found him ready and prompt to answer any and all inquiries. Among other matters, he stated that, at the request of some of the securities on his official bond, he had deposited the public money in certain banks; that these banks were selected by him, with the approval of the Governor, under the requirements of the law; that they were designated by his securities on account of their recognized solvency, and because they would pay to them commissions of from two to five per cent. on the monthly balances of the deposits; that these commissions were received by the securities referred to, and they paid a portion thereof, varying from one third to one half, to him; that he justified his course in this particular under par. 8, sec. 92, of the Code, also under par. 11, sec. 18, of the act of 1876, which is but a reenactment of the section of the Code alluded to; also under the resolution of December 8, 1871, which is as follows:

"Whereas, It has not been customary to require the State Treasurer to pay into the Treasury interest on the deposits of the State funds;

"Be it resolved, That the Treasurer of the State shall not be held liable for any such interest; and be it further resolved, etc.," directing the dismissal of certain suits for such interest against the then Treasurer.

The statement of the Treasurer, after searching in every quarter in which light might be had, was not materially affected.

I would not be understood as endorsing this course of conduct, but on the contrary believe it to be deserving of censure. It will be observed that sec. 92 of the Code, reenacted in the act of 1876, declares that "the Treasurer shall not, under any circumstances, use himself, or allow others to use, the funds of the State in his hands." In handling such large sums of money as annually pass through the Treasury of Georgia, under the very necessities of the case, large deposits must be made in banks. The law itself, as found in the Code and the act of 1876, contemplate this course. The evidence does not disclose that the Treasurer, in reference to the deposits, did more than this. He deposited in certain banks, with the approval of the Governor, the funds in his hands, precisely as any business man or corporation would deposit.

The law, in providing for such deposits, contemplates necessarily that the banks thus patronized would use the money precisely as they use the funds of other depositors—nothing more, nothing less. Were such not the case, we should soon have no banks in which to deposit. The statement of the Treasurer, together with the evidence taken upon this point, fails to indicate or even to suggest that he

placed the public funds in any of these institutions upon any other terms than those which impliedly attach to all deposits. The fact that he received a commission or percentage on the monthly balances does not of itself add to the character of the deposits any additional attribute of using himself, or permitting others to use, the public funds. If he is in the latter case within the prohibition of the statute, he is equally so though no commission or percentage be paid him. It would seem that, to violate the law as it then stood, there must have been some contract with the banks in reference to the time the money was to remain in their custody, or as to the amount to be deposited, or as to some other feature which destroyed the identity of the transaction with the ordinary deposit. That a commission or percentage was paid *ipso facto* did not vary the terms of the deposit, and more emphatically is this so when the banks expressly agreed with the securities that no such result would follow, but that such deposits were subject to the check of the Treasurer at any and all times.

When we add to this reasoning the resolution of 1871, passed by the first Democratic Legislature which met under the Constitution of 1868, it is, to say the least, a matter of grave doubt whether any law was violated up to the adoption of the Constitution of 1877. That resolution says expressly that the Treasurer shall not be held liable for any interest on deposits. It is a legislative construction of the section of the Code above alluded to. It is true that paragraph five of the second section of the fifth article of the Constitution of 1877 provides that "the Treasurer shall not be allowed, directly or indirectly, to receive any fee, interest, or reward from any person from the deposit, etc., of public funds"; but it will be observed that it is also provided that "the General Assembly shall enforce this provision by suitable penalties." The present General Assembly is proceeding by an appropriate act to enforce this provision, but the Treasurer has long since ceased the receipt of any commission. The evidence disclosed that he promptly discontinued the receipt of such moneys so soon as his attention was called to the constitutional provision, and long in advance of any investigation of his department. The last commission received by him was about November 1, 1878.

The second matter to which I desire to call attention is the payment to the Treasurer by Mr. Childs, the President of the Northeastern Railroad, of \$247 for extra work done in endorsing the bonds and coupons of such road. This is in substantially the same condition as the commissions on the deposits. He received 14 cent for each bond and coupon signed. This amount had always been allowed by the State to preceding Treasurers, the only difference being that they collected that amount from the State, while the present Treasurer collected it from the railroad. It appears that the railroad authorities pressed him to do this work with the utmost speed, and hence he was compelled to labor late at night and early in the morning, out of office hours. The State has lost nothing, and, if the transaction be objectionable, it can not happen again. There is not a particle of evidence that the Treasurer forced its payment through the power of his office.

I desire to call attention to a few special instances in which the Treasurer has shown great and constant fidelity to the interests of the State, and his ability in the management of her finances:

1. In the change from the Fourth National to the National Park Bank of New York, as the fiscal agent of the State, by which an average of \$2,000 per annum is saved in commissions, etc., the latter institution contracting to transact the business of this State for no moneyed consideration whatever.

2. In the gradual reduction of the amount of, and rates of interest on, temporary loans, until this unhealthy branch of the State's finances has been done away with entirely, and the expenditures of the government so managed as to be covered by the regular annual income from taxation.

3. In the negotiation of \$542,000 of bonds under the act of 1876, to take up matured coupons on the Macon and Brunswick Railroad bonds, by which a premium of \$2,300 was realized to the State, and all of this at an expense of \$591.15.

4. In the negotiation of the \$2,298,000 of bonds, under the act of 1877, to take up the Macon and Brunswick Railroad bonds, at par, at an expense of \$665.45.

5. In the determination, so successfully executed, to pay no commissions for the sale of State bonds.

6. In the economical management of the question of exchange on New York, making the banks sell to him upon nearly every occasion at par.

The excellent management of the Treasurer in the negotiation of bonds can be seen at a glance, by comparing it with the expense of disposing of the \$1,200,000 of the Nutting bonds, which cost the State in commissions, etc., \$8,000. The present Treasurer negotiated \$2,840,000 at an expense to the State of \$1,256.65.

I am well aware of the fact that public sentiment is against the reception of any interest, fees, or perquisites by officers beyond their salaries, and this Legislature is taking such measures as will prevent such action in the future. But whatever sums the Treasurer has received came into his hands before November, 1878. It is manifest that the State suffered no injury. Her credit is perfect; her securities rank with the best in every market; her Treasury is in easy condition; her taxes are lower; and no effort has been spared by the Treasurer to bring about these advantageous results.

While the resolution to impeach was pending in the House, the Treasurer sent to that body a communication in which he tendered all the fees he had received, and also appended his resignation of the office, addressed to the Governor. It was now urged against the resolution to impeach, that the effect of impeachment was to vacate the office and disqualify the incumbent for the future. But a resignation had been made, and a tender of the fees; why, therefore, incur the expense of impeachment merely to disqualify the incumbent? It was further urged that the House should express its unqualified condemnation of the acts of the Treasurer, accept the resignation and tender, and instruct the Governor to proceed against him for all moneys improperly used. This last proposition received yeas 43, nays 109. The vote was then taken on the resolution to impeach, and it was adopted—yeas 126, nays 13.

Six articles containing specific charges against the Treasurer were brought forward by the House, and they were tried before the Senate. The first article of the list, and reply of the Treasurer, were as follows:

ARTICLE 1. That on July 3, 1878, respondent received through the hands of V. R. Tommey, from the Georgia Banking and Trust Company of Atlanta, the sum of \$250, and did appropriate the same to his own use; the inducement for the payment of this sum by the bank to the sureties upon respondent's official bond being the deposit of funds of the State in that bank. But the respondent denies that in receiving this money he acted corruptly, or was unmindful of the duties of his office or of his oath of office, or knew that such receipt was contrary to the laws or the Constitution of the State, and now pleads not guilty of the charge of high misdemeanor contained in the same.

The vote of the Court on this article was, on the question of guilty, yeas 25, nays 17. A

two-thirds vote being required for conviction, he was declared "Not guilty." The second and third articles contained similar charges with the first, and the result of the vote was the same. The fourth article contained the charge of corruptly collecting fees to the amount of \$247 to which he was not legally entitled, for signing the coupons attached to the bonds of the Northeastern Railroad Company. On the question of guilty, the vote was, yeas 24, nays 18. On article five, the vote on the question of guilty was, yeas 7, nays 35. On article six the vote was, yeas 18, nays 24. So the Treasurer was acquitted of the respective charges as contained in the several articles.

On the same day on which the verdict of acquittal was given, the Legislature passed a resolution instructing Governor Colquitt to issue a *fi. fu.* against Treasurer Renfro and his sureties for the amount of interest taken by him for the use of the public funds, and for the fines and forfeitures that had accrued under the law by his course. The resolution requested the Governor to do this as he "is authorized and required by law." The process indicated was that laid down in the act of 1876, in which it is provided that if the Treasurer misapplies any funds in his hands, etc., the Governor need not proceed against him and his sureties by regular process of suit, but executions shall be issued against him and his sureties, and they shall have no more defense against these *fi. fas.* than is allowed to tax-collectors when the *fi. fas.* of the Comptroller-General are issued against them. This means that there is no defense at all. The *fi. fas.* were issued for over \$26,000, but resistance was anticipated on the part of the defendant. This is as far as the matter had proceeded at the end of the year.

The committee of nine appointed by the House to investigate the office of the principal keeper of the penitentiary of the State presented three reports, two of which were signed by four members of the committee and one by one member. The first report declared that the keeper had "grossly abused the authority and powers of his office by prostituting the same for his private gain." The second report states that, having discovered what they believe to be the true state of affairs, the undersigned "suggest that the principal keeper is guilty of nothing more than following a reprehensible precedent, and we conclude with expressing the opinion that, beyond censuring such conduct, further action is unnecessary." The third report concluded with recommending the adoption of the following resolution:

Resolved, That the testimony taken by the special committee of nine, appointed by the Speaker, on the office of the principal keeper of the penitentiary, be certified as correct, and by the chairman of the committee laid before his Excellency the Governor; and that his Excellency the Governor be, and is hereby, requested to take such action in the matter as the facts therein justify.

The charge that the keeper used his office to oppress the lessees of the convicts led to the

investigation. The reports show that the lessees, being forced by law to bear the expense of carrying the convicts from the county jails to the various camps, have found it best to make a contract with the keeper to deliver the convicts at so much per head. This practice has prevailed for many years. The price charged by the keeper was \$12 a head. A certain company of the lessees refused to pay what was demanded, and made the charge.

The committee appointed to investigate the conduct of the State School Commissioner made a long report, in which they presented an itemized account of all the receipts and expenditures of the office; also a statement of the amounts received in the State from the Peabody fund. The report in the highest terms commended the zeal, efficiency, and good management of the State School Commissioner, and showed how skillful and economical had been his administration of the school interests of the State.

The investigation of the Agricultural Bureau was unimportant.

The measures before the Legislature related with few exceptions to local affairs. They were very numerous in consequence of the modifications of the State Constitution.

The financial condition of the State appears to be most satisfactory. During the last two and a half years the expenses have been reduced in every department. The floating debt of \$350,000 has been paid, and above \$200,000 has been unexpectedly obtained from claims. The funding of high-rate interest bonds in low-rate bonds has been very successful. The public debt is only one twenty-sixth of the property, and under the new Constitution can not be increased, but must be steadily diminished.

At the previous session of the Legislature an act was passed to issue about \$3,000,000 in small-sized bonds, some as low as five dollars, at 4 per cent. interest, free from taxes. The cost of the preparation of these bonds was \$3,197. The entire issue was sold at the Treasury as fast as they could be signed; and when the last were sold, orders remained that could not be filled. The objection was raised against the bonds that they were bills of credit, and subject to 10 per cent. tax under the internal revenue law. In consequence, one of the Representatives of the State in Congress, Mr. Henry Persons, asked the following questions of the Commissioner of Internal Revenue, Mr. Green B. Raum:

1. Will you kindly inform me if there is any law or ruling which can tax any bank, corporated or private, for paying out a bond of any sovereign State in the United States in payment of checks upon said banks, when the holders of such checks are willing to receive said bonds in payment of said checks?

2. Or is there any law or ruling which can in any manner tax any bank for receiving or paying such bonds in lieu of currency beyond the usual tax on average deposits of any character?

3. Would not State, private, and national banks stand on the same footing as to receiving or paying out such bonds?

The reply of the Commissioner was as follows:

The bonds or obligations particularly in question are, as I understand, of various denominations, some of them as low as five dollars. One of them of the denomination of five dollars has been shown me. It was issued by the State of Georgia under an act of the Georgia Legislature, is payable to the bearer by the State, January 1, 1885, with annual interest represented by coupons at the rate of 4 per cent. per annum, and is signed by the Treasurer and the Governor of the State. In short, it is an interest-bearing obligation of the State of Georgia, payable to bearer at a definite future time.

It has never been considered as within the spirit of the internal revenue laws or the policy of Congress to impose a tax upon the bonds or other similar obligations of a State. In fact, the tenor of the decisions of the United States Supreme Court in analogous cases is that Congress has no authority to impose such a tax. However that may be, I am of the opinion that not only has Congress not imposed any tax upon the obligations in question, but that it has passed no statute which purports to impose them.

The tax imposed upon bank deposits by section 3,408 of the Revised Statutes is upon "deposits of money." I do not regard the bonds in question as "money" within the meaning and intent of that word as used in that portion of the statutes. They are obligations which a bank may buy and sell as it buys and sells all bonds and other similar obligations; but they are not money.

The only other internal revenue tax to which these obligations may be thought liable is the tax of 10 per cent. imposed upon certain notes mentioned in sections 3,412 and 3,413 of the Revised Statutes, and sections 19 and 20 of the act of February 8, 1875 (Abbott's "Statutes at Large," 311). Even assuming the obligations in question to be "notes," they are nevertheless liable to tax neither under said section 3,412 nor said section 19. The tax imposed by those sections is upon the notes of persons, firms, associations, State banks and State banking associations within the meaning and intent of this statute (13 "Opinions of Attorneys-General," 176); and it would hardly be claimed that a State falls within either of the classes enumerated in the section cited.

The tax imposed by said sections 20 and 3,413 is upon the notes of any town, city, or municipal corporation. The expression of one thing implies the exclusion of others. The mention of towns, cities, and municipal corporations implies the exclusion of a State. If it had been the purpose of Congress to impose a tax upon notes issued by a State, States would undoubtedly have been included in the enumeration in the statute.

In reply to your inquiries, therefore, I have to say that there is no ruling of this Bureau, nor in my opinion is there any internal revenue law, which requires a tax from any bank or banker for paying out bonds of the State of Georgia in satisfaction of checks drawn upon such bank, nor is there any internal revenue law which imposes a tax upon any bank or banker for receiving or paying out such bonds in lieu of currency. State banks, private banks, and national banks stand upon the same footing, under internal revenue laws, as to receiving and paying out such bonds.

The returns to the office of the Comptroller show the amount of property held subject to taxation in the State to be \$225,000,000. The returns also show that the property now held by the colored people of Georgia aggregates \$5,182,398, against \$5,124,875 last year, and this, too, when the bulk of property has decreased at least 10 per cent. in value. They have added 39,309 acres to their possessions during the last year, making a total of 341,199 acres owned by them. There are only four

colored men in the State worth over \$10,000, so that the property of \$5,182,398 is divided in small lots among the colored people of all classes and all sections.

The Atlanta University is the college for colored students, and is in a prosperous condition. The School Superintendent of Bibb County states that some of the most efficient and conservative teachers in the county were educated at this university. Of the 51 alumni of the institution, 42 have engaged in teaching as a profession, while three are pastors of churches, two theological students, and one is pursuing the study of law. Of the teachers four only have located beyond the limits of the State. In addition, over 90 of the more advanced pupils employ their time during vacation in teaching. Its students number 240, representing ten different States and forty-seven counties in Georgia. The trustees hold sixty acres of valuable land adjoining the college edifices, which is in itself a splendid endowment. The other revenues cover \$8,000 per annum from the State of Georgia, tuition fees (only \$2 per month), and donations usually amounting to \$2,500 from charitable institutions at the North. The library of the institution comprises 4,000 volumes, with a balance on hand in cash of \$700 for further augmentation, derived from the interest on the permanent library endowment, which is \$5,000.

The law for the punishment of the crime of murder was amended at a previous session of the Legislature, by providing that, on a recommendation of the guilty to mercy by the jury, the penalty shall be changed from death to imprisonment for life. The effect of this amendment has been virtually to abolish capital punishment in the State. In a recent case, in which a father murdered his son, he was arrested and his guilt was clearly shown; but he was "recommended to the mercy of the Court," and under the law the death-sentence could not be passed on him. Judge Wood, who presided, said: "I am satisfied that we have seen the last of capital punishment in Georgia until this law is repealed. It is impossible to escape the recommendation."

The management of penitentiary convicts in the State is in some respects unusual. They are leased for a period of twenty years. The law to this effect went into operation in the spring of the year. It was passed by the Legislature in February, 1876, to take effect on the expiration of the lease then existing. This act provides for the leasing of the convicts to three companies, who are to pay the State \$25,000 per annum for twenty years. This sum is prorated between the three companies according to the number of convicts which each is working. These three companies are as follows: Company No. 1 is composed of J. E. Brown, Julius Brown, John T. Grant, and W. D. Grant. Company No. 2 is composed of B. G. Lockett, W. B. Lowe, John B. Gordon, and C. W. Howard. Company No. 3 is composed of W. W.

Simpson, W. D. Grant, and the heirs of Thomas Alexander. These three companies control and operate all the convict camps in the State. Of these there were under the old act one at Augusta, one at Old Town in Jefferson County, one in Greene, one at Albany, two in Washington County, and one at Dade coal-mines. Under the new lease some of these camps will be abolished, and there will be but three divisions of the convict labor, though there will be several minor camps. Company No. 1 will operate at Dade coal-mines, No. 2 at Albany, and No. 3 in Greene County. The last two companies use the convicts in farming operations, and the first companies use them in the mines. This lease is to a certain extent a speculation on the part of the lessees. If the number of convicts decreases, they lose; if it increases, the profit will increase. There were 1,200 convicts early in the year, the term of many of whom expired before its close. The convicts generally are said to work well. If their number remains as large as it now is, the lessees will probably find their investment well made. The State will get a million clear, and it is doubtful if the old penitentiary system paid so much in any twenty years of its existence. Under the new lease the Dade Coal Company will receive 300 "long-term men," as they are called. The other two companies will receive about 375 each. As soon as the term of a convict expires his place is filled by another, if the State has him on hand; and, if he is not forthcoming, the lessee has to lose the services of one hand until the necessary criminal appears and takes his place. In order to transfer large numbers of them by railroad, they have to be chained in box-cars, which are well ventilated and made as comfortable as possible. Two guards well armed are put in the doors of the cars. Thus any shrewd fellow who should slip his chain would be powerless to do any harm or to help the others loose. All three of the new companies are chartered, and are distinct organizations; and the question has been raised whether this status does not place them beyond the reach of the Legislature. The lessees are acting under the new lease, and their rights have become vested.

A series of questions relating to sheep husbandry in the State was addressed by the Commissioner of Agriculture to men engaged in the business. Their answers presented these results: Of those who have tested crosses in Georgia, 98 per cent. report the cross of the merino and the native most profitable. The average annual profit on the capital invested in sheep in Georgia is 33 per cent. This presents a very marked contrast between the profits of sheep-raising and cotton-growing. The average annual cost per head of keeping sheep is only 54 cents. In answer to a question, the average cost of raising a pound of wool is only 6 cents, while the average price for which the unwashed wool is sold is 33½ cents, or 27½ cents net. An average of 74 lambs are raised

for every 100 ewes, notwithstanding the ravages of dogs. The average yield of unwashed wool to the sheep is 3.44 pounds, which, at 27½ cents net, gives an average clear income in wool from each sheep of 94 cents. The average price received for lambs sold to the butcher in Georgia is \$1.87. The average price of stock sheep is \$2.58 per head. The average price of muttons is reported at \$2.75 per head. Ninety per cent. of the correspondents report dogs the principal and generally the only obstacle to sheep husbandry. The United States census of 1870 gives the number of sheep in Georgia as 419,465. Mr. David Ayers, of Camilla, Mitchell County, in southwestern Georgia, where snow never falls and the ground seldom freezes, and where the original pine forest is carpeted with native grass, says his sheep—3,500 in number—cost him annually 14 cents per head, clip 3 pounds of unwashed wool, which sells at 30 cents per pound, giving a clear profit of 90 per cent. on the money and labor invested in sheep. He does not feed his sheep at any time during the year, neither has he introduced the improved breeds, using only what is known as the native sheep. He complains of the ravages of dogs on the sheep, and of hogs and eagles on lambs. Mr. Robert O. Humber, of Putnam County, in middle Georgia, furnishes some interesting facts from his experience in sheep-raising as a factor of mixed husbandry, in which the famous and much-dreaded Bermuda grass is utilized. He keeps 138 sheep of the cross between the merino and the common stock. He says they cost "nothing except the salt they eat," while they pay 100 per cent. on the investment, in mutton, lambs, and wool. They yield an average of 3 pounds of wool per head, which he sells at the very low price of 25 cents—less than the market price. It costs him nothing except the shearing. His sheep range on Bermuda-grass old fields in summer, and the plantation at large, embracing the fields from which the crops have been gathered and the cane-bottoms in winter. They are never fed at any season.

There are thousands of acres of land in the State suitable for the manufacture of turpentine, which can be purchased for one dollar per acre. The following facts embrace the whole subject of its manufacture: Any number of pine-trees tapped are called an orchard. Ten to ten and a half thousand trees tapped are called a crop. One to three boxes are cut into every tree within one or two feet from the ground. Seventy-five trees will usually average 100 boxes. One and a quarter to one and a half cent is paid for cutting each box. One man can scrape in one week the trees of one crop. One man can gather in one week the rosin of two crops. A season lasts seven to seven and a half months. Trees are generally used three successive seasons, though sometimes longer. Where trees are plenty they are by preference used but one season, the virgin turpentine being considered the best. The

first season the rosin is gathered every four weeks; after that every six weeks. Five thousand boxes average daily during the season one barrel of rosin of 280 pounds, including the weight of the barrel, and 6 to 6½ gallons of turpentine of about 6½ pounds each. Eighty men employed in all will produce daily 60 barrels rosin and 360 gallons turpentine. Turpentine was worth in 1879 26 cents per gallon in Savannah, and it sold as high as 60 cents per gallon in 1875 and 1876 without having cost any more to produce it. Rosin varied in 1879 from \$1.10 to \$4 per barrel, the lightest colored and freest from turpentine being the best. Distilling it too long darkens the rosin. Rosin generally pays all the expenses of manufacture, leaving the spirits of turpentine clear profit. New oak barrels for turpentine cost in New York \$1.35, and delivered in Savannah about \$1.85 each; old ones are cheaper but less useful, as they sell poorer when filled. Rough pine barrels for rosin are made near the turpentine distilleries. Distillers sometimes buy and sometimes lease pine lands. The establishment of a turpentine still is not very expensive. Laborers about stills get 75 cents per day—often less. Tapping trees retards their growth—often even kills them, and decreases largely the value of lumber made of them.

The progress of gold-mining in the State within the last few years has been rapid. It was somewhat stimulated by the developments of the geological survey. In 1874 there were only four gold-mills in the State, and the total yield was about \$40,000. In 1879 there were 46 mills, and the yield was over \$500,000. These mills cost \$10,000 each, which gives a total of about \$500,000 invested in machinery alone, against \$40,000 five years ago. The gold-belt has been defined, and it is estimated that the increase in its value has not been less than \$40,000,000. The following facts are stated among other results of the geological survey:

The calling of attention to the marl-pits in the eastern part of the State has been of great benefit. These marls are very rich in lime, and many of them contain 3 per cent. of potash, and used with stable and home-made manures, would almost do away with the buying of fertilizers. The experiments made with these marls have turned out splendidly. Used at the rate of 100 bushels to the acre, they have increased the yield 70 per cent., and at the rate of 200 bushels have increased it 90 per cent. They will in time supplant very largely the costly fertilizers.

One of the most important pieces of work done by the Bureau is the location of the water-powers of the counties in which the survey has been made. Over 600 streams have been carefully measured and explored by Professor Locke, and the water-powers on each, ranging from one-horse powers to 35,000, have been located upon the maps. In a very few years the people and strangers will begin to utilize these water-powers in the manufacture of wagons, furniture, etc., out of the splendid wood with which the forests abound.

The manufacture of ice is becoming quite extensive, and companies are formed for that purpose in many cities. The machine used is thus described: "In the water-machine about

fifty pounds of liquid ammonia are stored in a very strong iron cylinder, and this is connected with a coil of pipes immersed in a tank of strong brine; into this brine galvanized iron cans holding pure water are placed, and these cans are of the size of the blocks of ice which are formed. The liquid ammonia is allowed to flow through these coils, and it gradually becomes gaseous, and in becoming so abstracts from the water so much heat that it speedily freezes. A powerful steam-pump forces the gaseous ammonia back into the iron cylinder again, thus liberating great heat, which is disposed of by cold water dropping upon coils of pipes through which the ammonia passes on its way to the condenser. The process is a continuous one, and if the pumps and coils do not leak, there is no loss, and the operation may go on so long as the machinery lasts. The ice is sold for half a cent a pound."

The receipts of cotton at Savannah in the year 1878-'79 amounted to 694,611 bales, an increase over the previous year of 82,639 bales, and of 217,477 bales over 1876-'77. The receipts of rice amounted to 31,357 casks, of which 24,469 casks were exported. In naval stores the statistics embrace portions of the two naval seasons—the latter part of 1878 and the first of 1879. The aggregate receipts were 177,447 barrels rosin and 34,368 barrels spirits turpentine, against 177,104 barrels rosin and 31,138 barrels spirits turpentine in 1878—a small increase. In dry-goods the domestics manufactured in Georgia are said to have driven from the market all other goods of the same class.

At the beginning of the late war the General Government levied a direct tax of \$20,000,000 upon the States for the purpose of conducting the war. The seceded States were regularly charged with their proportion, which in the case of Georgia amounted to \$584,000, and about the same for Kentucky, Tennessee, Virginia, etc. Six per cent. interest was charged to this amount for each year from its assessment. After the war special agents were sent into the various States to collect it. These agents took the State tax-books and proceeded directly against the tax-payers. In Georgia \$86,500 were collected in one year. In South Carolina the whole amount due was collected, enough lands being sold to have paid five times the amount. The Arlington estate was sold under the operation of this levy, and the tax-payers of every State have been forced to pay something. About ten years ago the collection was suspended, and the State governments have been held liable for the amounts. All claims of these States when allowed by Congress have been credited against this indebtedness. Recently, the ruling of the Treasury has been revised, and the charges against the States have been marked off, which releases Georgia from nearly a million dollars, and the other States from large amounts. The position taken was, that a State could not be as-

sessed or taxed in its sovereign capacity, but that all assessments must be against the individual tax-payers.

GERMANY, an empire in Europe, reestablished January 18, 1871. The Emperor, William I., was born March 22, 1797, and was married June 11, 1829, to Augusta, daughter of the Grand Duke Charles Frederick of Saxe-Weimar. The heir apparent, Frederick William, born October 18, 1831, has the official titles of Crown Prince of the German Empire and Crown Prince of Prussia. Imperial Chancellor (*Reichskanzler*), Otto, Prince von Bismarck-Schönhausen; President of the Imperial Chancery (*Reichskanzler-Amt*), Karl von Hofmann, Minister of State.

The legislative functions of the empire are vested in the Bundesrath or Federal Council, and the Reichstag or Diet of the Empire. The Bundesrath represents the individual states of Germany, and the Emperor must have its consent to declare war which is not merely defensive. The members of the Bundesrath are appointed by the Governments of the individual states for each session. On January 1, 1880, the German Bundesrath was composed of the following members: *Prussia*—Prince Bismarck, President and Imperial Chancellor; Count zu Stolberg-Wernigerode, Vice-President of the State Ministry; the Ministers Hobrecht, Count Eulenburg, Leonhart, Kameke, and Maybach; Von Bülow, State Minister, and Secretary of State in the Ministry for Foreign Affairs; Von Stosch, chief of the Admiralty; Hofmann, President of the Imperial Chancery; Von Philippsborn, Director in the Foreign Office; Dr. Friedberg, Secretary of State in the Ministry of Justice; Stephan, Postmaster-General; Hasselbach, Director-General of the Indirect Taxes; Burghart, Ministerial Director in the Ministry of Finance; Herzog, Under-Secretary of State for Alsace-Lorraine; Von Möller, Oberpräsident of Alsace-Lorraine. *Bavaria*—The Ministers Von Pfretschner and Dr. von Fäustle; Von Rudhart, Ambassador in Berlin; Ministerial Director von Riedel; Colonel von Xylander. *Saxony*—The Ministers H. von Nostitz-Wallwitz and von Könneritz; O. von Nostitz-Wallwitz, Ambassador in Berlin; Major von der Planitz. *Württemberg*—Minister von Mittnacht; Hugo von Spitzemberg, Ambassador in Berlin; Major-General von Faber du Faur; Councilor Hess. *Baden*—Turban, President of the Ministry; State Ministers Elstätter and Stöszler. *Hesse*—Freiherr von Stark, President of the Ministry; Ministerial Councilors Neidhart and Schleiermacher. *Mecklenburg-Schwerin*—Von Prollius, Ambassador in Berlin; Oldenburg, Director of Customs. *Saxe-Weimar*—Councilor Dr. Stichling. *Mecklenburg-Strelitz*—Councilor von Prollius. *Oldenburg*—Councilor Seldmann. *Brunswick*—Councilors Schultz and von Liebe. *Saxe-Meiningen*—Minister von Giseke. *Saxe-Altenburg*—vacant. *Saxe-Coburg-Gotha*—Minister von Seebach. *Anhalt*—

Minister Freiherr von Krosigk. *Schwarzburg-Rudolstadt*—Minister von Bertrap. *Schwarzburg-Sondershausen*—Minister Freiherr von Berlepsch. *Waldeck*—Director von Sommerfeld. *Reuss* (elder line)—Faber. *Reuss* (younger line)—Dr. von Beulwitz, State Minister. *Schaumburg-Lippe*—Councilor Höcker. *Lippe-Detmold*—Eschenburg. *Lübeck*—Dr. Krüger, Minister Resident in Berlin. *Bremen*—Dr. Gildemeister, Burgomaster. *Hamburg*—Dr. Kirchenpauer, Burgomaster.

The German Empire consists at present of twenty-six states, of which four are kingdoms, six grand duchies, five duchies, seven principalities, three free cities, and one, Alsace-Lorraine, an imperial province (*Reichsland*). The following table exhibits all the states of the German Empire, the area, the population according to the census of 1875, the number of representatives of every German state in the Federal Council, and the number of deputies who represent each state in the Reichstag:

STATES.		Area in English square miles.	Population in 1875.	Votes in Federal Council.	Deputies to the Reichstag.
Free cities.	1. Prussia (including Lauenburg)	184,178	25,742,404	17	286
	2. Bavaria	29,291	5,022,390	6	43
	3. Saxony	5,789	2,760,586	4	28

Bremen	Burgomaster	F. L. Grave	1879-1883	
		Dr. O. Gildemeister	1877-1881	
Hamburg	Burgomaster	Dr. H. A. C. Weber	1879	
		Dr. C. Petersen	1879	
Lübeck	Burgomaster	Dr. H. T. Behn	1879-1880	
	Stadtholder, appointed by the Emperor	Freiherr von Manteuffel		
Alsace-Lorraine		fel.		

The ducal line of Brunswick is likely to become extinct on the death of the reigning Duke. The succession is disputed by the Duke of Cumberland (son of the late King of Hanover) and the Emperor of Germany. The heir apparent is the son of the reigning sovereign in only fourteen of the twenty-two sovereign houses which belong to the German Empire.

The movement of emigration from the ports of Bremen and Hamburg was as follows:

FROM	Bremen.	Hamburg.	Total.
Germany.....	11,829	11,827	23,156
Other countries.....	10,154	12,976	23,180

Sometimes the academies of Münster and Braunsberg, containing each the two faculties of Catholic theology and philosophy, are counted among the German universities. In 1879 Münster had 32 professors and 279 students. At the following universities outside of the German Empire the German language is exclusively or predominantly used, and in the province of literature they may be counted as German universities:

UNIVERSITIES.	Countries.	Professors.	STUDENTS.

The budget of the German Empire for 1879-'80, as declared by the laws of March 30, May 16, and July 6, 1879, estimates the revenue at 546,594,477 marks and the expenditure at 545,894,037 marks (1 mark = 23.8 cents). The revenue was derived from the following sources:

	Marks.
1. Customs and excises of consumption.....	251,698,860
2. Stamps on playing-cards.....	1,216,000
3. Stamp duty on bills of exchange.....	6,577,300
4. Administration of postal affairs and telegraphs.....	15,622,958
5. Administration of railroads.....	9,910,600
6. Administration of the imperial printing-office.....	1,105,440
7. Imperial Bank and other receipts.....	2,105,000
8. Receipts of various descriptions.....	7,208,000
9. From the imperial funds for invalids.....	33,015,879
10. Surplus of former years.....	1,130,000
11. Profit from the coining of imperial money.....	100,000
12. Interest from invested capitals.....	6,270,172
13. Extraordinary receipts.....	120,263,974
14. Matricular contributions.....	90,371,390
Total.....	546,594,477

The matricular contributions were divided among the particular states as follows:

STATES.	Marks.
Prussia.....	44,199,312
Bavaria.....	19,015,557
Saxony.....	4,739,613
Württemberg.....	6,777,330
Baden.....	4,564,561
Hesse.....	1,517,657
Mecklenburg-Schwerin.....	949,119
Saxe-Weimar.....	502,507
Oldenburg-Strelitz.....	103,983
Brunswick.....	547,822
Hannover.....	561,707
Saxe-Meiningen.....	838,838
Saxe-Altenburg.....	250,258
Saxe-Coburg-Gotha.....	813,555
Anhalt.....	866,753
Schwarzburg-Rudolstadt.....	131,522
Schwarzburg-Sondershausen.....	115,701
Waldeck.....	93,754
Reuss (elder line).....	80,667
Reuss (younger line).....	1,8,572
Schaumburg-Lippe.....	56,565
Lippe.....	192,562
Lübeck.....	97,565
Bremen.....	245,024
Hamburg.....	689,844
Alsace-Lorraine.....	3,425,579
Total.....	90,371,390

The expenditures of the empire were estimated as follows:

EXPENDITURES.	Ordinary.	Extraordinary.
1. Chancellor of the Empire.....	103,780	608,504
2. Imperial Chancery and Bundesrath.....	2,154,795	200,000
3. Imperial Diet.....	851,530
4. Foreign Office.....	6,335,925	870,000
5. Administration of Posts and Telegraphs.....	10,123,150
6. Imperial army.....	821,184,910	43,114,249
7. Navy.....	23,122,750	20,014,010
8. Administration of Justice.....	1,239,540	301,200
9. Imperial Treasury.....	2,929,216	2,239,247
10. Railroad Office of the empire.....	260,750	180,000
11. Imperial Chancery for Alsace-Lorraine.....	171,760
12. Interest on the debt of the empire.....	8,482,500
13. Chamber of Accounts.....	460,793	35,000
14. Railroads of the empire.....	16,203,826
15. Mint.....	22,700,000
16. Reimbursement to Prussia for the government printing-office.....	4,872,500
17. General pension funds.....	17,217,736
18. Expenditures arising from the war with France.....	5,256,572
19. Imperial invalid funds.....	33,015,879
Totals.....	419,022,949	126,871,058
Grand total.....	545,894,007

The public debt of the German Empire consists of three loans, one of 77,731,321 marks (authorized by the law of June 14, 1877), one of 97,484,865 marks (law of June 14, 1878), and one of 68,021,071 marks (law of June 13, 1879). There is also a floating debt consisting of Treasury notes issued for short periods only. In accordance with the law of April 20, 1874, the Imperial Government has issued paper money (*Reichscassenscheine*) to the amount of 120,000,000 marks, which has been distributed among the several states in proportion to their population on December 31, 1871. The same law authorized the issue of paper money to the amount of 54,889,940 marks to facilitate the carrying out of the reform in the coinage. Of this amount, 54,075,860 marks had been issued

on April 1, 1879, and 10,977,960 had been withdrawn, leaving the paper money in circulation on that date 163,097,900 marks. The budgets and public debt of the several states in 1879 were as follows (in marks):

STATES.	Gross receipts.	Expenditure.	Debt.
Alsace-Lorraine.....	89,735,175	89,735,175

Pioneers.....	123	6,432
Total garrison.....	11,152	412,723	37,577
reserves.....	4,583	250,210	31,000
field army.....	17,591	699,078	230,635
Grand total.....	33,326	1,392,011	299,562

The military forces of the empire in time of peace are as follows:

DIVISIONS.	Officers.	Men.	Horses.
1. Staff.....	1,994	4
Infantry of the line.....	8,579	259,013
Chasseurs.....	424	11,148
Landwehr.....	848	4,622
2. Infantry.....	9,651	274,758
3. Cavalry.....	2,358	64,709	62,591
Field artillery.....	1,629	80,737	14,845
Foot artillery.....	683	13,159
4. Artillery.....	2,812	45,896	14,845
5. Pioneers.....	394	10,324
6. Train.....	200	5,000	2,457
7. Particular formations.....	811	948
Total.....	17,220	401,659	79,593

The number of recruits in 1877-'78 was 142,937, against 140,197 in 1876-'77 and 139,855 in 1875-'76. Of the recruits in 1877-'78, 134,189 had received an education in the German language, and 6,292 in other languages, making a total of 140,181, and leaving 2,406, or 1.73 per cent. of the total number of recruits, without a schooling. In 1876-'77 the number of recruits without an education was 2,975, or 2.12 per cent., and in 1875-'76, 3,311, or 2.37 per cent.

The German navy was composed as follows in 1879:

VESSELS.	Number.	Guns.	Tons.	Horse-power.
2. Steamers—Ironclads:				
Frigates.....	7	85	80,754	48,100
Corvettes.....	4	26	17,474	19,800
Batteries.....	1	4	1,280	1,200
Gunboats.....	7	7	5,438	4,900
Total ironclads.....	19	122	54,946	69,000
Frigates.....	1	163	24,194	27,600
Corvettes.....	7	62	9,821	10,800
Dispatch-boats.....	3	4	1,768	2,150
Artillery ship.....	1	23	3,818	8,000
Imperial yachts.....	2	5	1,993	8,650
Gunboats.....	14	45	4,465	4,710
Torpedo vessels.....	11	..	2,122	3,750
Transport steamers.....	2	..	425	320
2. Sailing vessels:				
Frigates.....	1	10	1,052
Brigs.....	3	18	1,708
Total.....	74	452	105,312	125,010

The German Customs Union includes the entire German Empire, with the exception of the free ports of Bremen, Hamburg, Bremerhaven, Geestemünde, Brake, and a small part of Baden, in all 150 square miles, with 594,576 inhabitants. It also includes the grand duchy of Luxemburg, with an area of 999 square miles and 205,158 inhabitants, and the Austrian community of Jungholz, having an area of 2.2 square miles and a population of 206. The imports for 1878 and exports for 1877 in the customs territory of Germany were estimated as follows (value in marks—1 mark = \$0.238):

CLASSES OF GOODS.	Imports, 1878.	Exports, 1877.
Grain.....	612,000,000	376,500,000
Malt and other liquors.....	55,700,000	61.2 0,000
Colonial produce.....	202,000,000	82,400,000
Tobacco and cigars.....	106,000,000	23,600,000
Seeds and fruits.....	138,000,000	79,100,000
Animals and animal provisions.....	396,600,000	276,500,000
1. Articles of food.....	1,518,900,000	908,000,000
Fuel.....	52,500,000	95,000,000
Minerals and ores.....	76,700,000	88,100,000
Raw metals.....	65,400,000	77,400,000
Hair, hides, and leather.....	176,300,000	89,900,000
Spinning material.....	657,900,000	244,100,000
Wood and timber.....	199,300,000	74,800,000
2. Raw material.....	1,164,200,000	669,300,000
Pottery and glassware.....	12,900,000	81,500,000
Metal manufactures.....	46,200,000	155,700,000
Machines and vessels.....	54,700,000	72,100,000
Leather, etc.....	18,000,000	63,900,000
Yarn.....	141,700,000	51,800,000
Cordage, woven goods, and clothg.....	123,200,000	415,600,000
Caoutchouc and wax goods.....	6,500,000	14,200,000
Paper.....	6,400,000	25,500,000
Wood and carvings.....	16,700,000	85,000,000
Jewelry and art goods.....	13,900,000	49,200,000
Manuscripts, articles for printing.....	10,200,000	20,900,000
3. Manufactured goods.....	450,400,000	944,200,000
4. Miscellaneous goods.....	401,400,000	192,600,000
Total merchandise.....	3,529,900,000	2,709,100,000
Preclous metals.....	209,000,000	66,200,000
Total.....	3,738,900,000	2,775,300,000

The movements of shipping in the German ports in 1877 were as follows:

The second session* of the Reichstag was opened on February 12th by the Emperor William in person. In his speech from the throne, the Emperor thanked the House for the assistance it had rendered him in arresting the Socialist agitation, and said bills would be introduced for removing the evils afflicting com-

merce. "I consider it my duty," added the Emperor, "to strive at least to preserve the German market for articles of national production as far as that course is consistent with our interests, and also to cause the customs legislation to be once more assimilated to those well-tried principles which, in our commercial policy since 1865, have in some essential points been abandoned." After mentioning the abrogation of clause 5 of the Treaty of Prague, by a

* The first session was opened on September 9, 1873, and closed in October. For an account of the proceedings, see "Annual Cyclopædia" for 1873, p. 330.

special convention with Austria, the Emperor referred to the fulfillment of the hopes he had expressed for the termination of the war in the East, and said that tranquillity in Turkey and the maintenance of peace in Europe might be expected to result from the arrangements made at the Congress. On February 13th Herr von Forckenbeck was reelected President by 151 votes, against 67 received by Herr von Seydewitz; the candidate of the Conservative party, Herr von Stauffenberg, was reelected first Vice-President, and Prince von Hohenlohe-Langenburg second Vice-President. As the latter declined, Herr Lucius was elected second Vice-President. On the 19th the Reichstag, after a brilliant defense of Parliamentary reform by Dr. Lasker, almost unanimously resolved to refuse the Government permission to imprison and criminally prosecute two Socialist deputies, Fritzsche and Hasselmann, who had returned to Berlin in obedience to the Emperor's general convocation of Parliament, and in defiance of the police decree against their further residence in the capital. On motion of Herr Rickert, it was furthermore declared, with all votes against those of the two Conservative parties, that the Reichstag, in framing the law of October, never meant that a member might be prevented by a police decree of expulsion from taking his due share in the proceedings of Parliament.

The discussion of the new commercial treaty with Austria began on the 20th. Although there was hardly any opposition to the approval of the treaty, the discussion became at once very animated, as it turned on the radical change in the financial policy of the empire which the speech from the throne had announced. The most remarkable speeches were made by Herr Delbrück, formerly President of the Imperial Chancery, and Prince Bismarck. The lines between the Free-Trade and Protectionist parties were distinctly drawn. Delbrück is looked upon as the leader of the Free-Trade party. He defended, in two elaborate speeches, the traditions of the commercial policy of Prussia, tracing the history of the reformatory movement, which he said began with the customs legislation of 1818, was continued in the Customs Union, and quietly and steadily kept on developing, with only a short interruption, until recently. By a long array of commercial statistics he attempted to refute the assertion made in the speech from the throne, that the commercial policy followed since 1865 had been unsuccessful. Prince Bismarck made a characteristic speech, in which he explained the reasons why the Government proposed to return to the path they had followed between 1823 and 1865. He stated that until a year ago he had confided the supreme management of the commercial policy of the empire to Herr Delbrück, whom he regarded as the highest authority in all questions of commercial legislation; and though he had not fully agreed with the views of Herr Delbrück,

he had been satisfied that the commercial interests were intrusted to the best hands which could be found in Germany. Gradually, however, the conviction had grown upon him that a radical change was required; and, much as he regretted that he could no longer have the coöperation of Herr Delbrück, he believed a change in the commercial policy necessary for the salvation of Germany.

The great debate on the reorganization of the customs and commercial policy of the empire began soon after the Easter recess, which had lasted from the 3d to the 28th of April. During this recess the Bundesrath had completed the draft of the Government's bills, which had been communicated to all the members of the Reichstag by mail. The discussion was opened on May 2d by Prince Bismarck, who in a speech lasting about an hour said that Prussia had not taken the initiative in any tax reform since 1824—a fact to be explained by the relation of the various states to the Zollverein. That union, possessing the power to impose indirect taxes, had not a pliant character, a circumstance which logically justified the fact that the development of such imposts in Germany lagged behind that of all other countries. The possibility of a reform in this respect first appeared with the creation of the North German Confederation and of the empire; and if he did not then undertake financial reform, this was because, apart from his defective health and multitudinous duties, he did not primarily regard that as the duty of the Imperial Chancellor. But now the case was different, the present cohesive relations between the empire and the various states being of such a nature as to demand the most prompt and pressing remedy. The first motive for reform was the need of financial independence for the empire, a principle willingly recognized on the settlement of its constitution. The contributions of the various states to the general exchequer were unequal, and he desired to see the necessary income raised in the least burdensome form. At present there were too many direct and too few indirect taxes, and he aimed at reversing this order. The Prince contended that civil servants should not have to pay the income-tax. Another mistake was the distinction made between movable and immovable property. No branch of industry was so highly taxed as agriculture, and the present indirect taxation did not give native labor the protection which it ought to have. He would not enter into the question of free trade *versus* protection, but one thing was clear, that, through the widely opened doors of its import trade, the German market had become the mere storage-space for the over-production of other countries. They must, therefore, shut their gates, and take care that the German market, which was now being monopolized by foreign wares, should be reserved for native industry. Countries which were inclosed had become great, and those which remained open

had fallen behind. Were the perils of protectionism really so great as sometimes painted, France would long ago have been ruined, instead of which she was more prosperous after paying the five milliards than Germany is today. And protectionist Russia, too—look at her marvelous prosperity! Manufacturers there had lately been able to save from 30 to 35 per cent., and all at the cost of the German market. The question before them was not a political but a financial one, and they should put all personal sensibility aside. Nor should they forget the maxim, "Bis dat qui cito dat"; and whichever of them would not quickly give would do detriment to the economic interests of the realm. Dr. Delbrück warned the House to beware of approving the proposed taxes on cotton yarns, as thereby certain branches of export industry would in the highest degree be imperiled. Dr. Delbrück then contrasted France and Germany in this respect, proving by statistics that in the former the customs on cotton yarns are very high as compared with those in the latter, and that, though the imports are thrice as great as in Germany, the export is only a third. On the 3d Herr Bamberger, of the National Liberal party, a great financial authority and an ardent free-trader, undertook to refute the speech made by Prince Bismarck the day before, which, he urged, contained nothing but the assurance of future prosperity sure to result from the acceptance of his scheme, and raised hopes which in the long run could not be realized. Whether such a course was judicious in view of the efforts and expectations of social democracy seemed to him highly questionable. The strength of Prince Bismarck lay in the domain of foreign policy, but his intervention in matters of finance was at variance with his Highness's activity in the past. The Prince's pillar of support was the Center, and the tendency of the Ultramontanes was invariably retrograde. Nor had the Federal Council shown much independence in their discussion of the bill. Herr Bamberger proceeded to consider the probable effects of the new tariff from all general points of view, ending with the assurance that if it were accepted German industry would most assuredly suffer euthanasia, or die a calm and gradual death. On the 4th Herr Richter, Progressist, and a financier of no mean order, chained the attention of the House for nearly three hours, and drew a gloomy picture of the evils sure to result to the empire from the adoption of Prince Bismarck's bill. The Fortschritt (Progressist) party were unanimously opposed to the proposed taxes on tobacco and beer, petroleum, and the most indispensable articles of daily consumption, and they would listen to no compromise. They looked upon the question of customs and taxes as one of might. Money was power, and this Prince Bismarck was evidently bent on gaining for the empire at all risks. In proportion as direct taxation was lessened, the parliamentary influence of pro-

vincial assemblies, and even that of the various states, would be weakened. The proposals before them aimed at absolutism. He reminded all who loved freedom that it was never sent down direct from heaven, but had to be fought for and won. He bade them hold fast together, for liberty and the future of the German Empire were at stake. On the 5th Freiherr von Varnbühler, President of the Tariff Commission, combated the arguments advanced during the last few days by such champions of free trade as Herren Bamberger and Richter. On the 8th Deputy Lasker called the attention of the House to a letter written by Prince Bismarck to the Bavarian Herr von Thüngen, the chief of the so-called Agrarian party, as revealing plans still more reactionary than those indicated by the new tariff. Herr von Thüngen, in his letter to Bismarck, had complained that the interests of German agriculture were not sufficiently protected in the new tariff, at all events not in due proportion to commerce and industry. A number of agricultural products continued to be imported free of duty. The agricultural middle class was on the point of disappearing. Rich capitalists buy real estates for small sums; the peasant becomes again what he was a thousand years ago, a shepherd; some emigrate, the others become Social Democrats, and the social revolution which ends in imperialism is completed. The Imperial Chancellor in his reply expressed his concurrence in the opinion of Herr von Thüngen that the corn duties were insufficient as a protection of agriculture in proportion to the burdens which it bears; but, in his negotiations with the Governments of the other German states and the Tariff Commission, he had been unable to obtain greater concessions, and had found it even difficult to retain the concession that had been made. In view of this correspondence, Lasker laid a special stress on the corn duties proposed in the new tariff, and with great vehemence denounced the intention of the Chancellor. The reply of Prince Bismarck admitted that in his opinion the agricultural interests of the empire deserved a more energetic protection than they received at present. Herr Windthorst, the leader of the Ultramontane Center, declared that his party would support the new protective policy of the Chancellor. A few days before, Herr Windthorst ("the Pearl of Meppen"), who is not only the leader of the Center, but also the trusted adviser of the ex-royal family of Hanover, and who for long years had been the uncompromising foe of the Prince, had for the first time had an interview with Bismarck, and on May 4th he had attended the parliamentary *soirée* of the Prince, who was observed to receive him with warm and prominent hospitality. It was therefore inferred from the speech of Deputy Windthorst, that Prince Bismarck must have secured some kind of agreement with the Center. On the 11th the tobacco-tax bill was defended by Deputy von Schmid of Württemberg, who con-

tended that taxation of tobacco was preferable to a Government monopoly in it, and there were many reasons why it should be taxed by weight. Herr Meyer of Bremen described the unsatisfactory result of the French monopoly system, which he implored the House not to think of. The tax on manufactured goods was most preferable, as having to be paid whenever a sale was made, and as being a real consumption-tax. He hoped the license-tax, moreover, would be rejected as being inquisitorial and vexatious. Herr Fritzsche (Social Democrat) energetically opposed the measure, from the acceptance of which he ventured to prophesy would accrue the most baneful results to the tobacco trade in Germany.

The debate on the tariff bills was finished on May 12th. In accordance with the motion of Deputy Löwe (Progressist), the Reichstag resolved to refer part of the new tariff and the tobacco-tax bill to a special committee, but to let the second reading of the other part of the tariff take place in the Reichstag itself. On the 16th the Reichstag rejected, by 192 against 125 votes, a motion to reduce by a half the proposed tax of one mark on pig and scrap iron. A motion of Count Stolberg-Wernigerode, to admit duty-free between Memel and the Vistula all pig and scrap iron, on written certification of its destination for foundries, etc., was also rejected, though most of the members from Posen and the Prussian provinces supported this. On the 17th, on motion of Dr. Delbrück, the duty on Swedish bar-iron destined for the manufacture of certain kinds of wire was reduced to 50 pfennigs (about 12 cents). On the 19th the House passed to the first reading the so-called *Sperrgesetz* or frontier-closing measure, for immediately and provisionally putting in force the stipulations of the new tariff bill under consideration, with a view of frustrating the tactics of those who were importing large quantities of goods to escape the heavy protective duties threatened thereafter. The House unanimously approved the proposed immunity from customs of bronze and ores, and after some discussion also supported the Government in its intention to make flax and raw material for spinning, with the exception of cotton, free. On the 20th the House began the discussion of the tariff under the head of grain and agricultural produce, the new duties proposed thereon being one mark per 100 kilos on wheat, oats, and husked fruit; 50 pfennigs (half a mark) on rye, barley, maize, and buckwheat; 20 pfennigs on malt; 3 marks on anise-seed and caraway-seed; other products being free. On the 21st Prince Bismarck made a long speech on the subject, in which he tried to show that the imposition of the duties proposed, by bettering the fortunes of the agricultural class, would in reality give an impetus to industrial activity. England, France, Belgium, and the Netherlands were cited in proof. The Prince disclaimed all intention of seeking to increase the Impe-

rial Exchequer by a corn-tax; all he desired was merely to do justice to the long-suffering countryman by removing to the frontier, in the form of a consumption duty, part of a direct tax pressing on him. On the 23d the proposals of the Tariff Commission in regard to the duties on grain were carried by 226 against 109. On the 27th the House carried the motion of Deputies Windthorst and Hammacher, Ultramontane and National Liberal respectively, to extend the *Sperrgesetz*, or provisional customs bill, to iron, groceries, and petroleum, in addition to wine and tobacco, as recommended by the Tariff Commission. This protective and preventive ordinance would lapse as soon as the various tariff bills now under consideration should become law, or at the latest fifteen days after the close of the present session of Parliament. On the 28th the House passed the *Sperrgesetz*. A majority of 172 against 88 also approved the proposed tax of 10 pfennigs per 100 kilos on building timber, raw or rough-hewn, as also of 25 pfennigs on sawn wood or planed boards, and other manufactures of wood. On June 16th the proposed duty of 50 pfennigs per kilo on beams and blocks of hard wood was approved by 140 votes against 86. Those on carpenters' goods, wood for parquets and furniture, and wood combined with metal and glass, 3, 4, and 10 marks respectively, were also approved. The duty of 10 pfennigs on building timber, raw or rough-hewn, was carried by 140 votes to 86. On the 17th the House approved the proposed duties of 20 marks per kilo on all fine-wood and carved goods, 30 marks on uncovered upholstered furniture, and 40 marks on covered. The tax of 20 marks on every hundred kilos of hops was also finally accepted. On the 24th the proposed duties on oil and grease were approved by large majorities, although the free-traders made a strenuous endeavor to reduce the duty of 10 marks per 100 kilos on lard, as being the butter of poor men. The House also granted the proposed duties on candles and furs, and the clauses on soap and perfumery, playing-cards, stones, and stone-ware.

The second reading of the tariff bill was completed on July 5th, when the House by a considerable majority voted the so-called financial duties proposed by the Government on tobacco, coffee, petroleum, etc. The Liberals and Socialists made a desperate stand against the duties on coffee and petroleum, Herr Bebel declaring that they would breed very bad blood among the people and furnish fresh stimulus for social-democratic agitation. On the 8th the Reichstag passed by a majority of 163 against 148 that section of the law which provides that goods coming from countries which treat German vessels or wares of German origin more unfavorably than those of other states may be taxed with an addition of 50 per cent. over the rate of the imposed tariff. On the 9th, after a long and lively debate, in

which Prince Bismarck took a prominent part, the Reichstag, by a majority of 211 against 122, adopted the motion of Herr Frankenstein with reference to the so-called constitutional guarantees, with an amendment of Herr Varnbühler in harmony therewith. This section of the tariff law now provides that the surplus in any year over 130,000,000 marks, arising from the receipts of customs and the tobacco duties, shall be distributed among the various states of the empire in proportion to their population and the rate of their annual contributions to the general exchequer. This stipulation is to take effect from the 1st of April, 1880; and any surplus over 52,651,815 marks accruing between the 1st of October, 1879, and the 31st of March, 1880, will be subtracted under similar conditions *pro rata* from the matricular contribution of the states for that period. On July 12th the debate on the new tariff and the

tariff law, after lasting for nearly three months, came to an end. The House passed it in its entirety by a majority of exactly 100, the numbers being 217 against 117. Before the vote was taken, Dr. Delbrück once more strove to show that the bill would grievously injure export industries, and oppressively raise the price of the commonest necessities of life, that the corn duties would change the whole financial policy of the empire, and promised nothing but discontent and confusion. Dr. Lasker prophesied perpetual conflicts between the Federal Council and the Finance Ministers of the various states; and he looked upon the law as the beginning not of peace, but of strife.

On March 4th the Reichstag began the discussion of the bill introduced by the Government concerning the coercive power of the Reichstag over its members. The bill found

HAMBURG.

hardly any friends among the deputies. Professor Hänel, of the Law Faculty in Kiel (Progressist and formerly second Vice-President of the Reichstag), attacked the measure in an eloquent and learned speech, and defended full freedom of speech and its corollary, the right to publish the proceedings. He sought to show that the adoption of such a law would make the Reichstag unlike any other Parliament, and declared himself opposed to any change in the standing orders of the House, especially at the present time, when they might appear to act under pressure. Herr Bebel, the well-known leader of the Social Democrats, maintained that the bill was intended to gag the Social Democrats, and suggested that it would be better to modify the law granting the franchise to all Germans over twenty-five to the extent of excepting those whom the police have cause

to suspect of revolutionary tendencies. Such a measure was possible in no other country but Germany. On the 7th the bill of the Government was rejected by a large majority. On the other hand, on motion of Herr von Stauffenberg (first Vice-President), it was resolved to ask the Standing Order Committee to consider whether any changes are necessary in the manner of conducting business, and, if so, to formulate and lay regular proposals before the House.

Among the most important measures adopted by the Reichstag is the final regulation of the government of Alsace-Lorraine. In the early part of the session the deputies Schneegans, North, Rack, and Lorette, belonging to the party of the so-called Autonomists, introduced a motion to request the Chancellor of the Empire to prepare for Alsace-Lorraine an inde-

pendent government residing in the country itself. The motion was supported by a large portion of the National Liberal party, as Bennigsen, Lasker, and Stauffenberg, and was approved in its essential parts by the Chancellor himself. The discussion began on March 21st. Deputy Schneegans, the leader of the party of Alsatian Autonomists, referred to the fact that the obstacles which formerly prevented the establishment of an independent administration of Alsace-Lorraine, in place of the central Government located in Berlin, had now disappeared. The Chancellor had himself repeatedly promised the establishment of an independent government. Herr Schneegans expected from the adoption of his motion a revival throughout Alsace and Lorraine of the old attachment to the German Fatherland. Deputy Kablé read, in the name of the Alsatian Protest party (who demand reannexation of Alsace and Lorraine to France), a declaration in which the party express their concurrence in the wish for the establishment of an independent government. They, however, are convinced that no permanent institutions can be created in Alsace and Lorraine, and no real independence secured, without the concurrence of a legislative assembly elected by a general vote. While willing to vote for the motion of Deputy Schneegans, the party do not mean to prejudice their future movements. Prince Bismarck explained to what extent he was willing to accept the motion. He was, in particular, willing to grant to the imperial province a resident Stadtholder, surrounded with administrative officers having the rank of ministers, and also some kind of representation in the Federal Council. On May 15th the Chancellor submitted to the Reichstag a bill concerning the constitution and administration of Alsace and Lorraine. During the discussion of the bill only a few insignificant changes were proposed and adopted, and on June 23d the bill was passed by a unanimous vote of all parties, except that of the French Protest party, which left the House before the vote was taken. It was signed by the Emperor on July 4th, and an imperial decree of July 23d provided that the law should go into operation on October 1st. According to the new law, Alsace-Lorraine remains an imperial possession, and becomes virtually a federal state, of which the Emperor of Germany as such, not in his capacity as King of Prussia, is the ruler. The Emperor appoints a Stadtholder, who resides in Strasburg, and may at any time be recalled. The Stadtholder does not exercise the functions of the sovereign, but merely those which were hitherto exercised with regard to the Reichsland by the Imperial Chancellor and by the Oberpräsident (Lord-Lieutenant) of Alsace-Lorraine. The section of the Imperial Chancery for the Reichsland and the bureau of the Oberpräsident will be replaced by a ministry for Alsace-Lorraine, under the presidency of a Secretary of State, which will be divided into a number of sections, at the

head of each of which will be an Under-Secretary of State. In the Federal Council the country will be represented by a delegate elected by the Landesausschuss (Provincial Assembly). The delegate will take part in the discussions of the Federal Council, but will have no right of voting. For the examination of bills prepared by the Government a State Council is formed, consisting of the Stadtholder as president, the Secretary of State, the commanding general of the 15th army corps, the Under-Secretaries of State, the Chief Justice of the Supreme Court, the Attorney-General, and seven members appointed by the Emperor, of whom three are proposed by the Landesausschuss, one must be a judge, and one an ordinary professor of the University of Strasburg. The Landesausschuss will hereafter consist of fifty-eight members, who will be elected by indirect vote for a term of three years. On July 23d, the same day when the new Constitution for Alsace-Lorraine was promulgated, the Emperor appointed General Edwin Freiherr von Mantheyll Stadtholder of the Reichsland. At the same time Dr. Herzog, heretofore Under-Secretary of State in the section of the Imperial Chancery for Alsace-Lorraine, was appointed Secretary of State.

Some important information, not known heretofore, on the history of the unification of Germany, was given on July 7th during the discussion of the new German tariff law by the Reichstag, in a speech of Herr von Varnbühler, member of the Federal Council for Württemberg, and the virtual author of the new tariff. In reply to imputations launched against him by Dr. Boretius, in connection with the attitude of Württemberg toward Prussia in 1866, Herr von Varnbühler stated that he did all he could at that time, and though the *væ victis* which he had uttered with regard to Prussia came unfortunately to apply to Württemberg instead, the very mild form in which this happened was due to the great statesman now at the helm of German affairs, and he could never forget the debt of gratitude thus incurred by his country. After peace was concluded it was from his (Herr von Varnbühler's) initiative that the federal treaties arose. He strove too for the preservation of the Zollverein; and when Prussia sought to withdraw from it, it was he who was instrumental in convening the Customs Parliaments, so that the chief bond of cohesion in Germany should not break. All these statements were willingly confirmed by Prince Bismarck, who was present at the discussion.

On May 20th Herr von Forckenbeck, President of the Reichstag, sent in his resignation, in a letter in which he declared that the fact of his being at variance with the majority of the House on important questions before it, together with imperious considerations of health, had rendered it incumbent upon him, in the interest of public business, no longer to retain the office. On the next day the Reichstag, in which now the alliance between the Conserva-

tive parties and the Catholic Center controlled a majority of votes, elected Herr von Seydewitz, Conservative, as President. The Liberals did not vote, and of 204 valid tickets 195 were found to be in favor of the Conservative candidate. On May 23d Freiherr von Stauffenberg resigned his post as first Vice-President of the House, and on May 24th Baron von Frankenstein, one of the leaders of the Catholic Center, was elected in his place. As this was the first time that an Ultramontane had been elected to this high office, the Catholic press of Germany characterized the event as a great victory of its party. It is a noteworthy fact that previous to the election of Herr von Seydewitz both the President of the Reichstag, Herr von Forckenbeck, and the two Vice-Presidents, Freiherr von Stauffenberg and Dr. Lucius, were Catholics; but none of the three sympathized with the Ultramontane Center, and, though belonging to different political parties, all of them, in the conflict between the German Government and the Catholic Church, sided with the former.

The Socialists of the Reichstag repeatedly produced scenes of great commotion. On March 17th, when the report of the Government, stating the reasons which had induced them to place Berlin in a minor stage of siege, was under discussion, Herr Liebknecht, the Socialist Deputy for Dresden, severely attacked the Prussian Administration. He denied that the Socialists ever advised resistance to the law, that they were connected with the Russian Nihilists, or that they were responsible for the attempts to murder some of the European princes. The spirit of murder was an epidemic, as might be seen from the rapidly succeeding attempts in the earlier part of the reign of Queen Victoria, than whom a more blameless and constitutional ruler could not exist. When the speaker finally sought to defend himself from the charge of willfully insulting the Emperor by remaining once seated when the Chancellor proposed three cheers for the Emperor, his words produced a general uproar, and the President declared that the speaker in acting as he did had wounded the feelings of the Reichstag and the whole German people in a way which nothing else could have equaled, and that, having warned the speaker twice already, he must put it to the House whether the speaker should be permitted to proceed. Herr Liebknecht did not wait for the vote, but left the tribune. On March 31st the only Socialist member present in the House again ostentatiously kept his seat when the House respectfully rose to its feet to express its sympathy with a recent affliction of the imperial family (death of Prince Waldemar, grandson of the Emperor). On May 14th the Reichstag was informed that a communication from Washington to the Postmaster-General of Prussia denied the assertion made some time ago by the Social Democrat, Herr Liebknecht, that the United States authorities had complained of

letters from Germany being broken open or tampered with before crossing the sea.

On March 11th Herr von Bühler of Württemberg, moderate Progressist, moved that Prince Bismarck be requested to call a congress of the Powers, with the view of bringing about an effective general disarmament, to the extent at least of half their present peace strength, for a probationary period of from ten to fifteen years. All thinking men, the speaker said, agreed that the continued competition among European states as to which should spend most on armies must necessarily lead them to bankruptcy, if it had not partly done so already. The motion received the support of only about a dozen men, including Socialists, Alsatian Particularists, and Poles.

On June 19th Herr Delbrück presented an interpellation in regard to the Government's discontinuing the coinage of silver. He said it was necessary to clearly define the situation, especially as in the debates of the British Parliament the question whether Germany intended to modify the law fixing upon a gold standard had been treated as an open one. Prince Bismarck replied that he did not know the views of the federal governments, but he himself did not think it expedient unnecessarily to commit himself to an expression of opinion upon a question of such moment. He thought the interpellation had not been well considered, but, treating the matter from a business point of view, he could assure the House that neither the Federal Council nor the Prussian Ministry had mooted the question of a modification of the gold-standard law. Suspension of the silver sales was a measure of expediency, adopted pending an increase of value. Any doubt respecting the stability of German coinage legislation was wholly unwarranted. He had never discussed the question with the Minister of Finance. The gentleman from whom Lord Odo Russell, the British Ambassador, had derived his information that "the German Government is preparing to introduce and adopt a double standard, as in France," must have been better informed than the Imperial Government. The President of the Imperial Bank, addressing the House, said the Government had already lost by its sales of silver 96,500,000 marks. Herr Bamberger stated that the deputies who introduced the interpellation (he was one) had done so because of the report of Lord Odo Russell, who had been informed by the British Consul-General, who was also a member of the Bank Committee. The President of the Bank observed that the British Consul-General, though a member of the Bank Committee, was not informed of the intentions of the Government.

The Reichstag was closed on July 13th by Prince Bismarck, in the name of the Emperor.

The special convention with Austria concerning the northern part of Schleswig, to which the imperial speech from the throne referred, was concluded at Vienna on October

11, 1878, by Prince Reuss, the German Ambassador in Vienna, and Count Andrassy, and it was ratified on January 11, 1879. In consequence of this convention, Article V. of the Treaty of Prague reads now: "His Majesty the Emperor of Austria transfers to his Majesty the King of Prussia all his rights to the duchies Holstein and Schleswig acquired by the Peace of Vienna of October 30, 1864." The provision which was formerly added to this article, that the northern districts of Schleswig, in case the people thereof should indicate by a free vote their desire to be united with Denmark, should be ceded to Denmark, has been abolished. As the Emperor stated in his speech, his Government had failed in repeated attempts to settle the question with Denmark, and meanwhile the people affected by the promise were kept in uncertainty.

On July 14th, the day after the close of the Reichstag, the "Official Gazette" of the Government published a decree by the Emperor, dated the 27th of May, ordaining, in accordance with the previous recommendation of Prince Bismarck, a department for the management and control of imperial railways. Herr Maybach, Prussian Minister of Public Works, was appointed chief of the new department. A decree published on the 16th empowered Prince Bismarck to create an Imperial Treasury Department immediately, under the authority of the Prince, in lieu of the financial department hitherto attached to the office of the Imperial Chancellor. Another imperial decree, addressed to the Chief of the Admiralty, ordained the formation of an Engineer Torpedo Corps, to be especially intrusted with the study and handling of the latest instruments of destruction in naval warfare.

In July the court-martial appointed to inquire into the cause of the disaster which in 1878 befell the ironclad Grosser Kurfürst sentenced Rear-Admiral Batsch to imprisonment in a fortress for six months, Captain Klausner to a similar imprisonment for one month, while Captain Kühne was acquitted. It is a noteworthy fact in connection with this trial that the tribunal which passed this sentence was for the most part composed of military men, and that the chief of the Imperial Admiralty at this time, Herr von Stosch, was also a soldier.

Herr Windthorst, the leader of the Catholic party, and formerly Minister in the kingdom of Hanover, successfully negotiated the pension or annuity claimed by him for Queen Mary of Hanover. The Queen, through the Duke of Altenburg, thanked the Prussian Government for the readiness with which it had responded to her wishes.

On May 18th the German Imperial Consul for Egypt, Baron von Saurma, delivered to the Khedive in the name of his Government the following protest: "The Imperial Government, regarding the decree of the 22d of April, by which the Egyptian Government on its part

only seeks to arrange its debt relations in a way involving the suspension of existing recognized rights, as an open and direct infringement of the international obligations assumed by it along with judicial reforms, must deny to the said decree all legally binding operation with reference to the competence of the mixed tribunals and the rights of the Imperial German subjects, and holds the Viceroy responsible for all the consequences of his illegal conduct."

On June 11th the Emperor and Empress celebrated their golden wedding, which was attended by representatives of all the European Courts. Public rejoicings were general throughout the empire, and large sums of money were collected for the endowment of charitable institutions in commemoration of the festival. A few weeks before, on May 13th, the Emperor had become a great-grandfather by the birth of the first child of the heir apparent to the duchy of Saxe-Meiningen, who last year was married to the oldest daughter of the Crown Prince of Prussia.

On May 17th a *Städtetag* (convention of cities) was held at Berlin, which was attended by the representatives of seventy-two cities and municipalities. The object of the meeting was to register their protest once more against the proposed new duties on cattle and corn, and to point out the wrongs and disadvantages which the laboring and industrial populations of large towns would thereby suffer. A resolution was passed setting forth that a tax on beef and bread would prevent workmen from enjoying the necessary means of sustenance, would thereby lessen the power of labor, and thus impede the commercial activity of German towns. Only four of the seventy-two municipalities represented voted against the resolution.

The Supreme Court of Germany was opened at Leipsic on October 1st, in accordance with the laws finally passed on December 21, 1876. Dr. Friedberg, Secretary of State, in his inaugural speech, referred to the successful activity at Leipsic of the Supreme Imperial Court of Commerce, which was now absorbed and superseded by the new institutions, and lauded the legal unity now introduced into all Germany of which it was the crown and symbol. After the various members had been sworn in, Dr. Simson, the President of the Court and ex-President of the Reichstag, proposed three cheers for the German Emperor, which were given with great enthusiasm. The judiciary reforms which came into operation all over the empire on this day primarily affect the organization of the various courts and the forms of procedure. All previous upper courts are declared dissolved on the 30th of September, and in their place comes the Supreme Imperial Court, with its seat in Leipsic. Tribunals of first instance are formed by the *Landesgerichte*, or provincial courts, with their various dependent branches, while appeals will first go to the *Oberlandesgerichte*, or upper district courts,

and afterward to the supreme tribunal, of which Dr. Simson is the head.

On January 24, 1879, a treaty of friendship was concluded between Germany and the chiefs of the Samoan Islands, which secures to the German merchants great advantages. The treaty was sanctioned by the German Reichstag on June 16th.

German trade in the South Pacific received a severe blow in 1879 by the failure of the house of J. C. Goddefroy & Son of Hamburg. This house had for two centuries been one of the largest of the German shipping-houses, and had established numerous stations in the South Sea Islands, notably in the Samoan Islands, which were virtually owned by them. In 1878 they transferred their property on these islands to the "German Commercial and Plantation Association of the South Seas," which was formed for that purpose. In order to protect the German interests at stake, it was proposed to reconstruct the company, which should pass under the immediate protection of the German Government. The coöperation of Prince Bismarck was secured, and a proposal to the above effect was to be submitted to the Reichstag upon its meeting in 1880.

During the year 1879 there were fifteen cases of cremation at Gotha. The time occupied in each case varied from one and a half to two and a half hours. The first case of cremation occurred in Gotha on December 10, 1878.

GERM THEORY OF DISEASE. The doctrine of *contagium vivum* is constantly being strengthened by new and substantial evidence derived from laborious investigations, undertaken by many scientists in different countries. If it can be shown that many of the epidemic and zymotic diseases are due to the invasion of the animal system by microscopic parasitic organisms, which increase with enormous rapidity, covering the tissues of the body or disturbing functional action, then the ways will soon be found for preventing some of the most mysterious, incurable, and destructive maladies which befall mankind, sweeping off the vigorous and the enfeebled with an equal fatality. Those classes of diseases which decimate the ranks of society have their generic representatives in many maladies to which the higher orders of animals are subject, to some of which the domestic animals fall a frequent prey, and from which they also may be preserved when the true source and nature of the disease is discovered. The fact that animals are also attacked by contagious diseases enables investigators to study closely and experimentally the theory of *contagium vivum* by subjecting them to infection and watching the symptoms, and subsequently examining the tissue and fluids of their bodies under the microscope to detect the expected parasitic destroyers.

The discovery that splenic fever is caused by the presence of a bacillus is followed by the

detection, by the minute investigations of Dr. Klein, of another bacillus as the cause of a second disease to which one of the higher animals is subject—the infectious pneumo-enteritis or typhoid fever of the pig. Cultivating the bacillus in such a way as to obtain it free from the presence of any other organism, he inoculated healthy swine with the fluid containing the bacteria. In due time the disease appeared, and followed its course with the usual train of symptoms. From the dried blood of horses which had died in India of the "Loodiana fever," which has committed fearful devastations in the East, a crop of *Bacillus anthracis* was raised in the Brown Institution in England, with which other animals were infected. Experiments proved that the exhausted malt from breweries upon which cattle are often fed affords a soil in which these bacteria thrive remarkably well. Cattle were infected with the anthrax by feeding them with such grain in which the bacillus had been cultivated. The practice of feeding stock with brewery refuse is therefore a constant source of danger; only recently the disorder broke out in a previously uninfected district in England, and inquiry showed that the cattle which suffered had all been fed upon grains procured at one particular brewery.

Dr. Koch, who a couple of years ago established the fact that splenic fever was always accompanied by a multiplication of the bacterial organism known as *Bacillus anthracis*, has turned his attention lately to infectious traumatic diseases, or those infectious disorders which originate in the introduction of poisonous matter through a wound. The presence of bacteria in the blood and tissues in these diseases has long been observed. In order to establish the doctrine of *contagium vivum*, it is necessary to prove not only that the bacteria are not merely incidental or resultant concomitants of the morbid symptoms, but that they are not introduced into the wound along with the poison or otherwise, and multiply because the tissue affords them nourishment, while the toxic effects are produced by a specific poisonous substance. To prove this, it is enough to show that each disease is attended by a distinct and well-characterized bacterial form, which coexists with the particular symptoms, and is present in sufficient quantities to produce the morbid derangement, while on the other hand the different bacteria are never present in the tissue without being accompanied by the same particular symptoms. Koch's experiments for this purpose were very extensive. His method was to inoculate mice or rabbits with decomposing animal matter, and notice if any morbid symptoms resulted, and then to subject the tissues of the infected animal to a microscopic examination for the same form of microphyte which was contained in the injected fluid. In a series of experiments for producing septicæmia in mice, he found that putrid blood injected under their skin produced death in a

few hours, but that the blood appeared to be free from bacterial life on microscopic examination, and was incapable of producing symptoms of disease in other animals inoculated with it. The bacteria introduced were found still confined in the subcutaneous cellular tissue of the dead subjects. He further found that a certain amount of the fluid required to be injected before the disease was produced. He therefore concluded that these symptoms were not due at all to living germs, but to a soluble poison—septin or sepsin—contained along with the bacteria in the putrid fluid. Another disease, however, was produced in about one third of the cases, no matter how small the quantity of the injected fluid. This disease ran through a certain order of characteristic symptoms, and was followed after a definite period by death. Taking the blood of one animal to infect another, he produced this form of traumatic septicæmia in seventeen successive subjects. He found that only house-mice were susceptible of the contagion, while on rabbits, and even on field-mice, the infected blood would have no effect. In the blood of the infected animals he detected swarms of bacteria of a definite form and size, bacillus-like in structure, which were evidently the contagion of this peculiar disease.

No other bacteria injected with these bacilli were able to live and multiply in the living tissue; but occasionally a form of micrococcus was observed which multiplied with great rapidity, forming chains in the subcutaneous tissue, while the bacillus lived and spread in the blood. This micrococcus when injected into the ear of the mouse produced a distinct disease—necrosis of the tissues of that organ. It found here so congenial a medium to propagate in, that it spread through and through the tissues until they were completely destroyed. This disease could never be produced in the house-mouse unless its blood was simultaneously infected with the septicæmia bacillus; but the field-mouse, which is not liable to septicæmia at all, could be infected from the house-mouse with the micrococcus, and the house-mouse when inoculated from an infected field-mouse then harbored the parasite, which spread in its chain-like forms with the same rapidity and produced the same symptoms of progressive necrosis as in the field-mouse, or in the house-mouse accompanied by septicæmia.

Injection of putrid blood into rabbits produced an entirely different effect. Abscesses were formed in the subcutaneous tissue, which increased gradually in size, causing death in a few days. These abscesses were found on examination to be surrounded by a thin layer of micrococci in the *zooglaea* state. The cheesy, granular contents of the abscesses were probably derived from the zooglaea and the dead tissues invested by them. A little of the matter of the abscess diffused in water invariably produced the disease in healthy subjects; but

the injection of the blood of the diseased rabbits produced no effect. The artificial production of pyæmia in rabbits revealed the presence of micrococci, but they were neither in chains nor in zooglaea films, and differed in size from those attending the other diseases. They occurred either singly or in pairs in the blood-vessels, surrounding the corpuscles, and formed accumulations which sometimes caused a stoppage in the vessels. By the injection of putrescent infusions both septicæmia and erysipelas were produced in rabbits. Septicæmia was accompanied by a distinct form of micrococcus, and could be transmitted from one animal to another. Erysipelas showed the presence of small bacilli, but could not be transmitted.

Pasteur believes that he has discovered in recent researches the microscopical organisms which produce puerperal fever and malignant pustule. The parasite which causes puerperal fever he describes as an entozoön containing two, four, or six cells united together. The cells have an average diameter each of two thousandths of a millimetre. His researches into the cause of malignant pustule have convinced Pasteur that this disease is engendered by the bacterium which Davaine discovered in 1860. The method of investigation was by obtaining the organisms to be observed by cultivation. This method, which he first employed in 1857, is the only means of obtaining specimens in a state of purity. He took a minute drop of blood from a case of malignant pustule, and sowed it in a liquid propitious for the development of the organisms—the froth of beer-yeast. By repeatedly infecting fresh yeast-froth with a drop of that which he had before infected, he could keep on hand for years a constant supply of the organisms. By introducing this liquid into the blood of guinea-pigs, sheep, and certain other animals, malignant pustules were reproduced in them. If he filtered the liquid through a plaster filter, the germs remained on the filtering substance, with which the disease could be inoculated, but not with the filtered fluid. The poultry cholera can be cultivated and fowls infected in the same manner. Puerperal septicæmia could probably also be preserved by culture and inoculated from the medium of cultivation. Thus the evidence in favor of the germ theory is rapidly accumulating.

The facts that the above diseases can be communicated from one animal to another by the injection of infinitesimal quantities of the diseased blood or tissue, that each disease has its own characteristic form of bacterium, and that they multiply at a sufficient rate to account for the symptoms, seem to prove the parasitic origin of these diseases. There is conflicting evidence which leaves the question of a living contagium still in doubt, even in regard to some of the diseases in which the presence of a characteristic microphyte has been established. Panum, Richardson, and

others, for instance, have discovered that a septiferous fluid can not be deprived of its virulent properties by either filtering, boiling, evaporation, or combination with acids in the form of salts. As no life could survive such operations, it must be inferred that the toxic agent is not the zoöphytes themselves, but a specific poison produced by them by a process of fermentation in the putrescent fluid.

Professors Klebs of Prague and Tommasi of Rome spent several weeks in the spring season in the Agro Romano, a part of the Roman Campagna, notorious for the prevalence of marsh or intermittent fever, in investigating into the physical cause or specific poison of this disease. They believe that they have discovered in a minute fungus which abounds in the soil and the lower strata of the air in that region. This microscopic fungus is a bacillus, growing in rod-shaped forms. It consists of numerous movable, shining spores of elongated oval form. They cultivated the germs artificially in different kinds of soil. The residual solids of this bacterium, after the soluble matter had been repeatedly filtered and washed out, were capable, when injected under the skin of a dog, of bringing on all the symptoms of the disease in their regular order. To this newly discovered epizootic parasite the name of *Bacillus malarie* has been given.

Besides the diseases in which the presence of a characteristic microscopic parasite has been actually observed, the number of which is already considerable, as has been seen, and those in which there are strong indications of a similar origin, and those others which by analogy may be ascribed to such a cause, there is a tendency to attribute to morbid bacteria certain diseases which are not classed as epidemic, as contagious, nor scarcely as endemic, so great a hold has the germ theory lately acquired upon scientific minds. In Germany it is now held, on almost purely theoretical grounds, that tuberculosis is caused by a specific bacterial germ. Even Professor Klebs of Prague, who stands high as a medical authority, is committed to this theory. The effects of a novel cure for phthisis, which is producing an unusual stir in German medical circles, are ascribed to its destroying the living germs. The new remedy is sodium benzoate. The method of taking it is described as follows: *Natrium benzoicum* (sodium benzoate)—1 per mille of the bodily weight, diluted to a solution of 5 per cent.—is inhaled twice a day, in the morning and evening, by means of a Siegel's pulverizator (an atomizing inhaler), for seven weeks uninterruptedly. The appetite, which is said to be soon excited by this treatment, should be fully satisfied by a meat diet, plenty of fresh air taken, and all enervating influences avoided. The proportion of the salt to be inhaled— $\frac{1}{1000}$ of the bodily weight of the patient at each inhalation, or about 2½ ounces for a person weighing 140 pounds—is strictly adhered to: the inhaler must be care-

fully adjusted to permit such a large amount to enter the air-passages; and still a portion will escape, so that the patient should remain in the room an hour at least after each inhalation. This treatment is said to have produced remarkable cures in the hospital at Innsbruck and elsewhere. It might be expected to prevent the formation of pus in the morbid cavities; but it is said to attack the true seat of the disease, and put an end to the tuberculizing process—and this, as is boldly held, by destroying the characteristic bacteria to which the degeneration of the tissue is solely due. Rabbits confined in an atmosphere of these benzoic vapors can not be infected with tuberculosis, although the disease can otherwise be readily induced in these animals. The benzoate of soda is extremely irritating to the air-passages, and many patients would find difficulty in breathing such large quantities of the fumes.

GODON, SYLVANUS W., a naval officer, born in Pennsylvania, died in France, May 20, 1879. He entered the navy as a midshipman in 1819, and reached the rank of lieutenant in 1836. In 1847 he took part in the siege of Vera Cruz as an officer of the bomb-brig Vesuvius. After the breaking out of the civil war in 1861 he was commissioned as captain, and took command of the sloop of war Powhatan, one of the vessels employed in Du Pont's expedition to Port Royal. In 1863 he was promoted to be commodore, and commanded the steamer Susquehanna and the fourth division of Admiral Porter's squadron at the two battles of Fort Fisher, December, 1864, and January, 1865. Commissioned as rear-admiral July 25, 1866, he commanded the South Atlantic squadron on the coast of Brazil during that year and 1867. From 1868 to 1870 he was commandant at the Brooklyn Navy Yard, and was subsequently placed on the retired list.

GOLDTHWAITE, GEORGE, a jurist and Senator, born in Boston, Massachusetts, December 10, 1809, died at Montgomery, Alabama, March 18, 1879. He received his early education in Boston, at a grammar-school then attended by Charles Sumner, R. C. Winthrop, and George S. Hillard. In his fourteenth year he was appointed a cadet at West Point, and was there at the time when ex-President Davis, Generals Lee and Joe Johnston, and Bishop Polk were students in the Academy. In 1826 he left West Point and went to Montgomery, where he began the study of law in the office of his brother, and was admitted to the bar in his eighteenth year. He located at Monticello, Pike County, where he remained many years. He then returned to Montgomery, where he practiced with increasing reputation till December, 1843, when he was elected to the Circuit Court bench. He held this post till January, 1852, when he was elected a Justice of the Supreme Court. By the resignation of Judge Chilton in January, 1856, Judge Goldthwaite became Chief Justice, a dignity he

held only thirteen days. Resigning, he returned to practice. When hostilities began between the States, he was appointed by Governor Moore Adjutant-General of the State, and held the place about three years. In 1866 he was elected Judge of the Circuit Court, but he was ejected from office by an act of Congress in 1868. In 1870 he was elected to the Senate of the United States. His term expired on March 3, 1877, and he was succeeded by John T. Morgan. His career on the bench established his reputation as a calm and profound jurist. He was warm in his attachments, exceedingly kind, charitable, and just in his transactions, and was esteemed as a useful citizen and prudent public servant.

GRANT, ULYSSES S. The second term of General Grant as President of the United States expired on March 4, 1877. He soon left Washington for Philadelphia, with the design of making a tour of the world. This he began on May 17th, with his wife and elder son, by embarking on board the steamship *Indiana* at that port. He arrived in Liverpool on the 28th, having made the passage in eleven days. From Liverpool he went to London, and dined with the Duke of Wellington on the 2d of June. During his stay in England the General was honored with an invitation to dine with Queen Victoria at Windsor Castle. The invitation having been given and accepted in due form, at half-past eight on the 26th of June the Queen, surrounded by her court, received him in the magnificent corridor leading to her private apartments in the Quadrangle. The dinner was served in the Oak Room. Among those present were Prince Leopold, Prince Christian, Princess Beatrice, Lord and Lady Derby, the Duchess of Wellington, General Badaeu, and others. After dinner the Queen entered into conversation with the party, and about 10 o'clock took her leave, followed by her suite. The next morning the General and party returned to London, and for some days afterward received the most flattering attentions from the nobility and the statesmen of the kingdom. On the 26th of July the ex-President and his party arrived in Geneva, Switzerland. He afterward crossed the Simplon Pass, made the tour of the northern part of Italy, and returned to Ragatz by the 14th of August. Thence he made a flying trip through Alsace and Lorraine. Returning to England, he left London on the 5th of July for Ostend, where King Leopold tendered the party the use of the royal car to Brussels. On their way they stopped and examined the principal places of interest at Ghent. On the 7th of July King Leopold of Belgium called on General Grant at his hotel, and had a long conversation with him. The visit was returned the next day at the palace. The party arrived in Palermo, Italy, on the 23d of December. Here they spent Christmas, and dined on board the United States ship *Vandalia*. On the morning of January 19, 1878, the ex-President and his com-

panions entered Siout, Egypt, and were welcomed by the American Vice-Consul and his son. From Egypt he proceeded to Jaffa on the Mediterranean, and thence made the tour of the Holy Land. After a trip full of pleasant and complimentary incidents, he embarked from Beyrout, in Syria, for Constantinople, and arrived there immediately after the treaty of San Stefano, which ended the late Russo-Turkish war. Thence he proceeded to European Turkey, and returned to Stamboul on the 5th of March, where he was received by the diplomatic representatives of the United States. In the latter part of March the ex-President sailed for Italy, arriving in Rome soon after the election of Leo XIII. to the Pontificate. Having visited the principal cities of Italy, the party left for France and arrived in Paris on the 7th of May, and thence soon after went to Holland. From Holland they went to Germany, arriving in Berlin on the 26th of June, when they were met by the late Minister, Bayard Taylor. They reached Hamburg by rail on July 2d, and made a tour through Denmark, Sweden, and Norway. On the last of the month the party crossed the Baltic from Stockholm to St. Petersburg. After a visit to the principal cities of Russia and to Poland, the ex-President reached Vienna, Austria, on the 18th of August; thence he proceeded to Switzerland, and thence through southern France, and finally to Spain. The ex-President arrived at Vitoria on the 16th of October, having entered Spain from France via Bayonne, and was received by Señor Castelar, ex-President of the Spanish Republic, and subsequently by King Alfonso. In December the party was still in Spain and Portugal. In January, 1879, the General and party visited Ireland, and returned thence to Paris. On the 24th he embarked at Marseilles for Bombay, India, where he arrived on the 12th of February. The ex-President's visit to India was marked by the attention and respect shown him everywhere by the native officers and English rulers. In Calcutta, where he arrived on the 10th of March, he was received by a guard of honor and an aide-de camp of the Viceroy. At a state dinner given in the evening, Lord Lytton, in an eloquent speech, proposed a toast to their distinguished guest. All the notables of India were present. After dinner the General received many native gentlemen and princes. On the 17th he proceeded to Burmah, and thence to China. At Bangkok he received a letter from the King of Siam inviting him to visit that kingdom as the guest of the Government. The letter was encased in royal purple satin. The party arrived at Hong Kong on the evening of April 30th. The ship was boarded by United States Consuls Mosby of Hong-Kong and Lincoln of Canton, Chargé d'Affaires Holoombe, and deputations of citizens of various countries, including Japan. The party was received at Canton on May 6th by the consular officials and conducted to the Viceroy's residence. They left Hong Kong for

the north of China on May 11th. There were receptions and entertainments by European and Chinese parties, and a public garden gathering. The ex-President and his party reached Yokohama, Japan, about the 1st of July, and on the 4th the distinguished tourist, accompanied by Mrs. Grant, was admitted to an audience with the Emperor and Empress. The Mikado welcomed his guest in a cordial speech, highly eulogistic of the ex-President and of the country which he represented. It gave him, he said, especial pleasure to greet the ex-President on the anniversary of the independence of the United States. On the 7th there was a brilliant review in honor of the General, and on the 8th a gorgeous festival was arranged for him in the great hall of the Kobu Dai Gaku. No effort was spared by the Japanese authorities to make his stay in that country agreeable and varied in all its phases. A special and highly complimentary feature of his visit to China was his conversation with Li-Hung-Chang, Viceroy of the Province of Tientsin, in which the General was invited to become the mediator between that Government and Japan concerning the Loo-choo difficulty, the Viceroy's proposition being authorized by Prince Kung. The party left Yokohama on the 25th of August, and had a pleasant passage to San Francisco, where they arrived on September 20th. During this tour he was received with distinguished honors by the following persons, besides many others: Queen Victoria of England; King Leopold of Belgium; the Khedive of Egypt; the Sultan of Turkey; King Humbert of Italy; Pope Leo XIII.; President MacMahon of France; the King of Holland; Emperor William of Germany; Prince Bismarck; King Oscar of Sweden; the Emperor Alexander of Russia; the Emperor Francis Joseph of Austria; King Alfonso of Spain; President Grévy of France; M. Gambetta; Viceroy Lytton of India; King Thebaw of Burmah; Prince Kung of China; the Emperor of Siam; the Mikado of Japan. His reception in San Francisco was very flattering. He visited several towns in this State, also Oregon and the adjoining States, and returned slowly to his home in Illinois, and thence to Philadelphia. At the close of the year he left for a tour in the West India Islands and Mexico. (See preceding volumes of "Annual Cyclopædia.")

GREAT BRITAIN AND IRELAND, a kingdom of western Europe. The Queen, Victoria, was born May 24, 1819. She is a daughter of Prince Edward, Duke of Kent, the fourth son of George III.; succeeded her uncle, William IV., in 1837; and married in 1840 Prince Albert of Saxe-Coburg-Gotha.

Children of the Queen.—1. Princess Victoria, born November 21, 1840; married in 1858 to the present Crown Prince of Germany. 2. Prince Albert Edward, heir apparent, born November 9, 1841; married in 1863 to Princess Alexandra, daughter of King Christian IX.

of Denmark. Issue, two sons and three daughters; eldest son, Albert Victor, born January 8, 1864. 3. Princess Alice, born April 25, 1843; married in 1862 to Louis IV., Grand Duke of Hesse; died December 14, 1878. 4. Prince Alfred, Duke of Edinburgh, born August 6, 1844; married in 1874 to the Grand Duchess Maria of Russia. He is heir apparent to the Duke of Saxe-Coburg-Gotha. He has issue one son and three daughters. 5. Princess Helena, born May 25, 1846; married in 1866 to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg. 6. Princess Louise, born March 18, 1848; married in 1871 to the Marquis of Lorne. 7. Prince Arthur, Duke of Connaught and Strathearne, born May 1, 1850; married March 13, 1879, to Princess Louise Margarethe, daughter of Prince Frederick Charles of Prussia. 8. Prince Leopold, born April 7, 1853. 9. Princess Beatrice, born April 14, 1857.

The Cabinet was composed as follows at the close of 1879: First Lord of the Treasury, Right Hon. Benjamin Disraeli, Earl of Beaconsfield; Lord High Chancellor, Lord Cairns; Lord President of the Council, Duke of Richmond and Gordon; Lord Privy Seal, Duke of Northumberland; Chancellor of the Exchequer, Sir S. H. Northcote, Bart., M. P.; Secretaries of State: 1. Home Department, Right Hon. R. A. Cross; 2. Foreign Affairs, Marquis of Salisbury; 3. Colonies, Sir Michael Hicks-Beach; 4. War, Colonel Frederick Stanley, M. P.; 5. India, Viscount Cranbrook; First Lord of the Admiralty, Right Hon. W. H. Smith, M. P.; Postmaster-General, Right Hon. Lord John J. R. Manners, M. P.; President of the Ministry of Commerce, Lord Sandon.

Parliament is composed of two Houses, the House of Lords and the House of Commons. The number of peers in 1879 was 494. Of these, 5 were peers of the royal blood, 2 archbishops, 21 dukes, 19 marquises, 115 earls, 24 bishops, 25 viscounts, and 247 barons. In addition to these there are 16 Scotch and 28 Irish representative peers, making in all 502 members. The Speaker of the House of Lords was Lord Cairns, the Lord High Chancellor, and the Chairman of Committees Lord Redesdale. The Speaker of the House of Commons was Henry Bouverie William Brand, and the Chairman of Committees Henry Cecil Raikes. The members of the House of Commons are elected by the counties, boroughs, and universities.

The area and population of the British Empire in 1879 were as follows:

COUNTRIES.	Area in square miles.	Population.
United Kingdom.....	121,608	34,517,118
India and Ceylon.....	924,043	193,851,002

Ireland.....	20,519,903	5,412,377	5,338,906	5,351,060	5,363,324
Islands in the British waters.....	193,647	144,633	145,000	145,000	145,000
Soldiers and sailors abroad.....	216,050	216,000	216,000	216,000
Total.....	77,928,908	31,845,379	33,807,930	34,160,856	34,517,118

The British colonies are grouped in forty administrative divisions, some of them embracing a number of formerly separate colonies. Of these four are in Europe, eleven in America, ten in Africa, seven in Asia, and eight in Australasia. According to the form of government the colonies are divided into three classes, viz.: 1. Crown colonies, in which the Crown has entire control of legislation, while the administration is carried on by public officers under the control of the Home Government; 2. Colonies possessing representative institutions, in which the Crown has no more than a veto on legislation, but the Home Government retains

the control of public officers; 3. Colonies possessing responsible governments, in which the Home Government has no control over any public officer except its own representative. The first class embraces twenty-four colonies, the second class seven, and the third class nine. The latter comprise Canada, Newfoundland, Cape Colony, and the colonies of the Australian continent, with the exception of Western Australia.

The movement of population from 1871 to 1878, according to the "Statistical Abstract of the United Kingdom," No. 26, 1864-1878 (London, 1879), was as follows:

YEARS.	Marriages.	Births.	Deaths.	Excess of births.
ENGLAND AND WALES.				
1871.....	190,112	797,428	514,879	282,549
1872.....	201,267	825,907	492,265	333,642
1873.....	205,615	829,778	492,520	337,258
1874.....	202,010	854,956	526,632	328,324

1875.....	24,087	138,320	98,114	40,206
1876.....	26,388	140,469	92,324	48,145
1877.....	24,722	139,659	93,543	46,116
1878.....	25,363	134,370	99,889	34,531

The sum raised by poor-rates in England and Wales in 1878 was £12,585,677; the receipts in aid amounted to £904,085, forming a total receipt of £13,489,712. The gross rental during the same period amounted to £150,980,679. The number of paupers was 805,080. In Scotland the number of paupers on May 14, 1879, was 97,676, and in Ireland in 1878, 324,046.

The following table gives the population of the principal cities in July, 1879, according to the estimates of the Registrar-General:

1. London.....	3,620,363	12. Nottingham.....	169,396
2. Glasgow.....	578,156	13. Newcastle-on-Tyne.....	146,948
3. Liverpool.....	538,338	14. Hull.....	146,347
4. Manchester.....	861,819	15. Portsmouth.....	181,821

Total.....	£128,721,563

The public debt of Great Britain was as follows at each of the periods mentioned:

MARCH 31.	Funded debt.	Terminable annuities.	Not funded debt.	Total.
1874...	£723,514,005	£51,289,640	£4,479,600	£779,283,245
1875...	714,797,715	55,811,671	5,239,800	775,848,686
1876...	718,657,517	51,911,227	10,701,800	776,270,544
1877...	712,621,355	49,805,558	13,943,800	775,873,713
1878...	710,543,008	46,835,589	20,638,000	777,781,597
1879...	709,430,533	42,778,147	25,570,100	778,078,840

The British army is filled up exclusively by recruiting. The term of service is twelve years, after which a soldier can serve for nine years more. At the end of three years he can also enter the reserve, one year in the regular army being counted as three in the reserve. By the reorganization of 1872, the United Kingdom is divided into 68 military districts. In each district there is one brigade depot of 182 men, two battalions of the regular army, which alternately serve abroad, two battalions of militia, and the volunteers of the district. Besides these there are the following organizations: In Ireland there is a police force under military discipline, consisting of 13,000 men and 4,000 horses; the Channel Islands have a militia of 300 officers and 7,000 men, subsidized by the British Government; India has a police force, under military discipline, of 190,000 men, the officers of which are Europeans; the colonies all have a militia and a volunteer corps of their own. In 1878 the army, excepting the

last-mentioned forces, was composed as follows:

TROOPS.	Officers.	Soldiers.	Total.	Animals.*
I. REGULAR ARMY.				
1. Cavalry.....	854	16,446	17,300	13,825
2. Artillery.....	1,400	23,550	25,250	14,660
3. Engineers.....	840	4,810	5,650	450
4. Infantry.....	4,850	121,150	126,000	1,250
5. Colonial corps.....	122	2,368	2,490	12
6. Administrative corps	1,734	5,746	7,480	1,950
7. Reserve.....	1,500	58,500	60,000
Total.....	11,300	242,870	254,170	42,147
II. TERRITORIAL ARMY.				
1. Yeomanry and militia	4,600	126,790	131,390	15,800
2. Volunteers.....	7,700	186,510	194,210	1,770
Total.....	12,300	813,300	825,600	17,570
III. IMPERIAL ARMY OF NATIVES IN INDIA.				
1. Gardes du corps.....	2	170	172	70
2. Cavalry.....	310	18,500	18,810	20,100
3. Artillery.....	20	800	820	600
4. Engineers.....	40	3,200	3,240	200
5. Infantry.....	1,100	101,200	102,300	2,220
6. Staffs.....	1,828	1,828	1,000
Total.....	3,800†	123,870‡	127,170	24,190
Grand Total.....	26,900	680,040	706,940	73,907

In 1878 the army was distributed as follows:

TROOPS.	Great Britain.	Colonies.	India.	Total.
I. Regular army.....	151,400	40,120	62,650	254,170
II. Territorial army.....	325,600	325,600
III. Native Indian army	127,170	127,170
Total.....	477,000	40,120	189,820	706,940

The navy consists of 68 ironclads, about 360 steamers, and 120 sailing vessels. Of this number 254 were in commission on September 1, 1879, 122 being at home, and 132 abroad. The navy is manned by 45,800 seamen, 13,000 marines, and 21,420 men belonging to the Royal Navy reserve.

The imports and exports of merchandise from 1874 to 1878 were as follows:

YEARS.	IMPORTS.	EXPORTS.		
		British goods.	Foreign and colonial goods.	Total.
1878.....	£368,771,000	£192,849,000	£52,635,000	£245,484,000
1877.....	894,423,000	193,833,000	63,433,000	257,266,000
1876.....	375,155,000	200,639,000	56,137,000	256,776,000
1875.....	373,940,000	223,460,000	53,140,000	281,612,000
1874.....	370,068,000	239,558,000	58,092,000	297,650,000
1869-73 (average).....	331,143,000	224,306,000	53,247,000	278,053,000

The declared value of the imports and exports of precious metals, coined and in bars, in the same period, was as follows:

YEARS.	GOLD.		SILVER.		TOTAL.	
	Imports.	Exports.	Imports.	Exports.	Imports.	Exports.
1878.....	£20,871,000	£14,969,000	£11,552,000	£11,718,000	£32,423,000	£26,687,000
1877.....	15,442,000	20,861,000	21,711,000	19,437,000	37,153,000	39,798,000
1876.....	23,476,000	18,518,000	18,578,000	12,948,000	37,054,000	29,464,000
1875.....	23,141,000	18,643,000	10,124,000	8,980,000	33,265,000	27,623,000

The number of telegraph offices in 1878 was 5,316, of which 1,555 were private and railway stations. The length of the government lines was 25,040 miles, of wires 108,110 miles. The number of dispatches sent, exclusive of press and official dispatches, was 22,477,921.

The table on page 452 shows the finances, commerce, and movement of shipping of the

British colonies in 1877, according to the "Statistical Abstract for the Colonial and other Possessions of the United Kingdom in 1863-'77" (London, 1879).

The session of Parliament was resumed on February 13th. In the Lords, Lord Beaconsfield stated the measures to be proposed by the Government, which included, among others, the substitution of a permanent act consolidating the whole body of military law for the annual Mutiny Bill, a Bankruptcy Bill, a Criminal Code Bill, a County Boards Bill, a Workman and Employers Bill, and a Public Works Bill. The leader of the Opposition, Lord Hartington, had previously, while addressing a meeting of Liberals at Liverpool on February 7th, intimated the programme of the party in the ensuing session, specifying support of the Burial Bill, extension of the suffrage in counties, elec-

toral rearrangement in large towns, and a fair consideration of fresh claims. By common consent, subjects likely to agitate or divide public opinion were set aside, to be dealt with after the general election, when the judgment of the country on conflicting principles and schemes may be ascertained.

The Army Discipline Bill will hold a prominent place in the Parliamentary annals of 1879. It was introduced on the 27th of February, and read a second time on the 7th of April, without any indication of serious opposition. It got into committee on the 1st of May, and during the whole of May and June, and the early part of July, the discussion of the details of the measure absorbed the attention of the House of Commons. The greatest excitement was aroused by the controversy touching corporal punishment. At first the Government took up a strong position, in which they were supported by the leaders of the Opposition. They contended that flogging was, in the opinion of the highest military authorities, indispensable to the maintenance of discipline in the army. When the bill had been seven weeks in committee, Colonel Stanley was apparently worried by the persistency of the opponents of the "cat" into a series of concessions. While the Secretary for War was considering in what form and limits his concessions should be couched, the opposition to the bill increased

* The commerce of Gibraltar, Hong-Kong, and Labuan is with the United Kingdom only.

and became more violent. The progress of the bill was considerably obstructed by amendments proposed by Mr. Parnell and some of his Irish colleagues, so that when it passed the third reading, on the 18th of July, it was almost too late. The Mutiny Continuance Act was to expire on the 25th, and the House of Lords was compelled to run the measure without debate through all its stages, in order that it might receive the royal assent in time. In the House of Commons the measure spread discord in the ranks of the Liberals. Lord Hartington reproved Mr. Chamberlain and the Radical opponents of flogging, and cautiously supported the Secretary for War; and Mr. Chamberlain revenged himself for this dissension by calling Lord Hartington the late leader of the Opposition. A week later, however, Lord Hartington came round to the conviction of Mr. Chamberlain. On July 14th, in committee upon the Army Discipline Bill, he announced that, having reconsidered the whole question, he was prepared to support the total abolition of flogging in the army except as a substitute for the penalty of death. On July 17th Lord Hartington moved a resolution for the abolition of flogging in the army, which he justified by the indecision of the Government in respect of the military necessity for that punishment. Mr. Gladstone supported the resolution, which was opposed by Colonel Stanley and Lord Sandon. The resolution was negatived by 289 to 183. The "Times"

called the Army Bill "a measure of which the great importance and the great value are acknowledged on all hands." It introduces a system of free enlistment, and abolishes many of the snares with which recruiting has hitherto been surrounded. It constitutes enlistment really a free contract, which men will be more at liberty to abrogate than at any previous time, if they dislike its conditions. It takes away or greatly modifies the absolute power of the provost marshal, who will only exercise his authority under the control of the statute, and will carry out what is simply the record of a summary court martial; while punishments have in several respects been mitigated.

Considerable attention was devoted to educational matters. The Government originally did not intend to deal with the complicated subject of university education in Ireland, but the O'Connor Don introduced a measure professing to follow the lines of the Intermediate Education Act, and appropriating a large part of the Irish Church surplus to the maintenance of a new university. It was objected to this bill that in reality it differed widely in its application from its presumed model, and that it would in substance endow a number of sectarian colleges in Ireland. The debate on the second reading, which began before Whitsuntide, was resumed on the 25th of June, when Mr. Forster supported the Irish demand for denominational teaching, and Mr. Cross, remarking incidentally that Mr. Forster's argument would justify Home Rule, surprised the House with the statement that the Government, recognizing the existence of a substantial grievance, would attempt to carry a remedial measure. The O'Connor Don's bill was accordingly abandoned, and a few days afterward the Lord Chancellor brought forward the ministerial proposals in the Upper House. The main feature of the ministerial scheme was the dissolution of the Queen's University and the transference of graduates and matriculated students of the Queen's Colleges to the new university to be established. The new university was to consist of a Chancellor and a Senate, the Senate to be appointed by charter of the Crown. The number of the Senate was not to exceed thirty-six, and the Convocation, which was to be composed of the graduates of the new university and of the graduates of other universities who might be transferred to it, might fill up vacancies to the number of six as they occurred in the Senate. The Senate would elect a Vice-Chancellor, and the university as thus constituted would appoint examiners for matriculation and degrees, and would confer degrees in all the faculties except theology, and this without evidence of education at any particular college or other place. The exhibitions attached to the Queen's Colleges which had been provided for by the money of private individuals would not be interfered with, but the vote of Parliament for the Queen's University would, if the bill passed, be transferred to the

new university. The bill was brought down to the Lower House on the 17th of July, and on the second reading Mr. Lowther stated that provision would be made for university prizes. Mr. Shaw, the Home Rule leader, moved an amendment that no measure could be accepted which did not assist collegiate education in Ireland as well as throw open degree examinations. Mr. Gladstone and a considerable number of Liberals, including several ex-Ministers, voted with Mr. Shaw; but the Government was supported by a strong contingent of independent members of the Opposition, and the amendment was defeated by a majority of 257 against 90. The resistance of the Home Rulers, however, was not persevered in. A proposal by Mr. P. J. Smyth to refer the question to a Royal Commission was not entertained. The measure passed rapidly through its remaining stages, the Government refusing to admit any important modifications. On August 13th the House of Lords agreed to the amendments of the Commons that had so completely transformed the bill, and it received the royal assent.

Besides Ireland, the principality of Wales also put forth a claim for an enlargement of its educational institutions. On July 1st, in the House of Commons, Mr. H. Vivian moved a resolution calling upon the Government to take steps to assist in extending the means of higher education in Wales. He described to the House the existing means of higher education open to the Welsh people at Jesus College, Oxford, at Aberystwith, and at Lampeter, and contrasted the expenditure on Scotch and Irish universities with the total neglect of the claims of Wales. If grants were made to the principality on the same scale as to these two kingdoms, she would receive from £8,000 to £10,000 for university education, where now she received nothing. Mr. Vivian insisted on the separate nationality of the Welsh people, and mentioned among other contemporaneous facts that out of 686,000 religious worshippers, 36,000 only worshipped in the English language. The bill was supported by Mr. Gladstone. Mr. B. Williams was of opinion that what the Welsh people desired was a subsidy for the college at Aberystwith which they had themselves established. Lord G. Hamilton and the Chancellor of the Exchequer recognized the claim of Wales to consideration, but said that measures were in progress which it was hoped would contribute toward the end desired. Upon a division the resolution was negatived by 105 to 54.

On June 30th the Duke of Richmond and Gordon said the Government had determined to advise the Crown to grant a charter for a university for the North of England, to be called the Victoria University.

On June 10th Mr. R. Yorke called attention to the increasing expenditure of the London School Board, and condemned the unnecessarily high standard of education maintained at public expense. Mr. W. E. Forster defended

the Board from the charge of extravagance, and contended that results would amply compensate for the expense. Lord G. Hamilton, on behalf of the Government, admitted that the expenditure was very large, and indicated several points on which it was considered that limitations might be imposed.

On May 5th, in the House of Lords, Lord Houghton moved the second reading of a bill to legalize marriage with a deceased wife's sister, of which the Prince of Wales, in presenting a petition from Norfolk, signified his approval. The Bishop of London and Lord Cranbrook opposed the second reading, which upon a division was rejected by 101 to 81. The Prince of Wales, the Duke of Edinburgh, and the Bishop of Ripon voted for, and fourteen bishops against the second reading.

The suffrage question was repeatedly the subject of discussion. On March 4th Mr. Trevel-

yan moved resolutions favoring the extension of household suffrage to the counties and a redistribution of representation. One reason why he pressed the question was that household franchise was the only mode of correcting the abuse of *fagot* votes. He dwelt on the "sin and the shame" of depriving large classes of all voice in legislation and all control over the administration of the country. Sir C. Dilke, in seconding the motion, asserted that manufacturing of fictitious votes was carried on to a large extent in the southern counties, and that the anomalies of the present system were as great as any which existed before 1832. Lord C. Hamilton moved as an amendment, "that it is inexpedient to reopen the question of Parliamentary reform at the present time." The "abstract right" and "representation of classes" arguments, if insisted on, would sweep away the old Parliamentary system, and Eng-

GREAT SEAL OF ENGLAND.

land would come in the end to equal electoral districts and universal (including female) suffrage. He denied that a class was necessarily unrepresented because it did not possess votes, and contended that of the small boroughs at least seventy-five would disappear under this law. In Ireland the proposal would place entire power in the hands of the ignorant and bigoted Roman Catholic peasant, and certainly end in the return of ninety obstructionists. The composition of the House of Commons had deteriorated under household suffrage. Sir C. Legard, who seconded the amendment, predicted that the proposed change would lead to universal suffrage and to the ultimate establishment of a democratic House of Commons as the sole power in the state. Mr. Lowe repeated his well-known objections to further reductions of the franchise, insisting that it must be considered not from the philanthropic point of view, but solely with regard to the permanent interests of the country. Each further change in this

direction would alter the structure of the House of Commons, in which now all power was centered, and the result must be the establishment of an unchecked democracy, which all history showed was devoid of stability. Mr. Knowles and Mr. Courtney argued earnestly in favor of the representation of minorities. The Chancellor of the Exchequer remarked that it was not desirable to reopen the suffrage question, which was settled in 1867 with the assent of the Liberal party. The Marquis of Hartington avowed himself as averse as any one could be to reopening the question of reform, but objected strongly to the attitude of the Government. Mr. Trevelyan's resolution was negatived on a division by 291 to 226. Lord Hamilton's amendment was then unanimously agreed to, after (on motion of Mr. Lowe) the words "at the present time" had been omitted. The suffrage question came up again for discussion in the House of Commons on March 7th, when Mr. Courtney moved a resolution in favor of ex-

tending the Parliamentary franchise to women possessing the statutory qualifications which entitle them to vote in municipal, parochial, and school-board elections. Experience of female suffrage, he contended, both in the United Kingdom and the United States, was uniformly favorable to it; and he advocated it strictly from a utilitarian point of view, on account of the benefit which it would confer both on the state and on the women themselves. The Chancellor of the Exchequer objected to the form of the motion, which he thought would commit the House to the reopening of the reform question. Although he believed the elevating influences of female suffrage had been exaggerated, and did not admit that women were treated unjustly because they had no votes, he was not indisposed, at a proper time and under proper circumstances, to consider the claim for equal treatment. Mr. Blennerhasset contended that the Parliamentary franchise ought to follow as a matter of right from the concessions already made; and Mr. Beresford-Hope read extracts from the writings of leading advocates of women's rights, contained in what was described as the "Ladies' Green Book," to illustrate the real character of their claims. Mr. Bristowe thought that if the vote were given, the right to be elected must also follow. Sir H. James commented on Mr. Courtney's inconsistency in proposing to enfranchise some 900,000 women while he stoutly opposed the admission of the agricultural laborer. He denied woman's fitness for the franchise; she could not obtain the necessary experience, for a woman's only profession was marriage. What injustice, he said, to women to deprive them of a vote as soon as they became successful in their profession, and to give it only to failures! A quotation from the Queen's diary, telling against the measure, provoked a solemn objection from Mr. Sullivan to "the introduction of the sovereign's name to influence debate," which the Speaker held was not tenable. Sir Henry finally appealed to the Liberal party not to sanction the enfranchisement of a class of all others most subject to influence. Mr. W. E. Forster opposed the motion, not because he doubted the fitness of women, but because he regarded electioneering as man's work, and not woman's. Moreover, he objected to giving a vote without accompanying it with the capacity of being elected. He denied that a majority of the women wished for the vote, and predicted that the motion could never be carried. After some remarks from Sir H. Jackson, who asserted that the franchise was desired by considerable numbers of the most distinguished women, the resolution was negatived by 217 to 103. A resolution, moved by an Irish member, Mr. Melton, on February 14th, in favor of the assimilation of the Irish borough franchise to the system existing in England and Wales, was supported by Mr. W. E. Forster and the Marquis of Hartington, but opposed by Mr. Lowther and the Chancellor of the Exchequer, upon the

ground that there was no necessity for a change in the electoral system so lately settled. Upon a division, the resolution was rejected by 256 to 187.

On March 12th the Clerical Disabilities Bill, proposed by Mr. Goldney, to enable clergymen of the Church of England without cure of souls to sit in Parliament, was rejected by 135 to 66, Mr. Cross having pointed out that if clergymen wanted to come into Parliament, all they had to do was to take advantage of the act of 1870, which allowed clergymen to lay aside their orders.

On April 2d Mr. Mundella's bill, repealing the property qualifications for serving on municipal corporations, boards of guardians, local boards, etc., was discussed. Mr. Burt, in supporting the bill, mentioned that, though he was capable of sitting in Parliament, he had lived fourteen years in the borough which he represented without being eligible for a municipal office. The bill was thrown out by 173 to 167.

The House of Lords adjourned on April 4th, and the House of Commons on April 7th, for the Easter vacation.

The continuance of foreign complications frequently gave an opportunity to the Opposition to attack the Government. In the House of Commons, the largest share of attention was bestowed on the Greek claims. Mr. Cartwright about the middle of April moved a resolution, supported by Mr. Gladstone, Sir William Harcourt, and other leading Liberals, demanding the settlement of the question in accordance with the Berlin protocol. He was defeated by a majority of 16. More than three months later Sir Charles Dilke reopened the question in a more elaborate manner, but the debate was adjourned without a decisive division. Some signs of restlessness and suspicion with respect to the Afghan policy of the Government were visible early in the year, which died out rapidly after the announcement, on the 19th of May, that bases of peace with Yakoub Khan had been settled. On the 4th of August a vote of thanks was carried in both Houses to the troops engaged in the Afghan campaign. The resistance was slight.

The war in South Africa, which, when Parliament met in December, 1878, had been looked upon as a matter of minor importance, rose into prominence in February, 1879. A discussion of the whole subject was brought on, when, on the 25th of March, the Marquis of Lansdowne moved a resolution in the House of Lords, censuring Sir Bartle Frere for provoking Cetwywayo to war "without authority from the responsible advisers of the Crown," condemning the inception of an offensive war "without imperative and pressing necessity or adequate preparation," and regretting the maintenance of the High Commissioner in power after the censure passed upon him in the Colonial Secretary's dispatch. The resolution was rejected by a majority of 156 against 61. On

the 27th of March a debate on a similar resolution, proposed by Sir Charles Dilke, began in the House of Commons. After a discussion lasting three nights the resolution was negatived by 306 against 246 votes, a smaller majority than that obtained by Ministers in the division on the Eastern Question. The official announcement of the end of the war caused great rejoicing, not only on the Ministerial, but on the Opposition benches.

The Government was very reticent in regard to Egyptian affairs, but repeatedly gave a pledge that no engagement involving a guarantee would be entered into without the knowledge of Parliament. At the close of the session Sir Julian Goldsmid animadverted upon the interference of the Government in the internal affairs of Egypt, but the Government was not attacked by any formal resolutions. (See EGYPT.)

Indian affairs, except in relation to the Afghan war and the frontier question, were not prominent in Parliament. (See INDIA.)

The estimated revenue of 1878-'79 was £83,230,000, and the actual receipts, in spite of an apparent decrease in the consuming power of the country, fell short of this calculation by no more than £114,000. But there was a wider discrepancy between the estimated and the actual expenditure. Sir Stafford Northcote had reckoned in 1878 upon an outlay of £81,000,000, or nearly two millions and a quarter less than the estimated income. The actual outgoes were £85,400,000, due to the accumulation of the extraordinary charges, those for the Zooloo war being added to the Exchequer bonds representing the unpaid balance of the six millions vote of credit. The result was that in April the Chancellor of the Exchequer had to deal, not, as he had anticipated, with a surplus of a million or thereabouts, but with a deficit of £2,291,000, and with not less than £4,750,000 of unpaid Exchequer bonds. For 1879-'80 he estimated a revenue of £83,055,000 and an expenditure of £81,153,000, not including extraordinary charges. The surplus, he believed, would be adequate to defray the current expenses for the Zooloo war. With respect to the outstanding Exchequer bonds, Sir Stafford Northcote proposed that payment be postponed, on the understanding that two millions were to be paid off next year and the balance in the following year. The policy of the Government was attacked by Mr. Gladstone, Mr. Rylands, Mr. Baxter, Mr. Goschen, and others; but on a division the Government were supported by a majority of 303 against 230.

Frequent allusions were made to the distress prevailing throughout the country, and particularly to the complaints of the agricultural interest. In both Houses the doctrine was propounded that free trade was at the root of all difficulties; but this view failed to obtain any Parliamentary support, and the Prime Minister emphatically repudiated the protectionist system in any shape or form. The representa-

tives of the sugar industry, however, complaining that Continental countries have crushed them by an unfair bounty system, induced the Government to assent to an investigation of the subject by a select committee. The London tradesmen obtained the appointment of another select committee to inquire into the working of the coöperative stores, which they allege have injured their business. An inquiry into the wine duties was initiated, mainly with a view to procuring such modification of the alcoholic scale as might induce foreign countries, and especially Spain, to deal more reasonably with British trade in their tariff arrangements. The same uneasy feeling which prompted these inquiries inspired the demand for the establishment of a Ministry of Commerce. This was proposed by Mr. Sampson Lloyd, and the Government were willing to accept the proposal, if the proviso that the Minister of Commerce shall be a member of the Cabinet were omitted. An amendment to this effect was, however, rejected by the House, and Mr. Lloyd's resolution adopted by a majority of 20.

On March 11th Sir W. Lawson moved a resolution favoring the transfer of the power of granting licenses for the sale of intoxicating drinks from magistrates to inhabitants of localities. He set forth, in language borrowed from a resolution of Convocation, that, as the ancient and avowed object of licenses was to supply a public want without detriment to the public welfare, the legal power of restraining the issue of them should be placed in the hands of those most likely to be injured; and he based its necessity on the notorious increase of drunkenness, arising, as he contended, from the unlimited facilities for the opening of public houses. The words of the resolution, though wide enough to include the Permissive Bill, Licensing Board, the Gothenburg system, etc., did not commit anybody to details. All the religious bodies of the country had decided in favor of it, and there was no organized opposition to it except from the publicans. Mr. Wheelhouse moved a counter-resolution, objecting to any change in the present licensing arrangements. He denied that drunkenness was on the increase, and attributed its mischief not so much to the legitimate licenses as to the grocers and other "off" licenses. Sir M. Ridley, on behalf of the Government, opposed the original resolution, the fatal defect of which was its subordination of the privileges of the sober to the reformation of the drunkards. The House ought not to deal with a question of this kind by passing a vague resolution, which merely meant that something must be done. He did not see in local option the elements of a satisfactory licensing tribunal, which ought to be judicial, consistent, and independent. The Government held that further legislation of some kind was necessary, whether by increased police supervision or enlarged magisterial discretion, or by increas-

ing the rent necessary for licenses; and they, therefore, though they opposed the resolution, could not accept the amendment which merely meant *Non possumus*. Mr. W. E. Forster said, though he had always opposed the Permissive Bill, believing it to be oppressive and impracticable, he intended to support this resolution, because it embodied the principle of local control. The evil of drunkenness, he believed, could most effectually be checked by those who had the local knowledge; and he also held that the wishes of the inhabitants of a district should be consulted. Lord Hartington declined to vote for the resolution, to which different meanings were attached by its supporters. The resolution was rejected by 252 to 164. Mr. Wheelhouse's amendment was negatived without a division; and Lord T. Hervey's proposition, to defer legislation on the subject until the report of the Lords' Committee on Intemperance had been received, was defeated by 169 to 121.

On June 13th, in the House of Lords, Lord Truro moved the second reading of a bill to prohibit vivisection. On evidence given before the Royal Commission on the subject, Lord Truro denied that great medical and surgical discoveries had been made through vivisection, and he told the House that the opponents of vivisection would persevere until they should secure its prohibition. Lord Shaftesbury, who supported the bill, argued that the restrictions imposed by the bill of 1877 had not had the effect of preventing cruelty. Some anæsthetics inflicted more pain than the operation itself. The question was taking a prominent position in Europe, even in Russia. The system had a tendency to brutalize the human heart. He repudiated the doctrine that the Almighty sanctioned the infliction of these refined tortures on any of his creatures. The Bishop of Peterborough deprecated the abolition of vivisection in the interest of humanity, though he would guard the practice by any conditions which might be thought necessary. He had heard from the lips of one of the greatest surgeons that an operation which had been discovered in our own times, and by which thousands of human lives had been saved, was owing to observations made on twelve rabbits which had been subjected to vivisection. Lord Aberdare, as one who had filled the office of President of the Society for the Prevention of Cruelty to Animals, opposed the bill on the ground that it would prohibit vaccination and many useful operations. The motion was negatived by 97 to 16.

On August 15th Parliament was prorogued.

Immediately after the prorogation Great Britain was the scene of a determined and passionate political campaign, which was opened by Mr. Gladstone at Chester and Sir Charles Dilke at Chelsea. Meetings addressed in the latter part of October at Manchester by Lord Salisbury, Mr. Cross, and Colonel Stanley, were remarkable for their enthusiasm, as well as the

meetings addressed the following week in the same city by Lord Hartington and Mr. Bright, on which occasion the Liberal champions were welcomed by equally large crowds and with as much enthusiasm as had greeted the representatives of the Government the week before. Hardly any new arguments were presented in these oratorical displays, which seemed mainly to have been intended to rouse the political spirit of the constituencies. The Prime Minister's speech at the Guildhall on Lord Mayor's day had been expected with general curiosity, as likely to contain some interesting references to the Ministerial policy and the relations of the empire. But Lord Beaconsfield was more than usually reserved. He spoke with ominous mystery of the state of Europe, "covered with millions of armed men," and would only express a qualified hope of the maintenance of peace. He enjoined Englishmen to hold fast by the motto, *Imperium et Libertas*, and pointed out the manifold perils of an "insular policy." He, as well as the Chancellor of the Exchequer, rejoiced in the improvement of trade, and was hopeful that financial embarrassments would soon disappear. The most remarkable and crowning episode of party warfare was Mr. Gladstone's extraordinary campaign in Scotland, which began in the last week of November and lasted almost without interruption for fully two weeks. In the beginning of the year Mr. Gladstone had been invited to become the liberal candidate for Mid-Lothian, a constituency traditionally subservient to the Conservative influence of the ducal house of Buccleugh. During the first week of the campaign he reviewed for the Mid-Lothian electors the whole field of politics, domestic, foreign, financial, ecclesiastical, and local, in a series of elaborate speeches. Quitting Edinburgh, he went north into Perthshire, and, again returning to the southwest, delivered his rectorial address before the University of Glasgow, instantly resuming the political controversy and sustaining it all the way home through Scotland and the north of England as far as Chester. During this campaign he attracted the general attention of the country, and it was described as having never been surpassed as a succession of grand oratorical displays.

Ireland during the year was the scene of a violent agitation, and in some localities of severe distress. In consequence of the poor harvests and the general decline in the prices of farmers' produce, the tenants of Ireland demanded a proportionate reduction of rents. The first public demonstration occurred on June 8th, when an open-air meeting was held at Westport in County Mayo, which was attended by from four to five thousand men. The sentiments of the meeting were expressed by the inscriptions on the banners, such as "The land for the people," "Down with jobbing landlords," and others of a similar character. The principal speaker on the occasion

was Mr. Parnell. In the course of his speech he said: "You must show the landlords that you intend to hold a firm grip on your homesteads and land. You must not allow yourselves to be dispossessed as you were dispossessed in 1847. You must not allow your small holdings to be turned into large ones. If rents are not reduced on those properties on which the rents are out of all proportion to the times, you must help yourselves, and the public opinion of the world will stand by you and support you in your struggle to defend your homesteads." A resolution was also carried without a dissentient voice, "That the occupiers being unable to pay the current rents, owing to bad harvests and other depreciations of farmers' produce, any landlord who evicts a tenant for non-payment of an unfair rent is an enemy to the human race, and we pledge ourselves to protect by every means in our power the victims of such oppression." It was remarked that the clergy had taken no part in the meeting. Indeed, Archbishop McHale had put his veto upon it in advance in a letter published in the "Freeman's Journal," in which he condemned the meeting as "a combination, organized by a few designing men, who, instead of the well-being of the community, seek only to promote their personal interests; and the faithful clergy will not fail to raise their warning voices, and to point out to the people that unhallowed combinations lead invariably to disaster and the firmer riveting of the chains by which we are unhappily bound as a subordinate people to a dominant race." The Government at once acted promptly in the matter. A deputy inspector-general of the constabulary was dispatched on a special mission to the districts concerned, to consult with the magistrates and local constabulary, and report what additional police were required in order to insure full protection to all persons in the exercise of their legal rights. Considerable reinforcements were drafted into the districts concerned, and notice was given that in the event of any outrage the cost of these measures would be levied upon the district, where it occurred. Another meeting was held on June 15th at Milltown, County Galway, at which the language used by the speakers was even more violent than at Westport. No further meetings were held during the summer, but occasional murders were committed in the disaffected counties. After the close of Parliament, Mr. Parnell made a tour through Ireland in favor of the tenant-right agitation, and meetings were addressed by him at Limerick, Tipperary, Tuam, Ennis, and other places. Large crowds attended these meetings, and the spirit manifested by the people was very violent. In his addresses to the meetings Mr. Parnell dwelt upon the necessity for a revision of the relations between landlord and tenant, and declared that if the tenants would refuse to pay any rent until a satisfactory reduction was made, the landlords would be unable to resist.

Resolutions were passed calling upon Parliament to consider the depressed condition of Irish farmers, and pledging those present not to occupy any farm from which a tenant had been evicted for non-payment of a rack-rent. At Tullow Mr. Parnell, while denouncing the landlords as rapacious, insisted that the Government should appoint a tribunal to determine what are fair rents, and asserted that the land question could never be satisfactorily settled until the occupiers were the owners of the soil.

An attempt was made by Mr. Parnell to call a national convention, in which he intended to reconstruct the Home Rule party. The attempt failed, however, through the opposition of the more conservative members of the party. On the other hand, Mr. Parnell in October organized a National Irish Land League, of which he was chosen president. The objects of the League were clearly indicated in the speeches made at the different meetings—a reduction of rents, and refusal to pay if such a reduction were refused, and, finally, an entire change in the land laws, peasant proprietors to be substituted for the landlord. While Mr. Parnell in his speeches avoided a direct breach of the law, other speakers were not so careful; and the consequence was that on November 19th three of the speakers at a meeting held on the 2d at Gurteen, County Sligo, were arrested on a charge of having used seditious language. These three were Mr. James Bryce Killen, a barrister, Mr. Michael Davitt, a liberated Fenian convict, and Mr. James Daly, proprietor of the "Mayo Telegraph." The prisoners after a preliminary hearing were admitted to bail. Large meetings were subsequently held at Balla, Dublin, Liverpool, and in Hyde Park, London. The last was the largest ever held there, being attended by over 100,000 persons, to protest against the arrest of Davitt, Daly, and Killen. Resolutions to that effect, as well as calling for a revision of the land laws in Ireland, were passed. On December 5th one of the secretaries of the Irish National Land League, Mr. Thomas Brennan, was arrested on a charge of seditious language at the Balla meeting on November 22d. He also was admitted to bail.

The distress in the west of Ireland was described as very great indeed, and to relieve the suffering the Duchess of Marlborough, wife of the Viceroy of Ireland, addressed an appeal to the benevolence of the British public. In her address she said: "In the counties of Kerry, Galway, Sligo, Mayo, Roscommon, Donegal, and the south of the county of Cork—in fact, in most of the western districts of Ireland—there will be extreme misery among the poor, owing to want of employment, loss of turf, loss of cattle, and failure of potatoes, unless a vigorous effort of private charity is got up to supplement the ordinary system of Poor-Law relief."

In England, the agricultural outlook was very poor. Continued rains had seriously damaged

the crops, while the competition of American produce interfered with the sale of the remainder of the crops. In this state of affairs a large number of farmers organized for emigration, or turned their attention to other pursuits, so that many farms remained unlet in spite of the reductions made on numerous estates by the landlords.

GREECE, a kingdom of southeastern Europe. Reigning King, George I., born December 24, 1845, second son of the reigning King of Denmark; elected King of the Hellenes by the National Assembly at Athens, March 18 (30), 1863; accepted the crown June 6, 1863; declared of age by a decree of the National Assembly, June 27, 1863; married October 27, 1867, to Olga, daughter of the Grand Duke Constantine of Russia, born August 22, 1851. Their children are: Constantinos, Duke of Sparta, born August 2, 1868; George, born June 24, 1869; Alexandra, born August 30, 1870; Nicholas, born January 21, 1872; Maria, born March 3, 1876.

The area is 19,353 square miles; the population, according to the census of 1879, 1,679,775. The following table shows the area and population of each of the nomarchies into which the kingdom is divided:

NOMARCHIES.	Square miles.	POPULATION IN 1879.		
		Male.	Female.	Total.
Attica and Beotia.....	2,451	99,640	85,724	185,364
Eubœa.....	1,574	49,543	45,593	95,136
Phthiotis and Phœcis.....	2,058	65,351	63,059	128,410
Aœarnania and Etolia.....	3,024	71,647	66,797	138,444
Achaia and Elis.....	1,908	95,908	85,724	181,632
Arcadia.....	2,028	78,180	70,775	148,955
Laconia.....	1,678	60,842	60,274	121,116
Messenia.....	1,226	81,855	73,905	155,760
Argolis and Corinthia.....	1,448	63,679	67,402	136,081
Cyclades.....	926	65,112	66,908	132,020
Corecra (Corfu).....	427	55,126	50,938	106,109
Cephalonia (Cephalonia).....	302	39,379	40,964	80,543
Zacynthus (Zante).....	273	28,935	20,587	44,522
Soldiers and marines.....	20,523	20,523
Sailors out of the country.....	5,180	5,180
Total.....	19,353	881,080	798,695	1,679,775

The movement of population has been as follows:

YEARS.	Marriages.	Births, exclusive of still births.	Deaths.	Excess of Births.
1874.....	9,529	45,212	29,863	15,349
1875.....	10,250	44,386	30,986	13,450
1876.....	9,773	47,243	31,083	16,165
1877.....	9,472	46,355	31,280	15,075

In the budget for 1879 the receipts were estimated at 45,808,000 drachmas, and the expenditures at 60,078,760 drachmas (1 drachma = 19.3 cents).

The foreign debt at the close of 1878 amounted to 395,513,422 drachmas, and the home debt to 147,569,480 drachmas; in all, 543,082,902 drachmas.

The strength of the army on a peace footing is as follows:

Infantry.....	16,186
Chasseurs.....	4,082
Cavalry.....	545
Artillery.....	1,950
Engineers.....	1,104
Sanitary troops.....	800
Total.....	24,376

There is in addition a corps of gendarmes comprising 2,508 men.

According to an estimate of the Minister of War, the army in time of war will comprise 200,000 men, of whom 120,000 belong to the active army and its reserves, 50,000 to the landwehr, and 30,000 to its reserve. The general staff consists of 19 officers. The fleet in 1877 consisted of 1 ironclad, 1 monitor, 1 royal yacht, 8 screw-steamers, and 10 sailing vessels.

The Turco-Greek Commission appointed under the Treaty of Berlin to rectify the frontier between Turkey and Greece assembled in January. On February 13th it was recorded in the protocols that the Commission was unable to come to an understanding as to the basis on which the negotiations were to be carried on. The standpoint taken by Mukhtar Pasha, the principal Turkish commissioner, was that the delimitation indicated in the 13th protocol of the Congress was never intended to be binding on the Porte, as was clear from the 18th protocol, in which, in reply to the demand of Caratheodori Pasha to adjourn the decision on the 24th article of the treaty, it is stated that, in the event of Turkey being unable to come to an understanding with Greece on the subject of the frontier regulation suggested in the 13th protocol, the Powers reserved to themselves to offer their mediation. The President of the Congress, Mukhtar Pasha represented, declared distinctly that the paragraph in question expressed not a resolution, but only a wish on the part of the Congress, to which the Porte was asked to accede. The Powers but expressed their desire to see the negotiations succeed, and there seemed no occasion then either for the Porte giving its opinion on the subject or for the Congress taking any resolution, seeing that, according to the precise statement of the President, there was no resolution taken by the Congress with regard to the extent of the frontier delimitation, much less any consent on the part of Turkey to any such resolution. The line indicated in the 13th protocol as embodying the wish of the Powers in this respect might, and indeed would, be taken into consideration, but could scarcely be accepted by the Porte as the unalterable basis on which these negotiations must be carried on. Mukhtar Pasha, while maintaining this view, expressed his readiness to take into consideration any positive line of delimitation which the Greek Commissioners might propose, discussing it fairly on its own merits. According to Mukhtar Pasha, in judging of any line to be proposed by the Greek Commissioners, the ethnographical conditions of the territory claimed would demand the first and foremost consideration. On the Turkish

side of the present frontier line the population was a mixed one of Greeks, Albanians, and Wallachs, Mohammedans and Christians. Not the Greeks alone, but all of these, had a right to be considered in any eventual cession of territory to Greece. In reply to all this, the Greek Commissioners said that they could propose no other line but that indicated in the 13th protocol, their instructions forbidding their entering into negotiations on any other basis, and much less themselves proposing another. Minister Delyannis, on receiving the report of the Greek Commissioners, had recourse to M. Waddington, informing him of the state of the case; whereupon the latter sent a note to the Porte, expressing the regret of the French Government at the slow progress of the negotiations, and supporting the view of the Greek Government that the basis of negotiations could only be that laid down in the 13th protocol. The negotiations were again taken up, and in the beginning of April a new frontier line was proposed by the Porte. On the side of Thessaly, the line followed nearly that indicated in the protocol, including Volo, Larissa, and Agrafa. In Epirus it included the valley of the Arta, together with the town of that name—Janina and Preveso, however, remaining in the hands of the Turks. On April 6th a deputation of Epirotes presented an address to the King praying him not to consent to the abandonment of the demand of the cession of Janina to Greece, as such a course would seriously affect Greek interests. The King in reply said that the question was one of vital importance to Greece, and expressed a hope that the Great Powers would never commit the injustice of refusing the claim of Greece to Janina. On June 22d the dragomans of the British, French, German, Italian, and Russian embassies presented to Caratheodori Pasha, the Turkish Minister of Foreign Affairs, identical notes urging the Porte to appoint commissioners for the settlement of the question of the Greek frontier. In the beginning of July the Turkish Government officially notified the Powers of its readiness to appoint the commissioners, and soon after appointed Aarifi, Munif, and Nedjib Pashas. Upon the change in the Turkish Ministry, however, these names were recalled, and on August 16th Safvet, Sawas, and Ali Said Pashas appointed in their places. In August the Turkish Government concentrated large numbers of troops on the frontier, under the command of Edhem Pasha, who hastened to take up good positions in front of the town of Larissa. Still more remarkable than these movements of troops was the distribution of arms which had been ordered by the Turkish Minister of War among the Albanian Mohammedans, amounting to 6,400 Snider guns and 5,000 percussion guns, with a considerable quantity of ammunition. The Mohammedans on receiving these arms were instructed not to leave their homes, but to hold themselves in readiness for

marching. This distribution among fanatical Mohammedans created considerable uneasiness among the Christian population of Epirus and Thessaly.

The first meeting of the new Turco-Greek Commission was held on August 22d, when the Commissioners exchanged credentials and discussed the course of procedure. Safvet Pasha declared to the Greeks that the Sublime Porte was ready to accept the frontier suggested by the Treaty of Berlin as the basis of negotiations, but at the same time repeated all the reserves and protests it had formerly urged in this respect. He also declared that the Porte contested the obligatory character of the protocol. The discussion on this question of the obligatory or non-obligatory character of the protocol was continued in the following sessions. In the fourth session, held on September 11th, the Greek delegates, while maintaining their view of the question, suggested that, as neither party wished to impose its view on the other, the general question as to the obligatory or non-obligatory character of the protocol might be for the moment left in abeyance, and the more practical question as to the new line of frontier might be discussed. Safvet Pasha thereupon prepared and read a short memorandum, in which he expressed satisfaction that the Hellenic plenipotentiaries had somewhat approached the point of view of the Ottoman Government, and declared that he and his colleagues were ready to enter upon the practical question, taking the 13th protocol as the basis of the negotiations. Another session, held on October 5th, brought out a declaration from the Greek delegates, which had been approved by the Powers, that the 13th protocol of the Berlin Congress should be taken as a starting-point in the negotiations. The Turkish delegates, however, insisted that the indications in the protocol must be susceptible of modifications. The meeting then adjourned to allow the Greek delegates to communicate with their Government. Another meeting was held on October 24th, when the Turkish delegates declared that the part of Thessaly and Epirus which was left to Turkey by the line of frontier indicated in the 13th protocol would be in an isolated position and without a port, and that it was therefore impossible to accept it. The Greek members of the Commission stated their demands, and Sawas Pasha, Turkish Minister for Foreign Affairs, addressed a note to the Powers, pointing out that these demands exceeded the frontier line indicated in the 13th protocol. At a meeting of the Commission held on November 17th, the line of frontier proposed by the Porte was indicated, giving Greece an extension of frontier to the west, but leaving Turkey almost the whole of Epirus.

Elections for the Chambers were held on October 5th. All the Ministers were returned except those of Marine and Justice, and a majority for the Ministry was secured. The

Chambers were opened on November 1st by the King, who said in his speech that the negotiations with Turkey were shortly expected to have a favorable issue. It was necessary, however, that the forces of the country should be maintained in an effective condition, and military preparations must continue, because strength greatly regulated the relations between nations.

GREEK CHURCH. The following table gives an estimate of the population connected with the Greek or Orthodox Eastern Church at the end of 1879, and compares it with the entire population of the several countries:

COUNTRIES.	Total population.	Population connected with Greek Church.	Percentage of Greek Church to total population.
Russia, inclusive of Finland	88,823,000	60,600,000	68·6
Austria-Hungary.....	87,712,000	3,205,000	8·5
Bosnia and Herzegovina..	1,212,000	571,000	47·2
Roumania.....	5,876,000	4,700,000	57·4
Servia.....	1,577,000	1,487,000	94·5
Montenegro.....	286,000	286,000	82·5
Greece.....	1,680,000	1,662,000	98·9
Bulgaria.....	1,800,000	1,260,000	67·7
Eastern Roumelia.....	875,000	751,000	50·0
Turkey (except Bosnia, Herzegovina, Bulgaria, and Eastern Roumelia)	43,000,000	3,425,000	7·9
China.....	5,000
Japan.....	5,000

Adding to the above figures a population of about 10,000 scattered through all other countries, especially in North America, the aggregate population connected with the Greek Church may be estimated at about 77,912,000. It will be seen that the Greek Church in 1879 controlled the majority of population in seven countries, in the following order: Greece, 98·9 per cent.; Servia, 94·5; Roumania, 87·4; Montenegro, 82·5; Russia, 68·6; Bulgaria, 67·7; Eastern Roumelia, 50. Besides, a large minority (47·2 per cent.) belongs to this Church in Bosnia and Herzegovina, where the remainder is divided between the Roman Catholic Church and Mohammedanism.

The most prominent bishop of the entire Church is still the Patriarch of Constantinople, but the churches of Russia, Austria, Greece, Servia, Roumania, Montenegro, Bulgaria, and the churches of Bulgarian nationality in Eastern Roumelia, are independent of his jurisdiction. The Patriarch has formally recognized the entire independence of the churches of Servia and Roumania. Therefore, although the honorary preëminence of the see of Constantinople continues, the direct jurisdiction of the Patriarch has become limited to the Greeks living in the Turkish Empire. The progressing consolidation of the Bulgarian nationality, and the prospective annexation of large districts of the European part of Turkey to Greece, are likely soon to reduce this jurisdiction of the Patriarch to still narrower limits.

As the Greek Church in Bosnia and Herzegovina is of the same (Servian) nationality as a large portion of that in Austria-Hungary, the

Austrian Government has given special attention to the establishment of a closer union between the two churches. It is estimated that in Austria-Hungary about 3,100,000 inhabitants belong to the Servian nationality. Adding to these the population of Bosnia and Herzegovina, Austria now rules over more than 4,300,000 people of that race, considerably exceeding in number all Servians living outside of Austria. The establishment of a strong ecclesiastical center in Austria for all Servians appears therefore to many Austrian statesmen as a matter of great political importance. Up to the time when the Treaty of Berlin was concluded, the church of Bosnia and Herzegovina was under the direct jurisdiction of the Patriarchate of Constantinople. The Patriarch appointed the bishops, who generally were Greeks and did not understand the language of the natives. This rule of Greeks over Servian churches has long called forth considerable dissatisfaction, which in late years greatly increased as the national feeling among the different branches of the Servian people grew stronger. When the Treaty of Berlin in 1878 placed Bosnia under the administration of Austria, the Servians of Austria fostered this feeling of dissatisfaction. The history of the past relations between Constantinople and the Servian nation was appealed to as a proof that the jurisdiction claimed by Constantinople over the Servians is in fact a usurpation, and that the latter are therefore fully justified in shaking it off as soon as they have the power. At the time when Servia was a powerful kingdom it had its own Patriarch at Ipek, whose independence the Patriarchs of Constantinople were prevailed upon to recognize. The Patriarchs of Ipek maintained their supremacy even after the subjection of the country by the Turks in 1389. In 1690, when the attempted rising of the Servians against Turkish rule had failed, the Patriarch Arsenius of Ipek, with 30,000 Servian families, settled in Hungary. This Patriarch was recognized by the Austrian Government as metropolitan, and the Servian emigrants were authorized to elect thereafter a Vayvode and a Patriarch. After the death of Patriarch Arsenius, however, the Servians of Hungary elected only metropolitans, who remained dependent upon the Patriarch who had been elected at Ipek as successor of Arsenius. This dependence was greatly disliked by the Court of Austria, which entered into negotiations with the Patriarch of Ipek in regard to the transfer of the Patriarchate to Austrian territory. In consequence of these negotiations, Patriarch Arsenius Yoranovitch Shakobent, who felt aggrieved by the Turkish rule, emigrated with several thousand families to Hungary, bringing with him all the documents and church utensils of the Patriarchate of Ipek. After the death of the Austrian Metropolitan he was confirmed by the Empress Maria Theresa, in 1741, as Patriarch, Archbishop, and Metropolitan of the entire Servian Church. After his death the

title Patriarch fell into disuse, but the metropolitan and archbishop, who was elected by the Servians of Hungary and who took up his residence at Carlovitz, was considered as the head of the national church of Servia and the legitimate successor of the Patriarch of Ipek. The see of Ipek existed nominally until 1765 (according to others until 1769), when it was united with the see of Constantinople. In Hungary the title Patriarch was revived in 1848, and the Patriarch Archbishop of Carlovitz therefore appears now more than ever as the legitimate heir of the national Patriarchate of Ipek. In view of these facts, it has been proposed by prominent leaders of the Servians in Hungary to place the Greek Church of Bosnia and Herzegovina under the Patriarch of Carlovitz. A measure of this kind would of course tend to promote a permanent political union of these countries with Austria-Hungary. At the end of November the Patriarch of Carlovitz and the Bishops of Ofen and Neusatz were called to Vienna and to Pesth, to be consulted on the subject by the Governments of Austria and Hungary.

In view of the proposed consolidation of the churches in Bosnia and Herzegovina with the Servian Church of Hungary, the proceedings of the Servian Church Congress of Hungary in 1879 were of more than ordinary importance. This Congress consists of the Patriarch, the bishops, and a number of clerical and lay deputies. Before the meeting of this Congress, which took place in October, it had been feared that serious differences of opinion would show themselves between the bishops on the one hand and the majority of deputies on the other. The deputies were desirous of using the influence of the Church for promoting the political aims of the Servian nationalists, while the bishops did not conceal their dissatisfaction with the liberal organization of the Church and the proposed legal organization of the parishes. After the opening of the Congress, however, a mutual understanding was attained, and the proceedings were harmonious. The law of organization was adopted almost unanimously. It provides that the parish priests shall not be *ex officio* presidents of the parochial meetings, but that the presidents shall be elected. The Congress was in session six weeks, and at its close, November 9th, the royal commissary announced that the Government intended to convoke the Congress again early in 1880 to complete its labors.

The Synod of the Church of Roumania was opened on November 26th, and was closed about the middle of December. In Roumania, as in Austria and in the new states of the Balkan peninsula generally, the cooperation of elective church synods in the affairs of the Church is now fully secured.

In Russia, the Holy Synod is contemplating a reform of the monasteries and nunneries under its jurisdiction. It is especially intended to deprive the lower grades of the religious

orders of the privilege of holding and acquiring private property. The annual revenue of the religious orders of Russia is understood to exceed 3,000,000 roubles. They are holders of dividend-bearing stocks of various kinds to the amount of 29,000,000 roubles.

GRÉVY, JULES, President of France. (For biography, see "Annual Cyclopædia" for 1878.)

GUATEMALA (REPÚBLICA DE GUATEMALA). To the details heretofore given concerning area, territorial division, population,* etc., it is only necessary here to add that the number of departments into which the republic is divided has been increased to twenty-two, these being, in order of importance, as follows: Guatemala, Sacatepéquez, Escuintla, Amatitlan, Chimaltenango, Sololá, Suchitepéquez, Quezaltenango, Retalhulen (formerly a part of Suchitepéquez), Totonicapan, Quiché, Huehuetenango, San Marcos, Alta Verapaz, Baja Verapaz, Peten, Izabal, Zacapa, Chiquimula, Jutiapa, Jalapa, and Santa Rosa.

By the terms of a new convention † signed in March in the city of Mexico, and exchanged and ratified in Guatemala on the 1st of August, the time allowed for the surveys and other operations necessary to the determination of the first section of the boundary-line between the two republics was extended to the end of 1879, and a still longer time granted for the final ascertainment and adjustment of the "precise frontier." The extension of time thus granted was regarded as important, as many circumstances had concurred to retard the commencement of the engineers' work, and as it is to be desired that such an accurate survey be made as shall render diplomatic discussion of the subject needless.

The President of the Republic is General Rufino Barrios, elected May 7, 1873. The Cabinet is composed of the following Ministers: Interior and Justice, Sr. Don A. Ubico; War, Finance, and Public Credit, Sr. Don J. M. Barrundia; Public Works and (*ad interim*) Foreign Affairs, Sr. Don Manuel Herrera; Public Instruction, Sr. Don Delfino Sanchez. In the course of the year an important change took place in the Cabinet by the retirement of Sr. Salazar, the previous Minister of State (Interior), and the appointment in his stead of Sr. Ubico, who had already given proof of zeal and activity as *Jefe Político* (Governor) of several of the departments, and also as Under-Secretary of War for more than two years. He is, besides, familiar with the duties of his new post, having filled it temporarily in 1877 during the absence of the Minister. Sr. Don Ramon Uriarte, Minister to Mexico since 1872, was recalled for his unsatisfactory conduct of the recent questions with that republic. His successor is Sr. Don Manuel Herrera, Jr.

The regular army is 3,200 strong, and the militia 13,000.

* See "Annual Cyclopædia" for 1875.

† See "Annual Cyclopædia" for 1873, p. 415.

The educational movement, which owes its origin to the Barrios Administration, continues to elicit the admiration of all interested in its progress. According to the report of the Minister of Public Instruction, there are at present in the republic, besides the University, the Normal School, the *Instituto Nacional* (the largest school in Central America), and other institutions for higher branches of study, about 600 primary schools (165 of which are for females), with an average daily attendance of 26,822 scholars. The monthly expenditure in teachers' salaries for these schools amounts to \$12,375, of which \$7,807 is paid by the central Government and the remainder by the municipalities. Unprecedented numbers of applications were made for admission to the various schools, and unusual energy displayed in the formation of new classes. The attendance at the Military School, which had for a few years considerably fallen off, has again risen to its wonted average; the Normal School, with a thorough reorganization under the auspices of a new director, began the year with an increase of nearly 50 per cent. in the number of pupils; and at the *Instituto Nacional* the new applicants were so numerous as to necessitate the enlargement of the already extensive edifice devoted to that highly creditable college. The Government had resolved upon the adoption of measures for educating the Indian population.

Judging from the report of the Minister of Finance, the condition of that department is no less flattering than it was in 1877, since which year no full returns have been published, and for which the revenue and expenditures were set down at \$4,503,523 and \$4,428,298 respectively, leaving a surplus of \$75,225. In the volume of the "Annual Cyclopædia" for 1878, however, it is remarked that, "in the course of the year (1877), the Government made proposals for a new loan of \$1,000,000 to meet current expenses and for the amortization of the convertible debt"; and as for 1879, the Government, it is understood, to provide for "immediate and pressing necessities, has issued a new internal loan, in bonds bearing interest at one per cent. per month; offered to the public at 80, and regarded so favorably that they are marketable at 78." This loan is to be paid out of the proceeds of the custom-house.

The total amount of the national debt was reported at \$5,369,529 on January 1, 1879. A committee appointed by Congress to consider and report on the British debt, suggested that a special tax of 5 or 6 per cent. be levied on all taxable commodities in the republic, until such time as the accumulated interest is paid off, and that the first claim on the revenue of the state be for the payment of the sums annually due the bondholders. The suggestions were favorably received by Congress, and the urgency of their adoption unanimously sustained.

As complementary to the remarks in our volume for 1878 on the International Bank, we transcribe the subjoined extract from a report dated December, 1879:

Among the most successful and useful enterprises which have been inaugurated in Guatemala during late years must be reckoned the International Bank. Although but a little over a year in existence, this bank has not only just paid a second dividend of \$700 per share, but has also laid the basis of a powerful reserve fund. Its capital consists of one hundred shares at \$10,000 each. Up to the present, only \$7,000 per share has been called in, with the results given above, which, of course, are highly satisfactory to the bondholders. All over the republic the notes issued by the bank are received at par.

The condition of commerce had not materially improved. The total values of the exports and imports for 1878 were \$3,918,912 and \$3,238,000 respectively, against \$3,773,180 and \$3,133,000 in 1877. Coffee was exported of the value of \$3,349,740; cochineal, \$220,000; muscovado sugar, \$110,600; hides, \$79,000; specie, \$320,000; indigo, \$1,300. The proportion of these articles taken by Great Britain represented a value of \$1,130,000; the United States, \$1,486,000 (New York, \$149,126); France, \$492,000; Germany, \$490,000. The values of the imports from the countries just named were as follows: Great Britain, \$994,000; United States, \$461,000; France, \$513,000; Germany, \$407,000. Duties were increased 25 per cent., payable in cash. Ten days' notice of this change was given to Central American ports; thirty days' to Mexico, California, and the republics of the south coast; two months' to New York and the West Indies; and four or six months' to European ports, according to the class of vessels in which goods are embarked. The duties now charged on merchandise may be estimated when it is stated that entries at the custom-house during the month ending June 26th amounted to \$140,405, on which the duties paid were \$98,353, or over 70 per cent. "The late change in the tariff is an added burden to commerce, which looks hopefully forward to good crops and a continuance of peace for an improvement in the situation."

The work on the Central Railway was progressing with unremitting activity, and an official report published in the Government journal under date of December 20, 1879, speaks of the completion of two or three miles of the line at the San José (Pacific coast) end of the line; the arrival of some rolling-stock; the expected early arrival of more; and the presence of a locomotive in operation to aid in the transport of materials, etc. Indeed, it is understood that the entire necessary material had been purchased early in the autumn: the woodwork, etc., in San Francisco; the locomotives and other rolling-stock in Philadelphia; and the rails in London. This railway is essentially an American enterprise, the company having been organized at San Francisco, and the shareholders and directors of the works

(Colonel Schlessinger and Mr. Nanne) being citizens of the United States. In the contract which the Government signed with Mr. Nanne, it is stipulated that, at various times during the progress of the work, sums of money shall be paid to him by the Government, such sums to amount altogether to \$210,000, to be paid, as understood, in seven installments. Owing to various causes, the Government not being (February, 1879) very well off as regards ready money, and Mr. Nanne being naturally anxious to arrange these payments upon a secure basis, so that there might be no trouble or indecision as to his receiving them when they fell due, all doubt in that respect was completely set at rest by the spontaneous offer of a number of the largest capitalists in Guatemala City to guarantee the whole amount promised by the Government; and not that alone, but also any further sums which the Government might contract to pay in a like manner for similar enterprises.

Of telegraph lines (the property of the Government) there were over 1,150 miles, with 52 officers;* and the Minister of Public Works reports that, on February 20th, telegraphic communication was formally opened with the republics of Honduras, San Salvador, and Nicaragua. A treaty has lately been made in New York by Mr. J. Baiz, Consul-General, on the part of the Guatemala Government, with the Central and South American Cable Company (a branch of the Western Union Telegraph Company), to connect with the United States on the Gulf coast near to the Mexican frontier. The tariff will be 75 cents per word for dispatches, against \$2.28 per word *via* Panama. Cheapness will not be the only advantage offered by the direct cable: there will likewise be a very material economy of time, since the minimum loss of time *via* Panama is five days, as dispatches have to be transmitted thence northward or *vice versa* by steamer.

By the terms of a new Constitution, promulgated on December 12, 1879, with upward of a hundred articles, all of a liberal and progressive tendency, and consequently the reverse of those of the rejected Constitutions of 1873 and 1874, the term of office of the President of the Republic is extended to six years, from four; the duties of the executive and the legislative powers are clearly defined; the law of *habeas corpus* is introduced, and complete liberty of conscience guaranteed; the conferring of military rank above that of colonel is an attribute of the legislative power, the promotion to be proposed by the executive; the legislative power declares war and makes peace; primary instruction is compulsory, and that given under the auspices of the Government is secular and gratuitous; perfect freedom in matters of religion is established, etc., etc. Agreeably to one of the articles of the new Constitution, the Presidential term of

office begins on March 1, 1880; consequently elections were to be held before that time. Several candidates were already in the field, but none with any apparent element of popularity. The general desire seemed to be for the reelection of General Barrios, or, if he should not consent, to elect Sr. Martin Barundia as his successor.

A new immigration law was promulgated in February, in which liberal inducements are offered to foreigners to settle in the republic, with the guarantee of protection of all their rights and interests.

GUEST, JOHN, a naval officer, born in Missouri in 1821, died at Portsmouth, New Hampshire, January 12, 1879. He entered the navy as a midshipman in 1837, and in 1843 became a passed midshipman, in 1853 a lieutenant, in 1866 a captain, and in 1873 a commodore. He served with distinction on the eastern coast of Mexico in the Mexican war, and took part on shore in several sharp engagements. In 1854 he was second in command of the seamen and marines of the United States steamer Plymouth in a severe and victorious fight with the Chinese rebels of Shanghai, who endeavored to plunder the foreign residents of that city. Captain Guest commanded the *Owasco*, of Admiral Porter's mortar flotilla, in the bombardment of Forts Jackson and St. Philip prior to and during the passage of Farragut's fleet by the forts on its way to New Orleans, April 24, 1862. He also commanded the same vessel at the bombardment of Vicksburg in the summer of the same year, and received the highest praise from his superiors. He was in command of the *Itasca* at both of the Fort Fisher fights, in which engagements he added to his previous enviable reputation as a gallant and discreet officer.

GURNEY, WILLIAM, an army officer, born in Flushing, Long Island, August 21, 1821, died in New York, February 3, 1879. He was in business in New York at the outbreak of the civil war, and was a lieutenant in the Seventh city regiment. In April, 1861, he entered the United States service with that regiment for the three months' term. Returning from that, he accepted a commission as captain in the Sixty-fifth New York regiment (the Fighting Chasseurs), and served with that regiment through the early campaigns of the war. In 1862 he was appointed an assistant inspector-general and examining officer on the staff of Governor Morgan. In July, 1862, he received authority to raise a regiment of his own, and in thirty days he recruited the 127th New York regiment, at the head of which he returned to the field, joining the Twenty-third Army Corps. He was assigned to the command of the Second Brigade of General Abercrombie's division in October, 1862, and in 1864 he went with his brigade to join General Gillmore's command, on the South Carolina coast. In December, 1864, he was severely wounded in the arm in an engagement at De-

* See "Annual Cyclopædia" for 1878.

voe's Neck, and was sent North for treatment. When convalescing he was assigned to the command of the Charleston post. While in command of Charleston he was promoted for gallantry in action to the rank of brigadier-general of United States volunteers; but he returned to New York with his regiment, and was mustered out in July, 1865. He returned

to Charleston in October, 1865, and established himself in business. In October, 1870, he accepted the position of Treasurer of Charleston County, which he held for six years. He was Presidential Elector for South Carolina in 1872, and in 1874 was appointed by President Grant a Centennial Commissioner, being elected a vice-president of the Commission.

H

HALE, Mrs. SARAH JOSEPH (BUEL), was born in Newport, New Hampshire, in 1795, and died in Philadelphia on April 30, 1879. This amiable lady was married in 1814 to David Hale, and left a widow with five children in 1822. She resorted to the pen as a means of support, publishing in 1823 "The Genius of Oblivion, and other Original Poems." In 1827 she published "Northwood, a Tale of New England," and during the same year was invited to take charge of a ladies' magazine which was about to be established in Boston. After some hesitation she decided to accept, and in 1828 she removed to that city. In 1837, the "Ladies' Magazine" having been united with "Godey's Lady's Book," published in Philadelphia by Mr. Louis A. Godey, Mrs. Hale became editress of the consolidated periodical, remaining in Boston, however, until 1841, when she removed to Philadelphia. In this position she advocated woman's advancement, urging that teachers of girls should always be of the female sex. She suggested the observance of a national thanksgiving in 1846. The idea of educating women for medical and missionary service in heathen lands was another thought of Mrs. Hale, and she devoted much labor to the securing of its practical adoption. In 1850 the first medical college for women ever founded was established in Philadelphia, and thus the opportunity was presented. The Ladies' Medical Missionary Society was formed, and under its auspices two ladies prepared for the work of treating the diseased bodies and undeveloped minds of women in heathen nations. In 1860 the Woman's Union Missionary Society for Heathen Lands was formed. Mrs. Doremus was the first President of this Society, Mrs. Hale succeeding her and holding the office nine years. In 1877 she retired from editorial labor. Among her published volumes are: "Sketches of American Character," "Traits of American Life," several tales, a manual for housekeepers, and "Woman's Record from the Creation to A. D. 1854." She wrote pleasing poetry, and was respected and esteemed by all who knew her.

HARTRIDGE, JULIAN, a lawyer and member of Congress, born in Savannah, Georgia, about 1831, died in Washington, D. C., January 8, 1879. He received a collegiate education at Brown University, Rhode Island, graduated at the Harvard Law School, and com-

menced the practice of law in his native city. After having held various public positions in the State of Georgia, and serving as a member of the Charleston Convention in 1860, he bore arms in the Confederate army during the first year of the war, and was subsequently a member of the Confederate Congress. In 1871 he was chairman of the Executive Committee of the Democratic party in Georgia, and in 1872 was delegate-at-large from that State to the Democratic National Convention, and elector-at-large on the Democratic ticket. He was elected to Congress as a Democrat in 1876 from the First Georgia District, and was reelected in 1878.

HAYMERLE, KARL, Freiherr von, an Austrian statesman, born December 7, 1828. He is descended from an old German family of Bohemia, one of the members of which was knighted by the Empress Maria Theresa. He was educated at the Oriental Academy of Vienna. Together with other students of this institution, he took part in the revolutionary movements of 1848. He was made prisoner, and was sentenced to death by Prince Windischgrätz, but was saved by the intercession of an old friend of the family. He completed his studies in 1850, and in the same year went to Constantinople as assistant interpreter to the Austrian embassy. During the Crimean war he was intrusted with a difficult and important mission to Omer Pasha, regarding the protection of Austrian subjects, which he carried out to the full satisfaction of his Government. In 1857 he went to Athens as secretary of legation, and in 1861 in the same capacity to Dresden, and in the following year received an appointment to the Bundestag in Frankfort, where he also remained during the Congress of German Princes. In 1864 he was appointed chargé d'affaires in Copenhagen, where he brought about a good understanding between the Austrian and Danish courts. After the war with Prussia he was appointed chargé d'affaires in Berlin, and here also through his ability restored good relations with his Government. In 1868 he was recalled to Vienna, where he was employed for a short time in the Ministry of Foreign Affairs, and then went to Constantinople as chargé d'affaires. In 1869 he was appointed Ambassador to Greece, and in 1872 to the Netherlands. In 1876 he was created a Baron (Freiherr), was appointed Ambassador to Italy

in 1877, and in 1878 was one of the Austrian delegates to the Congress of Berlin. When Count Andrassy retired from his office, it was thought desirable that one of the delegates to the Congress of Berlin should succeed him. As Count Karolyi, the second delegate, declined, Freiherr von Haymerle was appointed. He is regarded as one of the ablest men of the empire, and is described as very pleasant in company. He is the first Austrian who has held the office of Minister for Foreign Affairs since the establishment of the dual monarchy, Count Beust being a Saxon and Count Andrassy a Hungarian.

HAYS, ISAAC, a scientist and eminent physician, born in Philadelphia in 1796, died there, April 13, 1879. He graduated from the department of arts in the Pennsylvania University in 1817, and from that of medicine in 1821. His literary labors were very extensive and valuable. He edited Hall's edition of Wilson's "American Ornithology" (Philadelphia, 1828); Hoblyn's "Dictionary of Medical Terms," etc. (1846); a new edition of the same, from the last London edition (1855); Lawrence's "Treatise on Diseases of the Eye" (1847), and successive editions; and Arnett's "Elements of Physics" (1848). He was the editor of the "American Journal of the Medical Sciences," which is still published. It was originally started in 1820 as the "Philadelphia Journal of the Medical and Physical Sciences," and was edited by the late Professor Nathaniel Chapman. In 1826 Dr. Hays joined the editorial staff, and in 1827 it was converted into the "American Journal of the Medical Sciences," of which he was thenceforth sole editor until 1869, when his son was associated with him. He was elected a member of the Academy of Natural Sciences of Philadelphia in 1818, and was its president from 1865 to 1869. He was an active member of the American Philosophical Society, and for a number of years a member of its Council. He was one of the founders of the Franklin Institute, and in early years its secretary, and at the time of his death was the oldest living member. He was one of the oldest members of the College of Physicians of Philadelphia, and for a number of years one of the censors. He was one of the founders of the American Medical Association, and author of its code of ethics, which has since been adopted by every State and county medical society in the Union. Many other honorary positions were held by him in scientific bodies in this country and abroad.

HEALTH, NATIONAL BOARD OF. The evil results of quarantines, established at every country town or even cross-roads by irresponsible boards, wholly inefficient to protect the public health, but destructive of trade and prosperity, plainly pointed out the necessity for a National Board of Health. The Constitution gives no specific power to the General Government to make sanitary regulations. The "power to regulate commerce

with foreign nations," however, implies the control of that which interferes most materially with it. Epidemics destroy commerce; it may be conceded, then, that their prevention should be intrusted to the long purse and strong arm of the central Government, which alone can enforce obedience to its mandates. The act constituting the National Board of Health was approved on March 3d. The Board consists of eleven members, viz., seven civilian physicians, one army surgeon, one navy surgeon, one medical officer of the Marine Hospital service, and one officer from the Department of Justice. The duties prescribed are, that they should obtain information upon all matters affecting the public health, and advise the several departments of the Government, the executives of the several States, and the Commissioners of the District of Columbia, on all questions submitted by them, whenever in the opinion of the Board such advice may tend to the preservation and improvement of the public health. They are to cooperate with the Academy of Sciences, and to collect the views of leading sanitary organizations and scientists in order to perfect a plan, to be submitted to Congress at its next session, for a permanent health organization. This is explicit, and the Board has clearly understood and complied with these injunctions.

On June 3d the national quarantine law was passed. This is vague in terms, and gives little or no authority to do any specific work. The Board may request the President to appoint medical officers to assist consuls in foreign ports from which infection may be imported. To prevent the introduction of infectious diseases from foreign ports, or from one State to another, the National Board is to cooperate with State and municipal boards. The extent of this cooperation and the means by which it is to be carried out are not provided for. Should local provisions appear inadequate, the National Board is to report to the President, who may order it to make rules and regulations to meet the case. If the President approve these, the Board is to promulgate and the State authorities to enforce them. Should the State authorities fail in this duty, it is discretionary with the President to detail an officer to see to their enforcement.

In regard to the rules and regulations to be observed by vessels coming from infected ports, the Board has no more definite authority. It has power to obtain from consuls, and medical officers assisting them, weekly bulletins of the sanitary condition of foreign ports from which danger is apprehended. These warnings are invaluable. It is authorized to collect and publish weekly reports of the health of towns and cities throughout the United States. It is expected to procure information relating to the climatic and other conditions affecting the public health. It is to supply information and suggest rules and regulations concerning vessels, railroad trains, and other modes of in-

terior communication. In compliance with law the National Board publishes weekly bulletins, thus distributing gratuitously to those who are most interested in such matters a record of all important work done by the Board, or information gathered. Still further disseminated by the daily press, it thus furnishes to the working minds of the country the data most important for them to obtain, and which would be extremely costly in time and money if only to be accumulated by private endeavor. In one of its circulars it proffers aid, in means and information, to leading professional or scientific men who are willing to devote their labors to the objects in view. Being in complete communication with local boards and associations, it is in a position to mass and sift facts and to compare results, so as to reduce to a system all tentative efforts.

Beyond a doubt the most important function of the Board is the fashioning of a permanent organization. The deliberative wisdom of Congress will rarely be employed on a more important work than the framing of the act which will place the permanent National Board of Health on a solid basis, far above sectional or party considerations. It should become a great national educator, collecting facts and distributing knowledge, unadulterated by individual theories or prejudices. It must apply science to the stamping out of disease, and erect barriers against its importation, at the same time that it must render impossible all selfish or senseless quarantines suggested by other interests than the public health. The act must clearly determine the means and regulate the mode. Local rights and customs should be respected so far as they are not inimical to the interests of the general public. Suitable officers must be selected to carry out the provisions of the act with the greatest possible advantage to health and the least possible disturbance to trade. These delicate functions may be so exercised as to insure the barring out of all preventable diseases.

Other diseases have been ignored by the public mind, and in point of fact the National Board is judged by its yellow-fever work. It is difficult to say just how much effect upon the spread of this infection has been due to the labors of the National Board. The original bill contained a clause authorizing the Board to pay half the expenses of local boards, organized on the plan proposed by the National Board. This clause was altered. Doubtless it would have increased the efficiency of local boards, which have at least experience and interest to lead them to use such funds properly. By subordinating the local boards to the National Board uniformity of action is obtained. If the National Board is accused of halting and vacillating, it may be answered that its powers are ill-defined, its labors are in a new field, there are no precedents to guide, and there are many subtle questions of State and inter-State and national

rights involved. With the desire on all sides to waive other considerations than the public good, these causes account for hesitation and other sins of omission and commission. The *personnel* of the Board has also been the subject of much criticism. Physicians with lucrative practices and scientists with life-pursuits, if found, are not easily induced to surrender them and devote their entire energies to such purposes. It is conceded that some at least of the leading men of the country are members of the Board. The only proper inquiry is not who are they, but what are they doing? Here the people and the press have a proper topic for discussion. Early in the summer the Board issued a well-considered circular. If its terms seem too cautious, let it be remembered that the whole question is still an open one. Not only do physicians of all ranks differ in regard to diagnosis and treatment, but men of equal pretensions to science dispute rancorously whether yellow fever is contagious or infectious, preventable or non-preventable, exotic or indigenous. Hence the non-committal tone of the following official utterance of July 12th :

Whatever opinions may be held as to the causes of yellow fever and the recent appearance of that disease in Tennessee and Mississippi, it is best to act as if it were a disease due to a specific particular cause, which is capable of growth and reproduction, transportable, and may be destroyed by exposure to a temperature above 240° F., or by chemical disinfectants of sufficient strength if brought into immediate contact with it. It is also prudent to assume that the growth and reproduction of this cause are connected with the presence of filth, in the sanitary sense of that word, including decaying organic matters and defective ventilation as well as high temperature.

The cases of yellow fever recently observed should be considered as due to causes surviving from last year's epidemic, and not to recent importation from other countries. . . . The object of the present circular is to advise that all cities and towns be made clean, in a sanitary point of view. . . . The results of a careful sanitary inspection of almost any city or town will show the existence of collections of decaying and offensive matters previously unknown. . . . Such inspections, to be of value, must be thorough, and made by persons competent to recognize foul soils, water, and air, as well as the grosser and more palpable forms of nuisance. They should also be made by persons who will report fully and frankly the results of their observations, without reference to the wishes of persons or corporations. . . . The remedy is usually self-evident.

The weekly reports contain, besides other valuable information, the mortality from specific diseases of the chief cities of the world. The Board has also issued six bulletins, which contain rules and regulations "for securing the best sanitary condition of vessels, cargoes, passengers, and crews coming from infected foreign ports"; "for quarantined ports, with special reference to yellow fever"; "concerning the sanitary condition of vessels, cargoes, passengers, and crews going from an infected port of the United States to another port in the United States"; "for securing the best sanitary condition of railroads, station-houses, road-beds, and of cars, freights, passengers, and employees coming from a point where yellow

fever exists"; "to be observed by the health authorities of a place free from infection, having communication with an infected place"; "concerning the course to be adopted in a place already infected with yellow fever." These publications carefully embody the best sanitary and medical views of the day, and give plain and sensible directions for practical use. Reading them produces a conviction that, well followed, they would not only stay the progress of yellow fever, but increase the average of human health and life by eradicating the cause of half the ills which flesh is heir to. Inspectors and other employees of the Board may have erred through too much zeal; they may have been too inquisitorial; they may have been rash in telegraphing cases which were disproved by later diagnosis. In these ways they may have produced panics and injured the material interests of some communities, which have already suffered too much. These are the difficulties to be expected in the working of a new and untried scheme. But they are errors on the right side. The public has not heretofore been satiated with too much truth. In the end it will work out good. Nothing is more calming to apprehension than the certainty that there is no concealment. The publications of the Board have had a wholesome effect on public opinion in regard to sanitation. The people have learned the difference between dirt and filth, and, instead of resting satisfied with superficial cleanliness, they are seeking to eradicate the hidden evil.

In the diversity of opinions, the weight of testimony inclines to the view that yellow fever is a specific disease not originating in this country, but chiefly from the West Indies, where it has its habitat. In order to make a scientific examination of these important questions, the National Board organized a commission, composed of three physicians and a civil engineer, to visit the island of Cuba, called "the Havana Yellow Fever Commission of the National Board of Health of the United States." The Board instructed this Commission—1st, to ascertain the sanitary condition of the chief ports of Cuba, and to determine how to prevent the introduction of the cause of yellow fever into the shipping; 2d, to investigate the pathology of yellow fever and the changes and results which it produces in the human body; 3d, to obtain all information in regard to the endemicity of yellow fever in Cuba. In addition the Board enjoined them to attack other unsolved and perhaps insoluble problems in regard to the nature and natural history of yellow fever. They were to experiment on animals, and to seek to discover the immediate cause of yellow fever other than the production of the disease in man. Amply supplied with apparatus, photographic, microscopic, and chemical, for the prosecution of these researches, the Commission sailed from New York on the 3d of July, and arrived in Havana on the 7th. The Captain-General

furthered their aims in every way, and appointed twelve eminent physicians and *savants* as an auxiliary commission to cooperate with the American Commission during their stay, and to continue the study of yellow fever after their departure. Much valuable information collected is due to the zeal with which these learned and courteous gentlemen seconded their American *confères*. A circular containing questions was distributed over the entire island. The responses from Spanish commissioners, American consuls, physicians, and scientists furnished the Commission with reports, the most extensive yet amassed touching yellow fever.

The subjects proposed by the Board were treated in the following order:

I. *The principal ports of Cuba from which shipments are made to the United States.*—The "ports of entry" of Cuba are fifteen in number, of which eight are on the northern and seven on the southern side. The island has also two hundred minor ports on its coast-line of 2,200 miles. Twenty-five hundred vessels, carrying thirty thousand sailors, pass annually from Cuba to the United States. More than two fifths of these enter the port of New York. In 1875 only 571 out of 2,286 sailed to the eighteen ports south of Norfolk, which alone are liable to yellow fever. The intercourse with Cuba is largest during May and June, and decreases during the summer months. The people of the United States may well ask themselves whether their welfare would not be promoted by suspension of intercourse during the dangerous months. In January, 1879, it was stated before the Congressional committee investigating the epidemic, that the restriction on the West India trade of New Orleans injured that city to the extent of \$100,000,000. This statement passed unchallenged. The total exports of Cuba in 1878 were \$70,881,552. Imports into New Orleans from Cuba amounted to \$2,043,697. The United States is an indispensable market to Cuba, and any loss arising from the restriction of commerce to certain months would fall chiefly on the shipping interest. Sanitary hindrances to this trade do not and will not cause loss to any great amount.

II. *The endemicity of yellow fever in Cuba.* Though it may be suspected that the sickness which prevailed in Santo Domingo in 1498-'94, and in succeeding years in various countries bordering on the Caribbean Sea, was yellow fever, the first unquestionable epidemic of this fever occurred in 1640, in Guadeloupe. Its first recorded appearance in Havana was in 1761. The next year Havana was captured and held by English soldiers, and was ravaged by another epidemic. Before 1761 Cuba was noted for its salubrity. Yellow fever could not have prevailed, if at all, to any great extent. Since 1761 it has been present every year, and it is therefore said to be endemic. Some authorities aver that yellow fever was imported from Africa in the slave-ships. Several thou-

sand slaves were entered in 1763. In 1774 there were 75,180 blacks. Diligent inquiry was made for some spot on the island exempt from visitation. Reports from more than forty towns prove that wherever there is food for it in unacclimated population, it prevails, though with varying and erratic intensity. At Puerto Principe, an inland and elevated city, hospital records show its prevalence every year but one since 1850. In Havana the fever is usually epidemic from June to October, and endemic during the rest of the year. From 1870 to 1879, in no month have there been fewer than 4 deaths, nor more than 675. During this decade the minimum of deaths was 515 in 1872; the maximum, 1,619 in 1876. From one fourth to one half of these deaths occur in the military hospital. This disproves the assertion that yellow fever is specially severe in the shipping and harbor.

III. *The causation of this endemicity.* The geography, geology, and meteorology have not altered since 1761. Endemicity must be caused by differing conditions. Previous to the English invasion in 1762, Cuba had no commerce. The introduction of steam navigation in 1819, and of railroads in 1836, contributed to the rapid spread of the disease. Spanish medical authorities, official and unofficial, class yellow fever among contagious diseases. Though some may deny its contagiousness, none dispute its portability and importability. Yet in the military hospital, where yellow fever is rarely absent, the lower story is used to store blankets, clothing, and other hospital supplies for general distribution over the island. The paper currency of Cuba is noisome and filthy to a degree. On October 4th clean bills of health were furnished by Havana officials. During that week there were eighty cases and twenty deaths of yellow fever, and nine infected vessels in the harbor. The Commission procured the meteorological records of Havana for twenty years. The annual mean temperature of the island varies from 77° to 79° F. The only record of a frost is on the 24th and 25th of December, 1856. The average rainfall is about 50 inches; number of rainy days, 102. Violent winds and hurricanes are injurious to the sick, but they dilute the poison and lessen the number of new cases. Investigations of electricity, magnetism, and ozone have so far yielded no satisfactory results.

IV. *The actual sanitary condition of Havana, Matanzas, and other Cuban ports.* The unsanitary condition of Cuba is demonstrated by the death-rate. In different parts of the island and in different years the annual mortality varied from 39.5 to 67.05 per thousand. Among destructive diseases yellow fever ranks third. Phthisis stands foremost. This malady makes frightful havoc among residents, yet consumptives are still ordered to Havana. Statistics confirm Bowditch's law concerning the pernicious influence on consumption of foul air combined with subsoil moisture. Under

whatever name registered, swamp-poison or malaria is the deadliest agent in Cuban mortality. The water-supply flows, partly through an aqueduct, partly through a ditch, from the Almandares River, four miles distant. Water is scarce and costly. A large part of the population purchase it from street venders. Personal and household cleanliness is rendered difficult. That part of the supply which comes through the Zanga, an open earth-ditch, is impure as well as inadequate. A half-finished aqueduct, which has already cost \$3,000,000, may obviate this difficulty if it is carried to completion. The sewerage is grossly defective. The surface-soil is shallow. The substratum rock is porous and friable, admitting a high degree of saturation. A moisture-mark may be observed high on walls of houses, even on those built a hundred feet above the sea-level. The water and soil being in such plight, the air is necessarily foul. Ventilation in the old town is obstructed. The streets are so narrow that vehicles are only allowed to travel in one direction. The paved streets of the modern town are kept clean. Even there, however, repulsive odors greet the nostrils, teaching the presence of fecal and kitchen refuse reeking within the courts of even the better class of houses. These are usually built low. The floors, of wood or brick, are on the ground, if not below it. The interior arrangements are unwholesome. Kitchens, cabinets, and stables are close to sleeping apartments and intolerably offensive. Buzzards resting on the roofs show the call of nature for scavenging. *Mamposteria*, or rubble masonry, is the ordinary building material. The walls testify to its porous and absorbing qualities. Rents are high and houses overcrowded. Since 1806 burial in churches has ceased. In 1871 the intramural cemetery of Espada was closed upon its 300,000 dead. The new cemetery is well located, beyond the reach of evil influence. No abatement of fever has been observed.

The picturesque harbor of Havana suffers under a bad reputation. English naval vessels are forbidden to use the harbor-water for any purpose. The anchorage-ground for large vessels is contracted. An average of 100 vessels, sometimes as many as 227, lie close to each other and to the shore. It is the receptacle of a vast surplus of filth. Very little clean water finds its way into it. The tide has a rise and fall of about two feet. The remarkable phosphorescence of its waters has been considered connected with yellow fever. In 1879 the fever made its appearance, and not the phosphorescence. On its southern edge lie five piles of ballast. This ballast, which freely absorbs fluids and gases, should be treated as dangerous yellow-fever fomites, at least until this theory is disproved. Hygienic laws are thus violated in all the Cuban ports, and that where the conditions most favorable to yellow fever exist, viz., hot climate and dense population.

V. *The means by which the sanitary condition of Havana, Matanzas, and other Cuban ports can be best made satisfactory.* Cuba does not lack scientific engineers, who see what is required for its sanitation. Here, as elsewhere, two factors are needed for the elimination of disease, hygienic education for the people and financial power in the Government. There are persons who pronounce yellow fever a nautical disease. The weight of evidence collected by this Commission goes to prove that the more communication between the crew and the town, and the closer the vessel lies to the shore, the more liable it is to become infected. While ships are known to carry this poison from port to port, in the opinion of this Commission they receive it from the land and not from the harbor. There is no proof of its spontaneous origin on ships.

VI. *What can and should be done to prevent the introduction of the cause of yellow fever into the shipping in Cuban ports?* The United States can protect itself by prohibiting entrance into its ports of vessels from infected ports. The eradication of the evil in Cuba depends solely upon the Spanish authorities. The following preventive measures are recommended: Clean, dry, and less porous ballast should be procured, and this should be thoroughly disinfected in the ship. Vessels should lie as far as possible from shore and other vessels, and well to windward of infected localities or ships. On leaving port every part of the ship should be cleansed, fumigated, and ventilated. The order to the Spanish navy requires strict precautions at all seasons. This is equally incumbent whether there are or are not fever cases on board, as the virus is known to lie long dormant. The need for stringent sanitary measures is self-evident; the execution of them is difficult. Right methods must be enforced by right men. In the act of June 2d Congress essays to regulate this important affair. An older law requires captains to pay three months' extra wages to sick seamen discharged in a foreign port. To avoid this mulct, masters of small vessels often prefer to sail with their fever-smitten sailors. This should be amended. Legal enactments should secure the prompt report to the United States Consul of suspicious cases on shipboard, and the non-intercourse of persons on board with the shore.

The quarantine act of June 2d was denounced by the Cuban press. Permission to promulgate it was not granted by the authorities. Inspectors were appointed under the act, but the Spanish Government refused to allow other bills of health to be issued than those given by their own officials. The loose construction under which they give clean bills of health has been shown. During this imbroglio vessels left Cuba and were admitted into the United States, not being provided with the required certificate, and in contravention of the act for preventing the importation of disease. This part of that law is thus in abeyance, and the public

health imperiled, until these important points are decided. The consent and aid of Spain in the enforcement of the statute should be sought. An international sanitary code, modeled on the French code of 1853 and providing uniform regulations, is a great desideratum.

VII. *Examination of the blood in yellow fever.* Micro-photographs were taken with powerful instruments. The only peculiarity observed is certain granules in the white corpuscles. These may or may not be symptomatic of this disease, or causative of it. The Commission were able to deduce no new facts from their examinations. They hold that these photographs reveal all that there is in the blood. No organism is shown in any preparation photographed immediately after collection. No chemical examination was attempted.

VIII. *Experiments upon animals.* Animals of various species imported from the United States were exposed to infection in the holds of vessels; they were fed upon the excretions of yellow-fever patients; the blood of such patients, in different stages of the disease, was injected into their veins; they were made to sleep in infected bedding and clothing. Ingenuity exhausted modes of injection. In no instance was yellow fever developed in an animal. One suspicious case turned out to be a well-known fever, called *romadiza*, common in dogs imported into Cuba.

IX. *Culture experiments.* In verification of the hypothesis that the essential cause of yellow fever is a living germ or organism, capable under certain circumstances of indefinite multiplication, the Commission made experiments in germ-culture. A certain fungus was developed, but whether distinctive of yellow fever only no one on the Commission, unluckily, had sufficiently precise knowledge of the lower forms of vegetable life to determine. Careful micro-photographs were obtained, which should be submitted to expert mycologists. The *agua coco* (cocoanut-milk) from the unripe nut, being transparent and inclosed in a germ-proof receptacle, was found a convenient fluid for detecting bacteria. Exposed to infected air, it soon developed a pellicle containing cells of a fungus, and turned milky white. Portions of the same fluid, protected by a bell-glass, retained their purity and transparency.

X. *Examination of the water of the harbor.* The harbor-water has the same specific gravity as that of the gulf outside. After heavy rains its gravity falls, especially in the vicinity of sewers. Kept in an open vessel, it developed no putridity recognizable by the senses. That taken near the sewer-mouths contained infusoria, but they showed no activity, being probably fresh-water species destroyed by salt water.

XI. *Examination of the air.* Microscopic examinations of air from hospital wards, and other infected localities, revealed certain slender, glistening, acicular crystals in great abundance, unknown to the Commissioners, and undescribed in the standard works on the subject.

Subsequent observations, made in Washington, showed the same crystals deposited on glasses brought from infected spots, such as Morgan City, Bayou Bouff, and the New Orleans Charity Hospital, while none were found in those from Bellevue Hospital, New York.

Finally, twenty-two autopsies were performed in Havana. Preparations of tissues were made and brought to the United States.

The statements in the preliminary report, of which the above is a brief synopsis, are to be regarded, the Commissioners say, as suggestions rather than conclusions. The value of the work done by the Commission can only be estimated by the amount of pabulum it furnishes to the scientific minds of the country.

In addition, they publish an interesting report on the alkalinity of the atmosphere, by Dr. Charles Finlay of the Spanish Commission. Observations dating from 1858 have convinced him of the excessive alkalinity of the Cuban atmosphere. To show the alkalinity resulting from free ammonia in other atmospheres, he instances the ventilation experiments in St. Mary's Hospital, Paddington. The maximum value obtained in these hospital wards in July, 1875, was 2,000 times smaller than the Havana maximum of 1879, and 228 times smaller than the Havana maximum in October, 1864. This alkalinity increases and diminishes in intensity *pari passu* with yellow fever. The blood, breath, and excretions during certain stages of yellow fever are markedly alkaline. The most recommended disinfectants are just the agents that would destroy a volatile alkali. Empirical treatments by non-professionals in the West Indies have oily and acid substances for their basis, just as if the object were to saponify or neutralize some alkaline poison. Scientific investigations may verify his proposition that some volatile alkali of the compound ammonia type, disseminated in the atmosphere surrounding centers of infection, is the material cause of yellow fever.

The National Board has completed a sanitary survey of Memphis, with a view to removing causes which might bring about a recurrence of yellow fever.

Twenty State boards are now working in subordination to the National Board. The American Health Association, in its convention at Nashville, commended and endorsed the National Board, and recommended its continuance with increased powers. Whatever the discrepancy between public expectation and the results gained by the Board, it must be admitted that during its brief existence its labors have been neither few nor small. With more definite powers it must have a field of ever-widening usefulness. The creation of this bureau was an imperatively needed act of legislation.

HELIOGRAPH, THE. The Mance heliograph, an instrument for signaling by means of reflected solar rays, was made use of among the British forces in Afghanistan, and in the latter part of the war in South Africa. The

signals made by the Mance heliograph are visible, under favorable conditions of position and atmosphere, to very great distances, and have been read as far as eighty and a hundred miles. It consists of a specially prepared mirror, with mechanism for reflecting the sun's rays with absolute precision to any required spot, notwithstanding the sun's apparent motion. By pressure on a finger-key the flashes are made of short or long duration, thus adapting the instrument to the Morse code of telegraphy. A second mirror is provided to permit of signaling being carried on irrespective of the sun's position. The instrument intended for field service weighs from six to eight pounds, and is mounted on a light tripod stand. The working parts are protected from injury during transit, and the complete apparatus admits of being easily carried, as it is also efficiently worked, by one man. By working different adjusting screws the sun's rays may be made to strike any desired point on the mirror. The groupings and duration of the flashes admit of sufficient variety to give a different signal for every sign and letter, so that verbal messages can be transmitted. Different forms of this instrument have occasionally been used for various purposes a long time. It never, however, so recommended itself to military use as when General Roberts, beleaguered in Khost, employed it to signal for reinforcements to Baunee, sixty miles away. In the present improved form it is capable of being used with great advantage in the signal service or for other purposes between points which have no telegraphic communication by electric wires.

HILL, BENJAMIN HARVEY, an American statesman, born in Jasper County, Georgia, September 14, 1823. He is of Irish lineage on his father's side, and of English on his mother's. He graduated with the first honors from the University of Georgia in 1844, studied law, was admitted to the bar, and began the practice of his profession at La Grange, Georgia, in 1845. In November of that year he married Caroline E. Holt, daughter of Cicero Holt, a prominent lawyer of Athens, Georgia. He soon acquired a high standing as an advocate and orator, and now ranks as the foremost lawyer at the Georgia bar.

In 1851 he was elected to the State Legislature. Without being fully in sympathy with the American or Know-Nothing party, he was chosen an elector at large on that ticket in 1856. His speeches during this Presidential campaign enhanced his reputation as an orator and popular speaker. In 1859 he was elected to the State Senate as a Union man. In 1860 his name was on the Bell and Everett electoral ticket. He was a member of the Secession Convention held at Milledgeville, January 16, 1861. Georgia did not secede without considerable hesitation on the part of a large proportion of her people, nor without solemn warning and earnest remonstrance from her most

eminent citizen, Alexander H. Stephens, who was a member of this Convention. On the third day of the sessions of the Convention, Mr. Stephens made a speech endorsing his celebrated speech of November and deprecating the dissolution of the Federal Union. Mr. Hill also spoke with characteristic zeal and earnestness in favor of the Union; but, when he found that the passage of the ordinance of secession was inevitable, he finally voted for it, believing with many of his friends that it was his duty to follow the fortunes of his State. He was a member of the provisional Confederate Congress which assembled at Montgomery, Alabama, February 4, 1861. The State Legislature in the fall of that year elected him a member of the Confederate Senate, in which body he served during the continuance of the war. After its close, in May, 1865, he was arrested and confined in Fort Lafayette, New York Harbor. In July he was released on parole, and returned to his home at La Grange.

During the next ten years Mr. Hill held no official position, but was active in the political affairs of his native State, speaking and writing against the reconstruction acts of Congress. He was a zealous supporter of the Greeley movement in 1872. Elected a representative to the Forty-fourth Congress, he took his seat December 6, 1875, and was appointed a member of the Committee of Ways and Means. The debate on the "Amnesty bill" brought him into prominence at the beginning of his Congressional career. In his speech on January 11, 1876, he said: "Is the bosom of the country always to be torn with this miserable sectional debate, whenever a Presidential election is pending? The victory of the North was absolute, and God knows the submission of the South was complete! But, sir, we have recovered from the humiliation of defeat, and we come here among you and ask you to give us the greetings accorded to brothers by brothers. We propose to join you in every patriotic endeavor and to unite with you in every patriotic aspiration that looks to the benefit, the advancement, and the honor of every part of our common country. Let us, gentlemen of all parties, in this centennial year, indeed have a jubilee of freedom. We divide with you the glories of the Revolution and of the succeeding years of our national life, before that unhappy division—that four years' night of gloom and despair; and so shall we divide with you the glories of all the future. We are here; we are in the house of our fathers, our brothers are our companions, and we are at home to stay, thank God! We come charging upon the Union no wrongs to us. The Union never wronged us. The Union has been an unmixed blessing to every section, to every State, and to every man of every color in America. We charge all our wrongs upon that 'higher-law' fanaticism that never kept a pledge nor obeyed a law. Brave Union men of the North—you who fought for the Union

for the sake of the Union, you who ceased to fight when the battle ended and the sword was sheathed—we have no quarrel with you, whether Republicans or Democrats. We felt your heavy arm in the carnage of battle; but above the roar of the cannon we heard your voice of kindness, calling, 'Brothers, come back!' and we bear witness to you this day that that voice of kindness did more to thin the Confederate ranks and weaken the Confederate arm than did all the artillery employed in the struggle."

He made a speech January 17, 1877, in favor of the Electoral Commission, characterizing it as a measure wholly constitutional, wise in every provision, and patriotic in every purpose.

He was reelected to the Forty-fifth Congress, but resigned to enter the United States Senate, March 5, 1877, where he served on the Committees on Privileges and Elections, Revolutionary Claims, and Mines and Mining. In addition to these, in the extra session in March, when the Democrats came into power, he was made a member of the Committee on Foreign Relations and chairman of the Committee on the Contingent Expenses of the Senate. His most important speeches in the Senate have been on the silver bill, delivered February 8, 1878, in which he favored the recoinage and remonetizing of silver, but opposed the unlimited free coinage of the silver dollar; on the Thurman Pacific Railroad Funding bill, May 20, 1878; on "The Union and its Enemies," May 10, 1879; and in defense of his Union record during the war of secession, in reply to Senator Blaine, June 10, 1879.

HILL, Sir ROWLAND, K. C. B., D. C. L., F. R. S., born at Kidderminster, December 8, 1795, died in London, September 2, 1879. He was brother to Matthew Davenport Hill, Q. C., who fifty years ago had reached distinction as a Reform member of Parliament. These brothers were sons of Mr. Thomas W. Hill, schoolmaster in Birmingham. Rowland Hill was educated in his father's school, and for seventeen years lived the uneventful life of a teacher in that institution. In 1835 he entered the public service as Secretary to the Commissioners for the Colonization of South Australia. His mind was turned to the subject of post-office reform, which became his life-work, by the following incident: Coleridge, on a tour through the Lake district, arrived at a wayside inn as a postman delivered a letter to the waiting-maid. She examined it carefully and returned it to the postman, saying she could not afford the shilling. Finding that the letter was from her brother, the poet insisted on paying the postage. Afterward, in explanation of her reluctance to accept his kind offices, the girl showed him that the letter was blank. On the outside were certain marks which conveyed to her the knowledge that her brother was well. Thus by a prearranged system they managed to correspond with each other and

defraud the Government. Mr. Hill was much impressed by this narrative, and henceforth dedicated his energies to an amelioration of the law. He lived to see the complete success of his system in Great Britain, and its adoption throughout the civilized world. Postage before his day, except to the easy classes, was prohibitive. News was smuggled through the mails in many ingenious ways. He met with much official opposition. When Mr. Hill proposed his plan to the Postmaster-General, it was unceremoniously rejected. In 1837 he published a book on "Post-Office Reform." By a convincing array of facts and figures he proved that, despite increase of business and growth of population, the post-office revenue had decreased from 1815 to 1835, so universal was the custom of sending letters through private channels. He argued, in favor of cheap postage, that a greater number of letters at reduced rates would increase the total revenue. The public were quick to perceive the merit of his plan. In 1838 the House of Commons appointed a committee to investigate the subject, which recommended its adoption. During 1839 more than two thousand petitions in its favor were addressed to Parliament. In spite of official obstructions, early in 1840 the penny post was established. Mr. Hill was appointed to a place in the Treasury to superintend its inauguration. Results have more than justified his prophecies. In 1838, the last complete year of the old system, 76,000,000 chargeable letters were delivered in the United Kingdom. This number was more than doubled during the first year of the cheap system. In 1854 it reached 443,000,000. In 1878 the aggregate amounted to 1,900,000,000. Within ten years the postal receipts equaled the greatest high-postage revenue. Since that period the increase has continued without fluctuation. In 1842, on a change of ministry, Mr. Hill was removed from office on the score that his services, though successful, were no longer needed. This did not meet the general approbation. A subscription for a public testimonial was begun, which rapidly brought in £13,360. In 1843 he was manager of the London and Brighton Railway. Subsequently he became its chairman. He was afterward appointed a member of a Royal Commission on Railways. His dissenting views were published in a separate report from those of his fellow commissioners. In 1846 he was made Secretary to the Postmaster-General. In 1854 he received the appointment for which he was eminently fitted, that of Chief Secretary. This post he filled with honor to himself and benefit to the nation until declining health forced him to resign it in 1864. The Treasury, after a handsome acknowledgment, continued to him for life his full salary of £10,000. Parliament voted him also a grant of £20,000. In 1860, in recognition of his services in the Post-Office, he was created a Knight Commander of the Bath, Civil Division. In 1864 the University of Ox-

ford conferred on him the degree of D. C. L. In that year he received the first Albert gold medal of the Society of Arts. In 1877 a subscription for a statue (no contribution over sixpence allowed) resulted in £1,600 from over 100,000 persons raised in a short time. A few months before his death the freedom of the city of London was conferred upon him. The ceremony was performed at his house, where he was confined by ill health, and where soon after, full of years and honors, he died.

HILLARD, GEORGE STILLMAN, an editor and author, born at Machias, Maine, in September, 1808, died in Boston, January 21, 1879. He graduated at Harvard College in 1828, and in 1833 was admitted to the bar in Boston. In the same year he became editorially connected with the "Christian Register," a Unitarian weekly newspaper. Subsequently he became associated with Charles Sumner in the publication of "The Jurist." In 1856 he bought an interest in the "Boston Courier," and took the position of associate editor, but retired at the beginning of the civil war. He was most successful in his contributions to magazines and reviews, among which were the "Atlantic Monthly" and the "North American Review." His articles were chiefly reviews of books and essays on subjects of art. In 1845-'47 he was a member of the Boston Common Council. He then visited Europe, and on his return published "Six Months in Italy," which was successful here and republished in England. In 1850 he was a member of the State Senate; in 1853 a member of the State Constitutional Convention; in 1854-'56 Boston City Solicitor; and in 1866-'70 United States District Attorney for Massachusetts. He was a pleasing speaker, and delivered many public addresses. He published in 1856 a series of school readers which were very successful. In 1839 he published, in five volumes, "The Poetical Works of Edmund Spenser, with a Critical Introduction." His "Selections from the Writings of Walter Savage Landor," published in 1856, was well done. Several translations were also made by him, one of which was Guizot's "Essay on the Character and Influence of Washington." In 1864 he published the "Life and Campaigns of George B. McClellan." He began to prepare for publication the life and letters of George Ticknor, but was unable to finish the work, which was completed by Miss Ticknor.

HOOD, JOHN B., Lieutenant-General in the Confederate Army, born at Owenville, Bath County, Kentucky, June 1, 1831, died of yellow fever in New Orleans, August 30, 1879. His preparatory education was received at Mount Sterling. In 1849 he entered the Military Academy at West Point. He graduated in 1853 in the same class with Chambliss, Bowen, McPherson, Rich, Schofield, Sheridan, Terrill, and other distinguished military leaders. Assigned to duty in the 4th Infantry, he served two years in California. In July, 1855,

he was transferred to the 2d Cavalry, of which Albert Sidney Johnston was colonel, and Robert E. Lee lieutenant-colonel. This regiment, which gave so many officers of note to both Northern and Southern armies, was then guarding the northern and western frontiers of Texas. Hood won his first laurels in a desperate fight at Devil's Run in July, 1856. With twenty-five men of his company he charged a numerous band of Comanches and Lipans, and captured them. But in a hand-to-hand encounter with an Indian warrior he received an arrow-wound, from which he was laid up for two years. At the outbreak of the civil war he was cavalry instructor at West Point. On the 16th of April, 1861, he resigned his commission in the United States Army, returned to the South, and in May reported to General Lee with the rank of first lieutenant. Appointed to the captaincy of an irregular squadron of mounted volunteers, he was ordered to the Peninsula, and under General Magruder took part in the fight at Big Bethel. He was called to Richmond to organize a body of Texans, partly recruited by Van Dorn, partly individual volunteers who had hurried to Richmond at the first call. He was elected colonel of the 6th Infantry, which with the 1st Texas was brigaded under General Wigfall. In March, 1862, Wigfall having been elected to the Confederate Congress, Hood was appointed to the vacant brigadiership. This was the famous Texas Brigade, to which Hood was so strongly attached, and of which he spoke with his dying breath. Its valor was native, its efficiency was due to the drill of its commander. The brigade was ordered to the Peninsula, and formed part of the 11,000 troops who, under Magruder and Johnston, opposed the advance of McClellan. Its first fight was near West Point on York River, where Hood's Texans attacked Franklin's command; and the brigade bore a fair part in the seven days' battle around Richmond. Perhaps the proudest day in its annals was the desperate fight at Gaines's Mill. Hill's assault having been repulsed, Pickett's brigade attacked the formidable works and was foiled. Whiting's division, to which Hood was attached, was ordered to attempt the difficult task. Hood's Texans charged at a double-quick across a ravine open to the enemy's fire, and up the hillside, carrying the triple line of intrenchment. They lost more than half their numbers, yet on the summit they re-formed their broken line and repelled a sudden onset of cavalry. The following day, when Stonewall Jackson surveyed the battle-ground, he exclaimed, "These were soldiers indeed." This utterance of the silent hero was the stamp of fame to the Texas Brigade. Hood led them, afoot and sword in hand, and was shot in the body. He was made a major-general.

With Longstreet's corps, Hood's command shared the varied fortunes of the two Maryland campaigns. At the second battle of Manassas, Hood led the charge which resulted disastrous-

ly for Pope. At Boonesboro, with D. H. Hill, he held that pass against all opposition until Lee returned with a corps and checked McClellan. At Fredericksburg his command supported Jackson's left. At Antietam, on the Confederate left, his men were in the thickest of the fight. At Gettysburg the Texans confronted Meade's left. At one time they fought their way to a rocky eminence commanding the Union lines. Too few to hold it, they fell back after their leader had been wounded in the left arm. A painful surgical operation, two resections of the bone, preserved the shattered limb, but it was ever after useless.

Two months later, with this still unhealed arm buckled to his side, he rejoined his command, which, with the rest of Longstreet's corps, was ordered to Tennessee to reinforce Bragg. In the battle of Chickamauga Hood's division was stationed on the left of the Confederate line. In the second day's fight, perceiving that the line wavered where his own Texans were posted, he rode up to them, saying, "Give me the colors." "Against my orders, General," the young color-bearer answered, "but I'll carry them wherever you command." Just then a ball struck Hood. The Texans rallied and charged. He was borne off the field, but not before he heard and joined in the shout of success. Amputation of the right leg was the consequence of this wound. While still in hospital he was offered a bureau place. He refused, saying: "No bomb-proof for me. I purpose to see this fight out in the field." Within six months the mutilated soldier returned to the post of duty.

During the spring of 1864, at the head of his corps, he fought through the memorable retreat of Johnston from Dalton to Atlanta. When the Confederate Administration decided on the perilous move of changing commanders in face of an advancing enemy, their choice fell upon Hood, whose record was preëminently that of a "fighting general." Aware of the deep dissatisfaction of the army at the change, "reluctantly and only in obedience to orders," he assumed command on the 18th of July. Within two days he acted on the offensive. On several successive days there were stubborn engagements where he claimed the victory. Finally, with one division of his army in Atlanta, and the other under Hardee twenty miles away, near Jonesboro, he found himself completely outflanked by Sherman. Hardee's attack on the Union lines having failed, Hood's position became untenable. He evacuated Atlanta. This left Sherman in his rear, and enabled him to make that "march to the sea" which proved the death-blow of the Confederacy. Hood began his counter-movement into Tennessee. This whole campaign is said to have been planned in Richmond by General Bragg, with the approval of President Davis. Hood executed it with vigor, if not with success. In September the Army of Tennessee was on its northward march. In November

they drove the Union force out of Decatur and crossed the Tennessee at Florence, confronted by General Thomas, a foe man worthy of their steel. Thomas retired slowly toward Nashville. On the 30th of November occurred the battle of Franklin. Hood's army drove the Union front to their second line of intrenchments and captured many prisoners and stands of colors. Their dead and wounded were left in his hands. The carnage on the Confederate side was frightful, especially in officers. General Cleburne fell mortally wounded as his horse was leaping the breastworks. The veteran soldiers, though they fought as well as ever, felt that their real enemy was far behind them, and that their desperate valor was futile. When reproached for the costly losses of this campaign, Hood defended himself with this reply: "I did my duty as commander of the forlorn hope of the Confederacy. I was put there to fight, and fight means kill and be killed."

Immediately after the battle of Franklin Nashville was closely invested. On the 16th of December the Union army, having received reinforcements, attacked the Confederates along their entire line. After a fierce fight Hood's center suddenly gave way. His retreat was covered by General Forrest, yet supplies, ammunition, and ordnance that could ill be spared had to be abandoned as he fell back. After a weary march, during the severest winter weather, the broken remnant of this once splendid army recrossed the Tennessee.

At his own request General Hood was relieved of his command. At Tupelo, Mississippi, he parted from his soldiers. In his farewell address, after paying tribute to the men who had borne defeat and hardship without a murmur, he took upon himself the whole responsibility of the campaign, saying, "I strove hard to do my duty in its execution." At the close of the war he carried with him into civil life the esteem of his countrymen, friend and foe. After a sojourn in Texas, the State to which he was bound by so many associations, he removed to Louisiana to enter into business as a factor and commission merchant. He was the agent of the Texans, who confided their financial interests to him. He was also appointed President of the Louisiana branch of the Life Association of America. At one time he had acquired a competent fortune, but subsequently, by some sudden fluctuation, he lost all. These reverses he bore with equanimity. With a due regard for his military reputation, he employed his leisure hours in writing the story of his campaigns, which he completed. Intended as his vindication, it must prove valuable to the future historian of the war, emanating as it does from a man of such marked simplicity and truth. Much adverse criticism has been bestowed upon the strategy which resulted in failure. Whether fitted or not for the greatness which was thrust upon him, no one denies Hood's fighting qualities.

General Hood had a fine physique and dignified bearing. He was a devout member of the Protestant Episcopal Church. He was most happy in his domestic relations. In 1868 he married Miss Anna Marie Hennen, a native of New Orleans. She died suddenly on the 22d of August. This was the first blow of fate which Hood could not summon fortitude to sustain. Prostrated by grief, the fever found in him an unresisting victim. The General and his eldest daughter were laid in the same tomb, which had reopened thrice within ten days. Ten little orphans survived him. Death being near, he was questioned in regard to his dependent family. He expressed a willingness to live for their protection, but repeated emphatically, "What God does is right." Then he talked of his old brigade, and added, "The Southern soldiers will never let my children want." Thus trusting in God, and, under Him, to his staunch comrades, he died as he had lived, without fear and without reproach.

HOOKER, Major-General JOSEPH, born at Hadley, Massachusetts, in 1815, died at Garden City, Long Island, October 31, 1879. He graduated from the Military Academy at West Point in 1837, and served in the Mexican war, rising to the rank of captain of artillery, and the brevet of lieutenant-colonel in the staff. From 1859 to 1861 he was a colonel in the California militia. When the civil war broke out in 1861, he was made brigadier-general of volunteers and put in command of the defenses of Washington, August 12, 1861; but his commission was dated back to May 17, 1861. When General McClellan moved to the Peninsula General Hooker's brigade was added to the command, and for gallant service at Williamsburg he was promoted to be major-general of volunteers, May 5, 1862. During General Pope's operations before Washington General Hooker was very active, and at Antietam, September 17, 1862, was wounded, and was soon after promoted to the rank of brigadier-general of the regular army. At the disastrous repulse of Burnside at Fredericksburg in December, 1862, he commanded the center of the army. In January, 1863, he was appointed to the command of the Army of the Potomac, and on May 2d-4th fought and lost the battle of Chancellorsville. The Army of Northern Virginia, under command of General Lee, soon after attempted to carry the war into Pennsylvania, but General Hooker followed closely. He resigned his command on the 28th of June, and General Meade, his successor, commanded at the battle of Gettysburg, July 1-3, 1863. General Hooker remained in Baltimore waiting orders till September 24th, when he was put in command of the 20th army corps (consolidated from the 11th and 12th), and sent to Chattanooga, Tennessee. He distinguished himself at Lookout Valley, Lookout Mountain, Missionary Ridge, and Ringgold, October 27 to November 27, 1863; was actively engaged in the march to Atlanta; again relieved of com-

mand, July 30, 1864; in command successively of the Northern, Eastern, and Lake Departments, and of the Retiring Board till September 1, 1866. He was brevetted Major-General of the United States Army in March, 1865, and in consequence of disability put upon the retired list, with the full rank of major-general, in 1868.

HUNGARY, a kingdom of Europe, and one of the two principal divisions of the Austro-Hungarian Monarchy. (See AUSTRO-HUNGARY.) The Hungarian Ministry at the close of 1879 was composed as follows: President of the Ministry and Minister of the Interior, Koloman Tisza de Borosjenö; Minister near the King's Person (*ad Latus*), Freiherr von Orczy; Minister of Education and Worship, A. von Trefort; Minister for the Defense of the Country, Colonel B. Szende von Keresztes; Minister of Public Works, Thomas Péchy von Péch-Ujfalú; Minister for Croatia and Slavonia, Koloman Bedekovitch de Komor; Minister of Justice, Dr. Theodor Pauler; Minister of Finance, Count Szapary; Minister of Agriculture, Commerce, and Industry, Freiherr Kemény.

The area and population of the countries of the Hungarian Crown are as follows, according to the "Statistische Handbuch der österreich.-ungarischen Monarchie":

COUNTRIES.	Square miles.	Population in 1876.
Hungary and Transylvania.....	108,268	13,724,442
Fiume (free city).....	8	18,178
Croatia and Slavonia.....	8,852	1,218,150
Military Frontier.....	7,308	693,783
Total.....	124,426	15,654,538

The movement of population was as follows in 1876:

Marriages.....	154,305
Births. { inclusive of still-births. }	713,156
Deaths. { }	591,279
Excess of births.....	151,877

The budget for the countries belonging to the Hungarian Crown for 1879 was voted by the Lower House on February 28th by a majority of 227 against 174. It was as follows (1 florin = 48 cents):

RECEIPTS.	Florins.
1. Direct taxes.....	82,635,500
2. Indirect taxes.....	84,677,857
3. Receipts from Government property and state institutions.....	25,155,195
4. Extraordinary receipts of the Ministry of Finance.....	3,046,173
5. Receipts of the other Ministries.....	19,863,445
6. Other receipts.....	4,308,000
Total ordinary receipts.....	219,691,170
Extraordinary receipts.....	2,517,432
Total.....	222,208,602

EXPENDITURES.	Florins.
1. Royal household.....	4,650,000
2. Royal cabinet chancery.....	69,669
3. Diet.....	1,809,960
4. Council of Ministers.....	308,690
5. Ministry ad Latus.....	50,843
6. " for Croatia and Slavonia.....	35,880
7. " of the Interior.....	7,492,469

8. Ministry of Public Defense.....	6,398,015
9. " of Education and Worship.....	4,228,410
10. " of Justice.....	9,914,869
11. " of Agriculture and Commerce.....	10,572,874
12. " of Communications.....	12,470,887
13. " of Finance.....	39,487,852
14. Administration of Croatia and Slavonia.....	5,822,709
15. " of Fiume.....	54,140
16. Pensions.....	4,043,899
17. Public debt.....	43,852,807
18. Contributions to the common expenditure of the empire.....	38,757,899
19. Contribution to the Austrian debt.....	30,473,430
20. Guaranteed interest to private railroads.....	10,200,000
21. Miscellaneous.....	18,944,844
Total ordinary expenditures.....	248,167,645
Extraordinary expenditures.....	8,268,735
Total.....	256,436,380
Deficit.....	84,227,778

In the budget for Croatia and Slavonia for 1878 the receipts were estimated at 3,312,234 florins, and the expenditures at 3,310,234 florins.

The public debt of Hungary at the close of 1877 amounted to 660,176,966 florins, exclusive of the common debt of the empire. Hungary also has a share in the public debt of Austria proper, about 30 per cent. of its amount previous to 1868. This debt is regarded as exclusively Austrian, but Hungary pays annually a fixed sum for interest and for amortization. The assets of the state were estimated in 1876 at 762,500,000 florins. The Diet on February 15th authorized a gold-rente loan of 100,000,000 florins (to bear interest in gold), intended to provide the means for defraying the costs of the occupation of Bosnia and Herzegovina and to cover the deficit of the year. If it should turn out that a gold rente can not be negotiated, the Minister is empowered to arrange for a temporary advance; and if sufficient can not be obtained in that way, then he may borrow on the security of the state domains. Lastly, if he finds it more convenient, he may have recourse to all three plans.

In the estimates for 1880, the expenditure was calculated at 253,669,662 florins, the revenue at 236,350,294 fl., making a deficit of 17,319,368 fl. If the Legislature should accept the proposed increase of the duty on petroleum, expected to yield 1,800,000 fl., this deficit would be reduced to 15,529,368 fl., against 28,829,591 fl., the figure for 1879. In this estimate the expenses of the occupation were not comprised. They had been fixed under 8,000,000 fl. This would entail a charge for Hungary of 2,512,000 fl., so that the total deficit for 1880 was set down in round numbers at 18,000,000 fl., for which, however, no new credit would be asked.

The aggregate length of railways open for traffic on January 1, 1879, was 7,002 kilometres (1 kilometre = 0.62 mile). The number of post-offices in 1877 was 1,980; the number of letters, newspapers, postal cards, samples, etc., 114,327,000; and the value of letters and packages, 838,700,000 florins. The length of telegraph lines in 1878 was 14,328.9 kilometres, and of wires 50,072.2 kilometres. The number

of telegraph stations was 960, and the number of dispatches sent and received was 2,832,259.

On March 12th the city of Szegedin was completely inundated by the river Theiss. It is situated at the confluence of the Theiss and its chief tributary the Maros, lies almost entirely on low alluvial ground, and, with the exception of the suburb New Szegedin, on the right bank of the Theiss. In order to protect it from the Theiss, a large high dike was carried along the river, and, in connection with other parties interested, the people had taken measures to protect the rear of the town by carrying several transverse dikes from the higher land and isolated hillocks to the river. The first of these is about twelve miles north of the town, where the river turns almost at right angles to the east. This, which might be called the outwork of the lines of defense, gave way as early as March 4th, the waters sweeping in and flooding the whole space to the second line, which runs from the higher land in the west in a southerly direction, being intersected by the embankment of the Alföld Railway, which runs southwest. In the night of the 7th the northern frontier of this second line was broken through, leaving as a last defense the southern portion of the Bakto dike and of the railway embankment, on which, therefore, all efforts were concentrated. Besides the military dispatched thither to work under the superintendence of the engineers, the population were called upon to give their assistance. In spite of the most heroic efforts, this dike had to be abandoned between one and two in the morning of the 12th, and before the people could secure places of safety the waters were upon them. Out of 10,000 buildings, 8,200 were destroyed, 4,800 being dwelling-houses. The number of persons who lost their lives was estimated as high as 2,000, and even according to the lowest estimate was deplorably large. All available means were employed in the work of saving those in the town, several thousands being removed by railroad and distributed among the different villages between Szegedin and Temesvar. The event was considered a national disaster, and the Emperor went in person to the afflicted city to cheer by his presence the unfortunate people. All parts of the empire joined in contributing to the relief of the sufferers. The Lower House of the Diet adopted a resolution empowering the Minister of Justice to carry into effect by decrees such extraordinary judicial measures as might be rendered necessary by the catastrophe. A motion was also made to send a committee of the Diet to Szegedin to see what could be done for the unfortunate city. M. Tisza opposed it on the ground that the necessary relief must be provided without delay, and added that the Government, after examining the recommendations of the scientific and practical men who had been called in, would submit proposals for retrieving the dis-

aster. In the ministerial programme submitted to the Diet on October 8th, M. Tisza stated that the plans for rebuilding the town had been made and were under examination, and that the dikes which were to protect it from similar catastrophes would be completed before winter set in. He also stated that the total sum received in aid of the city amounted to about 2,750,000 florins.

The foreign relations of the country occupied the attention of the Diet. The abrogation of Article V. of the Treaty of Prague (see GERMANY) was the subject of an interpellation on February 15th in the Lower House. Herr Tisza replied that it was more to the interest of Austria-Hungary to renounce all claims to the realization of that clause than to allow it to be used at a future time as a snare by which other interested Powers might involve the country in an unpleasant position. Germany, the Minister said, never expected any return for the service rendered by her to Austria-Hungary with regard to the occupation of Bosnia and Herzegovina. On March 1st the Government presented to the Lower House a bill expressive of its assent to the Treaty of Berlin. The discussion began on the 24th. M. Tisza, in opposing a motion on the part of the opposition to reject the treaty, maintained the view that international treaties concluded by the Crown did not depend for their validity upon the assent of Parliament. The controlling power of Parliament did not begin until the Government submitted estimates for the purpose of carrying out a provision of the treaty. The bill was finally adopted by a large majority in the Lower House on March 27th, and in the Upper House without a debate on the 29th.

The desire of the Hungarians to Magyarize the different nationalities inhabiting the lands of the Hungarian Crown was again shown by the passage of a bill in May ordering the Magyar language to be taught in all the non-Magyar primary schools.

Minister Tisza, upon the reassembling of the Diet in October, called the attention of the House to the failure of the crops in many parts of the country. He said the Government had taken the necessary measures to ascertain the real state of things, and had come to the conclusion that, in consequence of this failure, it might well be incumbent upon them in some districts to make a provision either by loans or else by giving work to relieve the distress that might ensue in the course of the winter and in early spring. In many places the crops had not yielded the seed necessary for the next year, or else of such inferior quality that it would be dangerous to use it. The Government thought it, therefore, imperative to take measures, in concert with the local authorities, to grant under proper security loans for the purchase of seed. It did not mean to ask now for any grant of money from Parliament for this purpose, chiefly because, according to its opinion, the grant of a sum of

money by Parliament might lead to unjustifiable and exaggerated demands.

In November the Chamber of Deputies adopted a bill declaring that any native of the country who voluntarily resides abroad for an uninterrupted period of ten years shall lose his civil status. The Extreme Left violently opposed this measure, accusing the Government of leveling it directly at Louis Kossuth, but it was finally carried by 141 votes to 52.

HUNT, WILLIAM MORRIS, an artist, born in Brattleboro, Vermont, March 31, 1824, died at Isles of Shoals, New Hampshire, September 8, 1879. He entered Harvard College, but withdrew before completing his course and went to Europe. In 1846 he began the study of sculpture at Düsseldorf, but soon went to Paris, and in the studio of Couture began his career as a painter. Such was his skill that for four years from 1852 he was an exhibitor in the Salon of that city. In 1855 he returned to this country, and established a studio in Boston, where he was one of the first to introduce French art. Among his best known paintings

may be mentioned his "Morning Star," "Bugle-Call," "The Lost Kid," "The Choristers," "Girl at Fountain," and "Girl selling Violets," nearly all of which have been engraved. Visitors to the Metropolitan Museum of Art in New York will recall with pleasure his "Marguerite" and "Boy chasing a Butterfly." A more splendid monument of the powers of this remarkable man is in the Assembly Chamber of the State Capitol at Albany. His mural paintings, "The Flight of Night" and "The Discoverer," far excel anything of the kind ever before attempted in this country. In portraiture Mr. Hunt also excelled, and some of his portraits are reckoned among the masterpieces of American art. An admirable head, "A Portrait of a Gentleman," in the last exhibition of the American Society of Artists, was an excellent likeness of himself. While Mr. Hunt excelled in drawing and modeling, his forte was in color. His touch was firm yet tender, and his hues were at once vivid and deep. Solidity and richness were the most striking characteristics of his work.

I

ILLINOIS. The biennial session of the Legislature commenced on Wednesday, January 8th, and ended on May 31st. In the Senate Lieutenant-Governor Sherman presided, and Senator Hamilton, Republican, was chosen President *pro tem.* by a vote of 27 to 22 for Senator Archer. In the House the custom prevails of making a temporary organization, which continues until the members have taken the oath of office and have affixed their names to their affidavits. Then the permanent organization is made by the usual election. On the next day, William A. James, Republican, was elected Speaker, by a vote of 81 to 60 for James Herrington, Democrat, with 9 scattering and 2 not voting.

One of the first measures of the Legislature was the election of United States Senator. In the Senate, John A. Logan received 26 votes, John C. Black 24, and John McAuliffe 1. In the House, Logan received 80 votes, Black 60, Alexander Campbell 10, and McAuliffe 3. In the House a young miss twelve years of age was appointed as one of the pages. A proposition to dispense with the services of a chaplain, and to call on members who may volunteer to offer prayers for the House, received 29 yeas to 74 nays, after a report by the Committee on Retrenchment recommending its rejection.

The sum of \$80,000 was appropriated to pay the military for services in suppressing the riots of 1877, and for other expenses connected therewith.

A Board of Fish Commissioners was established, to increase the product of fish by artificial propagation and cultivation.

An act was passed declaring all saloons or places where intoxicating liquors are sold, in which minors are allowed to play with cards, dice, etc., disorderly houses, and prescribing penalties for keeping such places.

Another act reduced the rate of interest which may be paid or collected on written contracts to eight per cent.

Another act required the polls to be kept open from 8 A. M. to 7 P. M. in all city, town, or village elections.

The amount of taxes that might be levied and collected by cities was limited to two per cent. on their assessed valuation.

Counties were authorized to issue bonds with the amount as low as \$25, and interest payable semi-annually.

Grave-robbery is made a felony, and punishable by imprisonment in the penitentiary from one to ten years.

The following resolutions relative to the coinage of silver were adopted in the Senate—yeas 40, nays 7:

Whereas, There is a world-wide effort on the part of certain special interests to demonetize silver, and thus destroy as money one half of the coin of the world, thereby causing a shrinkage of values, prolonged through a series of years, deranging business, and paralyzing industry and enterprise; therefore,

Resolved, by the Senate, the House concurring, That the silver dollar coming to us from colonial times, as it existed under the republic for nearly a hundred years, should be restored as the unit of value, with unlimited coinage, with the issue of bullion certificates, and all other privileges accorded to gold.

Resolved, That if experience shall prove that there needs to be a readjustment of weights as between gold and silver coin, gold should be the adjusting coin, as it has been heretofore.

Resolved, That the Secretary of State is hereby re-

quested to send attested copies of these resolutions to our Senators and Representatives in Congress, with a request that they present them to their respective Houses as the voice of the people of the State of Illinois represented in the General Assembly, and that our Senators are hereby instructed and our Representatives requested to labor zealously to so change the laws as to secure these results full and complete.

The receipts of the State government during the past two fiscal years (ending October 1, 1878) had been \$8,650,052.14, and the expenditures for the same period \$6,538,628.18, leaving a balance of \$2,012,223.96. The total State indebtedness two years ago was \$1,478,600.27, of which only \$652,742.06 is outstanding. Of this last sum \$357,442.06 is payable at the pleasure of the State, leaving a remainder of \$195,300, the aggregate of the State debt which is not subject to immediate payment. The State is thus practically out of debt, and after January 1, 1881, will be really so.

The following is an official statement of the appropriations made by the Legislature for the State institutions under the charge of the State Board of Charities:

NORTHERN HOSPITAL FOR THE INSANE.		
For ordinary expenses.....	\$200,000	
For special expenses.....	22,080	\$222,080
CENTRAL HOSPITAL FOR THE INSANE.		
For ordinary expenses.....	\$220,000	
For special expenses.....	35,496	255,496
SOUTHERN HOSPITAL FOR THE INSANE.		
For ordinary expenses.....	\$180,000	
For special expenses.....	18,000	198,000
EASTERN HOSPITAL FOR THE INSANE.		
For ordinary expenses.....	\$90,000	
For special expenses.....	167,500	257,500
INSTITUTION FOR THE DEAF AND DUMB.		
For ordinary expenses.....	\$150,000	
For special expenses.....	20,979	170,979
INSTITUTION FOR THE BLIND.		
For ordinary expenses.....	\$46,000	
For special expenses.....	6,634	52,634
ASYLUM FOR FEEBLE-MINDED CHILDREN.		
For ordinary expenses.....	\$100,000	
For special expenses.....	17,255	117,255
SOLDIERS' ORPHANS' HOME.		
For ordinary expenses.....	\$75,500	
For special expenses.....	8,500	83,000
EYE AND EAR INFIRMARY.		
For ordinary expenses.....	\$34,000	
For special expenses.....	4,000	38,000
STATE REFORM SCHOOL.		
For ordinary expenses.....	\$50,000	
For special expenses.....	5,600	55,600
Total.....		\$1,456,494

The appropriations made for their benefit, with the exception of the State Reform School, by the last four General Assemblies, have been as follows:

By the Twenty-seventh General Assembly.....	\$1,907,520 41
By the Twenty-eighth General Assembly.....	1,481,418 73
By the Twenty-ninth General Assembly.....	1,376,800 00
By the Thirtieth General Assembly.....	1,333,276 60

The reports of the Commissioners are made biennially, and the term ends on September 30th. At that date in 1878 there were in the nine institutions 2,038 inmates. The total number of beneficiaries of the State in the charitable institutions during the past two years was 7,549. The number remaining and actually present in the institutions, September 30, 1878, was:

Northern Hospital for the Insane.....	525
Central Hospital for the Insane.....	534
Southern Hospital for the Insane.....	453
Institution for the Deaf and Dumb.....	403
Institution for the Blind (in vacation).....	7
Asylum for Feeble-Minded Children.....	290
Soldiers' Orphans' Home.....	290
Eye and Ear Infirmary.....	65
State Reform School.....	192
Total.....	2,674

This is an increase of 27 $\frac{1}{2}$ per cent. over the number present at the close of the year 1876. The average number for the two years in all the institutions, in 1875-'76, was 1,940; in 1877-'78 it was 2,280, an increase of nearly 20 per cent. The average for the next two years, it was estimated, would be still greater. Two causes operate to bring about this increase—the natural growth of the population of the State, and the enlargement of the institutions, of which the former is primary and the latter an inevitable consequence. The increase in cost does not keep pace with the increase in numbers, and the per capita cost is steadily diminishing.

The subject of commitments to insane hospitals was extensively discussed by the Commissioners. The law of the State, as modified, makes it a crime, not simply to receive or detain an insane person "against the wishes of such person," but to receive him at all without a jury trial. But it was not framed for the protection of the insane. Its obvious intent is to protect sane persons from false imprisonment. The defect in the law, which is fundamental, is that it distinguishes between the sane and the insane, recognizes a possible peril to the former, overlooks the real danger which everywhere and always threatens the insane class, and extends the ægis of its protection to that one of the two classes which least needs it, because it is in the least danger and is the best able to protect itself. The Commissioners then proceed to say:

There is something almost ludicrous in the idea of "accusing" a man of insanity, as if insanity were not a disease but a crime; and his "prosecution" and "defense" by opposing attorneys, who, from want of experience or of discretion, sometimes take this opportunity to display their legal acquirements and forensic talent to an admiring world, is singularly inappropriate in a medical inquest, especially where the sincerity of the patient's friends and even the fact of his insanity is doubted by nobody. In one instance, in this State, to avoid the irritation of the patient, who was aged and infirm, by the ordinary forms of court procedure, the court, including judge, jury, attorneys,

and witnesses, organized as a croquet-party, solemnly played a game of croquet in his presence, observed him, conversed with him, and then with equal solemnity retired and found a verdict of insanity, which was entered upon the record of the court, but never communicated to the "accused" himself.

The law to be adopted, in their view, is one which should provide for the determination of the sanity or insanity of a person alleged to be insane, first, by an exhaustive personal examination of the case by competent medical men, and second, by the submission of the evidence in the case to the Judge of the Circuit or Probate Court for his approval; and which should also provide that the order of a Court shall be an indispensable prerequisite to the admission of any insane person into any hospital or asylum; and which should make the superintendent of the hospital or asylum fully and primarily responsible for the subsequent detention of the patient, and for his discharge when recovered, or if he is found not to be insane. Such a law meets all the fundamental requirements of a good law upon this subject. All else is matter of detail. The details of such a law are nevertheless worthy of careful study. They are very important. Various questions arise at once. For instance: Shall the medical examiners in each county be selected by the patient or by the Court? and if by the Court, shall special examiners be appointed for each case? or shall a permanent board of examiners be created in each county, and if permanent boards are established, shall they be appointed by the courts or by the Governor? and if by the courts, by which courts—the Circuit or the County Courts? Again, what shall be the necessary qualifications of a medical examiner in a lunacy case? Although permanent boards would accumulate experience by practice, yet the Commissioners think it to be more advisable to appoint special examiners in each instance, both on account of their greater nearness to the patient, and because there may be special reasons for the employment of a particular physician in a particular case. They would not allow the family of a patient to select their own examiners, because the Judge to whom an application is made for an order of commitment would be likely in many cases to make a wiser choice, uninfluenced by considerations which might affect them. The Judge would feel a greater sense of responsibility for the selection of the most competent men, and a report made to him by men in whose judgment he had confidence would afford him a more solid basis for his own action. Applications might be addressed to judges either of the Circuit or County Courts, and the Judge in all cases should appoint as examiners only registered, competent physicians, of good repute for intelligence and integrity. Provision should also be made for a brief report in writing, by the examining physicians, of the reasons which satisfied them as to the insanity of the party examined, and this report

or a copy of it should be transmitted by the clerk of the court, with the order of commitment, to the superintendent of the hospital or asylum, at the time when application is made for the patient's admission.

The question of the disposal of the criminal insane was not overlooked. The number of insane convicts in the State is twenty-eight. The most feasible plan of disposing of them properly, in the opinion of the Commissioners, would be to build, in one or both of the penitentiaries, an insane ward within the prison walls. The erection of such wards would relieve the hospitals and make room for as many more insane who are not convicts.

A general interest pervaded the State on the subject of taxation, which led to some modifications of the existing laws by the Legislature. The assessment of the capital stock of all companies and associations organized under special or general laws of the State was by the revenue law of 1872 assigned to the State Board of Equalization. In the interest of manufacturing corporations, the Twenty-ninth General Assembly amended the general act by providing "that, in assessing companies and associations organized for purely manufacturing purposes, or for printing, or for publishing of newspapers, or for the improving and breeding of stock, the assessment shall be so made that such companies and associations so organized shall only be assessed as individuals under like circumstances would be assessed, and no more; and such companies and associations shall be allowed the same deductions as allowed to individuals." The courts held that this clause did not change or modify the law, for the reason that such companies were *not* assessed at any greater rate than individuals were under like circumstances.

An act of this Legislature, which took effect on July 1st, takes from the Board of Equalization the right to assess the classes of corporations named in the amendment quoted above, and relegates the valuation of their property for taxation entirely to local assessors. Gas companies (manufacturers of gas), brewing companies (manufacturers of beer), and packing companies (manufacturers of provisions) all loudly declare that the Board has no longer anything to do with *their* property. Should it be so held, that branch of the Equalizers' duties will be considerably lessened. Out of the forty-six companies against which a capital stock assessment was made in 1878, twenty-seven will be exempt under this amendment. It was provided that in 1880 and every fourth year thereafter there shall be a general assessment of real property. It is to have an annual examination by the assessor for the noting of additions to and destruction of improvements. Equalizations are to be made, and personal property is to be assessed, annually. The intent of the framers and promoters of this act was that there should be but one book, which should start with the original assessment of the

realty, contain the four years' taxes based thereon, and be the record of payments, judgments, sales, forfeitures, and redemptions for each of said years.

In making assessments of personal property, the act requires the "numbers, amounts, quantity, and quality to be scheduled by the taxpayer under oath." The statute does not require the valuation of the property to be stated in the schedule. This is left entirely to the assessor, as in the old law. The same act increases the penalty for allowing forfeiture of property for taxes to 25 per cent., and makes all delinquent taxes bear interest at the rate of one per cent. per month after the first day of May until paid or forfeited.

The third change under this law consists in making a judgment for the sale of real estate for delinquent taxes conclusive as to all objections which existed at or before the rendition thereof, and which might have been presented as a defense to the application for such judgment.

In amending one of the sections to conform to the provision for increased penalties on forfeitures, a clause of the old law is reenacted which has been passed upon adversely by the courts repeatedly. The county clerk is authorized to sell property after forfeiture to any applicant who may offer to pay the tax, penalty, and costs due thereon. Thus the sale may be made without notice to the owner and without public competition.

The matter of the taxation of railroads was one of the most important subjects of the session. The present methods of assessment and valuation show the following results: The net earnings of all the roads in the State, as officially reported to the Board of Warehouse Commissioners for the year ending June 30, 1878, were \$17,368,502. If it be supposed that the net earnings are 10 per cent. of the value of the roads, then these earnings indicate a value of \$173,685,020. Fifty per cent. on one half of this indicated or cash value is \$86,842,510. Now the equalized valuation made by the State Board of Equalization was \$40,461,865. Thus it appears that, while one half of the indicated or cash value, which is generally considered a fair basis of taxation, was \$86,842,510, the sum of \$40,461,865 was the valuation on which the taxes were laid. Many of the shorter roads were assessed within a small margin of their net earnings, and the stronger roads paid proportionally a much less tax. A call upon the Auditor by the Legislature for the amount of railroad taxes charged on his books of 1873 brought out the following: tax of 1878, \$987,704; back tax, \$1,112,276; total, \$2,099,980.

The State Constitution provides that "every person and corporation shall pay a tax in proportion to the value of his, her, or its property." The revenue law also declares that the State Board of Equalization, in assessing the capital stock of railroads, "shall adopt such rules and principles for ascertaining the fair

cash value of such capital stock as to it may seem to be equitable and just." Under these provisions the State Board of Equalization in 1873 proceeded to assess the capital stock of the railroads. Their total assessment of all the railroad property, including capital stock, amounted to \$133,520,633, of which the capital stock amounted to \$64,611,071. In 1874 another assessment was made, amounting in all to \$81,707,594, of which \$31,314,175 was capital stock. In 1875 the total assessment of railroad property in the State was \$60,486,343, of which \$22,649,222 was capital stock. In 1876 the total valuation of railroad property for taxation was \$44,329,489, of which \$10,106,258 was capital stock. In 1877 the total was \$41,637,243, and, on oath, the Board said the whole capital stocks of the railroads of the State were not worth one cent, and so repudiated them and the law altogether. In 1878 the Equalizing Board assessed for taxes the whole railroad property of the State at the sum of \$40,461,865, and again the capital stocks were without value, notwithstanding more than \$50,000,000 of stocks of the Illinois railroad companies were selling every day for more than par. For the last three years the average net income of all the roads in the State (excluding the Illinois Central, which pays a constitutional tax of seven per cent. on its gross earnings) has averaged about the sum of \$16,000,000 each year; which sum has been paid out to bond- and shareholders or invested in new forms connected with the various roads. In other words, the roads of the State have earned between 35 and 40 per cent. net on their taxed values.

These facts excited the attention of the Legislature, and an effort was made to correct them, which, although not quite successful, was too important to pass unnoticed. Its object was to furnish the State Board with a rule by which they should be compelled to honestly value, for taxation, the capital stocks and franchises of the railroads. A bill was introduced into the Lower House proposing certain amendments to the existing revenue law, as follows: The substitution of the Governor, Secretary of State, Auditor, and Attorney-General for the present State Board of Equalization. In addition to the existing schedules of returns to be made to the Auditor, sworn statements are required, showing—

1. The total gross earnings or income of the road within the State of Illinois for the year ending on the 31st day of December then next preceding;
2. All the expenses incurred in operating and maintaining the road and the equipment thereof in the State of Illinois during the same time, including amounts paid for salaries of officers and agents, and wages of employees, amounts paid for repairs and renewal of track, fences, bridges and buildings, locomotives and cars, shop machinery and tools, office, shop, and train supplies, attorneys' fees, costs of suits, taxes, injuries to passengers and other persons, damages to and losses of freight and baggage, injuries to cattle and stock, injuries to property by fire, and all other operating expenses necessary to be shown in order to determine the net

earnings or income of the road; 3. The amount of net earnings or income; 4. The amount expended in this State during the same time in purchase of real estate, lands and lots, and for improvements and betterments thereon, for construction of depots, shops, and other buildings, principal and interest on bonds and indebtedness, dividends on stock, purchase of other lines of roads, construction of new track, and all other expenses not properly chargeable as operating expenses.

Part of this information is required of the roads by the existing law, but the bill proposes to make the requirements much more searching. The particular object aimed at in these provisions was to prevent the frauds extensively practiced by charging up to operating expenses expenditures for purposes mentioned in the above section. This section was regarded as of the utmost importance for securing accurate information as to the actual net earnings of any one of the great railroads. Without such facts, it was impossible to determine how much of the earnings had been buried up in improvements of various kinds and other expenditures, which were actually paid for out of the net earnings just as much as were dividends, and which were as properly chargeable to the income account and as justly subject to taxation.

But the principal feature of the bill was the new method which it proposed for arriving at the taxable value of the capital stock and franchises of the railroad corporations. It was contained in this section:

The valuation and assessment of the capital stock and franchise of railroad companies shall be determined by said Board in the manner following, viz.: The net annual earnings or income of each railroad company shall be taken as being a certain percentage on the actual value of the property and franchises represented by the capital stock thereof; the actual rate of such percentage shall be fixed upon, and the principal sum which would produce the amount of such net earnings or income at such rate per cent. shall be held to be the true cash value of such capital stock: *Provided*, that the same rate per cent. shall apply to each and every railroad company for the same year's valuation and assessment. The valuation so found shall be taken as the assessed valuation of the capital stock, and the same shall be equalized by the Board and distributed to the several counties, towns, cities, villages, and districts, in the same manner now provided by law.

The purpose of this rule was to secure the equitable taxation of all the roads. Without interfering in any way with the method of taxing the tangible property, it proposed only to change the method of ascertaining the taxable value of the capital stock and franchise. Under it the Board have no discretion, except in determining the rate per cent. upon which the taxable value of the capital stock depends. The lower this percentage, the higher would be the tax. It was believed by the advocates of the bill that, as the value of money and of all property fluctuated from year to year, it would not be just to fix this percentage to rigid limits. It was estimated that on an average the industrial and agricultural interests of the State realized 5 per cent. per annum, net, on

the amounts invested and expended. But, in order that no injustice should be done, it was assumed that the railroads of the State ought to be allowed 10 per cent. on their investments, which obviously gave them a decided advantage over any other business or industry.

To illustrate the operation of the bill, it was then supposed, as an instance, that a railroad company was reported by the local assessors of the counties through which its line runs to possess \$500,000 worth of tangible property. The sworn returns made by its officers show its actual net earnings last year to have been \$200,000. Ten per cent. having been agreed upon as the rate, "the true cash value" of the capital stock and franchise of the company is found to be \$2,000,000. The State rate for purposes of taxation is 50 per cent. of this, which would give \$1,000,000. Now, deduct therefrom the value of the "tangible property," and the assessed valuation of the capital stock and franchise is fixed at \$500,000, the taxes upon which are to be distributed among the several counties, etc., in proportion to the mileage of the road in each. The value of the tangible property is deducted, because the taxes thereon belong to counties in which it is assessed. The theory of the law is that the assessed value of the tangible property represents its intrinsic value, what it would sell for whether the road was running or torn up. A large proportion of the \$500,000, in the case supposed, might be represented by the machine-shops, located in one county, while the adjoining county perhaps would not be justly entitled to any taxes except upon the track and its share of the capital stock. This explains why the value of the tangible property is deducted in the calculation. The application of the rule to three or four of the railroads in the State showed the following results: The Chicago and Alton road under the rule would be taxed on \$16,536,685. The equalized value of the State Board was \$5,078,627. The company actually earned 41.5 per cent. upon the amount on which it was taxed. The Chicago and Northwestern under the rule should have been taxed on \$11,323,635, but the amount on which it was taxed was \$3,225,955. On this amount it realized the enormous income of 70.1 per cent. The results were similar in other cases. The bill, however, failed to become a law.

On an early day of the session the House requested the Governor to inform them of the expense to the State of the Board of Railroad and Warehouse Commissioners, together with such information as he might have regarding the benefit (if any) of the Commission to the people of Illinois. The cost of the Commission from July 1, 1871, to September 30, 1878, has been \$118,682; of which \$46,159 have been used for expenses, and chiefly in the prosecution of suits against railroad companies for violation of law. His answer relative to the benefit of the Commission is full of interesting and important facts bearing upon the relations

of the railroads to the State and the people, and their subjection to civil authority. Some points are thus stated :

Since the passage of the law creating the Railroad and Warehouse Commission in 1871, Illinois has made very important advances toward the solution of the railroad problem. The questions involved in this problem have not only been before the people in this State, but in other States and countries. In England, after the railroad was a fact, it was recognized as a public highway. The right of Parliament to fix rates for the transportation of passengers and freights was therefore asserted, and schedules of rates were put into their charters. Those familiar with the subject need not be told that the attempt to establish rates in this manner was a failure. Then it was asserted that competition, if encouraged by the Government, would prove a remedy for the abuses with which railroads were charged. The suggestion was acted upon; the Government encouraged the construction of competing lines. As a result, rates fell. Competition, however, finally began to entail disaster upon the competitors, and, compelled to become allies to escape destruction, the competitors combined. Railroads were consolidated, rival lines were united, and competition was thus destroyed. The danger of great combinations of this kind, not only to the business interests of the country, but also to the State, was at once suggested and occasioned alarm. This alarm resulted in a public opinion that the Government should own the railroads. But consolidation, to the surprise of the prophets of evil, did not result in higher rates; on the contrary, lower rates and higher dividends resulted. Thus, by a logical process of attempt and failure to control railroad corporations, the conclusion was reached that wise policy required permission to such corporations to operate their railroads in their own way, upon ordinary business principles. But at the same time a Board of Commissioners was wisely created and authorized to hear and determine complaints against railroad corporations and exercise other important powers. This Board in England was created about five years ago, and the most noticeable feature in its career, says Charles Francis Adams, Jr., "is the very trifling call which seems to have been made upon it. So far as can be judged from its annual reports, the cases which come before it are neither numerous nor of great importance. It would, however, be wholly unsafe to concede the fact that such a tribunal is unnecessary. On the contrary, it may be confidently asserted that no competent Board of Railroad Commissioners, clothed with the peculiar powers of the English Board, will either there or anywhere else have many cases to dispose of. The mere fact that a tribunal is there—that a machinery does exist for the prompt and final decision of that class of questions—puts an end to them. They no longer arise."

The process through which the public mind of America has passed on the railroad question is not dissimilar to that through which the public mind of England passed. But here competition was relied on from the first. To all who asked for them railroad charters were granted. The result has been the construction of railroads in every part of the country—many of them through districts of country without business or even population, as well as between all the business centers, and through populous, fertile, and well-cultivated regions. Free trade in railroad-building and the too liberal use of municipal credit in their aid have induced the building of some lines which are wholly unnecessary, and which crowd, duplicate, and embarrass lines previously built, which were fully adequate to the needs of the community. In Illinois railroad enterprises have been particularly numerous, and have made the State renowned for having the most miles of railroad track, the chief railroad State. Competition did not result according to public anticipation. The competing corporations worked without sufficient remuneration at the competing points, and, to make good the losses resulting there, were often guilty of

extortion at the non-competing points. They discriminated against persons and places. Citizens protested against these abuses in vain. The railroad corporations, when threatened with the power of the Government, indulged in the language of defiance, and attempted to control legislation to their own advantage. At last, public indignation became excited against them. They did not heed it; they believed that the courts would be their refuge from popular fury.

In Illinois the feeling of the people expressed itself in many ways, and finally found utterance in the Constitution of 1870. In this Constitution may be found all the phases of opinion on the railroad question through which the English mind has run. The railway is declared to be a public highway. The establishment of reasonable maximum rates of charges is recognized as necessary to the public welfare, and the General Assembly is required to pass laws to correct abuses and prevent unjust discriminations and extortion in the rates of foreign passenger tariffs on the different railroads in the State, and enforce such laws by adequate penalties, to the extent, if necessary for that purpose, of forfeiture of their property and franchises. The Constitution did more than this. To correct abuses of the interests of the farmers, from whose fields warehousemen, in combination with corporate common carriers, had been drawing riches, it declared all elevators or structures where grain or other property was stored for a compensation, public warehouses, and expressly directed the General Assembly to pass laws for the government of warehouses, for the inspection of grain, and for the protection of producers, shippers, and receivers of grain and produce.

Promptly after the adoption of the Constitution containing these affirmative provisions in 1871, the Legislature attempted to give them vitality by the enactment of laws to carry them out. One of these created the Railroad and Warehouse Commission, and imposed upon it certain important duties. Another was an act to regulate public warehouses and warehousing and the inspection of grain, and to give effect to Article XIII. of the Constitution. By this act other important duties were imposed upon the Railroad and Warehouse Commissioners. A grain-inspection department was created and placed under their charge. Another statute divided the railroads of the State into classes and fixed maximum passenger rates. Another prohibited unjust discrimination and extortion in freight rates, and fixed severe penalties for disobedience of law. Under the warehouse laws the Commissioners commenced a suit against Ira Y. Munn and George T. Scott, warehousemen, to compel them to recognize the right of the General Assembly to regulate their business in the interest of the people. The case was made a test one. It was decided by both the State and Federal Supreme Courts in favor of the people, and in its decision the Supreme Court of the United States declared a doctrine of the greatest importance to the people of the whole country—the doctrine that, under the powers inherent in every sovereignty, a government may regulate the conduct of its citizens toward each other, and, when necessary for the public good, the manner in which each shall use his own property. The value of this decision to the farmers and grain-consumers of the country can not be wholly estimated in money.

Under the law to establish reasonable passenger rates on railroads, a suit was commenced and taken to the Supreme Court. The Court decided that it was necessary to prove that the rate charged by a railroad in excess of the maximum rate fixed by law was unreasonable.

The law against unjust discrimination and extortion by railroad corporations was passed upon by the Supreme Court in the effort of the Commissioners to enforce its provisions; and the Supreme Court decided that the act could not be enforced until so amended as to make the charging of a greater compensation for a less distance, or for the same distance, merely *prima facie* evidence of unjust discrimination, instead of conclusive evidence, and in dictum expressed the

opinion that " what is a reasonable rate of freight over a railroad is at best a mere matter of opinion depending on a great variety of complicated facts, which but few persons could intelligently investigate, and which it would be wholly in the power of the company to furnish or withhold."

In 1873 the present law to prevent extortion and unjust discrimination in rates charged for transportation of passengers and freight on railroads in this State was passed. It was prepared and passed with the decision of the Supreme Court in the case of *The People vs. the Chicago and Alton Railroad Company* fresh in the minds of the members of the General Assembly, and every suggestion made by the Court was observed. The Commission since its establishment has brought many important suits against railroad corporations for alleged violation of law, and obtained judgments in the lower courts. In one of these, against the Illinois Central Railroad Company, for unjust discrimination in the matter of delivery of grain upon the track and to elevators, a judgment of \$1,000 and costs was obtained. The judgment was paid by the company, and the unjust discrimination discontinued. At that time the railroads charged six dollars per car-load more for delivering grain on the track than to an elevator. Since then the railroads have discontinued this practice. The action of the Commissioners in stopping this abuse has resulted in an annual saving to the grain-raisers of Illinois of vast sums of money. Other cases won by the people were appealed to the Supreme Court. The judgment in one of these was reversed, but in the opinion delivered by the Court, as two of the dissenting Justices assert, the constitutionality of the act is assumed, and an intimation is given that it will be sustained when its merits are discussed; but the law has not yet been passed upon by the Court, and the fact must therefore be apparent that the Commissioners can not act under the existing condition of things with the confidence they would possess if the law had been decided by the highest tribunal in the State to be constitutional.

Notwithstanding the difficulties experienced by the Commissioners, there has been rapid progress made in Illinois toward a settlement of the railroad question through their agency.

In 1871 the Railroad and Warehouse Commission was established. Its creation was resisted both by railroad corporations and public warehousemen, and after its organization they treated it with little consideration. They refused to recognize its authority. But after the decision by the Supreme Court of the United States declaring the doctrine that the Government may regulate the conduct of the citizens to each other, and, when necessary for the public good, the manner in which each shall use his own property, the railroad corporations and public warehousemen began to grow less determined in their opposition to the attempts to control them, until now there is very little opposition. They now give prompt attention to requests of the Commissioners for the correction of abuses called to its notice by their patrons, and thus the Commissioners not only settle questions arising between railroad corporations and their patrons, but it may as truthfully be said of this as of the English and Massachusetts Commissions, that the very fact of its existence has put an end to many of the abuses formerly practiced by such corporations which were angrily complained of by the people. The Commission has also, in some instances, shown to complainants that the hardships complained of were not the fault of the railroad companies, but resulted from causes affecting the markets outside of railroad control and interference.

It is a curious fact that the conclusion reached by the English statesmen in 1874 was reached in Illinois in 1873—the conclusion that railroad companies ought to have the right to control their own affairs, fix their own rates of transportation, be free from meddlesome legislation, and, as it has been expressed, work out their own destiny in their own way, just so long as they show a reasonable regard for the requirements

of the community. An analysis of the railroad law will prove this. It recognizes the right of a railroad company to establish its own rates for the transportation of passengers and freight over its railroad, provided that in doing so it neither extorts from nor unjustly discriminates against any of its patrons; and that questions of unjust discrimination may be determined, it declares what shall be unjust discrimination *prima facie*; and that complaints of extortion may be determined, the law provides a way to make the corporation complained about produce the facts on which is based the opinion of what is a reasonable rate on its road. This is done by requiring the Railroad and Warehouse Commissioners to prepare schedules of reasonable maximum rates for the transportation of freights and passengers on each of the railroads of the State, and in every suit against a railroad corporation are made *prima facie* evidence that the rates fixed by the Commission are reasonable maximum rates. By this process a corporation that has made a rate that is complained about as extortionate is compelled to prove that the rate is reasonable. In this way the law says to the railroad company, You may charge what you please if you can show, when your charges are questioned, that they are reasonable. In other words, the General Assembly has attempted to take the burden of proof from the shoulders of the complainants in a suit against a railroad company for extortion, and put it on the shoulders of the defendant; and it has done this because the Supreme Court has said that " what is a reasonable rate of freight over a railroad is at best a mere matter of opinion, depending on a great variety of complicated facts, possessed only by the railroad company, and which it may furnish or withhold." The Legislature has attempted to make the possessors of the facts furnish them for the use of courts and juries. It is true the Supreme Court has said that the schedules of rates are something more than evidence, that they are facts upon which actions against railroads must be based. But the Legislature did not intend to absolutely fix maximum rates. The Legislature intended to establish a standard of what is fair and reasonable in the charges made in the transactions of railroad business; it was intended to allow the roads to charge all they ought to, and devise a method by which a determination could be reached, when any one should complain that they were charging more than in fairness they ought to charge.

In conclusion he said:

In my judgment, if the Commission were dispensed with by the Legislature, difficulties would soon arise, agitation would commence again, and controversies would run riot. New legislation would follow, another board of some kind would soon be created, and the track we have just passed over would be again traveled by the people's representatives. The Board should be sustained in the interest of all the people. Instead of being destroyed, it should be strengthened. It should not only have the authority with which it is now vested, but more; it should be made a legal arbitrator in all matters of controversy between railroad companies and warehouses and their patrons, and should be required to make examination of roads, and be invested with authority to compel reparation of unsafe or defective bridges, culverts, track, and rolling stock.

S. M. CULLOM, Governor.

The railroads of the State which reported to the Commissioners, counting double and single tracks, etc., own 18,477 miles, of which 12,934 are laid with iron. During 1878 920 miles of steel and 293 of iron were laid. Forty-three corporations with 14,475.02 miles of road report \$364,145,683.95 capital stock. Of this, \$59,684,277.56 is preferred, and is reported by fourteen companies. Eight roads make no capital stock returns. Six of these are in the hands of receivers. During 1878 dividends were

declared aggregating \$11,058,030.06, or an average of 5.19 per cent. on the entire amount of common and preferred stock reported as paying dividends. Forty-two roads, with 14,885.12 miles of track, report bonded indebtedness of \$328,799,590.68, an average of \$21,531 per mile. Thirty-three companies report floating debts aggregating \$11,838,802.79. The aggregate of bonded and floating debt reported in 1879 is \$340,638,399.47, an increase of \$65,680,859.34 over last year—\$60,635,366.26 of bonded and \$5,045,493.08 of floating. This increase may be accounted for in some measure by the fact that some of the roads have added to their debts, but much the larger portion of it is due to the more perfect returns made by the companies. The ordinary operating expenses of 1878 compared with those of 1877 show a decrease of \$423,179.81, while the expenses called extraordinary have been increased over those of that year \$7,862,621.26. The total number of passengers carried during 1878 was 21,535,487. The number carried one mile was 830,817,698. The average receipts per passenger per mile were 3.18 cents. The total tons of freight carried were 30,233,308. The total tons carried one mile were 5,937,068,254. The average number of tons carried per train, twenty-one roads reporting, was 107. The highest average number of tons carried per train was 320; the lowest average was 28 tons. The average number of tons carried per car was 7.54. The increase in tonnage of 1878 over that of 1877 is 3,758,172, or 12.4 per cent.

The Committee on Railroads in the Lower House of the Legislature instructed its chairman to inquire of the State Attorney-General "whether corporations operating sleeping-cars in the State were subject to legislative control." His reply was as follows:

The same question was submitted to me by the House Committee on Railroads two years ago. The conclusion then reached was that persons or corporations operating sleeping-cars upon railroads, as that business is now generally conducted, were subject to legislative control in like manner as common carriers. (9, "Chicago Legal News," p. 221.) Subsequent reflection has confirmed me in that opinion. The recent decisions of the Supreme Court of this State and of the United States recognize the following as a sound legal principle: Whenever any person pursues a public employment, and sustains such relations to the public that the people must of necessity deal with him, and are under a moral duress to submit to his terms if he is unrestrained by law; then, in order to prevent extortion and abuse of his position, the price he may charge for his service may be regulated by law. (*Scott & Munn vs. The People*, 69 Ills., 80; *Munn & Scott vs. The People*, 40 Ills. (94 U. S.), 113; *C. B. and Q. R. R. Co. vs. Iowa*, 4 Ills., 155; *Peck vs. C. and N. W. Ry. Co.*, id., 164; *Stone vs. Wisconsin*, id., 181.) Persons or corporations operating sleeping-cars upon railroads may not, in a strict sense, be common carriers, yet they participate in the carriage of passengers for hire, and perform in part, at least, the duties which would otherwise devolve upon the common carriers. Upon the line of railroads upon which they operate, they furnish all the sleeping-cars used. All competition, so far as that mode of travel is concerned, is wholly excluded. They pursue a "public employment" in the same sense that the vocation of common

carriers, warehousemen, or ferrymen is held to be a public employment, as distinguished from ordinary business pursuits, and in my opinion are equally subject to legislative control as common carriers.

A sub-committee then proceeded to Chicago to consider the propriety of legislating for the reduction of sleeping-car rates. Ample facilities were offered to them by the President of the Pullman Palace Car Company (Mr. George M. Pullman), who likewise made a statement of the expenses and earnings of the company. He read the contract with the Chicago and Alton Railroad, in accordance with which the Pullman Company runs it scars on the line of that road, and then submitted statements drawn from the books showing that the investment account of the Pullman Company with the Chicago and Alton road was \$175,090 in eleven sleepers, the number on that road. The gross earnings for 1878 of these eleven cars were \$55,023, and the Pullman Company received \$7,080 mileage from the Alton Company, making the gross revenue \$60,104. The operating expenses, on the other hand, for conductors, porters, etc., were \$12,940; repairs on cars were \$18,287; and the taxes and insurance on the eleven cars were \$1,210, making the net earnings \$22,664.33, from which was to be deducted 5 per cent. for annual depreciation on the cars. This showed, as the result of the figures, that out of about \$60,000 gross earnings the company realized \$13,999.83, which were divided among the stockholders. Similar statements were submitted, showing the state of affairs with regard to the Illinois Central, the Chicago, Burlington, and Quincy, the North western, and other roads. It was next shown from statements before the committee that on the Chicago and Alton road, taken as an example, the year's earnings per car per trip were \$21.34, and the expenses \$16.40, leaving the net earnings of each trip at \$4.94 a car; further, that the gross earnings per passenger were \$1.73 and expenses \$1.33, leaving the net earnings at 40 cents per passenger. Mr. Pullman explained that the reason the gross earnings per passenger were \$1.73 instead of \$2, the price per berth, was that many of the passengers were not berth but merely seat passengers.

A most important military question was raised by the action of the Legislature. The Military Committee of the House were instructed to report "on the present necessity for a State military organization." They reported that, in the light of the events of the last two years, and with that experience so fresh in the minds of every member, they were compelled to recognize the wisdom which provided the State with a citizen soldiery in that hour of urgent need (referring to the railroad riots). Therefore they concluded that "it was an absolute necessity which the representatives of the people could not safely ignore." A bill was accordingly reported. The object of this measure was brought out in the following remarks by one of the mem-

bers (Mr. Trusdell) in the debate on the bill :

He denied Mr. Erhardt's statement that, because the Constitution gave one man the right to carry arms, any number had the same right. There was such a thing as constitutional authority which must be obeyed. No body of men in the State had the right to drill and carry arms in defiance of constituted authority. He knew the people were able to suppress riots, but it was not fair to require them to meet sudden dangers without sufficient preparation, and these dangers must arise unless these men are compelled to lay down their arms. Such defiance of law can not be tolerated for a moment. He knew that an armed body of men existed in Chicago who were a menace to the peace and order of that city. He cared not what they were called, but was in favor of compelling them with shotted guns to lay down their arms, and preventing the bloody contests that will inevitably come if they are not disbanded. If they had grievances, they must redress them at the ballot-box. No other remedy can be allowed them. He was in sympathy with them and knew their grievances. Their condition was pitiful and painful, but it was not the law that made it so. Their condition was vastly better than it was in Europe. Their homes were protected, and no execution officer can enter there to strip them of their home comforts. In every way, Democrats and Republicans alike had emulated each other to elevate the condition of the workmen.

The bill passed the House by a vote of 100 yeas to 37 nays. Of those voting for the bill, 71 were Republicans, 23 were Democrats, and 6 were Greenbackers. Of the 37 voting no, 3 were Socialists, 2 Greenbackers, 2 Republicans, and 30 Democrats. It provided substantially that the entire male population shall be enrolled in the militia, and that only a portion consisting of 8,000 men shall be organized and armed; and the parade and drill of all other military organizations, except under certain stated circumstances, is prohibited unless licensed by the Governor. This law when enforced would oblige the armed companies reputed to be Socialists in Chicago to disband. A test case under the law was therefore made up by one of these companies, which drilled without a license. One of its members was arrested and convicted, but subsequently released on a *habeas corpus* writ by the Circuit Court. It declared the law to be unconstitutional on two grounds: first, that the right to bear arms is an inalienable one, of which a man can not be deprived except under due process of law; and, second, that Congress by its act of 1792 has enrolled every able-bodied citizen in the ranks of the militia, and no State law can provide for drilling and organizing only a part of this militia force. This decision is based nominally on the amendment of the Constitution of the United States which declares that "a well-regulated militia being necessary to the security of a free State, the right of the people to keep and bear arms shall not be infringed." The case will be taken to the highest Court for final decision.

A compulsory education bill, requiring the attendance of children between the ages of eight and fourteen for at least twelve weeks in each school year, unless the child is excused

by the Board of Education or School Directors when it is shown that its bodily or mental condition, or application to study for the required period, prevents its attendance, or for any other sufficient cause, passed the House by a vote of 87 yeas to 49 nays, and became a law.

A "store-pay" bill, as it is usually called, to prevent the payment of any laborer, miner, or mechanic, as wages, with goods or supplies, or any order, check, device, etc., after passing the Legislature, was vetoed by the Governor. His objection was based on the hardship which would ensue to the laborer without money, to be thus cut off from the credit he requires to obtain goods or supplies.

The number of prisoners in the penitentiaries of the State at the beginning of the year was 1,893, of whom 29 were females. A proposition to change the law relative to life-sentences was again presented to the Legislature by the Committee on Penitentiaries. It was urged in its favor that the tables of Joliet Prison, as well as other prisons, show that a man sentenced for life rarely lives more than ten years. After that time the terrible strain upon his mind, with no hope of ever again being permitted to see his friends in this world, causes him to give up in despair and die, or he becomes a maniac and is sent to an asylum to spend the remaining years of his life. If the law was so amended that a convict should not be sentenced for a longer term than thirty-three years—the average life of man—he might, under the present good-time law, shorten his time one year and three months in the first five years and one half after that; so that if a man is sentenced for thirty-three years, he can, by obeying all the rules of the prison, end his sentence in a little less than twenty years. The committee say they are of the opinion that, if a man can not be reformed in that time and safely returned to society, he ought to have been hung in the first place.

An act was passed to create a Bureau of Labor Statistics, with five Commissioners, three of whom shall be manual laborers. Its duties are to collect, assort, systematize, and present in biennial report to the General Assembly, statistical details relating to all departments of labor in the State, especially in its relations to the commercial, industrial, social, educational, and sanitary conditions of the laboring classes, and to the permanent prosperity of the mechanical, manufacturing, and productive industry of the State. The compensation of the Commissioners is limited to \$150 per year, and of the secretary to \$1,200.

The returns of the local assessors of the State made in August show the valuation for the year in all but five counties. The following are the returns since 1872: 1873, \$1,194,221,550; 1874, \$1,194,456,451; 1875, \$1,025,428,289; 1876, \$958,405,803; 1877, \$892,380,972; 1878, \$818,987,409; 1879, \$752,239,937. In addition the Board of Equalization assesses annually about \$40,000,000. These figures

show that in this period there has been a decrease in the local assessment of about 37 per cent. It is believed that for 1879 the actual assessment does not exceed 40 per cent. of the actual cash value of the property. The number of cattle assessed in the counties of the State in June, 1878, was 1,775,101; in 1879, 1,722,057; of fat cattle for market in 1879, 376,573. The number of sheep assessed in like manner for 1878 was 775,757; for 1879, 762,788; number of fat sheep for market in 1879, 155,532. The number of horses assessed in 1877 was 915,995; in 1878, 904,948; in 1879, 927,117. The number of mules and asses assessed in 1877 was 127,117; in 1878, 125,875; in 1879, 122,348.

The crop of wheat for 1879 was the largest ever produced in the State. Its amount, as likewise the amount, price, value, etc., for the last twenty years, may be seen in the following table:

YEARS.	Number of acres.	Average yield per acre, bushels.	Bushels produced.	Price per bushel.	Total value.
1863...	2,109,471	11-3	23,897,023	\$0 85	\$20,261,469
1861...	2,109,471	11-3	23,897,020	0 71	16,994,234
1862...	2,300,964	14-0	32,219,500	0 76	24,492,262
1863...	2,611,347	12-0	31,403,163	1 05	32,975,571
1864...	2,828,763	14-3	39,871,173	5 55	51,725,815
1865...	2,296,977	11-0	25,267,745	1 09	27,541,732
1866...	2,196,223	13-0	28,551,421	1 98	55,104,213
1867...	2,456,140	11-4	28,000,000	1 97	52,161,000
1868...	2,488,475	11-5	28,560,000	1 20	34,272,000
1869...	2,607,142	11-2	28,200,000	0 76	22,192,000
1870...	2,259,538	12-0	27,115,000	0 94	25,488,100
1871...	2,050,081	12-8	25,216,000	1 13	29,754,580
1872...	2,042,231	12-1	24,711,000	1 23	30,394,580
1873...	2,104,963	13-5	28,417,000	1 10	31,258,700
1874...	2,619,304	11-5	30,122,000	0 86	25,904,920
1875...	2,690,000	10-5	27,800,000	0 91	24,343,000
1876...	2,520,430	9-3	23,440,000	0 98	21,799,200
1877...	1,977,745	16-4	32,490,556	1 15	38,002,032
1878...	2,324,755	14-6	33,883,395	0 80	27,059,400
1879...	2,440,809	15-0 $\frac{1}{2}$	45,417,661	0 87	39,930,639

It will be seen that the acreage of 2,440,809 for 1879 has been exceeded by the wheat acreage of 1863, 1867, 1868, 1869, 1874, and 1875. The average yield per acre, 18 $\frac{1}{2}$ bushels, for 1879, is the largest on record. The exceptionally large average yields reported generally consist of new varieties of wheat recently introduced. The 1879 crop is over forty-five million bushels (45,417,661), or over eleven million (11,534,263) bushels more than any preceding crop. The value of this crop is nearly forty million dollars (\$39,930,639), which, owing to the low average price (87 cts.) per bushel when compared with former years, will not yield the producer as large returns as the 1864, 1866, and 1867 crops. The 1864 wheat crop of 33,371,173 bushels, at \$1.55 per bushel, returned the producer over fifty-one million dollars (\$51,725,318). The 1866 crop of 28,551,421 bushels, valued at \$1.93 per bushel, brought \$55,104,243; and the following crop, 1867, of twenty-eight million bushels, at \$1.97, was valued at \$55,160,000. The price per bushel was lower than that of 1879 in 1860, 85 cts.; 1861, 71 cts.; 1862, 76 cts.; 1869, 76 cts.; 1874, 86 cts.; and 1878, 80 cts. The

spring wheat crop of 1878 was 3,870,251 bushels; the crop of 1879 was 3,376,409, a decrease of nearly half a million bushels (493,842). The 1878 crop was valued at \$3,189,203, while that of 1879 is valued at \$2,663,852, a decrease in one year of over half a million dollars (\$525,321).

The product of hay shows a falling off in acreage, as against 1873, of 185,793 acres, the total acreage in 1878 being 2,347,553, and in 1879, 2,161,760. The average yield per acre in 1879 was one and a fifth ton, and the average price per ton \$6.37, making the total value of the crop \$16,428,012.

The rye crop ranks fourth in the extent of area of the cultivated crops grown in the State. The area of rye reported for 1879 was 235,073 acres; the area for the previous year was 252,768, showing a decrease for 1879 of 17,695 acres. The 1879 acreage, with one exception (1878), is the largest reported, and the average yield per acre has not been equaled except in 1872. The 1879 crop of 4,238,824 bushels was the largest ever produced in the State, and the quality was good. The crop was valued at \$1,991,404, and has only been exceeded by the crop of 1877, which was estimated at \$2,103,800.

The crop of oats was of medium good quality. The area for 1879 was 1,631,139 acres; the 1878 acreage of oats was 1,757,953—a decrease of 126,814 acres in 1879. The average yield per acre of oats was 33 $\frac{1}{2}$ bushels—an increase of three bushels per acre over that of the previous year.

The corn crop of 54,664,569 bushels exceeded the 1878 yield of 53,424,555 bushels by 1,240,014 bushels. The average price per bushel of 22 cts. was two cents in advance of the price of 1878 at corresponding date. The 1879 crop, valued at \$12,059,162, exceeds that of 1878, valued at \$10,684,911, by \$1,374,251.

The report of the Chicago, Burlington, and Quincy Railroad, which with its branch and leased roads has 1,856 miles of track in Illinois and Iowa, gives as the gross earnings for 1879 \$14,812,105, and as the net earnings \$7,260,038. There was an increase of 61,673 over 1878 in the passengers carried, and of 711,343 tons in the freight traffic.

The number of fire, marine, and inland insurance companies complying with the laws of the State, and authorized to do business for 1879, was 171. These companies may be classified as follows: Joint-stock companies of Illinois, 8; mutual companies of Illinois, 3; joint-stock companies of other States, 136; mutual companies of other States, 6; foreign companies, 18. Total, 171. The number of district, county, and township mutual fire-insurance companies organized in the State, and authorized to do business during 1879, was 129, being an increase of 10 during the past year. The following table gives a comparison of the aggregate business of last year with that of former years since 1869:

YEARS.	Number of companies.	Losses.	Expenses, estimated at 30 per cent. of receipts.	Premiums received.
1869.....	109	\$2,450,824	\$1,210,399	\$4,576,986
1870.....	109	8,765,067	1,458,338	4,710,769
1871.....	94	25,769,723	1,008,075	8,854,793
1872.....	118	1,477,017	1,711,458	5,704,861
1873.....	146	1,737,100	1,876,969	6,259,887
1874.....	157	4,485,059	1,970,579	6,568,597
1875.....	187	1,687,792	1,856,733	6,245,354
1876.....	200	1,491,478	1,588,693	5,296,051
1877.....	181	1,976,719	1,472,706	4,908,855
1878.....	171	1,407,559	1,373,757	4,571,710

Some decisions relating to schools in the State have been made. No board can employ a teacher legally for a period extending beyond their term of office. The teacher must have a legal certificate when he makes his contract with the directors.

A minority report from a committee on optional studies made to the School Board in Chicago objects to the higher branches, as German, music, and drawing, introduced in the lower grades of schools to the exclusion of English studies. The minority say that Chicago has school-rooms large enough to hold at any one time but 40,000 of the 125,000 children of a school age. On the average, children in Chicago attend a school but 410 days before leaving the public schools altogether, and one fourth of the children in school, it was found on inquiry, had averaged but 100 days of schooling. Of this limited time, which must of necessity include all the instruction received in public schools in reading, writing, and arithmetic, one sixth goes to learning to read music. Taking the entire number of children collectively, and the exclusion of music and drawing would add one month a year to the instruction of 43,000 children in common-school studies; and three fourths of these children do not stay more than long enough to receive a rudimentary drill in those studies under the most favorable training. The Chicago school authorities decided, however, to continue the present course of music and drawing, a course arranged for twelve years, although not one child in a hundred completes it.

The question, "Are school boards authorized to make such regulations as will allow teachers and principals to require written excuses from the parents of pupils when the pupils are absent from school?" was asked of State Superintendent Slade, to which he replied:

In the 48th section of the school law are these words: "They (the directors) shall adopt and enforce all necessary rules and regulations for the management and government of the schools." These necessary rules and regulations certainly include those that tend to secure prompt and regular attendance, and to prevent truancy, tardiness, and absenteeism; and I can think of no more reasonable regulation for securing regularity and punctuality of attendance than that of requiring pupils to show, by means of a written excuse from parent or guardian, that they are not absent from school without good cause. I fully concur in the opinion given on this subject by Dr. Bateman when he was Superintendent. He says: "The right and duty of directors to make and enforce such regula-

tions as will secure regularity and punctuality of attendance (those prime requisites of a good school) have been affirmed by several of our Circuit Courts, and by the Supreme Courts of many States, notably and recently that of Iowa."

The right of directors to prescribe a course of study was decided by the Supreme Court during the previous year. It said:

It is an indispensable element to the validity of all by-laws (and such are, in effect, the rules and regulations here authorized) that they be reasonable; and whenever they appear not to be so, the courts must, as a matter of law, declare them void. To render them reasonable, they should tend in some degree to the accomplishment of the objects for which the corporation was created and its powers conferred. It is unquestionably reasonable that pupils shall be classified with respect to the several branches of study pursued, and with respect to proficiency or degree of advancement in the same branch; that there shall be prompt attendance, diligence in study, and proper deportment. All regulations or rules to these ends are for the benefit of all, and presumptively promotive of the interests of all.

By a decision of the Supreme Court, about three million dollars of the obligations of the city of Chicago, issued in excess of the constitutional provision, were invalidated. It was held that municipal bodies can exercise only such powers as are conferred upon them by their charter; and all persons dealing with them are supposed to see that they have power to perform the proposed act. Such corporations are created for governmental and not for commercial purposes. Hence no power to borrow money is incident to the performance of the duties which their charters impose, and it is by a grant of power only that they can create debts. No one has the right to presume the existence of such power, and persons proposing to loan money to a city should see that there is such power; and if the holders of certificates omitted to do so when they loaned the money, it was their own fault.

In the case of the Northwestern University *vs.* The People, etc., the Supreme Court of the United States thus speak of the term "for school purposes," which was material to the case:

The distinction is, we think, very broad between property contributing to the purpose of a school, made to aid in the education of persons in that school, and that which is directly or immediately subjected to use in the school. The purposes of the school and the school are not identical. The purpose of a school or university is to give youth an education. The money which comes from the sale or rent of land dedicated to that object aids this purpose. Land so held or leased is held for school purposes, in the fullest and clearest sense. A devise of a hundred acres of land "to the President of the University, for the purposes of the school," would be not only a valid conveyance, but, if the President failed to do so, a court of chancery would compel him to execute the trust; but if he leased it all for fair rent and paid the proceeds into the treasury of the corporation to aid in the support of the school, he would be supported as executing the trust.

What is known as "minority representation," or the cumulative method, prevails in

the election of members to the State Legislature. (See "Annual Cyclopædia" for 1871, page 678.) The State is divided into fifty representative districts, and each elects three members of the Lower House of the Legislature, thus making the total number 153. Each voter has three votes for Assemblymen, and can cast them for whomsoever he pleases, or can divide them up into fractions of not less than one half and distribute them among the candidates; or can cast one vote only in whole or in halves, two votes only in wholes or in halves, or not vote at all. The working of the system will be illustrated by comparing the votes for Secretary of State and for Assemblymen in several districts.

In the 11th district the relative strength of the three parties, and the aggregate number of voters, are shown by the return for Secretary of State at the election in November, 1878, as follows:

COUNTIES.	Rep.	Dem.	Nat.
Carroll.....	1,475	397	341
Whiteside.....	2,494	902	1,576
Totals.....	3,969	1,299	1,917
Whole number.....	7,185		

Republican majority over all, 753. The vote for members of the House was as follows:

COUNTIES.	Allen, Rep.	Shaw, Rep.	Pratt, Nat.	Green, Dem.
Carroll.....	2,185½	2,241	1,007	1,132½
Whiteside.....	3,921½	3,367	4,322	2,611½
Totals.....	6,107	5,608	5,329	3,550

Two Republicans and one National were elected, the latter representing the stronger minority. One Republican received more votes than the other, for various reasons. The whole number of Republican votes was 11,715; of National votes, 5,829; of Democratic votes, 3,850. Dividing these aggregates by three will give, approximately, the number of voters of each party, viz.: Republican, 3,905; National, 1,609 and 2 votes over; Democratic, 1,283 and 1 vote over; an aggregate of 6,798, which was 377 votes less than the number cast for Secretary of State.

The 13th district is composed of the counties of De Kalb, Kendall, and Grundy, and gave for Secretary of State the following vote:

COUNTIES.	Rep.	Dem.	Nat.
De Kalb.....	2,377	651	698
Kendall.....	1,513	153	653
Grundy.....	1,596	193	1,155
Totals.....	5,486	997	2,506
Whole number of votes.....	5,989		

The number of candidates for the Legislature was the same as in the 11th district, and the votes were as follows:

COUNTIES.	Byers, Rep.	Brighton, Rep.	Smith, Nat.	Clover, Dem.
De Kalb.....	3,774½	3,763½	2,787½	1,014½
Kendall.....	2,224½	2,230½	2,306	807½
Grundy.....	2,358	2,259	279	3,510½
Totals.....	8,357	8,253½	5,372½	5,132½

The result was the election of the two Republicans and one National as before, although the change of the Nationals of Grundy to Clover, the Democrat, nearly secured his election.

The 16th district, composed of Kankakee and Iroquois Counties, gave the following vote for Secretary of State:

COUNTIES.	Rep.	Dem.	Nat.
Kankakee.....	1,729	800	838
Iroquois.....	2,443	695	2,042
Totals.....	4,172	1,495	2,480
Whole number of votes.....	8,097		

The vote for members of the House was as follows in the district: Buck, Rep., 6,241½; Secret, Rep., 5,808½; Taylor, Dem., 4,313; Peters, Nat., 7,955. Two Republicans and one National were elected. By dividing the aggregate vote of each party by three, it will be observed that each party cast about the same proportionate vote for members of the House as for Secretary of State.

The 17th district is composed of La Salle County, and gave the following vote for Secretary of State: Republican, 4,357; Democratic, 2,617; National, 2,637. The National vote was only 20 in excess of the Democratic, but the Democrats had two candidates and the Nationals one. The result was as follows: Crooker, Rep., 6,799; Bowen, Rep., 6,118; Armstrong, Dem., 4,234; Miller, Dem., 3,732½; Richey, Nat., 7,532½. The two Republicans and the National were elected.

The vote for Secretary of State in the 36th district was as follows:

COUNTIES.	Rep.	Dem.	Nat.
Mason.....	989	1,273	450
Brown.....	516	1,026	661
Cass.....	834	1,280	539
Menard.....	701	1,049	787
Totals.....	3,040	4,628	2,387

The candidates and vote for members of the House were as follows: Wheeler, Rep., 8,376; Snyder, Dem., 7,623; Masters, Dem., 6,446½; Savage, Nat., 7,914½. The result was that one of each party was elected.

In the 46th district the vote for Secretary of State was as follows:

COUNTIES.	Rep.	Dem.	Nat.
Jefferson.....	816	1,277	673
Hamilton.....	265	1,034	826
White.....	1,000	1,764	296
Totals.....	2,081	4,075	1,795

The vote for members of the House in this district was as follows: Green, Dem., 6,522; Campbell, Dem., 5,075½; Taylor, Rep., 5,936; Moss, Nat., 5,830. One of each party was elected.

With regard to the whole State, the following statement shows the number of votes of each party, the number of members to which each was entitled, and the number which each obtained:

PARTIES.	Voters.	Members entitled to.	Members elect.
Republican.....	206,468	71	79
Democratic.....	170,085	59	61
National.....	65,689	23	10
Socialists.....	2,228	1	8
Total.....	444,470	153	153

Where there are but two parties, and each district elects three members, the cumulative system enables a minority to be represented where the minority has more than one third as many votes as the majority party, but not otherwise.

The election for members of the judiciary was held on June 2d. The Supreme Court was unchanged, all the old incumbents being re-elected. Of the forty-four Circuit Judges chosen in the thirteen circuits of the State and Cook County, twenty-nine were reelected, and fifteen were new men. Politically, the Supreme Judges stand 5 Democrats to 2 Republicans, and the Circuit Judges, 26 Republicans to 18 Democrats; but party lines were not drawn in the election of the former, and in only a few circuits in the choice of the latter.

INDIA,* a British viceroyalty in Asia. Viceroy and Governor-General of Bengal, Lord Lytton, appointed in 1876; Commander-in-Chief of the Army, Sir Frederick P. Haines. The Executive and Legislative Council is composed as follows: The Viceroy, the Commander-in-Chief, Major-General Sir E. Johnson, Sir John Strachey, Whitley Stokes, A. Rivers Thompson, Sir Andrew Clarke, and Sir Alexander J. Arbuthnot. The lieutenant-governors of the provinces are honorary members of the Council when it meets in their respec-

tive provinces. Government Secretaries: For the Interior, Sir S. C. Bayley; for the Finances, R. B. Chapman; for Agriculture and Commerce, A. O. Hume; for Foreign Affairs, A. C. Lyall; for Military Affairs, Colonel A. Johnson; for Public Works, Colonel A. Fraser; for Legislative Affairs, D. Fitzpatrick. The governors of the different provinces are as follows: Bengal, Lieutenant-Governor, Sir A. Eden; Northwest Provinces, Lieutenant-Governor, Sir G. E. W. Couper, Bart.; Punjab, Lieutenant-Governor, R. E. Egerton; Central Provinces, Chief Commissioner, J. H. Morris; British Burmah, Chief Commissioner, C. Atchison; Madras, Governor-General, Duke of Buckingham and Chandos; Bombay, Governor-General, Sir R. Temple, Bart.

The area and population of British India, according to the census of 1872, were as follows:

PRESIDENCIES AND PROVINCES.	Square miles.	Population.
Presidency of Bengal:		
Lower Bengal.....	156,200	60,502,897
Assam.....	45,802	4,162,019

“ “ “ 1877.....	138,985,029

* For a full account of the area and population of the different provinces, the distribution of the population according to religion and sex, and the population of cities, see "Annual Cyclopædia" for 1876.

The values of the principal articles of import and export for the years 1877-'78 were as follows (according to the "Statistical Abstract relating to British India," No. 13, London, 1879):

ARTICLES.	Imports.	Exports.
Grain, particularly rice and paddy.....	£10,134,000
Seeds and fruits.....
Colonial goods, particularly tea and coffee.....	£89,000	7,860,000
Wines, spirits, and malt and other liquors.....	1,560,000	5,601,000
Coal.....	1,402,000
Metals.....	1,008,000
Cotton, silk, and wool.....	230,000	524,000
Woods, timber, and carving material.....	8,604,000
Hides and skins.....	737,000	14,684,000
Drugs, chemicals, oils, and resin.....	1,432,000	9,123,000
Opium.....	12,374,000
Yarns and woven goods of all kinds.....	20,731,000	8,457,000
Other manufactures.....	5,232,000	453,000
Miscellaneous goods.....	3,251,000	1,490,000
Total goods.....	£39,326,000	£65,186,000
Total precious metals.....	17,355,000	2,155,000
Grand total.....	£56,681,000	£67,341,000

The movement of shipping for 1877-'78 was as follows:

NATIONALITY.	ENTERED.		CLEARED.	
	Vessels.	Tons.	Vessels.	Tons.
British.....	1,351	2,137,155	1,972	2,195,225
British Indian.....	1,572	219,736	1,445	198,938
Foreign.....	777	393,913	740	378,981
Native.....	2,123	106,795	2,027	104,486
Total, 1877-'73.	6,858	2,877,649	6,134	2,876,780
Total, 1876-'77.	6,376	2,791,884	6,938	2,542,153

On March 31, 1878, there were 8,215 miles of railroad in operation, of which 2,171 miles are government roads, and 6,044 miles private roads. The number of post-offices was 4,107. The number of letters sent in the year preceding was 115,089,336, and the number of papers 10,999,758. The length of the telegraph lines on March 31, 1878, was 18,210 miles, and of wires 42,687 miles; number of stations, 239. In the year 1877-'78 the number of dispatches sent was 1,431,452; the receipts were £306,089, and the expenditures £352,186.

The most important event in the history of British India during the year 1879 was the war against Afghanistan. The history of this war until the reoccupation of Cabool by the British has been given in the article **AFGHANISTAN**. A proclamation was issued by General Roberts after he reoccupied Cabool, offering an annuity to those Afghans (provided they had not been concerned in the attack on the embassy) who had taken up arms under the belief that Yakob Khan was a prisoner in the British camp, on condition of their surrendering their arms. Sir Richard Temple arrived at Candahar November 13th, and held a brilliant levee, which was attended by the Afghan Governor and all the chiefs of the city and the surrounding districts. The Governor of Ghuz-

nee arrived at Cabool on the 15th, having been summoned there by General Roberts for an inquiry into his loyalty, and reported that his district was very unsettled. The mollahs had been preaching against the British occupation, and malcontents had assembled there in considerable numbers. General Baker was dispatched with a small body of troops to settle the country and procure supplies. On the 20th General Roberts received the first convoy from Peshawer by the new route of the Lataband Pass, the crest of which is 8,000 feet above the sea. Skirmishing continued with the natives. Some cavalry who were sent out to arrest participators in the massacre of the British embassy were attacked by the Afghans from the hills, and retired. A larger force, which was sent out at daybreak the next day to attack the enemy, found that they had fled, whereupon it burned nine villages containing only a few inhabitants, who were first driven out.

On the 1st day of December the Ameer Yakob Khan started secretly, under the care of a British guard, for Peshawer, whither he had been summoned by the Viceroy. It was now apparent that the Ameer was really held a prisoner by the British. He still, however, asseverated his innocence of any connection with the massacre, having told the correspondent of the London "Times" the day before he left the camp that he had never had one moment's disagreement with Sir Louis Cavagnari, and that the outbreak was an unmeditated act of the rebellious soldiery, which he was utterly unable to control, and which he deeply deplored.

Mohammed Hussein, a son of the great Ameer Dost Mohammed, was appointed Governor of the Maidan, a district thirty miles from Cabool, but was murdered a few days afterward by the Afghan regulars and hill-men. The newly appointed governors of Kohistan and the Logar Valley were threatened with the same fate. The Afghans who had collected at Ghuznee, now numbering 7,000 men, started from that place in the first week of December, with the intention of joining a body of 3,000 men who were marching from Kohistan upon Cabool. On the 10th General MacPherson occupied Sarkh-Kotal just in time to prevent the junction of the two bodies, attacked the Kohistanis who occupied a position near by, and dislodged them. General Baker was to move by the way of Charasiab to take them in the rear, while General Massey was to join General MacPherson by the way of the Chardeh Valley for a combined movement, with the object of driving the enemy upon General Baker's command. The latter movement miscarried, and General Massey was met by the force from Ghuznee under Mohammed Jan, considerably outnumbering his own. He charged upon them without apparent effect upon their body. The enemy then, having been checked in an attempt to reach the Cabool gorge, turned and

occupied the heights south of the Bala Hissar. An attempt was made by the British on the 13th to capture the ridge above the Bala Hissar, but it was not carried out with success, and the fighting of the 14th and 15th did not result in any material improvement of their position. General Roberts then collected his troops in the Shirpoor cantonments, northeast of Cabool, where he waited for reënforcements, while the Afghans were left in possession of Cabool. The cantonment of Shirpoor was considered well enough fortified to withstand any attack that was likely to be made upon it, and was supplied with provisions to last several months. A few days afterward the Indian Government published an explanation of the military situation, stating that General Roberts had ample transport and ammunition; that, besides the 23 cannon belonging to his force, he had 214 captured cannon, many of which were rifled. His intrenchments could easily be held by 2,500 men, leaving 6,000 free for offensive operations. General Bright had 12,000 men between Jumrood and Jagdalak, with 30 cannon, two months' supplies, and sufficient transport. Including the forces at Candahar and in the Kooram Valley, the total field force was 45,000 men, with 160 guns, and was considered ample for present requirements.

On the 17th of December General Gough left Jagdalak with reënforcements for Shirpoor and Cabool. By the 18th the defenses of the Shirpoor cantonments had been completed. The enemy at that time occupied the heights over the city, but did not descend into the plains, which were patrolled by the British cavalry. General Roberts was awaiting the arrival of General Gough to make an attack, but intended to begin the offensive before he came up if a suitable opportunity should offer. The enemy's force was diminishing. One of their prominent leaders had been killed in a skirmish which took place on the 17th. Mohammed Jan Mardak, the real Afghan leader, was reported to have proclaimed Yakoob Khan's eldest son Ameer. On the 22d General Gough reported that he had been obliged to engage the Ghilzais all along his line in order to repress their desultory attacks, had driven them off, and hoped that they were dispersing. Reënforcements continued to advance, but General Roberts did not find it necessary to wait for them. Desultory attacks were kept up all the day of the 22d; and information was received during the day that an attack would be made by the enemy at daybreak on the 23d. Bodies of the enemy were seen occupying the distant villages and approaching nearer as it became dark. At 6 o'clock the next morning a fire was lighted on the Asmi Heights as a signal, and immediately afterward the attack was begun on three sides. The British were already prepared for it. The strongest demonstrations were made on the northeast, where, as soon as the enemy's intention was fully developed, a counter-attack with cavalry and ar-

tillery was ordered. A fire was accordingly opened on the enemy's flanks, which speedily dislodged them. The cavalry pursued and sabered numbers of the enemy, who retired from all points and hastily entered the city. Some near villages were occupied by the British, particularly those on the Butkak road. The success of the British proved to be complete. The enemy's loss was severe, one report saying that the ground around Shirpoor was thick with the bodies of the slain. Those of the enemy who lived in Cabool went straight to their houses after their defeat. The Kohistanis and Logaris remained in Cabool for a few hours, but all fled during the night. Two of the enemy's leaders, Mushki Alim (a priest) and Mohammed Jan, fled early in the day, and another prominent leader was reputed to have fled toward Wardak, with Yakoob Khan's eldest son. Yakoob Khan's wife and mother, and a daughter of the late Akbar Khan (who was the principal opponent of the British in 1841), were captured. The Bala Hissar and the city of Cabool were reoccupied, and by the 29th of December the country around Cabool and the line of communications were reported clear. An attack was afterward made by a khan with 2,000 followers on Colonel Norman at Gundamuk, but the enemy was driven off. General Baker was dispatched on the 27th with 1,700 infantry, a regiment of cavalry, and four guns, to Kohistan. He there destroyed the fort of the hostile chief Mirbatcha, which he found abandoned, and received the submission of several Kohistani and Logari chiefs. Mohammed Jan sent propositions for peace, in which he demanded, among other conditions, that the British forces should return to India, and that a promise should be given to send back the Ameer, while two British officers should remain at Cabool as hostages for the fulfillment of the promise. No notice had been taken of these propositions at the end of the year.

A fresh body of reënforcements from England left Portsmouth on the morning of the 1st of January, 1880. At that time 10,000 men were on their way through the Afghan defiles to the relief of General Roberts; about one fourth were British and the rest natives. Two thousand men held the fort of Lundi Kotal, and a similar number that of Ali Musjid. There were 500 Sepoys at Jumrood and 5,000 at Peshawer, and bodies were marching forward from Jelalabad and Gundamuk, whose places were to be supplied by troops from Agra, Meerut, and Bombay.

The annual financial statement, published by the Indian Government in March, produced an unfavorable impression. In view of the fact that the actual deficit of 1877-'78 and the estimated deficit of 1878-'79 amounted to over 16½ millions, and that the public debt within the same time increased by about 15 millions, a strong dissatisfaction was felt with the resolution of the Government to exempt from import duty all cotton goods containing no yarn of a higher

number than 30's, a measure which was expected to have the effect of diminishing the revenue by £200,000. The Indian press and public were almost unanimous in condemning that step, and many went so far as to assert that the interests of India were being sacrificed to those of Manchester. Tenders for a new 4½ per cent. loan of 50 millions of rupees having been called for by the Government, a total amount of over 67 millions was tendered in May, of which 40 millions allotted to the lowest tender were accepted at 94 per cent., and the loan was issued at an average rate of 94½, making the actual amount to be received by the Government about 38 millions of rupees. On May 3d a Government order was issued on the subject of the reduction of public expenditure. All departments were directed to retrench expenses, but it was in the public works that the greatest retrenchment was contemplated. No new works, even if already sanctioned, were to be commenced without special orders, and the outlay on reproductive works was to be largely cut down. Military charges were left untouched for the present, but the duty was declared of reducing them to the lowest point compatible with safety.

A memorial addressed by the Madras Chamber of Commerce to the British House of Commons was especially severe in its criticism upon the financial administration of the Government. It charged Sir John Strachey with direct breach of faith in having applied the famine taxation to the general purposes of the country, and affirmed that any bank or public company, which ignored the solemn pledges it had given to the shareholders in the same way as the Government of India had broken faith with the taxpayers, would forfeit all claim to public confidence. Equally severe was an address delivered in May by Mr. Yule, President of the Bengal Chamber of Commerce. Speaking of the trades' license tax instituted last year for the purpose of raising a famine-insurance fund, he asserted that this tax had been levied and collected in such a way as to lead large numbers to conclude that, if there were a choice between famine and tax, they would certainly prefer famine.

In the latter part of May the Government issued a circular to the local administrations directing that in future no person, not being a member of the Covenanted Civil Service or of the Staff Corps, or a native of India, shall be appointed to any office carrying a salary of 200 rupees per month or upward without the previous sanction of the Governor-General in Council. Exceptions, however, are made in favor of persons appointed by the Secretary of State to the financial, educational, and forest departments; and the circular is to be held not to apply to the appointments to the departments of opium, salt, customs, survey, mint, public works, and police.

On June 16th the Supreme Government issued a financial circular to all the local govern-

ments, giving a sketch of the actual financial position of the Indian Government. It pointed out that orders had already been issued for reducing the expenditure the next year; that altogether in the civil department alone a saving of £1,000,000 was hoped for; and that an inquiry was even then proceeding with a view to the reduction of the military expenditure. A policy of rigid economy and retrenchment was to be followed in every branch of the public service. The first step taken by the Supreme Government toward reducing the central establishments was the abolition of the separate departments of revenue, agriculture, and commerce, established by Lord Mayo in 1871. The business of these departments was divided between the home and financial offices, the former to be henceforth called the Home, Revenue, and Agricultural, the latter the Finance and Commerce Department. The business connected with ports and navigation, which had hitherto been transacted in the Revenue, went to the Military Department. The immediate saving would be only the salaries of the secretary and the registrar, amounting to 50,000 rupees per annum; but it was expected that a further saving of 40,000 rupees would be ultimately effected.

In July Mr. Hope introduced a bill in the Supreme Council for the relief of the indebted ryots of the Deccan. Its main points are as follows: All loans are to be registered before village registrars; imprisonment for debt is abolished; courts of conciliation and arbitration—in other words, the old system of village punchayets—are recommended; receipts are to be furnished to borrowers, as well as an annual statement of accounts. By these means the ryot, invariably an uneducated man, is virtually protected from fraud. It was referred to a select committee, and was passed by the Supreme Council on October 24th.

On November 14th Sir John Strachey introduced a bill in the Legislative Council for amending the license-tax acts, and extending taxation to the official and professional classes. The ostensible object of the measure was to relieve the poorer commercial classes at the expense of the richer professional and salaried classes. The passage of this bill was postponed until 1880, but it was opposed by the Chambers of Commerce of Madras, Bombay, and Calcutta, which bodies pointed out, in memorials addressed to the Council, that the proposed tax was but an income-tax under another name, and earnestly protested against the reversal of the policy deliberately adopted after an exhaustive inquiry six years ago. The memorial of the Calcutta Chamber further pointed out that the state finances were in a much better condition than was anticipated when the budget was prepared, and that there was a good prospect of further improvement. These prospects should not be clouded by vexatious changes of the law, which would have the effect of adding to the public burdens

at a time when the people were ill able to bear them.

The great khoomb, or duodecennial festival, at Hurdwar proved, like that of 1867, disastrous in its consequences. From 750,000 to 1,000,000 pilgrims assembled, and, despite the precautions taken by the authorities, cholera in a severe form broke out a few days before the close of the fair. The streams of returning pilgrims carried the disease in various directions toward their homes, and soon after the close of the fair outbreaks were reported from Delhi, Umritsur, Rawal Pindee, and other places of northern India. Great mortality among the pilgrims was reported from several districts; thus it was asserted that of 80,000 who went to the fair from a single district of Kumaon, one fourth were missing.

A severe famine prevailed in the tributary state of Cashmere, and excited the serious attention of the Indian Government, which impressed upon the Maharajah the duty of adopting effective measures of relief. A British officer was sent to assist the local authorities, and large quantities of grain were dispatched to the distressed districts.

On May 22d, in the English House of Commons, Mr. C. Stanhope made a statement of the finances of India, showing an estimated deficit of £1,400,000 for the coming year, which it was proposed to meet by a reduction of outlay upon public works and upon other branches of expenditure. Mr. Fawcett, accepting the statement as a vindication of his views, changed his announced resolution for diminishing expenditure into one of approval of the Government's recommendations. On May 23d Mr. O'Donnell moved a vote of censure upon Lord Lytton for his reply to a deputation of the British Indian Association, but it was rejected by 215 to 36. On June 12th Mr. Gladstone spoke in strong terms of some of the recent acts of the Indian Government, and urged the establishment of a permanent control over Indian expenditure. On July 1st the House of Commons discussed the bill to enable the Government of India to purchase the East Indian Railway, and a resolution of Mr. Fawcett that the measure should not be regarded as a precedent was agreed to. On the 2d the bill was passed.

In order to lay some of the grievances of the people of India before the British public, the Indian Association sent a barrister of Calcutta, Mr. Lai Mohun Ghose, to England. On July 23d a crowded meeting was held in London, under the presidency of John Bright, to hear his address and "consider certain questions affecting the interests of the people of India." The Indian barrister severely attacked the English Government in India. Questions concerning education and taxation had alike been decided in such a way that the Indian subjects of the Queen had no voice in their consideration, although they had to pay the taxes which were necessary to de-

fray the expenses. The people of India protested against the war in Afghanistan, a war in which politics had been divorced from morals; and contended that in the circumstances they ought not to be called upon to pay any part of the cost, or that, if any payment was to be made, England should bear an adequate part of the cost. The main grievance which the natives felt was that they had no voice in the government of the country, and this they thought ought to be remedied. Mr. Bright also made a long speech in which he dwelt on the burdensome character of the military expenditure in England, and said, if there was no possible escape from it, he thought it would be almost better to surrender, to confess the failure of English rule, and to say that the government of a great empire in Asia by persons sent out as rulers from the small island of Great Britain was impossible, and should never have existed. He complained of the high salaries paid to civil servants in India, and of the non-fulfillment by successive governments of the pledges made to the people of India with respect to the facilities to be afforded for their admission to the civil service.

An attempt on the life of the Viceroy was made on December 12th. He had just arrived in Calcutta, and as his *cortège* was driving to the Government house, and after crossing the Hoogly bridge, a Eurasian in the street fired two shots from a revolver at Lord Lytton's carriage, and then a third shot at the next carriage, in which Colonel and Lady Colley were seated. Colonel Colley jumped from the carriage, and with Captain Rose arrested the assassin without difficulty. They found on him a revolver with two chambers loaded and three recently discharged. The man, whose name is Deesa, was described as being intoxicated at the time, and as having been in a lunatic asylum. He was in Government employ in a subordinate capacity, but was dismissed owing to his weakness of intellect, and was said on that occasion to have threatened to kill the head of his department.

A fresh trouble arose in October for the Indian Government in the Naga Hills. On October 14th the Naga tribe, which murdered an English officer nearly five years ago, attacked and killed Mr. G. H. Damant, deputy commissioner and political agent for the Naga Hills. The tribes which cause the British the most trouble are those which inhabit the country south of Assam. They occupy the districts stretching into Burmah past Cachar, Chittagong, and Aracan. Some of the Nagas have settled down to a peaceful mode of existence. Those of the Lebsagur district may be classed among these. Whenever (and it has been very seldom indeed) an outrage has occurred among them, they have at once made ample atonement to the British officials, resorting to the simple expedient of closing the neighboring market to the offenders. With many other sections this remedy has proved effica-

cious, and very often offenders have been handed over to the British to exact justice from their persons for the murder of the police or for similar crimes. But it is from the Augami Nagas that most trouble has come. These hold a portion of the hills which stretch between Assam and Munnipoor. The Rajah of Munnipoor, at whose court the British have an agent, originally sought their protection from the tyranny of the Burmese ruler. The Rajah, acting under the advice of the British representative, has governed his little state to their entire satisfaction; but he has himself been beset by frontier difficulties with those very Augami Nagas who had given the British so much trouble for over fifty years, and who were again the aggressors. The attack took place at Konoma, in the heart of the Augami country. Immediately after the murder of Mr. Damant, together with some seventy of his followers, at Konoma, the Nagas of that village marched upon Kohima, and were joined by thousands of their tribesmen. The little garrison then consisted of Lieutenant Reid and a small detachment of the 43d regiment; Mr. Chorley, of the police, with his wife and his children; Mr. Hinde, of the police, and Mrs. Damant, who, with all the terrible affliction that had just fallen upon her, had now to go through the miseries and privations of a siege. At the most there were only 150 men whose loyalty could be depended upon, in a hostile village of 1,200 houses, while they were, in addition, completely hemmed in by a horde of savages, who were wrought up to the highest pitch of excitement. Mr. Hinde with 100 police was the first of several relief parties to reach the garrison, but was not strong enough to assail the Nagas. Colonel Johnstone, the political agent of Munnipoor, with 50 regulars, 50 police, and 2,000 tribesmen, reached Kohima on October 27th. He was only just in time. The Nagas were besieging in regular form behind intrenchments. The garrison, after thirteen days of defense, was reduced to the last extremity. Major Evans, with 200 men, arrived later, and the whole party fell back on Samagating. A force under General Nation was assembled at Golaghat, and in the early part of November set out to punish the Nagas. Several villages were occupied and burned, and on the 26th the village of Konoma was attacked by the British. After a severe struggle the natives retreated to some neighboring heights, and the village was burned on the following day. This virtually put an end to the hostilities.

Christianity has of late begun to make considerable progress. According to the latest attainable statistics of the Protestant missionary societies, their total force in India was represented in 1879 by 1,833 ordained and assistant missionaries, and 88,149 communicant members. This statement is based only in part on the reports for 1878-'79, since several of the societies have not recently published

detailed reports, and it does not include the very large accessions of 1877 and 1878 to the two Anglian societies. The growth of the missions is indicated by the fact that a careful census taken by the Rev. M. A. Sherring in 1871 gave the number of communicants in India, Ceylon, and Burmah at 78,494, and the number of persons connected with the Christian community as 318,363, while the figures given in the above statement for 1878-'79 are for India alone. The present number of the Christian communities in India, Ceylon, and Burmah is reckoned by Mr. Sherring at 460,000 souls. An unprecedented accession of adherents took place in 1877 and 1878 to the Anglican and Baptist missions in southern India, amounting in all to about 45,000 persons. The most rapid progress has been made hitherto among the aboriginal and Dravidian races and the lower castes. The higher castes have been until recently nearly inaccessible. Conversions have, however, lately begun to take place among the Brahmans, but are still so rare as to be generally deemed worthy of especial mention. The Methodist, Presbyterian, and Anglican missions in the Northwest Provinces and the Punjab are among a Mohammedan population, who are represented as becoming gradually more amenable to their influence. The Anglian mission at Peshawer has outposts among the Afghans, and records several persons of that nation among its converts. The most extended and successful operations of the women's missionary societies are among the zenanas of the Hindoo women, through which and the schools connected with them the families of the higher castes, otherwise inaccessible, are brought under missionary influence. The missionary schools are elementary or vernacular, middle or high vernacular, and Anglo-vernacular schools, and colleges in which the course prescribed by the University is followed and instruction is given in English. The number of pupils in these schools in 1872 was 122,372, and is now estimated at 140,000, of whom about 20 per cent. are girls. Secular education has been greatly encouraged by the introduction of competitive examinations for civil appointments, but the same influence has been found to work detrimentally to the religious side of education. Eight colleges are connected with the Protestant missions, all of which are affiliated with one or another of the Indian universities.

INDIANA. The biennial session of the Legislature of Indiana commenced on January 9th. Lieutenant-Governor Gray presided in the Senate; in the House Henry S. Cawthorne was elected Speaker. At the end of sixty days the regular session expired; a special session then followed, and the final adjournment took place on March 31st. More than twice as many bills were passed at the special session as during the regular one.

A Senator of the United States was elected on January 24th. In the House Daniel W.

Voorhees, Democrat, received 57 votes; Benjamin Harrison, 38; — Buchanan, 2. In the Senate Voorhees received 26 and Harrison 22 votes. For the short term caused by the death of the late Senator Morton, and which Mr. Voorhees had been appointed by the Governor to fill until the meeting of the Legislature, Mr. Voorhees received in the House 57 votes and Godlove S. Orth 37. In the Senate Voorhees received 26 and Orth 22. Mr. Voorhees was elected in each instance.

An act was passed relating to foreign corporations doing business in the State, which provides that any such corporation which shall transfer to the United States Court any suit commenced by or against it in a State Court, on a contract made in the State, shall thereby forfeit all right to transact business in the State, or hold real estate, or liens thereon. The object of the law is to limit outside corporations to the courts of the State in all suits founded on contracts made under State laws, and prevent the harassing and expensive practice of forcing citizens engaged in litigation with such corporations to appear, with their witnesses, before the United States Court at Indianapolis.

A Department of Statistics and Geology was created, of which the chief officer is required to be an expert in the sciences of geology and chemistry. His duties are to collect, systematize, tabulate, and present in annual reports, statistical information and details relating to agriculture, manufacturing, mining, commerce, education, labor, social and sanitary condition, vital statistics, marriages and deaths, and to the permanent prosperity of the productive industry of the people of the State. The several cities, incorporated town, county, and township assessors, trustees, officers of school boards, and boards of health, in their respective cities, towns, counties, and townships, the agents or superintendents of all manufacturing, mining, and mechanical establishments, the managers and superintendents of all corporations, manufacturing, mechanical, and transportation companies and associations, and county superintendents of schools, are required to make reports and answer such questions as the bureau may require from them. The chief officer is further required to take charge of the geological cabinet, museum, chemical laboratory, apparatus, and library, and from time to time, as may be practicable, to add specimens to the cabinet of minerals, organic remains, and other objects of natural history peculiar to the State and to other States and countries.

Another act requires locomotive engineers to open the steam-whistle when approaching a turnpike or highway crossing at least eighty rods distant therefrom, "and to sound the same continuously until the crossing is passed."

In the House, resolutions relating to the following subjects were voted upon, with the results stated: To indefinitely postpone a resolution congratulating the country on the resump-

tion of specie payments—yeas 50, nays 33. For a reduction of the salaries of Federal officers—yeas 90, nays 2. The unconditional repeal of the specie resumption act—yeas 50, nays 40. The repeal of the act exempting United States bonds from taxation—yeas 57, nays 34. The repeal of the law exempting greenbacks from taxation—yeas 76, nays 12. The abolition of all bank issues—yeas 59, nays 32. The free and unlimited coinage of gold and silver—yeas 85, nays 5. The issue by the General Government of full legal-tender paper money, receivable for all dues, public and private, in amounts sufficient to meet the wants of trade, or at least \$30 per capita—yeas 50, nays 40. To prohibit the further issue of interest-bearing Government bonds; lost—yeas 43, nays 45. That Congress take immediate steps whereby the bonded indebtedness of the Government shall be paid off as fast as it shall become due, according to agreement—yeas 84, nays 4.

An act was passed providing that the rate of interest, in cases in which the parties do not agree, shall be six per cent., but may be taken yearly or for a shorter period or in advance; and no agreement to pay a higher rate shall be valid, unless the same be in writing signed by the party to be charged therein. By and in such cases it shall not be lawful to contract for more than eight per cent. per annum. When a higher rate of interest than six per cent. is contracted for, the contract will be void as to the usurious interest contracted for; and in an action on such contract, if it appear that interest at a higher rate than six per cent., or in case of a written contract a higher rate than eight per cent., has been directly or indirectly contracted for, the excess of interest over six per cent. will be deemed usurious and illegal; and in an action on a contract affected by such usury, the excess over the legal interest may be recovered by the debtor whenever it has been reserved or paid before the bringing of the suit.

An act was passed to protect the miners of Indiana from the many accidents incident to coal-mining. It provides for better ventilation and other means of safety. A mine-inspector will be appointed by the Governor, and he must be a practical miner of twelve years' experience. Also an act abolishing coroners' juries was passed.

Seven important amendments to the State Constitution were agreed to in 1877, by a majority of the members elected to each of the two Houses of the Legislature. The Legislature at this session, by a similar majority, agreed to the same amendments. An act was also passed providing that these amendments should be submitted to the electors of the State for ratification or rejection, at an election to be held on the first Monday in April, 1880. The law providing for the submission of these amendments to the electors of the State enacts that "the Secretary of State shall procure

ballots of blue paper, on each of which shall be printed the proposed amendments, and below each amendment shall be printed the word 'Yes' in one line, and in another line the word 'No'; that any qualified elector may vote for or against any amendment by depositing one of said ballots in the ballot-box. If he intends to vote for any amendment, he shall leave thereunder the word 'Yes' and erase the word 'No' by drawing a line across it, or otherwise. If he intends to vote against any amendment, the word 'Yes' shall in like manner be stricken out and the word 'No' left; and if both words are allowed to remain without either of them being so erased, the vote shall not be counted either way." These amendments are designated by numbers, and are numbered 1, 2, 3, 4, 5, 6, and 9, numbers 7 and 8 having failed to receive a majority of the votes of both branches at this session.

These amendments relate chiefly to the matters of economy and honest elections. The first proposes to amend section 2 of Article II. so as to read as follows:

SECTION 2. In all elections not otherwise provided for by this Constitution, every male citizen of the United States of the age of twenty-one years and upward, who shall have resided in the State during the six months, and in the township sixty days, and in the ward or precinct thirty days immediately preceding such election, and every male of foreign birth, of the age of twenty-one years and upward, who shall have resided in the United States one year, and shall have resided in the State during the six months, and in the township sixty days, and in the ward or precinct thirty days immediately preceding said election, and shall have declared his intention to become a citizen of the United States, conformably to the laws of the United States on the subject of naturalization, shall be entitled to vote in the township or precinct where he may reside, if he shall have been duly registered according to law.

As the Constitution now stands, no fixed period of residence is required in a township or ward before voting, and no barriers against fraudulent voting can be maintained. When this amendment is adopted, one whose vote is challenged will have to swear that he has been a resident of the township sixty days, and of the ward or precinct thirty days, and thus the importation of votes and frauds upon the ballot-box may be measurably prevented.

The second amendment simply provides for striking out the words, "No negro or mulatto shall have the right of suffrage," contained in section 5 of the second article of the Constitution. The State Constitution is thereby made to conform to the Constitution of the United States. The prohibition in the former has become a dead letter.

The third proposes to amend section 14 of Article II. so as to read as follows:

SECTION 14. All general elections shall be held on the first Tuesday after the first Monday in November, but township elections may be held at such time as may be provided by law; provided, that the General Assembly may provide by law for the election of all judges of courts of general and appellate jurisdiction by an election to be held for such officers only, at which time no other officers shall be voted for; and

shall also provide for the registration of all persons entitled to vote.

The reasons for this amendment are, that the cost of holding a general election in Indiana is about \$1,000 to the county, or nearly \$100,000 to the State. By this amendment the State is saved the expense of double elections in Presidential-election years. But this is not all. The other States of the Union having nearly all changed the time of their elections to November, as long as Indiana continues to vote in October she assumes the burden of the Presidential day. In 1876, counting money expended and time devoted to it, the October election cost the people of Indiana over \$1,000,000, which expense was avoided by the States which did not vote until November.

The fourth amendment provides for striking out the word "white" from sections 4 and 5 of Article IV. of the Constitution, and thereby making it conform to the Constitution of the United States.

The fifth proposes to amend the fourteenth clause of section 22 of Article IV. so as to read as follows:

In relation to fees or salaries, except the laws may be so made as to grade the compensation of officers in proportion to the population and the necessary services required.

This provision will enable the Legislature to grade the compensation of county officers, and pay them in proportion to the population of the county and the services actually required. It will take away from that body the excuse urged for paying exorbitant fees and salaries to these officers, such as are out of all proportion to the compensation given for similar services in other avocations.

The sixth proposes to amend section 1 of Article VII. so as to read as follows:

SECTION 1. The judicial power of the State shall be vested in a Supreme Court, Circuit Courts, and such other courts as the General Assembly may establish.

The words "such other courts" are substituted for the words "such inferior courts," enabling the Legislature to establish other courts not inferior in jurisdiction to the Circuit Court, and to establish a perfect system of jurisprudence, which will greatly reduce expenses and at the same time facilitate business.

The next and last amendment proposed is as follows:

No political or municipal corporation in this State shall ever become indebted, in any manner or for any purpose, to an amount in the aggregate exceeding two per centum on the value of the taxable property within said corporation, to be ascertained by the last assessment for State and county taxes previous to the incurring of such indebtedness, and all bonds or obligations in excess of such amount given by such corporations shall be void; provided, that in time of war, foreign invasion, or other great public calamity, on petition of a majority of the property-owners, in number and value, within the limits of such corporation, the public authorities, in their discretion, may incur obligations necessary for the public protection and defense, to such amount as may be requested in such petition.

This provision is designed to protect the tax payers and limit the amount that may be assessed against them, and to which these municipalities may be burdened with debt.

The question was asked of the State Attorney-General whether, if the first and third amendments were adopted, it would be obligatory on the Legislature to pass a registry law, or only directory. He replied:

In the event of these amendments being adopted, it would undoubtedly be the duty of the Legislature to provide for a registration of voters, but the failure to do so, in my opinion, would not operate to disfranchise the electors otherwise qualified to vote. In other words, the central idea that the elections shall be held as provided for in the Constitution and laws can not be defeated by the failure of the Legislature to pass the registration law. So if the amendments are adopted, and there should be no session of the Legislature before the next election, persons otherwise qualified will be entitled to vote, although they have not been "duly registered according to law."

An act was passed to provide for the organization and support of an asylum for feeble-minded children. The number in the State is estimated at five hundred. It is intended by the act to gather up the children from the county poor-houses, and provide a home for them where they may be improved. Parents of such children who were able to pay their expenses would be required to do so, or, if they could not pay all, then one half of them. It was stated that there were eleven such institutions in the United States, and the statistics obtained show that 70 per cent. of the feeble-minded children gathered into such homes were taught to read, and 43 per cent. to read and write, while all of them were very much improved. An instance was given of a patient, persevering philanthropist of Philadelphia, engaged in the work, who took a child so feeble-minded as not to observe for two years a red ball rolled daily backward and forward before its eyes; at the end of that time it noticed the ball, and at the end of two years more he had taught the child to read.

An act was passed which takes the power of appointing the boards of trustees of the asylums from the Legislature, in whose hands it has always been, and gives it to the Governor.

The Woman Suffrage Association of Indiana, desiring to be heard upon the matter of bestowing the elective franchise upon the fair sex of the State, the House resolved by a unanimous vote to grant them an audience on February 25th, and to invite the Senate to be present on the occasion. The report upon the audience concludes by saying: "Whatever may have been the feeling awakened in the minds of the members, they certainly could not have failed to be impressed with the earnestness and seriousness which characterized the papers read before them."

A bill passed the House which provided that all juries should be composed of six instead of twelve men.

Grave charges having been made that the plan of the new State House was decided upon

unjustly, and that the contract for the construction of the said building was let against the interests of the State, a committee of seven was appointed in the House to investigate them. All of the committee save one made a majority report in detail. It sets out the charges preferred before them, and the answer thereto, and states that the whole action of the board, from its organization forward, was inquired into by the committee. They find that not one of the charges has been sustained or is true in point of fact; that no corruption, dishonesty, collusion, conspiracy, failure to perform duty, or improper discharge of duty upon the part of the board or any member thereof, is shown or found to exist. This report was adopted by the House—yeas 71, nays 24.

The propositions to divide the State into Senatorial and Representative districts, and also into Congressional districts, awakened much interest. The voting population, as shown by an official enumeration recently taken, is 451,025; consequently the average number of voting population requisite for a State Senator would be 9,020, for a State Representative 4,510, and Representative in Congress 34,694. A separate bill forming the districts for members of the Legislature was passed. In the Senate the Congressional apportionment bill was referred to a committee, which made a majority and a minority report. The minority considered the measure impolitic: 1. Because a new census would be taken by the Government in 1880, under which Indiana will be entitled to additional representation in Congress, and a new apportionment will be required; 2. It would violate a hitherto unbroken practice, and tend to a struggle every two years for a change; 3. The bill proposes to give 194,770 Democrats in this State nine Representatives in Congress, while 220,072 voters will have three or four. Amendments were made in this bill, and the Congressional districts as finally adopted are as follows:

First—Posey, Gibson, Vanderburgh, Warrick, Pike, Spencer, and Perry. Vote, 84,850. Democratic majority in 1876, 1,909; in 1878, 1,729.

Second—Knox, Sullivan, Greene, Lawrence, Martin, Daviess, Orange, and Dubois. Vote, 32,877. Democratic majority in 1876, 4,388; in 1878, 4,546.

Third—Jackson, Jennings, Washington, Scott, Clark, Floyd, Harrison, and Crawford. Vote, 32,381. Democratic majority in 1876, 4,474; in 1878, 5,943.

Fourth—Union, Franklin, Decatur, Ripley, Dearborn, Ohio, Switzerland, and Jefferson. Vote, 33,731. Democratic majority in 1876, 1,435; in 1878, 2,020.

Fifth—Putnam, Hendricks, Morgan, Owen, Monroe, Brown, Johnson, and Bartholomew. Vote, 32,488. Democratic majority in 1876, 2,183; in 1878, 2,525.

Sixth—Rush, Fayette, Henry, Wayne, Randolph, and Delaware. Vote, 33,948. Republican majority in 1876, 7,854; in 1878, 6,832.

Seventh—Marion, Hancock, and Shelby. Vote, 35,191. Republican majority in 1876, 241; Democratic majority in 1878, 502.

Eighth—Warren, Fountain, Montgomery, Vermilion, Parke, Vigo, and Clay. Vote, 36,810. Republican majority in 1876, 1,360; Democratic majority in 1878, 257.

Ninth—Tippecanoe, Clinton, Boone, Tipton, Hamilton, and Madison. Vote, 84,828. Republican majority in 1876, 853; Democratic majority in 1878, 422.

Tenth—Lake, Porter, Newton, Jasper, Pulaski, White, Carroll, Cass, Fulton, and Benton. Vote, 84,804. Republican majority in 1876, 1,045; in 1878, 1,680.

Eleventh—Miami, Howard, Wabash, Grant, Huntington, Wells, Adams, Blackford, and Jay. Vote, 89,863. Republican majority in 1876, 400; Democratic majority in 1878, 840.

Twelfth—La Grange, Steuben, Noble, De Kalb, Whitley, and Allen. Vote, 84,957. Democratic majority in 1876, 1,864; in 1878, 3,113.

Thirteenth—Laporte, Starke, St. Joseph, Marshall, Elkhart, and Kosciusko. Vote, 85,291. Democratic majority in 1876, 151; in 1878, 682.

In the Senate the bill was passed by a vote of 26 to 23, and in the House by a vote of 57 to 37.

On March 9th the regular session expired by limitation, and on the same day the Governor issued his proclamation convening the Legislature in an extra session. The members again took the oath of office, and the officers of the previous session were by resolution continued.

A resolution was adopted to appoint a committee of five to investigate the affairs of ex-Attorney-General Buskirk, the previous incumbent, during his term, and ascertain what amount of money has been collected by said Attorney-General from any and all sources; what amount thereof has been accounted for and paid over, and what amount, if any, has not been accounted for. The charges related to money collected for the State from counties and county officers. The term of office of James C. Denny was subsequently included in the investigation. The whole matter turned upon an interpretation of the statutes of the State, whether the Attorney-General was entitled to fees on the amount collected in addition to his regular salary. According to an act passed in 1855, providing for the election of an Attorney-General, fixing his compensation, and prescribing his duties, it is said to be clear that the statute as it then stood provided that the only compensation was the salary named in the act. Whether Messrs. Denny and Buskirk have accounted to the State for all moneys collected by them depends in part upon the construction to be given to the supplementary act relating to the duties and compensation of the Attorney-General, approved March 10, 1873. Section 2 of that act makes it the duty of the Attorney-General to collect all fines and forfeitures where the prosecuting attorney has failed to collect and pay the same into the proper Treasury for one year after such fine is assessed or recognizance forfeited, and no additional compensation beyond the \$3,000 salary is provided. The main difficulty arises under section 9 of the act, which provides for additional services and allows therefor additional compensation in the way of commissions on moneys collected. By applying to this section the familiar rule of construction that requires us if possible to ascertain the le-

gislative intent and give it effect, it is clear that the section contains two, and but two, separate and distinct propositions, which, although they are somewhat confounded as they stand in the sections, may be readily separated. The first part of the section is a distinct proposition and complete in itself. It authorizes no suits and provides for no fees or commissions for the performance of the services required, but simply requires the Attorney-General to ascertain what money belonging to the State has been collected by such officeholder, and requires the officer, under penalties, to furnish him with the necessary information. It does not even require the officer to pay it over to the Attorney-General, but seems to presume that, if it has been collected, it has reached or will reach the Treasury through the proper channels as provided by law. The other proposition in section 9 is equally independent. It seems very clear that the purpose of the first proposition is to aid the Attorney-General in enforcing the second, because, having ascertained what money belonging to the State has been collected, it is an easy matter to ascertain what is uncollected. It then becomes his duty, if the proper officer has refused or neglected to take the proper legal steps to collect the moneys of the State for twelve months or more, to step in and institute suit, or such legal proceedings as may be necessary. Under the first proposition the Attorney-General is not entitled to any fees or commissions for merely ascertaining what moneys belonging to the State the officer has collected, but his commissions must be alone on that which the officer refused or neglected to collect, and the Attorney-General did collect. The committee report the facts in part, and leave them to the House to determine what action shall be taken.

Ex-Attorney General Denny held that the ninth section authorized him to take the proper steps to collect any money due to the State in the hands of any officer in default. This was the construction given to the act by the judges of the courts in all the counties where the question had been raised. He also said:

The first portion of section 9 makes it the duty of the Attorney-General to ascertain from time to time the amounts paid to any public officer, etc., and to aid him in doing so the latter clause was added. It reads as follows: "And for the purpose of enabling the Attorney-General to ascertain the facts herein contemplated, it is hereby made the duty of the officer having the custody of any such moneys to report the facts to said Attorney-General," etc. Now, the question raised by the committee is fully settled by the Supreme Court in the case of Moore, administrator, *vs.* the State, *ex rel.* Denny, Attorney-General, 56th Indiana, p. 360. In that case the Court say that the ninth section of the Attorney-General's act repeals the sixth and seventh clauses of section 2 (1 Davis's Statutes, p. 157). The sixth subdivision of the above act reads as follows: "The Auditor of the State shall, sixth, institute and prosecute, in the name of the State, all proper suits for the recovery of any debts, moneys, or property of the State, or for the ascertainment of any right or liability concerning the same; seventh, direct and superintend the collection of all moneys due the State, and employ counsel to prose-

cute suits instituted at his instance, on behalf of the State." That the said ninth section repeals. The seventh section of the act of March 8, 1873, as to county superintendents, provides that the county superintendent may examine "the official docket, records, and books of account of the clerks of the courts, county auditors, county commissioners, justices of the peace, prosecuting attorneys, mayors of cities, and township and school trustees. . . . shall be open at all times to the inspection of the county superintendent, and whenever he shall find that any of said officers have neglected or refused to collect and pay over interest, fines, forfeitures, license, or other claims due the school funds or revenues in their possession, he shall be required to institute suit in the name of the State of Indiana for the recovery of the same, for the benefit of the school fund or revenues, and make report of the same to the board of county commissioners and to the State Superintendent." These two sections cover all the funds that have been collected by the Attorney-General, and the Supreme Court in the case referred to holds that the ninth section of the act of March 10, 1873, repealed the sections above referred to, and took the place of said sections.

Ex-Attorney-General Buskirk, after reading the report, sent a letter to the chairman of the committee, of which the following is an extract :

So far as your report shows small discrepancies to exist in certain counties, I hope to be able to explain them when I can personally examine the accounts; but your report, so far as it relates to me, seems devoted mainly to certain fees retained by my assistants and myself. On that subject, the law being loosely and awkwardly drawn, I took the opinion in writing of one of our best lawyers in the State—then Governor—and I think such fees were retained in accordance with it. I desire that the courts may decide the question. If they hold I am liable for what was retained by my assistants and myself, it would probably amount to more than my bond. My situation for paying is just this: I have mortgaged all I have to my surety, hardly sufficient to indemnify. I have nothing else, having come back here poorer by about \$4,000 than when I went to Indianapolis four years ago. I then left a law practice worth over \$5,000 a year, and so far since my return have had an equally good business, probably better. If the courts decide I owe anything, I am willing to devote the balance of my life to work to pay it off, to show that I did not wish to steal anything from the State. It may be proper for me to add that while you will see I could have done so to large amounts, I actually had to borrow money to pay in part the freight on my household furniture to get back here. Do not understand me as finding fault with the committee; only I beg respectfully to dissent from its views of the law upon the subject of the fees of the assistants and myself. Please submit this to the House.

Another case, involving the State Auditor Henderson, came before the House of Representatives. The point in this case was a question of fees. A committee of investigation was appointed, which made a majority and a minority report. The gentlemen making the minority report construed the law against the Auditor, and recommended that suit be brought against Mr. Henderson for the recovery of \$13,000 alleged to have been illegally collected by him while Auditor and retained. The majority report construed the law differently. It justifies the Auditor at every step; it finds that he had a right to collect and hold fees from the Land Department on private contract; it holds that the act of 1877 was amen-

datory of and supplemental to the act of 1865, and separate and distinct from the acts of 1873 and 1875; "that nothing whatever can be found in the law of 1865, or in the act of 1877, compelling or authorizing any of the money derived from such fees and charges to be paid over into the Treasury"; and that the Auditor was not bound to turn any of the fees collected under these acts over into the Treasury. It further said: "We recognize the fact that the question as to whether Mr. Henderson ought to account to the State for any portion of the moneys received by him from the additional fees and charges authorized by the law of 1877 is one wholly of the proper construction of the statute, which is by no means plain or free from ambiguity, and about which men and courts may, and very likely honestly, differ in opinion." The minority and majority agree that Mr. Henderson never, at any time, disguised or attempted in any way to conceal the fact that he charged and retained all of said fees, claiming that he was entitled to do so by a fair construction of the statute; and that Mr. Henderson upon request furnished the committee with all the facts desired. The minority report was adopted—yeas 58, nays 30.

A bill providing for the codification of the school laws of the State was also adopted. The amendments made to these laws were, that the levy for special school purposes be reduced from 50 to 25 cents on the \$100, with a provision that, in case the school officers in any district have created a debt, they may make an additional levy of 15 cents to pay such indebtedness; that the levy for local tuition purposes be reduced from 25 to 20 cents on the \$100; that county superintendents shall hereafter be appointed by the board of county commissioners instead of by the township trustees, and that their per diem shall be fixed by the county commissioners, provided, however, that it shall not be less than \$3 per day; that teachers shall pay a fee of \$1 for examination, such fee to be the only compensation of the superintendent for holding examinations; also, that county superintendents shall be authorized to hold township institutes or joint township institutes, and that teachers shall be required to attend such institutes not less than two nor more than three days during each year; that but one six months' license shall be issued to the same person in the same county, but that persons who have received a six months' license shall not be again licensed unless they have reached a grade sufficient to obtain a twelve months' license; and that the county commissioners may fix the number of days on which superintendents shall visit schools, provided that the number so fixed shall not be less than three fourths as many days as there are schools in the county over which the superintendent presides.

The number of persons in the State between the ages of six and twenty-one years is 707,-

845. The average daily attendance in the schools during the year was 312,143. The total number of white pupils admitted into the schools during the year was 496,066; of colored pupils, 7,826. Teachers to the number of 13,490 were employed, the average compensation of men in the townships being \$1.86 per day; of women, \$1.64. In cities the male teachers were paid \$3.64, female teachers \$2.10. The total school revenue was \$4,902,163.77; the total expenditures were \$3,002,517.94. The school fund consists of assets valued at \$9,000,000. The value of permanent school property is \$12,000,000. An investigation of the high schools in some twenty cities of the State showed the following average results:

Per cent. of patrons who pay no property tax.....	13
Per cent. paying on less than \$500.....	36
Per cent. paying on less than \$1,000.....	50
Per cent. paying on less than \$5,000.....	63
Per cent. paying on more than \$10,000.....	8
Per cent. of children of widows or parentless.....	16
Per cent. of children of manual laborers.....	40
Per cent. of children of agents, clerks, and others on salary	20
Per cent. of children of professional men.....	11

The debt of the State on October 31, 1879, was as follows:

FOREIGN DEBT.

Five per cent. certificates, State stock.....	\$14,469 99
Two and one half per cent. certificates, State stock.....	2,925 13
War loan bonds, 6 per cent.....	139,000 00
Temporary loan bonds, 5 per cent., due April 1, 1884.....	510,000 00
Temporary loan bonds, registered 6 per cent., due December 1, 1879.	200,000 00
Temporary loan bonds, held by Purdue University, 5 per cent., due April 1, 1881.....	200,000 00
Internal improvement bonds.....	27,000 00
	\$1,093,395 12

DOMESTIC DEBT.

School fund bond No. 1, January 1, 1867.....	\$709,024 55
School fund bond No. 2, January 20, 1867.....	2,653,057 30
School fund bond No. 3, May 1, 1868.....	134,284 00
School fund bond No. 4, January 20, 1871.....	177,700 00
School fund bond No. 5, May 3, 1878.....	175,767 07
	\$3,904,738 22

Total debt..... **\$4,998,178 34**

The receipts and expenditures of the State during the year were as follows:

Net cash receipts during year.....	\$3,157,221 37
Deduct net cash disbursements during year...	3,127,825 91

Leaves excess of receipts over disbursements.....	\$29,395 46
Add balance cash in Treasury October 31, 1878.	524,856 46

Makes cash balance chargeable against Treasury October 31, 1879..... **\$588,751 92**

An investigation was made by a committee of the Legislature of charges made against the President of the Board of Benevolent Institutions and the Superintendent of the Hospital of the Insane Asylum. The majority reported charges made for extra services, and the minority reported the application of some funds contrary to the meaning and intent of the statute. Both found that the charges of cruelty and neglect of the inmates in general were

not sustained. No action was taken by the Legislature.

The office of State Geologist was abolished by the Legislature. Some of the results of the geological survey have been very valuable. Before the survey, the coal lands of the State were worth from \$2 to \$10 per acre. They now sell readily at from \$50 to \$200 per acre, while Indiana coal is used to a very large extent by railroads and manufacturing establishments, and also for fuel, and still more extensively abroad. The reports issued showing the good quality of the coal have either suggested or aided the construction of four or five important railroads, and prepared the way for others. Placing the average extent of counties included in the coal regions at 250,000 acres, the increased value of previously unproductive land would exceed \$30,000,000; and adding the benefits derived from the setting up of forges, furnaces, factories, and mills, and the building of railways, it is estimated within the mark to state that the aggregate increase in values resulting from the development of the coal-fields has reached \$100,000,000. This great benefit to the State has been brought about to a very great extent, if not altogether, by the labors of the geological survey. The money invested in operating the coal-fields is largely foreign capital, which has been brought within reach for the purposes of taxation. The increased shipments from the town of Brazil, in Clay County, represent annually more money than the entire cost of the survey. Ten years ago a few car-loads per annum constituted the entire export trade; and the same statement holds equally true in regard to the Washington mines, in Daviess County. The annual shipments are now from 250,000 to 300,000 tons, and the proprietors of mines are glad to arm themselves with analyses and letters from the State Geologist showing the purity and excellence of Indiana coal, by means of which they have built up an extensive shipping trade, while the cannel coal of Daviess County, by reason of its superiority as a grate fuel and for its illuminating qualities, now commands a full market in all directions outside of the State.

The quarries of building-stone in the State are estimated to cover a surface of more than 200 square miles. This stone has been found in great variety of color and grade, and the tests applied have shown it to be of such enduring strength as to create a large demand. The product of the quarries, which a few years ago did not exceed \$30,000 per annum, during 1879 amounted to at least \$500,000. The citizens of Owen, Monroe, Lawrence, Washington, Harrison, and other counties consider that in the near future the increase of Indiana's wealth from her stone-quarries will be equal to that resulting from the successful working of her coal-mines.

An officer to be known as a Mine Inspector was created by the Legislature. Among bene-

ficial results anticipated from the administration of such an officer, one is that it will have a good effect in setting at rest existing troubles between mine-owners and operatives. The law requires that the officer shall be a resident of the State, a practical miner of not less than twelve years' experience, two of which shall have been spent in digging and mining coal in the State; and he is not to be at the time of his appointment pecuniarily interested in any coal-mine within the State, directly or indirectly. On entering upon his duties he is to execute a bond of \$10,000, to be filed with the Secretary of State, and take an oath of office. The Mine Inspector is to have his office in some central part of the mining district, is to be paid a fee of \$5 for each semi-annual inspection of a mine, and is to have power to enter, examine, and inspect coal-mines, machinery, etc., the owner or agent being required to furnish facilities for such inspection, failure or refusal to do so being declared a misdemeanor punishable by a fine of \$100. The Mine Inspector is to devote his whole time and attention to the duties of his office, and to collect and make tabulated statements of certain facts in relation to the yearly production of coal, methods of operating mines, amount of capital and number of men employed, and such other information as he may deem necessary, together with his opinion in regard to the condition of the mines as to safety and ventilation, all of which is to be set forth in an annual report to the Governor.

The wheat crop of the State for 1879 was computed at 55,000,000 bushels; of this it was estimated that about 43,000,000 could be exported, leaving the remainder for home consumption.

The number of hogs packed at various points in the State from November 1st to March 1st, for two seasons, was: 1878-'79, 682,321; 1877-'78, 496,025. The following statement shows the result in detail for Indianapolis alone:

DETAILS.	Years.	
	1878-'79.	1877-'78.
<i>Winter Season.</i>		
November 1st to March 1st.	1878-'79.	1877-'78.

Number of hogs packed.....	784,679	474,414

The Supreme Court of the State has decided that the 28th and 29th days of February must be counted in legal and commercial affairs as one day. The decision is in these words:

It must be regarded as settled in this State that the 28th and 29th days of February in every bissextile year must be computed and considered in law as one day. It has been held by this Court that the English statute—21 Henry III.—is in force in this State. This statute, speaking of the 29th day of February, in leap-year, provides, "*Computatur dies ille et dies proxime procedens pro unico die.*" (And that day as well as the day next preceding shall be computed as one day.) This English statute is recognized as a part of the law governing this State. The service of the summons was not sufficient in law to justify either the default entered or the judgment rendered.

In the case of the Chicago, Danville, and Vincennes Railroad Company, the Supreme Court of the United States decided "that the Court may, as condition of appointing receiver, provide for claims for back pay, materials, etc., and that when money which the Court may apply for back dues is used for the betterments, the Court may, in proper cases, provide for such debts out of proceeds of sale to extent of such diversion. Title to cars remains in conditional vendor as between him and mortgagees."

INDUCTION-BALANCE, HUGHES'S. By arranging two primary coils of equal size near each other, each with a secondary coil beside it, the induction-current induced in the one secondary coil by the passage of a current of electricity through the adjacent primary coil may be made to exactly neutralize and balance a similar current induced in the other secondary coil. An instrument of the most delicate sensitiveness has been constructed by Professor E. D. Hughes, the English electrician, on this principle. A microphone is placed in the primary circuit, and a telephonic receiver is connected with the secondary coil. To this instrument he gives the name of the induction-balance. One of its modifications is the sonometer, an instrument which promises to be of considerable practical value. The sonometer is constructed by placing two primary coils in a horizontal position at a distance of forty centimetres apart. A secondary coil midway between them is so arranged that it can be moved to one side or the other along a graduated bar divided into millimetres. The primary coils have similar poles facing each other, so that a secondary current induced in the movable coil by one of them would take the opposite direction from the induction-current produced by the other, and in a certain position of the secondary coil the two forces would exactly counterbalance each other; no current would pass, and the telephone could not be made to emit the slightest sound. When the two primary currents are equal in intensity, the neutral position for the secondary is exactly half way between them. When the coil is slid the least distance to either side of the neutral point, a sound is produced which increases as the coil is pushed farther to the

side. The sonometer is capable, therefore, of measuring the intensity of sound, as the sound increases in the exact ratio of the distance from the neutral point, which distance is indicated on the graduated rod.

When the secondary currents are in equilibrium, if a piece of metal is placed in either of the primary coils of an induction-balance, the balance is disturbed, and a sound can be immediately heard on the telephone. Bringing then a sonometer connected with the induction-balance into circuit by means of a circuit-changing key, and moving the sliding coil from the neutral position to such a distance that the same degree of sound is heard as on the telephone of the induction-balance, so that by moving the key up or down and connecting either telephone with the circuit, no difference in the intensity of the sound can be detected; then the exact amount of the disturbance caused by the piece of metal is measured on the graduated scale of the sonometer. Experiments show that the sounds produced by the same piece of metal remain constant, but that different metals and different masses of the same metal produce different sounds, as also the same piece of metal in different molecular conditions. As every metal has its own sound-measure, which is always the same for equal weights and coincides with that of no other metal, the sonometer may be employed in detecting the nature of samples of metals of unknown character. Standard gold gives a different degree of sound from any of the alloys used in imitating coin, so that counterfeit pieces can be instantly detected by the aid of the sonometer. When two genuine coins are placed one in each primary coil, the equilibrium is maintained; but with a debased coin in one and a standard coin in the other of the coils, the telephone will give forth a sound. The sensitiveness of the instrument is so keen that when a freshly coined shilling is balanced against one which is the least worn, or even rubbed in the hand, a sound is produced by the microphone. Experiments made upon various alloys with the induction-balance and sonometer in the British Mint, by Chandler Roberts, proved the instrument to be so extremely sensitive that it may be of practical use to the assayer. The slightest alloy of silver in gold or of gold in silver was indicated by the sonometer.

The sound-measuring part of the instrument has been employed successfully by Dr. B. W. Richardson in testing the hearing powers. When employed for this purpose, the sonometer is called the audiometer. The graduated bar is divided into two hundred parts. It was found that a person who hears the sound perfectly well when the coil is in a certain position may not be able to detect the slightest trace of sound when it is reduced by moving the coil only two degrees toward the center. Right-handed people hear best with the right ear, and left-handed people with the left ear.

When the barometer stood at thirty inches Dr. Richardson was able to detect sounds when the coil was removed the minutest distance from the zero, but could not hear within two degrees of the zero when the mercury was lower. Deaf persons can decide through the audiometer upon the value of different kinds of artificial drums. Dr. Richardson concludes that the best material for artificial drums is fine gold. In one case, where the natural tympanum had been destroyed, the introduction of a gold drum had the effect to improve the hearing by fifty of the two hundred degrees on the measured scale. The audiometer enables the aurist to decide, also, whether a case of partial deafness is caused by a defect in the ear itself, or whether it is throat-deafness caused by a closure of the Eustachian tube. The audiometer can not fail to prove of high value in determining the qualifications of persons for positions on railways, for example, where great acuteness of hearing is required.

INTEROCEANIC CANAL, THE. The International Congress for the study of the Interoceanic Canal met at Paris, in the rooms of the Geographical Society, May 15, 1879. The Congress was opened by Baron de la Roncière de Noury. Count Ferdinand de Lesseps was elected President; Commodore Ammen, of the United States Navy, and Likhatscheff, of the Russian Navy, Colonel of Engineers Sir John Stokes, of the British Army, and Cristoforo Negri, Italian Minister Plenipotentiary, were chosen Vice-Presidents; Henri Bionne, General Secretary; and Boissevin, H. Capitaine, J. Jackson, and Charles Wiener, Secretaries. Five committees were appointed: one on statistics, to estimate the probable traffic of the canal and the tonnage which would pass through it, as well as the probable share of each nation in the traffic; the second on economical and commercial questions, which should consider the advantages and saving in the costs of transportation which would accrue to each nation from the use of the canal, and the influence which it would exercise upon the commerce of each country through opening new markets and increasing trade and industry; the third on navigation, to consider the class of vessels which would be likely to frequent the canal and the adaptation of the canal to the requirements of navigation and commerce, the influence which the canal would have on naval architecture, the influence of the prevailing winds and ocean-currents on the frequentation of the canal, the meteorological and climatic conditions of the Isthmus, and the influence of these conditions upon the conservation of the canal; a fourth on technical questions, for the technical examination of the different routes, the estimation of the cost of construction, the annual cost of working, the annual cost of maintenance and repairs, the facility and security of navigation in the canal and harbor approaches; the fifth on ways and means, to estimate from the probable traffic the probable gross revenue, and to

study the sum which should reasonably be applied to the construction and maintenance of the canal in view of the possible traffic.

The Committee on Statistics, in its report, recommended a canal cut down to the level of the sea, and without locks, as the only profitable plan, as no canal with locks would be able to accommodate a traffic sufficiently great to yield a revenue which would return an ordinary rate of dividends to the stockholders. The minimum paying traffic at the toll-tariff proposed of 15 francs per ton was estimated at 6,000,000 tons per annum, or an average traffic of 8 ships of 2,050 tons per diem. This traffic would not be distributed evenly over the year. A traffic of 6,000,000 tons per annum would correspond to one of perhaps 16 ships a day during the commercial season, which during the busiest season, that succeeding the Californian wheat-harvest, would increase probably to an average of 24 ships daily. The only profitable kind of a canal, therefore, would be one which could allow of the passage of at least 50 vessels a day for many days together. The passage of an ocean-vessel through a lock would occupy probably two hours—at the least calculation one hour—allowing from half an hour to an hour for the filling and emptying of the lock-chamber, and as much time for the slowing of speed when approaching the lock and the time required in getting under way again after leaving it. A single lock would therefore limit the number of ships which could pass through in a day of 24 hours to from 12 to 24. The amount of traffic which would naturally have passed through the canal in 1876, had it been completed, was 4,830,000 tons, 3,500,000 tons from one side and 1,330,000 tons from the other. The increase in the commerce of the countries to whose ports the canal would be the avenue has been 6 per cent. per annum for the past fifteen years. Calculating the future annual increase at only 5 per cent., the probable traffic of the canal in the year 1887, the date at which the canal might reasonably be expected to be opened, would amount to 7,250,000 tons, 5,250,000 tons from one side and 2,000,000 tons from the other.

The Committee on Economical and Commercial Questions dwelt in its report on the shortening of the distance between the ports of the Atlantic and those on the western side of the American Continent, and between the Atlantic seaboard of the United States and the countries of the Orient and islands of the Pacific. The distance from Liverpool, Havre, or New York to San Francisco by sea is now 18,000 miles. Not only would the cocoa, the guano, the copper, the niter, and the wool of South America, and the wheat and other products of California, reach their markets by a much shorter voyage, but the storms of Cape Horn and the calms of the equinox would be avoided. The countries which would most profit by the canal would be the Pacific states of South America

and the republics of Central America, and their commerce in the above-cited products, as well as in vegetable ivory, cotton, alpaca-fleeces, sugar, cinchona and other barks, and vegetable essences, metals, and tropical food-products. Central America, particularly, would find for the first time a vent for its rich productions—a region which is not only the natural home of the most valuable vegetable products, such as cotton and other fibrous materials, coffee, cocoa, sugar, indigo, cochineal, rice, maize, caoutchouc, the finest cabinet and dye woods, and a thousand other choice products, but which contains a great variety of undeveloped mineral resources, iron, copper, lead, gold, silver, sulphur, and precious stones, and the other valuable minerals which are known to exist there. The nation, however, which would derive the most immediate benefit from the interoceanic canal would be the United States. As 79 per cent. of the commerce which passes through the Suez Canal is in the hands of the English, so the Americans would monopolize the navigation of the new gateway between the oceans.

The Committee on Navigation recommended that the canal should have a minimum depth of 8.3 metres, and a breadth of 25 metres at the bottom and of 70 metres at the surface, which could be lessened to 30 metres in the rocky parts. If a canal with locks should be decided upon, these should have a width at the gates of 22 metres and a length of 150 metres. The locks should be so limited in number and so disposed as to allow of the passage through the canal of 50 vessels per diem. If the canal at sea-level should be chosen, the same width should be adopted, as it would be necessary to accommodate sailing vessels as well as steamers.

The Technical Committee, to which the examination of the various schemes was confided, reported in favor of the route between the Gulf of Limon and the Bay of Panama, and recommended the construction of a canal without locks at the tide-level.

The Committee on Ways and Means, calculating on the basis of a prime cost of 600,000,000 francs, to be expended during a period of construction of eight years, and upon a gross revenue of 90,000,000 francs per annum from an average traffic of 6,000,000 tons at the rate of 15 francs per ton, estimated that there would remain an annual surplus of 42,000,000 francs after deducting 37,500,000 francs, interest on the total invested capital of 750,000,000 francs at 5 per cent., 6,000,000 for the annual cost of maintenance and operation, and 4,500,000 for the royalty to be paid to the state granting the right of way, taken at 5 per cent. of the gross revenue. It advised the employment of the negroes of the West Indies and Louisiana in building the canal. It recommended that the rate of toll should not exceed a maximum of 15 francs per ton, which is 50 per cent. greater than the tariff of the Suez Canal, and corresponds to the greater cost of the present under-

taking. The sentiment was approved that the canal should be declared absolutely neutral and free to all, notwithstanding any existing state of war.

At the closing session, on the 19th of May, the Congress voted in favor of the route recommended by the Technical Committee. The terms of the conclusion adopted were: "The Congress considers that the cutting of an interoceanic canal at the tide-water level, so desirable in the interest of commerce and navigation, is possible; and that this ship-canal, in order to secure the facilities of access and passage which such a channel ought indispensably to afford, should take the course from the Gulf of Limon to the Bay of Panama." The plan recommended by Henri Bionne was adopted with greater unanimity than was expected. In the division, out of 98 voters, 74 voted in favor of it, and 8 against, while 16 members abstained from voting.

The routes which were submitted to the consideration of the Congress were five in number: 1. The route across the Isthmus of Te-

huantepec, 148 miles long, and requiring 120 locks, taking a vessel 12 days to make the passage; 2. The Nicaragua route, 180 miles in length, requiring 17 locks, and taking 4½ days for the passage; for which route two projects were submitted, the American plan elaborated by Lull and Menocal, and one by the French engineers Wyse and Reclus; 3. The route across the Isthmus of Panama, length 45 miles, for which the same American engineers proposed a canal with locks, but the French engineers a deep tide-level cutting, with a tunnel 5½ miles long, the plan which was adopted by the Congress; 4. The route by the Isthmus of San Blas, another project of a tide-level canal, 33 miles in length, and time of passage 1 day; 5. The Atrato-Napipi route, with a length of 179 miles, requiring 3 locks, and 2 days for the passage. The number of projects from which the Congress had to choose was seven, or with the alternate Panama plan of Wyse-Reclus, eight, of which the following tabular statement gives the main features of character, cost, and construction:

ROUTES.	Length of canal.	Number of locks.	Length of tunnels.	Cost of construction.	Working expenses capitalized.	Total capital required.	Time of passage.
	Kilometres.		Kilomet's.	Million fr.	Million fr.	Million fr.	Days.
Tehuantepec.....	240	120	..	?	?	?	12
Nicaragua. { Lull and Menocal's project.....	290	20	..	380	130	460	4½

The Tehuantepec route lies in Mexican territory, running from the Bay of Vera Cruz in the Gulf of Mexico to the Gulf of Tehuantepec on the Pacific side. The isthmus through which this route runs is extremely level and low for the greater part of its breadth. The mountainous mass of the Cordillera occupies only a narrow strip on the Pacific coast. The Atlantic slope is drained by the Coatzacoalcos River, whose course is very sinuous, but which is navigable as far as Minatitlan, having a depth of not less than 6 or 7 metres for that distance, after the bar at its mouth is passed. The Pacific slope is not more than 50 kilometres in breadth, and is drained by numerous small streams, which flow into a series of large lagoons that extend down to the coast. Both slopes are composed of alluvial soil, and are easy to excavate. The mountain mass is composed of schist and calcareous rock. At the mouth of the Coatzacoalcos there is a sandy shore on a substratum of stiff clay. Over the bar of the river there is a depth of water of 4½ metres, which does not sensibly vary in the different seasons of the year. The engineer Fuertes and Captain Shufeldt, commissioned by the United States Government, explored this route in 1871. The plan which they worked out was to make the highest level of the canal

at the Pass of Tarifa, 223 metres above tide-water, where the canal could be fed from the upper course of the Coatzacoalcos with a cutting 7 metres deep in the pass, descending to the ocean on both sides by means of 130 locks divided between the two slopes. An aqueduct 43 kilometres long would be necessary to conduct the water from the upper Coatzacoalcos, which is here called the Corte, to the canal, for which 5 kilometres of tunneling would be required. The canal on the Atlantic slope follows the valley of the Tarifa, then that of the Chichihua to its junction with the Coatzacoalcos, and, continuing along the right bank of this river in the mountainous region, departs from it afterward to rejoin it again north of the Island of Tacamichapa, 50 kilometres from its mouth, thence utilizing its bed down to the sea. The length of the canal would be 280 kilometres, though the distance to be executed would only be 230 kilometres. The breadth proposed was 49 metres at the surface and 18 metres at the bottom, the depth 6·6 metres. These dimensions, although not adapted to the largest ocean-going craft, were sufficient for the American coasting vessels and for nine tenths of the other ships which would use the canal. M. de Garay, who presented this scheme to the Congress, suggested that it

▲ MAP OF THE WORLD, SHOWING THE GREAT COMMERCIAL ROUTES TRIBUTARY TO THE PROPOSED CANAL.

might be modified by deepening the cut in the Pass of Tarifa, thus reducing the number of locks to 120, by carrying the canal nearly to Minatitlan before uniting it with the Coatza-coalcos, and by directing it straight across the lagoons to the sea instead of carrying it obliquely by the way of certain torrents to the Bay of Salina Cruz. The country was declared to be more healthy, and the facility and rapidity with which the canal could be constructed greater, than by way of Nicaragua or Darien. The objections to this route were not based solely on the number of locks which would be required and the length of time which the passage would take, but also on the frequency of volcanic disturbances of the soil, which would possibly necessitate extensive repairs at times in the locks, stopping for the time being all traffic.

Nicaragua, the second contraction in the long neck which connects the two Americas, was the site specially favored by the American engineers present at the Congress and by the American public for the prospective canal. This isthmus seems destined by nature for an interoceanic canal—notwithstanding that its minimum breadth, 208 kilometres, exceeds that of Tehuantepec or Darien—owing to the presence of the Lake of Nicaragua, lying in the center of a valley which extends across the isthmus from northwest to southeast, with the port of Greytown or San Juan del Norte at one end, and that of Fonseca, on the Pacific, at the other. The lake is 176 kilometres (107 miles) long and 56 kilometres (34 miles) broad. The elevation of the lake at mean high water is 32·6 metres above the sea-level; its variations of level are $1\frac{1}{2}$ to 2 metres. The lake is 40 metres deep in the middle, and has a depth of 8 metres close to its western shore; but in its eastern portion the alluvial deposits of the river Frio have created shoals for a distance of 10 kilometres. The outlet of the lake is not far from the mouth of the Frio by the river San Juan, whose length in a straight line is 125 kilometres. This river down to the *dé-bouchure* of the San Carlos winds in a very tortuous course between two mountain-chains, and is broken in five places by rapids. The San Carlos and the Serapiqui affluents wash down large quantities of alluvium. Its valley broadens below the mouth of the San Carlos. Its lower course is through a low plain; and its mouth is a delta with two principal branches, the San Juan proper, which discharges at Greytown, and the Rio Colorado, which empties farther south and carries off the greater part of its waters. It was not proposed to carry the canal up the valley in the northwest by way of Lake Managua to Fonseca, but to find a passage to the Pacific from the western shore through the mountains, a distance of only 16 kilometres (10 miles), by passes whose elevation hardly exceeds that of the yoke of Managua. Five different passages proposed vary from 23 to 38 kilometres in length, and

the elevation of their highest ground from 46 to 300 metres above the sea. The character of the region west of the lake is essentially volcanic, the surface rocks of trap and basalt being 15 metres thick in places. The calcareous rocks on which they rest are exposed in various places. Conglomerates which are disintegrated by the action of the air are also common. In the hollows and places of low elevation there is an alluvial deposit 12 or 15 metres in depth. The mountains which incase the San Juan River are likewise the cones of extinct craters, and their sides are covered with feldspar which glitters with iron pyrites. The harbor at Greytown was still good in 1860, but is now nearly blockaded by a bar of sand, and is only accessible through a long and winding channel. On the Pacific side the different routes terminate in harbors such as the Bay of Salinas, the port of San Juan del Sur, and the Bay of Nacascoba, which are or could easily be made accessible for vessels of the deepest draught; the Bay of Brito, at the mouth of the Rio Grande, is a little too open, but could be made into a large and quiet haven by the construction of a jetty. The climate of the elevated portions of the Nicaragua route is extremely healthy; but in the lowlands on the Atlantic side, where there is a fall of rain almost every day in the year, fevers are common and easily contracted; yet, owing to the frequent breezes from the northwest, which carry off the miasma, they are generally of a mild type. The configuration of the Isthmus of Nicaragua, like that of the Tehuantepec route, forbids the idea of a canal without locks. The plans of Lull and Menocal are the result of extensive surveys of this region in 1872 and 1873. The Lake of Nicaragua forms the natural reservoir of the canal. The surface of the lake at mean high water is 32·6 metres above the sea-level. To descend to the two oceans, 20 locks would be constructed, 10 on each side. It would follow the bed of the San Juan, on the Atlantic slope, as far as the mouth of the San Carlos, a distance of 102 kilometres, and would then be carried on the left bank of the river a distance of 70 kilometres, to terminate at Greytown. Lateral canals, dams, and locks would have to be constructed at the rapids—the lock at the Castillo rapids with a lift of 5·7 metres, others at the rapids of Balas and Machuca with lifts of 5·8 and 6·8 metres, a fourth at the head of the artificial canal with a dam extending across the river. The canal to be carried across the plain from the mouth of the San Carlos to Greytown would be partly excavated and partly banked up, the work being so calculated, and the six locks so disposed, that the excavated soil would be just sufficient for the embankments, and that the deepest cut would not be over 3 metres above the surface of the water in the canal. The descent to the Pacific from the western side of the lake offers no excessive difficulties. The engineers chose the passage by the Rivas Pass, although its

elevation is 28 metres higher than the Pass of Guyscoyol. The route follows the course of the Rio del Medio to the Rio Grande. The canal leaves the lake near the mouth of the Rio del Medio, receiving the waters of this small stream at the distance from the lake of 8 kilometres. After crossing the Rivas Pass, it receives another creek, the Chicolata, beyond which the first lock is located, 17 kilometres from the lake, joins the valley of the Rio Grande at the place where it broadens, and terminates at a point near the mouth of that river. The total length of the canal would be 290 kilometres, the distance requiring artificial canalization 100 kilometres. The principal excavations to be made in the western section would be the excavation of a channel into the lake for 360 metres by blasting, and a cutting through the Rivas Pass 41 metres high above the surface of the water in its deepest spot, and averaging 8 metres for the whole distance to the first locks. In the eastern section, besides the inland canal, partly excavated and partly diked in, and the dams and locks to produce slackwater navigation in the Rio San Juan, the rocks in the rapids of Toro will have to be cleared away, and the bed of the river to be deepened by an average of $1\frac{1}{2}$ metre down to those rapids, and also for $1\frac{1}{2}$ kilometre above the lock at Balas; the deposits of the Frio River will also have to be dredged out to a mean depth of $2\frac{1}{2}$ metres below the present bottom of the lake for 10 kilometres. The sands would have to be removed to make a harbor at Greytown, and a breakwater must be constructed at Brito. The proposed depth of the canal is a uniform one of 8 metres throughout its course; in the diked-in portions of the canal, and generally in the excavations in earth, the breadth at bottom is to be 22 metres, at the water-level 46 metres, at 3 metres above 55 metres, the banks having an incline of over 45 degrees, the increase in breadth being to the increase in elevation as 3 to 2. In the deep cuts in earth the same relative profile is preserved, but the breadth is lessened to 15.2 metres at the bottom and 37 metres at the water-line. In the rocky excavations the incline of the banks is increased to over 45 degrees, and the breadth at the bottom is diminished to 18.2 metres, that at the water-line being 27.4 and at 3 metres above 32.3 metres. The harbor at Greytown would be preserved from the deposits which are washed down by the San Juan, by damming that river and turning its course into the Colorado. A second jetty at Brito would shut off the harbor in like manner from the Rio Grande and protect it on that side. Besides the 10 locks on the Pacific side, a sea-lock would be constructed at Port Brito. The total excavations necessary would amount to 48,000,000 cubic metres of excavation in the canal, blasting on the west side of the lake and in the Toro rapids, and the rest of it dredging. The cost of the different portions of the work was estimated as

follows: For the western division, from the mouth of the Rio del Medio to the Brito harbor, \$21,680,777; for subaqueous excavations in the lake, \$715,658; for the eastern division, from Fort San Juan to Greytown, embracing the establishment of 63 miles of slackwater navigation in the San Carlos and the construction of 45 miles of canal, \$25,020,914; for works in the harbor of Brito, \$2,333,739; for harbor-works at Greytown, \$2,822,630. This makes a total cost of \$52,577,718, which by adding 25 per cent. for errors and contingencies is augmented to \$65,722,147.

A second project for a lock-canal across Nicaragua was presented by M. Blanchet, materially different from the plan of the American engineers. Its principal feature was a scheme for preserving the level of the lake in the canal for the greater part of the length of the San Juan River, as far as the San Francisco, an affluent which joins the San Juan from the north between the mouths of the San Carlos and Sarapiqui. As in this project also it is necessary to shut out from the canal the waters of the Rio San Carlos, heavily charged with detritus, the valley of the San Juan, whose whole breadth is occupied by the canal down to this point, is dammed, and the canal is carried into a channel which runs close to the heights on the left bank, the necessary excavations furnishing the material for embankments on the southern side of the canal. Besides these cuttings, the only other labors necessary from the lake to the San Francisco will be the blasting of the rocks in the rapids of Castillo and Toro to a depth of $1\frac{1}{2}$ and 6 metres respectively, which operations will enable the current to carry away the accumulations above Toro. A long wall in the lake will protect the channel from new deposits of the Frio. Two or three locks near the Rio San Francisco bring the canal down to the second level, which extends down as far as the San Juanillo branch of the delta. Here, as above, it is led along the cliffs of the left bank, and shut off from the transverse valleys on the right by embankments thrown across their mouths. The canal is lowered to the sea-level by means of four or five locks, placed at the head of the San Juanillo, and carried across to Greytown by excavations in the low flat. On the Pacific side a channel is to be made through the valley of the Lajas, by blasting 1,200 metres into the lake, and by a cut in the Guyscoyol Pass, into the valley of the Rio Grande, which is to be made into a lake, like the San Juan Valley, by a dam at La Flor; from which point the canal would descend to the sea at Brito by 7 locks. The dam at La Flor must be 400 metres long, and must support 20 metres of water. The locks are to be 200 metres each in length and 24 metres broad, able to accommodate two large ships at a time; their average lift would be $4\frac{1}{2}$ metres. In order to avoid delay from a pressure of traffic or during repairs, there should be a complete

double system of locks at each change of level. The summit-level of the canal would by Blanchet's plan take up 237 of the 292 kilometres of the total length of the canal, and would consist of two artificial lakes and Lake Nicaragua, with which they would be connected by two narrow channels, one at the head of the San Juan and one through the Guyscoyol Pass. These lakes, filling the valleys of the rivers, would be broad sheets on which ships could ride abreast or pass each other under full headway. The depth of $9\frac{1}{2}$ metres would be maintained through the whole length of the canal. The material to be excavated is estimated at 30,000,000 cubic metres, of which it was hoped that the action of the water would remove about half. The estimated cost of this project is 362,000,000 francs.

A project submitted by M. Mainfroy proposed to excavate the canal in the clay of the left bank of the San Juan, leaving the bed of the river 12 kilometres below the lake, and descend to the sea by 6 double locks; and on the Pacific side to carry the canal through the valley of the Sapoa River, and make the terminus the Bay of Salinas.

M. Belly presented a theoretical scheme according to which the San Juan River could be restored to the navigable state in which it is reported to have been in the seventeenth century from the Caribbean Sea to the Lake of Nicaragua, by clearing away the rocks in the rapids and turning the waters of the Colorado branch into the San Juan outlet.

The American isthmus contracts in the region of Panama to its narrowest dimensions. The rocky barrier between the two oceans at the Isthmus of Panama is only 55 kilometres as the crow flies, and at the Isthmus of San Blas only 50 kilometres. The pass at Culebra, through which the Panama Railroad finds its way, is only 87 metres above the mean tide-level, the lowest pass of the whole isthmus after that of Guyscoyol. The survey of this region by Lull, with Menocal as engineer-in-chief, in 1875, commanded by the United States Government, led them to the conclusion that a tide-water canal was commercially impracticable; and they therefore confined their studies to a project of a lock-canal. The bays of Colon and Panama being settled upon as the most convenient termini, the route must necessarily cross the course of the Chagres River; and in order to avoid the dangers with which the excessive floods in that river would threaten the canal, it was decided to carry the canal across by a high aqueduct at Matachin, whose bottom would have to be 30 metres above the sea-level. The depth of 8 metres chosen for the canal would make the water-line here 38 metres above tide-water, which elevation would be the summit-level of the canal. The daily outflow through the 80 locks, 40 on each side, by which the descent to the two oceans is effected, would amount to about 950,000 cubic metres, which would be

supplied from the Chagres River by means of a dam between two rocky walls through which the river flows a few kilometres above, and conducted by the aid of a subterranean duct 4,000 metres long into a broad basin through which the canal passes. The canal would go through the Culebra Pass, crossing the divide a little to the east of the railroad, descending into the valley of the Rio Grande, and leaving it on the right to enter the harbor 400 metres to the east of the railroad quays. No streams except insignificant brooks would be allowed to discharge into the canal. The Rio Grande would have to be deflected into a new channel, and an outlet canal constructed to receive its affluents from the east. On the Pacific side 11 alignments would be necessary, with curves of not less than 1,500 metres radius; on the Atlantic slope there would have to be 28 alignments and curves, with radii as short as 760 metres. The displacement of earth necessary for the execution of this project would amount to 37,000,000 cubic metres, and the total cost to about 480,000,000 francs. In presenting this plan to the Congress, Menocal declared it decidedly less desirable than the Nicaragua project.

When, at the instigation of Ferdinand de Lesseps, the French naval officers Wyse and Reclus, accompanied by M. de Céliyer, engineer of the Bureau of Roads and Bridges in France, and other explorers and engineers, examined the American isthmus, it was with reference solely to cutting a canal through it at the tide-level, through which the largest ocean steamships could pass without stoppage. It was supposed at first that the most favorable line for such a canal was across the Isthmus of Darien, connecting the two large rivers, the Atrato, which flows into the Caribbean, and the Tuira, which discharges into the Pacific, and running between the parallel and separate mountain-chains of the Andes and the Cordilleras. A thorough examination of this region revealed the impossibility of digging a tide-level canal here. The same engineers undertook a second expedition at the solicitation of De Lesseps, and under the auspices of the Society of Exploration, constituted with General Turr as its president, and this time located a route for a tide-water canal across the Isthmus of Panama, in nearly the same line as that followed by the Panama Railroad. Satisfied by their survey that the piercing of the American isthmus by a tide-level canal which would accommodate the higher marine, the great iron steamships whose keels are 140 metres long and whose tonnage ranges up to 5,000 tons, is technically feasible, De Lesseps invited, in concert with Henri Bionne, of the Geographical Society, delegations from the different chambers of commerce and societies of engineers and statistics to meet in a Congress to discuss the question of an American canal. The Wyse and Reclus project was the one adopted by the Congress. The object of the

French explorers was essentially different from that of the various American surveys. Having in view the development of the higher transmarine commerce in enormous iron vessels, rather than the commercial profitableness of the canal itself, and being unwilling to depart from the model of the Suez Canal, they were not dismayed at a prospective cost entirely disproportionate to any immediate commercial needs. The material interests of the American public, on the other hand, seemed more identified with the construction of a canal which would be more hopeful as a commercial venture, and promised to return the usual profits to investors, and which would accommodate the smaller classes of vessels which now form the bulk of their marine.

The Wyso-Reclus route runs from the Bay of Limon, with its terminus at the town of Colon or Aspinwall, to the Gulf of Panama. The canal starts from the natural harbor at Aspinwall, at a point where its depth is 8½ metres, crosses the marsh of Mindi, and attains the Chagres after two alignments in the vicinity of Gatun. It keeps close to the river, crossing its bed in several places, as far as Matachin, changing its direction seven times in the interval, and crossing the line of the railroad at Barbacoas, where a swing-bridge will have to be constructed. Beyond Matachin the canal occupies the valley of the Obispo, which descends from the pass of Culebra, at a point where the ground is 40 metres above the mean tide-level. From this point it is necessary to cut a tunnel 7,700 metres in length through the mountain. The canal emerges at a point where the ground has the same elevation as at the entrance to the tunnel; and, occupying the valley of the Rio Grande, after three more curves it terminates in the Gulf of Panama next to the islands of Naos and Flamenca, at a spot where the depth is 7·3 metres at the lowest tides. The line has a total length of 75 kilometres. The curves, 13 in number, are none of them of a shorter radius than 3,000 metres. It borrows the course of the streams throughout its entire length, and would receive the whole of the drainage of the two valleys which it follows. Where it encounters the Chagres at Matachin, a cataract of 15 metres fall would necessitate a lateral cutting to conduct the river into it by a longer course; and similar labors would have to be performed in other places to protect it from streams which become formidable torrents in the rainy season. The depth of the canal is 8·5 metres below the mean tide at its terminus in the Bay of Limon, and by an incline which is distributed over the entire line it is lowered about 2 metres, or to 10·55 metres below the mean tide-mark, at its Pacific terminus, in order to have at that point a depth at the lowest neap-tide of 7·3 metres. The width at bottom is 20 metres throughout its course, and in the harbors this is gradually widened to 100 metres just before the points where the natural depth

is sufficient. The incline of the banks is 1 in 2 in the submerged portions at the termini; 8½ in 15 in the alluvial soil on the Atlantic side, which extends about 20 kilometres; and in the earthy portion on the Pacific side, about 10 kilometres in extent, 10 in 15; and in the rocky portions which occupy the whole central part of the route, 6½ of elevation to 3 of base, which sharper incline leaves the width of the surface at mean tide-level only 32 metres. In the tunnel the width at water-line is further reduced to 24 metres at mean tide, and the incline of the sides is increased to 2 of lateral extension to 9½ or 10 of elevation. Above the water the cross-section profile of the tunnel has the form of a Gothic arch terminating in an arc with a radius of 4 metres, whose summit is 34 metres above the mean tide-level. The cross-section of the tunnel, above and below the surface of the water, is an average area of 780 square metres. These dimensions do not permit vessels to cross each other while under way. At distances averaging 9 kilometres there will be stations where the width is expanded, in which vessels going in one direction will wait while those going in the opposite direction pass by. The flow of the water in the canal, it was calculated, would not exceed 1·7 metre per second. The rise of level in the tunnel during the period of freshets would never, it was hoped, be greater than 6 metres. To avoid the danger of a sudden rush of water into the canal after a rain-storm, it was proposed to build dams at different points in the upper valley of the Chagres, where the rocky banks approach each other, by which the waters would be retained in large natural reservoirs, and the discharge of the river in times of flood be reduced to the maximum of 200 or 300 metres a second. The Bay of Limon, which would serve as the port on the Atlantic side, is generally calm, being protected from the northeasterly winds, which blow with considerable violence in the dry season, by the island of Manzanillo: for the sake of additional security a sea-wall was proposed in the project, which would have a length of 850 metres. The entrance channel on the Pacific side, where stormy weather is of rare occurrence, would be sufficiently protected by walls on each side constructed from the rock excavated in the cuttings.

The plan for executing the work was to commence by leveling the line on the Pacific side down to the mean level of the Chagres and the Rio Grande, and to excavate the tunnel down to 10 or 12 metres above the final level; then to turn the Chagres into this new channel, and make it empty into the Pacific while its old bed is being lowered to the required level of the canal; and then, after the Atlantic division has been completed, to make it again the channel of the Chagres, and complete the excavations in the tunnel and on the Pacific side. In this way all would be dry excavation above the tide-level, and no blasting

under water would be necessary. The excavation of the earthy portions near the shore on both sides can be easily accomplished by dredging. The total material to be excavated was estimated at 47,000,000 cubic metres, of which 28,000,000 metres would be rock excavation, including 6,000,000 metres in the tunnel. The total expense was calculated by the projectors at 475,000,000 francs. Messrs. Wyse and Reclus presented alternative plans by which the tunnel could be shortened, or even done without, but only by considerably increasing the quantity of material to be excavated. To avoid having a tunnel, it would be necessary to make a cutting 87 metres deep in the pass of Culebra.

A project for a canal with locks was worked out by the same engineers during the sittings of the Congress, and was favored by some of the members on account of the difficulties, climatic as well as financial, which they thought would attend the execution of a tide-level canal. This modified scheme was similar in character to Blanchet's project for a Nicaragua canal. It was proposed to construct a dam at a spot in the course of the Chagres where it passes through a ravine, and one at a similar spot in the valley of the Rio Grande, thus creating two lakes, which could be connected by a cutting 72 metres deep at the deepest place. These lakes would extend to within 22 kilometres of Colon and 12 kilometres of Panama, and would be broad enough for ships to pass each other anywhere without stoppage, and deep enough to give 10 metres of natural depth at all points. Their plane would be 24 metres above the sea, which would be reached by a series of 5 locks on each side. The excavations would amount to only 12,000,000 cubic metres; the total expense was estimated at 428,000,000 francs.

The San Blas route was first explored by MacDougal in 1864 at the private cost of Mr. Kelley of Philadelphia, and subsequently by Selfridge. Wyse and Reclus also examined the Isthmus of San Blas, and especially the Pacific watershed. The indentation in the northern coast formed by the magnificent Bay of San Blas makes this the narrowest portion of the Panama Isthmus, only 50 kilometres broad. The water-parting here is near the Atlantic coast, instead of close to the Pacific as at Nicaragua and Panama. The height of the Cordilleras and the disposition of the water-courses in this region preclude the notion of a tide-level canal. The canal by this route, according to the surveys of Wyse and Reclus, would have a total length of 53 kilometres; but the excavations would only extend over 40 kilometres, of which 16 kilometres would have to be traversed in a tunnel. The excavations would amount to 34,000,000 cubic metres; the estimated cost is 475,000,000 francs. The surveys instituted by Kelley make the length of the tunnel only 12 kilometres.

The examination of the portion of the Isth-

mus of Darien where the sources of the Tuyra and the Atrato Rivers are not far apart, by Wyse and Céliier, led to the elaboration by the latter of a scheme for a canal with locks, whose summit-level would be 50 metres above the sea. It would be necessary to cut a passage between the valley of the Coquirri, which the canal would follow down to the Atrato, and the valley of the Cué, which it would occupy down to the Tuyra, through a pass whose elevation is 146 metres above the sea. To reduce the excavations in this pass, a tunnel 1 kilometre in length would be bored. The descent to the ocean-level would be made by 10 locks on the Atlantic side and 10 on the Pacific side. The length of the line would be 220 kilometres, but the excavations would extend over only 100 kilometres. The excavations would amount to 65,000,000 cubic metres. The total cost was estimated at 650,000,000 francs.

A project for a canal without locks across the Isthmus of Darien, from the Gulf of Acanti to the Tuyra, was sketched by Wyse and Reclus. The most favorable route which they could find for a tide-level canal was by way of the valley of the Tupisa, an affluent of the Tuyra, and its arm the Tiati; but it would be necessary to cross the Cordillera where the elevation is 1,000 metres, by a tunnel about 17 kilometres in length. The excavations necessary for such a canal would amount to 70,000,000 cubic metres. The estimate of the cost is 600,000,000 francs.

Another project for a canal *à niveau* was presented by M. de Puydt, who stated that he had found a passage in the Cordillera, whose greatest elevation was only 46 metres, between the Tuyra and Porto Escondido.

The Atrato-Napipi route, which has been very thoroughly explored by Selfridge and Collins, follows up the Atrato River, which always has a depth of at least 7·8 metres, for 240 kilometres, to the mouth of the Napipi affluent. The canal proper commences here. The distance from the mouth of the Napipi to the Bay of Chiri-Chiri is only 45 kilometres in a straight line. The direction of the route is nearly east and west. The highest point is at an elevation of 233 metres, and is found about 2 kilometres from the shore of the Pacific. Two projects for a canal by this route were submitted by Commander Selfridge, one for a canal with 22 locks, and one for a tide-level canal, with a double lock at the Pacific entrance. In the former the summit-level would have an elevation above the sea of 42·7 metres. The descent from the highest level, situated at the confluence of the Doguado and the Napipi, about 30 kilometres above the junction of the latter with the Atrato, would be effected by means of 12 locks through 7 levels, one of the lifts requiring a series of 4 locks. The total lift of the 12 locks from the Atrato at low water would be 37 metres. The total descent on the Pacific side is made by means of a connected series of 10 locks. The summit-level

would have a length of 16.5 kilometres, of which 5.5 kilometres would be in tunnel.

The second plan, which was more seriously proposed and warmly advocated by the projector, was for a tide-level canal by nearly the same route. The level of the canal would be lowered to that of the Atrato. Above the Doguado the canal would pass under the Napipi in a tunnel, which must be 30 metres high, and which would necessitate a change in the route, which must pass farther up the valley of the Napipi. From the Atrato, for 9 kilometres up the valley of the Napipi, the excavations can be done with dredges. The project proposes a constant free connection with the Atrato, but a lock may be necessary for security in time of high water. The depth of the cutting increases gradually from the 9th to the 37th kilometre, to 50 metres; at the 37th kilometre the tunnel, 9 kilometres in length, commences; at the end of the tunnel will be a basin and two locks to bring the vessels down to the level of the ocean, which in the Bay of Chiri-Chiri is at mean tide 5.7 metres below the level of the canal; the variations of the tide are 1.8 metre above and below the mean tide-level. The length of the tunnel can be reduced to 5,600 or even to 4,000 metres, by making the cuts on each side more than 50 metres deep. The mouth of the Atrato chosen for the Atlantic outlet of the canal is that arm of the delta called the Uraba mouth. A bar must be cut through for about 1,000 metres, and the passage lined with walls of masonry. In the Bay of Chiri-Chiri the port will be protected by two jetties. The expense of the canal is estimated at 491,000,000 francs.

IOWA. The election for township officers in this State takes place in April. The question which was extensively agitated was the prohibition of licenses for the sale of liquors. There was cast a considerable vote on the question by women. In Des Moines central precinct they cast 480 votes, of which 477 were for prohibition. In almost every town where a prohibition ticket was nominated it was defeated.

A petition was addressed to the United States Secretary of War by Mrs. Elizabeth Upright, of Butler County, requesting the discharge of her eleventh son from the army. The Secretary, under date of February 11th, replied as follows:

The discharge of this soldier is asked by the petitioner, who says she is seventy-two years old, on the ground that she had ten sons in the Union army during the rebellion, including one employed as a teamster, and that the one above named, her eleventh and youngest son, has served for over five years in the regular army. She furnishes the names of her sons and a statement of the organizations in which they served.

The papers having been referred to the Adjutant-General for an examination of the records with a view to verifying her statements, that officer reports that they are true in every particular.

I. G. W. Merchant was a private in Company C, Seventy-fourth Illinois Volunteers, afterward a lieu-

tenant, and was honorably discharged September 26, 1865.

2. Abel L. Merchant was a private in Company C, Fifteenth Illinois Volunteers, and died in service.

3. Do Witt C. Merchant was a private in the last-named company, and was killed in action July 22, 1864.

4. Enoch Merchant was corporal in Company F, One Hundred and Fifty-Sixth Illinois Volunteers, and honorably discharged September 20, 1865.

5. David O. Merchant was a private in Company C, Seventy-fourth Illinois Volunteers, and honorably discharged June 10, 1865.

6. Silas B. Merchant was a private in Company C, Forty-fourth Illinois Volunteers, promoted to first lieutenant, and resigned September 25, 1864.

7. Ario J. Merchant was a private in the last-named company, and honorably discharged September 25, 1865.

8. Lewis A. Merchant was a private in Company G, Forty-fifth Illinois Volunteers, and honorably discharged September 26, 1864.

9. Aaron Merchant was a private in Company G, Fifteenth Wisconsin Volunteers, and was killed at Island No. 10, December 26, 1862, by the accidental discharge of a cannon.

10. James B. Merchant, teamster, in the employ of the Quartermaster's Department.

11. Thomas M. Merchant enlisted March 3, 1873, as a private in Company B, Sixth United States Cavalry (regulars), and was discharged March 11, 1878, by reason of expiration of term of service. He again enlisted May 4, 1878, and was assigned to Battery B, Fourth Artillery, and is now in the service. The discharge of this soldier will be ordered in accordance with his mother's request. Discharges from the army as a matter of favor are not granted except in extraordinary cases, but this is, in my opinion, such a case. Indeed, I doubt whether another like it can be found upon record. But if another mother can be found who gave ten sons to the service of our country during the war, she may confidently ask, and expect to receive, similar favorable consideration. I have the honor to remain, very respectfully, your obedient servant,

GEORGE W. MCCRARY,

Secretary of War.

The result of the operation of the law to secure the planting of trees throughout the State, by allowing a certain sum to be deducted from the tax for the number of trees planted by each person, has been most successful. The amount of property returned by the assessors for the years 1879 and 1880, and thus made exempt for five or ten years, was \$5,949,730.

The State assessment is two mills on the dollar, or two fifths of one per cent., and thus the annual cost of the tree-planting law to the State in the loss of taxes is \$11,899. The entire amount of tax-levy, including State and county, averages about three per cent., and thus those who have taken advantage of the law saved just about \$178,492 per annum in taxes.

The following statement shows the amount of live stock assessed in the State for the year 1878; cattle, horses and mules under one year, and swine under six months, are not included in the assessment: Cattle, 1,530,056; horses, 672,808; mules, 42,566; sheep, 301,743; swine, 2,324,116. The average assessment of animals varies greatly; cattle in some counties are valued at \$8, while in others they run all the way along to \$14 and \$15; hogs and sheep are valued at from 50 cents to \$2 and \$3; horses

from \$20 to \$40, just as the estimates of the different assessors varied.

The following shows the equalized valuation of the cities of Iowa for 1879, as determined by the State Board of Equalization: Burlington, \$2,661,171; Cedar Rapids, \$1,417,239; Clinton, \$1,111,848; Council Bluffs, \$1,527,636; Davenport, \$2,819,970; Des Moines, \$3,242,203; Dubuque, \$3,886,634; Iowa City, \$1,118,769; Keokuk, \$2,046,582; Marshalltown, \$1,039,532; Muscatine, \$970,408; Oskaloosa, \$581,029; Ottumwa, \$1,385,485; Sioux City, \$628,405; Waterloo, \$781,401. The number of acres of land assessed in 1879 was 34,570,638. The value of these lands and the town lots, as equalized by the State Board of Equalization, was \$303,715,646. The equalized total value, including personalty and railroad property, was \$405,763,581. The assessment of property for taxes was the subject of considerable discussion in the State. The law requires the assessment to be made on the cash values, and many believed that all the inequality arose from a disregard of the law, and that the taxes of individuals would be less if it was strictly obeyed. The State Auditor in a letter on the subject expresses these views:

I am clearly of opinion that if we could have a just valuation of all the property of the State, and a consequent reduction in the rate of levies, the disposition to concealment of property would practically disappear, and the great majority of taxpayers have a less amount of taxes to pay than has hitherto been experienced.

It should be understood, and we have a right to expect, that upon a just assessment the *rate* of tax *must* be lessened, and I apprehend that in most cases the officers who determine our tax-levies would have regard to this fact, and by proper reductions do their whole duty to the people, whose representatives they are. We know that taxation is often heavy, but we also know that those taxes are heaviest which we individually and voluntarily vote upon ourselves, and we fully realize their necessity. Therefore, ceasing to inveigh against taxes and taxation which we know are an absolute necessity in our government, we should endeavor to have the law so administered that every species of property shall contribute its rightful and proportionate share. The law declares that property shall be assessed at its "true cash value." It is not always easy to ascertain with exact precision this value, but the assessor must exercise his best judgment, based upon all the information he is able to obtain. But it is quite as easy to determine what is cash value as to fix upon *third* or *half* value, or even a less proportion, as is frequently done.

The Board of Supervisors of Jefferson County, who are likewise a County Board of Equalization, prepared tables of the classification of property for the use of the local assessors, and addressed a circular to them, saying:

Inasmuch as the laws of the State require all property to be assessed at its true cash value, and the arbitrary departure from that standard or basis of taxation in different portions of the State, according to the whims of each particular locality, causes the grossest inequality and injustice in the distribution of the taxation, the Auditor of State is endeavoring to secure the assessment of all property at one common value—the true one. Upon you is placed the original and entire right and duty to adjust, level up, increase, diminish, and equalize the valuations of your townships;

and you are expected to see that all property pays its share, and its share only, of the burden of taxation.

Land should be classed in the class which fixes its true value; moneys and credits may be valued at par or less, as may be judged their cash market value. The Board has no power over this matter, and it is to be desired that you assume the responsibility of seeing that the township values are justly proportioned and brought to a cash value.

The Board further call your attention to the fact that no fears need be entertained that an increase of valuation of individual property will, in the end, perceptibly increase the aggregate taxation. It will not. The estimated amount of taxation to carry on the machinery of State government and to meet the appropriations of the Legislature has been made and distributed to the counties, and the levy will meet it.

Who shall regulate the rates of railroad freights was shown by the action of the State Board of Railroad Commissioners. In the latter months of 1878 three of the principal lines crossing the State advanced their rates on coal transportation variably from 5 to 25 per cent. Immediate complaints were addressed by the shippers to the Commissioners, who at once instituted an inquiry into them. Finding them supported by the new tariff tables, they addressed the companies, requiring them to forward copies of the schedules for examination. On their receipt they were scrutinized and compared, and it was found that an equal advance had been made by all three of the companies. The Commissioners then addressed a letter to the companies, setting forth that complaints were made, and protesting against the increase. The companies were asked to modify their increased tariff unless they could show good cause for refusal. Correspondence took place between the Board and companies which resulted in an agreed conference. This meeting was held on the 26th of March, and the presidents, general managers, or general superintendents, together with the general freight agents of the railway companies, were present. The entire subject was elaborately discussed, and while it appeared that the increased tariff was even lower than those of many other Western States, the Commissioners nevertheless insisted upon a modification. The officers present were not prepared to accede to the request without more thorough deliberation than they could give the matter at this conference, and asked for time. Meetings of these officers were subsequently held in Chicago, and the result was a modified tariff which went into effect on all three of the roads in April. A table of the modifications showed considerable reduction of the rates on merchandise, a reduction on grain, still more on stock, while the reduction on flour and meal, salt, lime and stucco, and coal was very marked and lower than the Granger-law rates. The rates on coal were the same as those of the Granger act; those on lumber were but slightly higher. There is also a new class created, with a very low rate, for which the Granger law made no provision. The readjustment of classification and the addition of the new class bring the reductions down to an average approximating to

the charges of the Granger law. For long hauls in the State less than Granger rates are charged; and as the through or inter-State rates have been from time to time reduced since the enactment of the law of 1874, it is evident that the new tariff is a close approximation in the average to the repealed Granger rates. It was estimated that the reduction which the Commissioners had succeeded in accomplishing would save to the producers and shippers of the State hundreds of thousands of dollars annually.

The railroads of the State are assessed by the Executive Council. Their aggregate assessed value for the year 1879 amounted to \$22,540,904. This is nearly a million dollars above the assessment of 1878. The amount of the tax to be paid by them is nearly \$150 per mile.

The capital stock of the railroads in Iowa amounts to \$90,612,451, being an increase of one million and three quarters since last year. The aggregate debt of all the railroads in the State is estimated at \$70,243,795, an increase of over three millions. Altogether fifteen roads have increased their indebtedness, while six have reduced. The stock and debt aggregate \$160,856,246, or \$36,612 per mile. The entire earnings of the roads for the year are :

Passengers, mail and express.....	\$5,335,177 86
Freight and miscellaneous.....	16,005,532 08
	<hr/>
Total, year ending June 30, 1879.	\$21,340,700 44
Total last year.....	20,714,496 07
	<hr/>
Increase of present year.....	\$626,218 37

The total operating expenses as returned are \$12,904,420, leaving \$8,436,288.52 to represent the net earnings, an increase over last year of \$287,742.78. The lines which charge the lowest average rates earn the most money, owing to the large business done. The railroads of the State paid last year in taxes \$584,169.79, or 11 per cent. of their net earnings after deducting operating expenses, interest, and taxes. Of the roads in the State 3,399 miles are owned by the companies operating them; 997 miles are leased by foreign corporations. There are 1,219 miles of steel rail in the State, or 27 $\frac{1}{4}$ per cent. of the whole trackage. There are 743 stations, or one to every six miles of road. The total number of locomotives in use is 1,036, of which 660 weigh 30 tons and upward each. There are 578 passenger cars, 275 express and baggage cars, 17,940 box freight cars, 2,512 stock cars, 7,693 platform cars, 561 cabooses, and 1,682 other cars—31,584 in all. Besides these a large number of fast freight-line cars are in use in the busier seasons, and at these times the roads are frequently unable to supply all the cars that are needed. The report shows the classification of tonnage, the total being 8,650,881, and the percentage as follows: Grain, 31 per cent.; flour, 4 per cent.; provisions, 3 per cent.; animals, 10 per cent.; other agricultural products, 1 per cent.; lumber and forest products, 15 per cent.; coal, 11 per cent.; salt, lime, and plaster, 1 per cent.; iron and steel, 3 per cent.; stone and brick, 3 per cent.;

manufactures, 2 per cent.; merchandise, etc., 16 per cent.

At the biennial session of the Legislature in 1877 a law was passed creating a Board of Railroad Commissioners. In their report the Commissioners thus describe the operation of the law :

Before this system was enacted suits at law were the sole remedy for unjust charges upon shippers. These suits, conducted at vast expense in the aggregate, were the source alike of exasperating delays and serious annoyance to both complainants and defendants. Often more than otherwise these suits were contested through all the grades of our courts, and when at last the end was reached, it was an end of each several case only, others of like character and involving like principles following upon its heels. It might be an interesting, as it certainly would be a startling exhibit, could the aggregate annual expenditure from both public treasury and private purse, on account of these suits, be spread before the public. To the Commissioners any and all persons aggrieved apply for redress, no matter how small the amount involved, confident of prompt hearing and without expense to themselves. The Commissioners are simply a court of arbitration, its expenses being borne by assessments upon the railroads. Not one suit at law, arising from alleged unjust or discriminatory charges, so far as the Commissioners have knowledge, has been prosecuted against any railroad company in Iowa since the Commissioner system was adopted. All grievances of this character have been referred to this Board, and by it investigated and adjudged, the result in every case, with perhaps a single exception, being accepted as final. Moreover, the Commissioners are not aware of an instance where any railroad company has persisted in charges that have been complained of after such rates have been held to be unjust or discriminatory by the Board. . . . It seems to vastly simplify the relations between the railroads and the public, and to cheapen the cost of adjusting whatever differences or grievances may from time to time be complained of.

In a case brought to recover damages for injury to a valuable cow while in transportation, caused by the collision of a car in switching it, the Burlington Railroad denied any negligence on their part, and showed that in the contract of shipment it was stipulated that they "were released from all liability above the value of common stock." They also pleaded that it was the universal custom of defendant, as well as all other roads, to receive fancy or blooded stock only on these conditions; that such practice was general and uniform, and well known to stock-shippers generally. They also pleaded that the plaintiff was guilty of negligence in shipping a cow in the condition of that one. The Judges in Johnson County held that the release in the shipping contract was void, as against public policy. As to the second ground of defense, the Court ruled that it was the duty of the company to receive and ship blooded as well as other stock, and that no custom could be shown authorizing the making of any contract which would exempt common carriers from liability for gross negligence. It was urged with much earnestness that the defendant was not a common carrier of blooded or fancy stock, though it was of common stock; but the Court held otherwise. The Judge instructed the jury that the measure of damages was the difference between the value of the

cow immediately before and immediately after the injury; and they were to take into consideration the enhanced value of such a cow with calf, as well as the blood of the cow:

In a case decided by the Supreme Court in June, raised notes were declared a forgery, and therefore the maker was released from liability. The State has for some years been overrun with agents and peddlers of every kind, who would get a note from a farmer for a small sum, raise it a hundred dollars, sell it to a bank, and the farmer would be obliged to pay it. The lower courts held that there were no defenses of fraud as between the innocent purchaser of a fraudulent note and the maker; and in several cases it was held that where the maker of a note left the blanks unfilled, so that it could be raised by writing in a larger amount, it was negligence of the maker, whereby the fraud was permitted to be made, and he could not take advantage of his own laches. Usually the decision of the lower courts was sufficient, and the maker paid the note rather than contest it further. In one county alone \$20,000 was paid over last year by the victims on the advice of their own lawyers. In the case above referred to, the Knoxville National Bank *vs.* John Clark, appellant, the appellant gave a note for ten dollars, leaving the blank uncanceled, and the name of the bank at which it was payable entirely blank, because the person to whom he gave it said an agent would be around to collect it when due. The payee then wrote in "one hundred dollars" before the "ten," and inserted "Knoxville National Bank, Knoxville, Iowa," in the blank, and sold it to that bank. Several other like notes were also sold. When due, the bank brought an action to recover, and under the general rule of negotiable paper the lower Court gave judgment for the bank. The Supreme Court, however, reversed the decision, holding that the case did not come within the rule that where the blanks are left unfilled in a note the presumption of law is that the payee has authority to fill the blanks, and if he exceeds the amount agreed upon with the maker, it is simply a breach of trust, and does not release the maker from liability. In the case at bar, the alteration of the amount was a forgery, and the law would not make a person civilly liable for the criminal acts of another, or perform a contract he did not make.

In a case for "civil damages," *Mary J. Loan vs. Peter Hiney*, the Supreme Court held that in an action at law for damages against the person who has caused the intoxication, the plaintiff may, if he chooses, join the property-owner by proper averments, and pray for a decree for a lien; and if a judgment for damages shall be rendered, the Court may transfer the action as to lien to the equity docket.

The criminal returns for the State, compiled by the Secretary of State, show that in 1878 there were 1,491 convictions, on which the aggregate imprisonment adjudged was 728 years

in the penitentiary and 17 in the county jail. Of the 1,491 persons sentenced, 1,304 could read and write, 37 could not, and the educational advancements of 142 were unknown; 690 of them were native-born citizens of the United States, 597 were foreign-born, and the nativity of the remainder was unknown; 440 were classed as "moral," 754 as "immoral," and 289 as "unknown." The total amount of fines unpaid was \$52,966.68; fines collected, \$24,839.97. The total cost of criminal prosecutions was \$325,933.48. The cost to the counties of the State for criminal prosecutions during the last four years has been as follows: in 1874, \$188,846.38; in 1875, \$180,890.03; in 1876, \$235,187.42; in 1877, \$318,322.70; in 1878, \$303,668.13; in 1879, \$401,659.39. The District Attorneys' fees in 1874 were \$18,368.19; in 1875, \$18,890.03; in 1876, \$22,071.87; in 1877, \$25,996.70; in 1878, \$23,260.35; in 1879, \$24,891.73. Total cost, \$1,762,052.92, being nearly \$1,000 per day for each working day. The Governor, in the discussion of this subject, thus alludes to grand juries: "The judiciary of the State are, almost without exception, of the opinion that it is desirable to do away with the grand jury system. This can only be done by amendment to the Constitution. The number of the grand jury is now fixed at fifteen, costing the counties thirty dollars per day during its session. Could not the work of this jury be as well done if it were reduced to five? This would save twenty dollars a day and the mileage of ten jurors to the respective counties during the time of session."

The lawlessness of tramps in the State during the last two years has been so great that the Governor determined to prevent it. As the time approached for their appearance, he issued orders to the military clearly defining their duties when called upon, and also the following to the sheriffs of counties:

The season of the year is approaching in which, judging from the experience of the past few years, it may be expected the State will be visited by numbers of lawless characters commonly called "tramps." It is believed that by prompt and efficient measures taken early, much of the evil arising from this cause may be averted. You are therefore required to use all due diligence in arresting tramps and vagrants, and bringing them before the proper authorities to be dealt with according to Chapter 69 of the acts of the Sixteenth General Assembly. If they visit your county in bands, as they have heretofore many of the counties of the State, and commit depredations either on the property of private citizens, or by taking possession of railway trains, you will use all the power vested in you by the laws of the State for the dispersion of such riotous gatherings, and the apprehension of the individuals concerned therein.

Chapter 6, Title XXV. of the Code, to which chapter your attention is specially invited, empowers you, whenever necessary, to summon a posse to aid you, and also to call out any military company in the county, to whom will be given instructions promptly to respond to any call made on them by the civil authorities.

The time for the election of members of Congress has been a subject of dispute in the

State. In 1878 it was ordered by the Governor to be held in October. (See "Annual Cyclopædia" for 1878, page 453.) It was claimed that this election was invalid, and another was held in November. At this second election the Republicans refused to run any candidates, relying upon the October election. The Democratic candidates were accordingly voted for without opposition, and at the commencement of the Congressional session they appeared and claimed their seats. The subject was referred to the Committee on Elections, which became divided and presented three reports. Eleven members of the Committee—Messrs. Manning of Mississippi, Armfield of North Carolina, Beltzhoover of Pennsylvania, Sawyer of Missouri, Phister of Kentucky, Keifer of Ohio, Camp of New York, Calkins of Indiana, Field of Massachusetts, Overton of Pennsylvania, and Weaver of Iowa—agreed that the law having been construed by the State authorities to require the holding of the Congressional election in October, that election should be considered legal, and the present incumbents—Messrs. Sapp and Carpenter, from the Eighth and Ninth Districts respectively—retained in their seats. Representative Springer of Illinois, Chairman of the Committee, in an elaborate and extended opinion, took the ground that, as the State laws of Iowa did not prescribe places for holding elections in November, and as Congress has prescribed that to be the legal month, and that elections held at any other time "shall be void," hence neither of the Iowa elections was held according to law, and should both be declared illegal. Representative Calkins of Indiana contended that the Iowa election held in November was the legal election, that the October election was contrary to the requirements of law, and that the contestants who were elected in November were entitled to their seats in the House. These several views were submitted to the House of Representatives, which permitted Messrs. Sapp and Carpenter to retain their seats.

The receipts and expenditures of the State for the biennial period, embracing general revenue, temporary school fund, swamp-land indemnity fund, agricultural college endowment, and miscellaneous in gross from these sources, amounted to \$2,260,360.61, which, with the balance of \$73,737.39 on hand September 30, 1877, makes a total of \$2,334,098. The disbursements for all purposes for the biennial period have been \$2,259,910.63, leaving balance in the hands of the State Treasurer of \$74,187.37. Of the balance on hand, \$2,226.65 belongs to the permanent school fund, \$217.85 to the coupon fund, and the remainder, \$71,742.87, is in interest-bearing bonds, being trust funds held by the State for the benefit of the Agricultural College. The amount of warrants outstanding on September 30, 1877, was \$267,776.31, and on September 30, 1879, only \$96,993.54, being a decrease of \$170,782.77. Since the close of the fiscal term, the amount

of outstanding warrants has increased until, on January 5, 1880, it reached \$130,361.42. Two years ago, at the same date, it was \$340,826.56; decrease in the two years, \$210,465.14. The State funds in the hands of the respective county treasurers of the State on September 30, 1879, amounted to \$116,817.09, more than sufficient, when paid in, to meet the outstanding warrants at that date.

The debt of the State is \$545,435.19. Of this amount, \$245,435.19 is due to the permanent school fund, part of it being made irredeemable by article seven, section three, of the Constitution. The remaining debt, \$300,000, was created under the acts of the special war session of the Eighth General Assembly in 1861, for purposes of war and defense. This debt matures July 1, 1881.

The number of persons between the ages of five and twenty-one in the State by the last returns is placed at 577,353; the number enrolled is 431,317; and the number attending school is 264,702, showing that a large percentage does not attend school. Of this percentage a small number should be deducted for attendance in private schools. The financial part of the school system is in some disorder. It appears that there are 4,279 treasurers of school districts in the State, who have in their hands the sum of \$2,672,304.49. These treasurers received as compensation during the past year the sum of \$48,834, and are delinquent to the school fund for the year 1879 in the sum of \$45,652.49; and the startling fact is shown that the deficiencies and defalcations of this class of officers from 1873 to 1879, inclusive, aggregate the enormous sum of \$491,518.51. Of this large amount of money in the hands of school treasurers, \$1,770,213 belongs to the teachers' fund.

The receipts of the State University from all sources for general and specific purposes, up to June 15, 1879, have been \$125,126.36, of which there has been expended \$121,511.58, leaving balance in the hands of the treasurer of the University of \$3,614.78. The University is in a flourishing condition. The collegiate and professional departments have already increased to a degree that about compensates for the loss of students occasioned by abolishing the preparatory classes.

The number of pupils in the Normal School is large and constantly increasing. The receipts of the institution were \$14,626, and the expenditures \$14,453.

The Agricultural College of the State is quite flourishing, and rapidly outgrowing its accommodations. The departments of botany and zoology are steadily advancing. A creamery is under construction to supply the college boarding-hall with butter. The course in domestic economy has been considerably enlarged. This College is said to be the only institution in the West which endeavors practically to teach the household arts. A small kitchen was opened two years ago, wherein

the girls of the junior class were taught plain cooking. Its success has demonstrated so clearly the practicability of making this branch of domestic economy a part of the college curriculum, that the trustees have been encouraged to take another step forward in developing the department. During 1879 the course was to be extended from one term to the entire year. The girls of the sophomore class were to be taught during the first term to wash, iron, and sew, including the cutting and fitting of dresses, etc., and the juniors were to go into the kitchen to cook the second term. This improvement was received with much satisfaction. The receipts of the College for the biennial period, including the sales of lands, the proceeds of which have been paid into the State Treasury, have been \$193,533.81. The disbursements have been \$127,768.42, and the balance on hand of all funds is \$5,765.39. The Seventeenth General Assembly appropriated for laboratory and sewer \$3,972.25, which has been drawn and expended. The United States donated to the State 204,206 acres of public domain for its foundation. Of these lands, 30,962 acres have been sold, and the proceeds thereof, amounting to \$71,742.87, have been paid into the State Treasury. Of the remainder, 147,735 acres are under lease, and 25,580 acres are unleased. The College has in addition 15,013 acres of land, which were purchased in 1868 with surplus interest funds at a cost of \$15,000, of which 12,213 acres are leased, and 1,200 are unleased, the remainder having been sold. The purchase of this land has been a most advantageous one, the College having already received over \$22,000 in interest, and the remaining lands are constantly increasing in value.

The following are the general statistics of the schools:

DETAILS.	1878.	1879.
Township districts.....	1,119	1,140
Independent districts.....	3,117	3,139
Sub-districts.....	7,266	7,543
Ungraded schools.....	10,215	10,457
Rooms in graded schools.....	2,008	2,083
Average duration in months.....	7-81	7-35
Number of teachers employed, male	7,561	7,573
Number of teachers employed, female	13,023	13,579
Average monthly compensation, males.....	\$33 98	\$31 71
Average monthly compensation, females.....	\$27 84	\$26 40
Pupils between the ages of 5 and 21 years.....	575,474	577,353
Enrollment in public schools.....	428,362	431,317
Total average attendance.....	256,913	264,702
Frame school-houses.....	9,596	9,753
Brick.....	650	654
Stone.....	244	250
Log.....	76	73
Value.....	\$9,161,101	\$9,066,145
Value of apparatus.....	\$173,341	\$170,463
Number of volumes in library.....	20,587	22,561

The grand total of the school fund reaches the sum of \$3,484,411.18, all of which, save the sum of \$8,561.65, is interest-bearing. The amount held in the counties, subject to loan, is \$3,221,402.93, having been increased within

the two years. The interest upon this sum at 8 per cent. is semi-annually apportioned to all the school districts in the State, in proportion to the number of persons therein between the ages of five and twenty-one years, and during the fiscal term of 1877-'79 amounted to \$560,231.88, inclusive of interest on State and Eads's loans, being an annual average of fifty cents to each individual.

The Institution of the Deaf and Dumb expended \$50,516 during the biennial period. Its receipts were \$61,568. The College for the Blind received \$52,708 and expended \$47,428. The receipts of the Institution for Feeble-minded Children were \$29,249, and the expenses \$28,708. The receipts of the Mt. Pleasant Hospital for the Insane were \$224,152, and the expenses \$211,248; those of the institution at Independence were \$139,096, and the expenses \$129,771. The receipts of the State Prison from all sources were \$73,448, and the expenditures \$62,456. The surplus from the convicts' earnings paid into the State Treasury amounts to \$17,144. The amount allowed by law for the support of the convicts is seven dollars per month. During the time of the present warden's incumbency, he has by rigid economy supported the convicts, exclusive of salaries of officers and guards, at a cost of about \$6.40 per month; quite a contrast with the monthly expenditure of his predecessor, which was, as is shown by the report of the Investigating Committee of the Seventeenth General Assembly, during his first term, exclusive of salaries of officers and guards, \$11.35½, during his second term \$17.35½, and during his third term \$15.26, being an average, during his six years' term of office, of over \$14 per convict per month. The convicts are well fed and clothed; the discipline and sanitary conditions of the prison are good.

From the following table it will be seen that there are nine boards of trustees in charge of the State institutions, and a board of regents in charge of the University, composed in all of fifty-one persons, and that their per diem and mileage for the biennial period has been as follows:

Agricultural College.....	\$1,859 60
Asylum for Feeble-Minded.....	1,056 40
Hospital for Insane at Independence.....	1,369 50
Hospital for Insane at Mt. Pleasant.....	1,508 05
Soldiers' Orphans' Home.....	318 60
Reform School.....	1,650 40
Normal School.....	759 70
State University.....	2,196 70
Institution of the Deaf and Dumb.....	1,386 60
College for the Blind.....	1,468 20
Total.....	\$19,448 65

How best to manage educational, charitable, and penal institutions has attracted the attention and engaged the thoughts of many philanthropists. The result has been, in most cases, to create additional supervisory boards, such as "boards of charities," "commissioners," etc., all of which are expensive, and impose additional burdens on the tax-payers. On this subject the Governor of Iowa says: "On ex-

amination of the workings of the system, I am clear in the opinion that, instead of increasing supervising boards, the best thing to do, in the interest of good government and economy, would be to reduce the number of boards."

The following shows the debt of the counties, cities, and school districts on January 1, 1879, so far as returns have been made:

90 counties.....	\$2,376,536 03
15 cities.....	2,598,830 43
353 school districts.....	1,197,158 00
Total.....	\$6,167,374 45

—equal to about 1½ per cent. of the assessed value of the State. The above is \$1,000,000 less than in 1869, and \$2,500,000 less than the same debts amounted to in 1873.

The amount of risks written during the last insurance year in Iowa, ending February 1st, was as follows:

Risks written by Iowa companies.....	\$22,664,856 00
Risks written by non-State companies.....	89,174,353 00
Total fire insurance written in 1873.....	\$111,839,738 00
The total premium receipts for the year, by seven Iowa companies, were.....	\$549,983 86
Of the non-State companies.....	1,066,571 62
Amount paid for insurance.....	\$1,616,509 93

The losses for the year foot up the sum of \$590,875, divided as follows:

State companies.....	\$137,683 33
Other companies.....	453,191 73
Total.....	\$590,875 11

The figures above given have no reference to the county and township mutual fire associations in the State, of which there are quite a large number.

Coal is abundant in the State. It lies on three measures or strata, the upper, middle, and lower, with a dip to the southwest. The coal-field may be outlined on the map by beginning at the southwest corner of Van Buren County, where Des Moines River leaves the county, going north near the county line to the northeast corner of Jefferson County; thence north and diagonally across Keokuk County, following a course parallel to the course of the Des Moines River, cutting off the southwest corner of Poweshiek and northeast corner of Jasper; thence north through the west half of Marshall to Eldora, in Hardin; thence westward across the north part of Hamilton and Webster above Fort Dodge; thence a little south direct to the Missouri River. The south line is the State line from the Des Moines River. This will give the coal-fields of Iowa, embracing over three thousand square miles, or an area larger than the whole State of Massachusetts. This embraces the lower coal-formation. The middle and upper coal-measures are thinner and not so profitable. At this point the lower coal-measures are reached at a depth of 125 to 135 feet, where the measure is from four to five feet thick. As you go southward it is deeper from the surface, the dip being in that direction. This

measure crops out at the northern line of the field. It thickens as you go southward. The entire thickness of the carboniferous strata in Iowa is estimated at 1,150 feet. It is estimated that a shaft 1,000 feet deep will pass through all the coal-measures in Iowa at any point. This would be in the south and west extremes of the State. Practically the supply of coal is inexhaustible. Its quality is good, and improves as you follow the dip southward.

The Democratic State Convention assembled at Council Bluffs on May 21st. General A. C. Dodge was chosen President. The following nominations were made: For Governor, H. H. Trimble; for Lieutenant-Governor, J. O. Yeoman; for Supreme Judge, Ruben E. Noble; for Superintendent of Schools, Irwin Baker.

The following resolutions were adopted:

Resolved, That the Democratic party now, as in the past, insists that our liberties depend upon the strict construction and observance of the Constitution of the United States and all its amendments.

Resolved, That the State and the General Governments should be sternly restrained to their respective spheres, and to the exercise only of the powers granted and reserved by the Constitution.

Resolved, That the policy of the Republican party, by which it inflates the importance of the States when necessary to cover the theft of the Presidency, and in turn magnifies the functions of the General Government to cover the coercion of the States into endorsement of the partisan will of the fraudulent Executive, is a policy full of evil and fruitful of danger.

Resolved, That such policy is intended to array section against section, the States against the General Government, and it against the States in turn, for the purpose of destroying the freedom of both, and teaching the people to look to a stronger Government as shelter from the anarchy its advocates have planned.

Resolved, That the evidence of these nefarious purposes is furnished by the present attitude of the Republican party, which is arrayed against a free ballot, on which depend all the liberties secured to us by the Constitution.

Resolved, That we view with alarm the determination of the Republican party, through its fraudulent Executive, to deprive this Republic of its army, so necessary to the defense of its frontier and its protection from foreign and domestic enemies, by vetoing appropriations for the pay and support of our soldiers, unless they can be used to force voters to record the mere will of the Executive.

Resolved, That we hail the Democratic Senators and Representatives in Congress as worthy the heroic lineage of American citizens in standing firmly for the American idea in government, as against the despotic theory from which our revolutionary fathers revolted; and we ask all lovers of liberty to join us and them in protest against the change in the form of our government proposed by the Republican party, which will substitute the will of one man for that of the majority of all the people.

Resolved, That we are in favor of the substitution of United States Treasury notes for national-bank notes, and of the abolition of national banks as banks of issue; that the Government of the United States issue the money for the people; and, further, that we favor a reduction of the bonded debt of the United States as fast as practicable, and the application of the idle money in the Treasury to that purpose.

Resolved, That we favor the free and unlimited coinage of the silver dollar of 412½ grains, and providing certificates for silver bullion which may be deposited in the United States Treasury, the same to be legal tenders for all purposes.

Resolved, That we favor a tariff for revenue only.

Resolved, That we are in favor of economy in public expenditures, including the reduction of salaries, local and general, whenever they may be deemed excessive, and also a reduction in the number of the officials.

Resolved, That the Democratic party of Iowa is desirous of promoting temperance, and, being opposed to free whiskey, it is in favor of a judicious license law.

Resolved, That we favor the holding of all public servants to a strict accountability, and their prompt and severe punishment for all thefts of public moneys and maladministration of public office.

The Nationals met in Convention at Des Moines on May 28th. John Porter was chosen President. The following nominations were made: For Governor, Daniel Campbell; for Lieutenant-Governor, H. H. Moore; for Supreme Judge, M. H. Jones; for Superintendent of Schools, J. A. Nash. The following preamble and resolutions were adopted:

Whereas, The sovereign and supreme power of the American Union is vested in the free will of the citizens thereof, who have an equal and unquestionable right to express that will as to them may seem best adapted to secure the peace, perpetuate the liberty, and promote the prosperity of each individual, as well as to enhance and protect the common welfare of our country; and,

Whereas, This power has been delegated to unworthy servants, who have diverted it from its original purpose, whereby grievous wrongs have been perpetrated on the masses of the people, subjecting them to gross injustice and widespread poverty, untold privations, and business paralyzation; and,

Whereas, These grievances have been greatly augmented by limiting the legal-tender quality of the greenbacks; by loaning the credit of the Government to national-bank corporations; by changing Government bonds into coin bonds, and making the same exclusively payable in gold; by the conversion of a non-interest-bearing circulating medium into an interest-bearing Government debt; by defrauding labor of employment; by the ruinous shrinkage in the value of property; by the depression of business; by the willful restrictions placed upon the remonetization of the silver dollar; by the exemption of capital from its just share of the burden of taxation; by the contraction of the greenback currency; by the forced resumption of specie payments; by the increase in the purchasing power of money, and its attendant hardships on the debtor class; by declaring poverty a crime, and providing punishments therefor; by the criminal waste of the public domain, through enormous grants of land to railroad corporations; by an oppressive taxation; by high rates of interest for the use of money; by exorbitant salaries and fees to public officers; by official corruption in the administration of public affairs; and,

Whereas, A moneyed despotism has grown up in our land out of this state of affairs, which controls the law-making power of our country, dictates judicial decisions, wields an undue influence over the chief executive of the nation in the consideration of laws passed for the benefit of the people, thus enabling the money power to carry on its schemes of public plunder, under and by which colossal fortunes have been gathered in the hands of the ambitious and unscrupulous men whose interests are at war with the interests of the people, hostile to popular government, and deaf to the demands of honest toil:

Therefore, We, the representatives of the Union Greenback-Labor party of Iowa, adopt the following as our platform of principles:

1. The General Government alone to issue money; the amount in circulation to be fixed by a constitutional amendment upon a per capita basis; calling in of all United States bonds, and the payment of them in full legal-tender money.

2. That the national banks, as banks of issue, must be abolished by law, and that legal-tender greenback

money of the Government of the United States shall be substituted for their circulation.

3. That we demand the unlimited coinage of the silver dollar of the present standard weight and fineness.

4. That the American people owes a debt of gratitude to the Union soldiers that can never be fully paid, and in recognition of their patriotic services we endorse the arrearages of pensions, and favor the passage of a bill providing for the equalization of bounties similar to the one vetoed by ex-President Grant.

5. That we view with grave apprehension the continued oppression of the people by corporate powers, and while we execrate the inhuman treatment of Union soldiers in the prison-pens of the South during the late rebellion, we condemn the violence of partisan spirit in the legislative halls of Congress, which seeks to revive the dead issues of the past, while conspiring against and deliberately refusing to provide measures of relief adequate to the living necessities of the present.

6. That it is the right and duty of all qualified electors of any State in the Union to vote according to their conscientious convictions, and to have that vote honestly and fairly counted; and that any attempt to interfere with that right either by threats or bands of armed men, or the use of troops at the polls, or by fraud in conducting the election, or bribery in making out the returns, or by threats to dismiss from service, or any other means by which that right is abridged, is a crime that should be severely punished.

7. That the officeholders of our country are the servants and not the masters of the people, and that these officers should be removed and punished to the full extent of law whenever they betray the public trust confided to them; and we demand that all official fees and salaries, commencing with the President, should be reduced from 25 to 50 per cent.; and we further demand the strictest economy in the administration of our courts of justice, and in all other Federal and State offices.

8. That we highly commend the moral reform of men and the elevation of families by the agency of the temperance cause, and demand the use of all just and legal means for the suppression of the evils of intemperance.

9. That all real estate be assessed to the owner, and the tax thereon be paid by him; provided, that in case there is a mortgage or vendor's lien upon the land, and he pays the whole tax, that he may deduct as a payment on said lien the *pro rata* share of the tax.

10. That the revenue law of the State shall be amended so that the penalty or interest on the sale of delinquent taxes should not exceed the sum of ten per cent. per annum, and that the time of redemption shall be extended to a term of five years.

11. We favor the repeal of the present Railroad Commissioners' law, and the adoption of a suitable legislative action to reduce and equalize freight.

12. That the prison-convict labor shall never come in competition with free labor, by the contract system, under any name.

Resolved, That we approve the bold and independent stand taken by our Greenback Representatives in Congress; and we especially endorse the conduct of Messrs. Weaver and Gillette in their contest with the combined opposition of both old parties.

The Republican State Convention assembled at Des Moines on June 11th. Ex-United States Senator James Harlan was chosen President. The following nominations were made: For Governor, John H. Gear, renominated; for Lieutenant-Governor, F. T. Campbell, renominated; for Supreme Judge, J. M. Beck; for Superintendent of Schools, C. W. von Coelln. The following resolutions were adopted:

The Republican party of Iowa, in convention assembled, declares:

1. The United States of America is a nation, not a league. This is the doctrine of the Constitution, confirmed by the result of the war of the rebellion. The

Democratic party denies this, and opposes to it the doctrine of States' rights, which includes the power of a State to dissolve its connection with the Union. Therefore it is dangerous to the national life to intrust it to the Democratic party.

2. Upon the foregoing doctrine of nationality depends the power of the Republic to protect its citizens in all their rights, both at home and abroad; and from its denial by the Democratic party have resulted the barbarous outrages perpetrated on citizens in all of the disturbed section of the Southern States; and redress can be had alone through the administration of public affairs in the several departments of the Government by the Republican party.

3. We denounce the attempt of the Democratic party in Congress to render the Federal elections insecure by the repeal of the election laws of the United States, as dangerous to a free and pure expression of the will of the people through the ballot-box, and as tending to subject said elections to the domination of the bulldozing elements of the Southern States, and of the repeaters and promoters of fraud in the city of New York and elsewhere; and the resistance made to the accomplishment of this result by the Republican Senators and Representatives in Congress, and President Hayes for his veto messages, are accorded our profound commendations.

4. That the Democratic threat of "not a dollar for the army" unless the appropriations can be limited for partisan ends, is but the echo of the cry heard during the rebellion from the same quarter of "not another man nor another dollar" for the purposes of the war. The end will be the same. The Government of the Union could not be beaten to death then, and it can not be starved to death now.

5. That we approve the financial policy of the Republican party, and refer with pride to its results. Southern Democratic rebellion, for the perpetuation of slavery and the enforcement of State rights, forced an enormous interest-bearing debt on the people, which, in August, 1865, reached its highest point, and then amounted to \$2,381,530,294.96, requiring an annual interest payment of \$150,977,897.87. On the first of August next, when the Republican refunding operations will be completed, this Democratic debt will be reduced to \$1,797,643,900, with an annual interest charge of but \$33,773,778.50; showing a reduction in the principal of \$583,886,594.96, and of annual interest charge of \$67,203,919.37; and we declare that this debt shall be honestly paid in honest money; and to this end we are in favor of keeping our coin circulation at its largest practicable volume, and of maintaining our paper currency where the Republican policy has placed it, at par with coin; and to the further end that the dollar earned by labor shall be worth as much as the dollar earned by capital.

6. Concerning further financial legislation we say, "Let us have peace," undisturbed by Congressional tinkering, that our business interests may revive, investments of more idle capital be encouraged, commercial interests fostered, and the general welfare promoted.

7. The profit arising from the coinage of gold and silver should inure to the benefit of the Government, and not to the advantage of the private owners of the bullion, as this tends to diminish the burdens of the tax-payers; and no part of the taxpaying currency of the country should be converted into the non-taxpaying list.

8. That we favor a wisely adjusted tariff for revenue.

9. We demand a strict economy in the imposition of public taxes and the expenditure of public moneys, and such a just reduction and equalization of the salaries and fees of public officers as shall place them on an equality with like positions in private employment.

10. That we renew our expressions of profound gratitude to the soldiers and sailors of the Union, and denounce the removal of employees of this class by the Democrats in Congress and the appointment in their stead of members of the Confederate army.

11. That we reaffirm the position of the Republican party heretofore expressed upon the subject of temperance and prohibition, and we hail with pleasure the beneficent work of reform clubs and other organizations in promoting personal temperance; and in order that the entire question of prohibition may be settled in a non-partisan manner, we favor the submission to the people, at a special election, of a constitutional amendment prohibiting the manufacture and sale of all intoxicating liquors as a beverage within the State.

The Prohibitionist Convention assembled at Cedar Rapids on July 16th. J. Pinkham was chosen President. The following resolutions were adopted:

Resolved—1. We recognize the traffic in intoxicating liquors as the great moral, financial, social, and political evil of the present age; that it is one of the worst relics of barbarianism; that it has always been the moving cause of crime, and is, therefore, subversive of our republican form of government, and should be overthrown.

2. We believe that the prohibition of the traffic in intoxicating liquors is the only sound legislative theory upon which this vexed question can be solved and the nation saved from bankruptcy and demoralization. Therefore we insist upon the maintenance and enforcement of our prohibitory liquor law, and upon such amendments by the next Legislature of Iowa as will place ale, wine, and beer under the same condemnation as other intoxicating liquors.

3. We believe that in the security of home rests the security of the state; that woman is by her very nature the acknowledged guardian of this sacred shrine, and that intemperance is its greatest enemy; therefore we claim that the daughters of this commonwealth, as well as her sons, be allowed to say, by their vote, what laws should be made for the suppression of this evil and what persons shall execute the same.

4. That the present movement inaugurated by the temperance organizations of the State to so amend the Constitution of the State as to prohibit the manufacture and sale of alcoholic liquors except for mechanical and medicinal purposes, including malt and wine liquors, meets our active support.

5. We are in favor of the election of honest pronounced Prohibitionists to enact and to administer the laws, and that we, at this convention, put in nomination a State Prohibitory ticket, and that we recommend the election of Prohibitionists only for the Legislature.

The following was offered as a substitute for the fifth resolution and adopted—yeas 41, nays 32:

Resolved, That we, as the Prohibitionists of the State of Iowa, in view of the great questions of public interest affecting the perpetuity of our General Government which are now absorbing the thought and action of all our people, deem it inexpedient and unwise to nominate a State Prohibitory ticket at the present time.

The following additional resolutions were adopted, and the Convention adjourned:

Resolved, That we are in favor of the amendment of the Constitution of the United States so as to forbid the manufacture, importation, and sale of all alcoholic liquors except for medical and mechanical purposes.

Resolved, That we believe that the cause of temperance can be best subserved at the present time in our State by devoting all our energies and labors to the election of Prohibitionists to the next session of the Legislature.

Immediately after the adjournment, another convention was held by nearly forty of the delegates, and the following ticket nominated:

For Governor, Professor G. T. Carpenter; for Lieutenant-Governor, Frank T. Campbell; for Supreme Judge, J. M. Beck; for Superintendent of Public Instruction, J. A. Nash. After which resolutions were adopted and a State Central Committee appointed. Professor Carpenter, when notified, declined the nomination.

The activity and energy of the temperance advocates became so great, that representatives of the interests of the dealers in liquors assembled in convention at Des Moines on July 30th. The Convention was called to order by M. McTighe, who in some remarks referred to the reasons which had brought them together. It was to inaugurate a contest of protection against fanaticism, and to notify all prohibitionists that the liquor-sellers had determined to stand up for their rights. They were assembled together not for the purpose of making or influencing nominations for office, and for no party purpose. J. F. Daugherty was elected President, and the following resolutions were adopted:

Whereas, We have made the sad experience as a class of business men, that the prohibitory liquor law of this State does not in any degree promote the cause of temperance or morality for which it is intended, and consequently does not afford the people of this State the desired protection, but on the other hand it is used as a lever to throttle us and to constantly hurl against us an army of dead-beats, blackmailers, and spies, who have in no wise the welfare of the people of the great State of Iowa in view, but who seek to destroy what it has taken years to build up, only to satisfy either their malice, personal greed, or ambition; and

Whereas, It is furthermore a universally recognized principle, that wherever there is a demand for any commodity in life, there will always be a supply of the same, and as this supply should always be controlled and regulated in the interest and true wants of the people; therefore, be it

Resolved, By the saloon-keepers, brewers, and liquor-dealers of the State of Iowa, in convention assembled in Des Moines on this, the 30th day of July, 1879, that we claim, as a class of business men, the same rights and protection under the Constitution and fundamental laws of this country as any other class of business men enjoy.

Resolved, That it is our firm belief that a well-regulated and judicious license-law in this State, giving the necessary protection to the dealer and manufacturer, and at the same time placing them under all reasonable restrictions, would greatly tend to decrease the evils of intemperance, and be in fact a better temperance law than we have at the present day in our statute-books.

Resolved, That in order to bring about the repeal of the present vicious liquor law at the earliest moment, and enact in its stead a just and equitable license law, we hereby firmly and unqualifiedly declare that we will not vote for nor support any candidate for the next Legislature, no matter what his political creed may be, who does not unmistakably pledge himself to use the utmost endeavors, when elected, to attain such result.

Resolved, That while the members of this convention belong to all political parties, and are therefore strictly non-partisan, we are not unmindful of who is our friend and who our foe; and we therefore pledge ourselves not to support any candidate for any office within the gift of the people of the State who is an enemy to the interest which we represent, or who will not pledge himself in favor of a judicious license law.

Resolved, That we recommend to the friends of personal liberty and license the organization of clubs in every township where practicable, for the purpose of

securing a greater unity of action, and to enable the people to become acquainted with the losses the farmer and business man sustains through the pernicious operation of the existing prohibitory liquor law of this State.

The result of the election, which was held on the second Tuesday in October, was as follows:

FOR GOVERNOR.	
John H. Gear, Republican.....	157,571
H. H. Trimble, Democrat.....	85,056
Daniel Campbell, National.....	45,429
FOR LIEUTENANT-GOVERNOR.	
F. T. Campbell, Republican.....	161,708
J. A. O. Yeomans, Democrat.....	86,400
M. H. Moore, National.....	45,750
FOR JUDGE OF SUPREME COURT.	
J. M. Beck, Republican.....	160,604
Reuben Noble, Democrat.....	85,788
M. H. Jones, National.....	45,719
FOR SUPERINTENDENT OF SCHOOLS.	
C. W. von Coelln, Republican.....	159,304
Edwin Baker, Democrat.....	84,945
G. A. Nash, National.....	47,848

The members of the Legislature were divided as follows:

PARTIES.	Senate.		House.
	41	51	14
Republican.....	7	14	4
Democratic.....	2	4	1
National.....
Independent.....
Total.....	50	100	

ITALY, a kingdom of southern Europe. King in 1879, Humbert I., born March 14, 1844. He succeeded his father, Victor Emanuel II., January 9, 1878. He married, April 22, 1868, Margaretha, daughter of Prince Ferdinand of Savoy, Duke of Genoa. Their apparent, Victor Emanuel, Prince of Naples, born November 11, 1869.

The following table gives the area of the larger territorial divisions (*compartimenti*), with the population, male and female, of each, according to the census of 1871, and the total population at the close of 1878, according to an official calculation:

TERRITORIAL DIVISIONS.	Square miles.	INHABITANTS, 1871.		Inhabitants at the close of 1878.
		Male.	Female.	
Piedmont.....	11,806	1,450,357	1,449,207	8,077,200
Liguria.....	2,056	419,919	428,868	856,885
Lombardy.....	9,085	1,755,545	1,705,279	8,658,941
Veneta.....	9,060	1,884,864	1,808,443	2,512,022
Emilia.....	7,921	1,078,686	1,085,142	2,198,445

Calabria.....	6,663	593,829	612,478	1,261,810
Sicily.....	11,291	1,284,531	1,289,568	2,798,672
Sardinia.....	3,399	327,078	309,587	667,427
Total.....	114,415	13,472,262	13,328,892	28,209,620

The movement of population was as follows in 1878:

Marriages.....	199,885
Births.. { inclusive of still-births. }	1,012,475
Deaths.....	812,550
Still-births.....	81,805
Excess of births.....	193,925

The number of emigrants in 1878 was 96,-268. Of these, the largest number, 33,552, went to France, 18,391 to Austria-Hungary, 10,782 to Switzerland, 10,105 to Brazil, Venezuela, Mexico, and Central America, 1,993 to the United States, and the remainder to other countries.

The receipts in the budget for 1878 were as follows (in lire; 1 lira = 19.3 cents):

1. Income from Government property.....	85,650,410
2. Direct taxes:	
Ground-tax.....	123,820,000
Building-tax.....	61,825,000
Other taxes.....	173,583,581
3. Indirect taxes:	359,725,581
Registration.....	53,000,000
Stamp-tax.....	39,500,000
Customs.....	116,500,000
Grist-tax.....	81,000,000
Tobacco and salt monopoly.....	198,500,000
Others.....	140,052,057
4. Miscellaneous receipts:	628,582,057
Lottery.....	70,000,000
Post, railroads, and telegraphs.....	71,690,550
Returns of payments.....	18,115,218
Miscellaneous.....	85,624,000
	195,429,763

Total ordinary revenue..... 1,218,420,816

The extraordinary receipts amounted to 109,-968,310 lire, and special revenue from various sources to 112,439,443 lire, making the total revenue 1,435,828,569 lire.

The expenditures were as follows:

DEPARTMENTS.	Ordinary.	Extraordinary.
Ministry of the Treasury.....	774,227,771	19,289,962
of Finance.....	117,435,272	1,646,583
of Justice and Worship.....	27,653,896	195,000
of Foreign Affairs.....	6,092,261	151,000

The commercial navy in 1878 comprised 8,590 vessels of 1,029,157 tons, of which 152 of 63,020 tons were steamers.

The movement of the special foreign trade from 1871 to 1878 was as follows (in lire) :

YEARS.	OFFICIAL VALUE.		COMMERCIAL VALUE.	
	Imports.	Exports.	Imports.	Exports.
1871.....	880,100,000	756,600,000	968,700,000	1,085,500,000
1872.....	1,189,200,000	1,108,500,000	1,186,600,000	1,167,200,000
1873.....	1,184,500,000	1,083,500,000	1,286,700,000	1,188,200,000
1874.....	1,281,700,000	1,038,400,000	1,805,000,000	985,500,000
1875.....	1,280,000,000	1,158,800,000	1,215,400,000	1,084,000,000
1876.....	1,864,800,000	1,228,000,000	1,827,200,000	1,216,800,000
1877.....	1,280,700,000	1,044,900,000	1,186,800,000	967,400,000
1878.....	1,070,800,000	1,045,800,000

The commercial value of the imports from and exports to the different countries in 1877 and 1878 was as follows :

COUNTRIES.	Imports, 1877.	Imports, 1878.	Exports, 1877.	Exports, 1878.
France.....	832,100,000	272,900,000	418,900,000	489,300,000
England.....	296,500,000	237,100,000	125,700,000	96,900,000
Austria-Hungary.....	237,500,000	196,600,000	135,000,000	173,400,000
Switzerland.....	28,000,000	33,500,000	181,500,000	99,000,000
Russia.....	28,400,000	53,500,000	20,000,000	17,700,000
United States.....	89,900,000	54,200,000	27,200,000	36,500,000
Germany.....	25,200,000	39,500,000	16,600,000	20,800,000
South America.....	50,800,000	23,000,000	48,500,000	27,800,000
Turkey.....	55,600,000	40,400,000	5,600,000	14,500,000
Other countries.....	60,300,000	115,100,000	89,600,000	69,600,000
Total.....	1,154,300,000	1,070,800,000	966,500,000	1,045,800,000

The value of the different articles of import and export in 1878 was as follows, the transit trade being included in both the imports and exports :

ARTICLES.	Imports.	Exports.
Grain.....	123,200,000	60,800,000
Seeds and fruit.....	17,200,000	58,800,000
Colonial goods.....	92,100,000	6,000,000
Tobacco.....	18,900,000
Wine, beer, ale, etc.....	7,500,000	13,200,000
Animals and food for animals.....	58,500,000	122,900,000
1. Articles of food.....	317,700,000	261,700,000
Fuel.....	42,500,000	8,500,000
Ores, etc.....	8,500,000	25,200,000
Metals, raw.....	44,000,000	1,300,000
Hair, hides, and leather.....	41,200,000	19,500,000
Spinning materials.....	143,300,000	816,200,000
Wood and carving materials.....	29,700,000	13,000,000
2. Raw materials.....	302,500,000	378,700,000
Glass and pottery ware.....	12,200,000	5,400,000
Yarns.....	47,400,000	6,300,000
Woven goods and articles of clothing.....	163,600,000	30,400,000
Manufactures of different kinds.....	84,000,000	111,100,000
Paper, books, etc.....	2,200,000	1,300,000
3. Manufactured goods.....	309,400,000	160,500,000
Manure.....	700,000	500,000
Drugs and chemical products.....	36,500,000	86,700,000
Resin, fats, and oils.....	61,500,000	92,500,000
Goods not specified.....	28,500,000	18,500,000
4. Miscellaneous goods.....	122,500,000	198,200,000
5. Precious metals.....	11,700,000	46,700,000
Total.....	1,070,800,000	1,045,800,000

At the close of 1877 there were 8,046 kilometres of railroad in operation, 486 in process of building, and 654 projected. The length of telegraph lines in 1877 was 24,088 kilometres;

of wires, 80,596; of submarine cables, 178. The number of stations was 1,977; of dispatches, 5,609,298, of which 5,057,789 were private, 235,148 official, 105,837 service, and 210,524 transit dispatches.

The number of post-offices in 1877 was 3,126; of letters and postal cards, 170,848,672; of packages of printed matter and samples, 61,713,852; and of newspapers, 83,314,302.

The principal question before the country in 1879 was the abolition of the grist-tax, and in connection with this the general question of finance. On March 10th the report of the Commission on the provisional estimates for 1879 was submitted to the deputies. These estimates were originally prepared by the former Minister of Finance, Signor Seismit Doda, whose anticipation of a surplus of 60,000,000 lire, and his intention of repealing the grist-tax, were denounced in unmeasured terms during the struggle for the overthrow of the Cairoli Cabinet. The new Minister of Finance, Signor Magliani, though calculating that the revenue would yield 11,000,000 less and the expenditure amount to 7,000,000 more than Signor Seismit Doda had estimated, nevertheless expressed confidence in obtaining a surplus of not less than 42,000,000; and the majority of the Commission endorsed his anticipations to the extent of 40,000,000. The minority of the Commission, however, who were more directly antagonistic to Signor Seismit Doda, considered the income announced by Signor Magliani as over-estimated to the extent of 18,000,000, and therefore predicted that the surplus would not exceed 22,000,000. The debate on the budget of revenue closed on March 28th. The Government accepted an order of the day proposed

by Signor Cairoli, upholding the abolition of the grist-tax and the adoption of the reforms forming the programme of the Left. Signor Depretis appealed to his political friends to aid in a reconstruction of the Left, and the Chamber, having by 255 votes against 99 rejected a motion made by Signor Minghetti, approved by 241 votes against 88 the order of the day moved by Signor Cairoli. This vote was generally considered as the sign of an understanding between the different groups of the Left and the Ministry. On May 4th the Minister of Finance laid a financial statement before the Chamber. Speaking of 1878, he stated that the receipts for that year had been 9,500,000 less than the amount estimated, and the expenditures 5,000,000 less. Taking these differences into account, together with the increased expenditure sanctioned by the Chambers after the estimates were voted, the expected surplus of 11,000,000 became reduced to something less than 500,000. The surplus for 1879, which in the provisional budget was estimated at 41,000,000, was reduced to 12,000,000. He further expected surpluses of 10,000,000 in 1880, 2,000,000 in 1881, 28,500,000 in 1882, and 38,000,000 in 1883. These surpluses would, however, be insufficient to fulfill the vote of July 7, 1878, of gradually abolishing the grist-tax, which would involve a decrease of income of 18,000,000 in 1879, of 36,500,000 in 1880, 1881, and 1882, and of 75,500,000 on its total abolition in 1883. In order to meet this decrease, he proposed to increase the taxes on sugar, alcohol, coffee, petroleum, and other colonial goods, the registration and stamp taxes, and the octroi. He estimated the total increase of the revenue from these sources at 30,000,000 lire. If these taxes were not granted, he considered it impossible to proceed with the abolition of the grist-tax and prevent a deficit. The Senate on June 24th, by a vote of 136 to 50, approved the abolition of the grist-tax so far only as regarded maize and grain of an inferior quality. This decision was of great political importance, as it was contrary to the wishes of the Ministry, who demanded the entire abolition of the tax. The bill as originally presented, and as it had passed the Chamber of Deputies in 1878, proposed that the tax on inferior grains should be entirely remitted from July 1, 1879, that the tax on corn should be reduced one fourth from the same date, and that the tax should altogether cease on January 1, 1883. The Senate was willing to agree to the remission of the tax on inferior grains, and to the prospective repeal of the whole tax in 1883; but it objected to the reduction on corn until an equivalent impost was voted. The Ministers, by the attitude which they took during the debate, converted the question into one of serious constitutional import. They denied the right of the Senate to alter or modify a money bill passed by the Chamber. It might accept or reject such a bill *en bloc*, but it had no right to do anything else. The

Senate, however, maintained the other side of the question.

The law for the abolition of the grist-tax, after its modification in the Senate, again came up in the Chamber. But, before a vote on it was reached, a vote of want of confidence in the Ministry was passed on July 3d, by 250 to 170 votes, in consequence of which the Cabinet resigned. This result was brought about by a most heterogeneous combination between various factions of the Conservatives and Radicals under the leadership of Signors Sella, Nicotera, and Baccarini. Signor Cairoli was intrusted with the formation of a new Ministry, which was completed on July 13th, and was composed as follows: Signor Cairoli, Presidency and Foreign Affairs; Signor Villa, Interior; Signor Grimaldi, Finance; Signor Baccarini, Public Works; Signor Vare, Worship and Justice; Signor Perez, Public Instruction; General Bonelli, War. On the 17th Signor Cairoli, in presenting the new Cabinet to the Chamber, said that the country needed a long period of peace and industry; that the Ministers would devote themselves exclusively to questions of internal interest, in conformity with which their foreign policy would be framed. At the same time he asked the Chambers to come to an agreement on the grist-tax. This was finally effected, as follows: The tax on the cheaper grains was to be abolished entirely, that on the better qualities reduced one fourth after July 1, 1880, and all taxes abolished after January 1, 1884. In this form it passed the Chamber on July 19th, and the Senate on the 24th.

The Chamber adjourned on July 23d, and the Senate on the 29th.

On September 15th Signor Grimaldi sent the details of his provisional budget for 1880 to the President of the Chamber, in conformity with the Parliamentary regulation, hitherto neglected, which requires its presentation on that date. The revenue was estimated at 1,402,000,000 lire, and the expenditures at 1,395,000,000 lire, leaving a surplus of 7,000,000. The report accompanying the budget, however, stated that, taking into account the expenditures already submitted to Parliament, there would be a deficit of 6,000,000 lire. Differences of opinion as to the budget led Signor Cairoli to resign on November 18th. The Chambers reassembled on the 19th, when Signor Cairoli announced that the Ministry had felt themselves under the necessity of placing their resignation in the hands of the King, and that his Majesty had intrusted him with the charge of forming a new Administration. The negotiations to that effect were proceeding regularly; but, in the mean time, he requested that the Chambers would adjourn until the 27th. The Chambers adjourned accordingly. The new Ministry was completed by the 27th, and was composed as follows: Cairoli, Presidency and Foreign Affairs; Depretis, Interior; Magliani, Finance; Villa, Justice; Baccarini, Public Works; De

Sanctis, Education; General Bonelli, War; Admiral Acton, Navy; Micelli, Agriculture and Commerce. On the same day Signor Cairoli presented the new Ministry to the Chambers and made a statement of the questions with which they had undertaken to deal. A cold reception was given to the Ministry, and leave was asked to interpellate the Government relative to the late Ministerial crisis. On the following day Signor Sella introduced his interpellation. Signor Cairoli in reply stated that the difference which arose between the members of the last Cabinet concerned the course to be pursued in regard to the grist-tax question. On December 5th Signor Magliani presented his modifications in the budget for 1880. These modifications showed an increase of 13,000,000 lire over the original estimates, 8,000,000 lire of which were due to retrenchments, mainly in the army, and 5,000,000 lire to the surplus of the revenue. An understanding was reached by the Ministry with Signor Crispi, and the latter was elected President of the Budget Committee.

The relations of Italy to foreign countries were discussed by the Chambers on several occasions. On January 20th Signor Vitelleschi in the Senate said that Italy ought to join with Austria, England, and France in assisting the populations of the East to set up constitutions for themselves, apart from the predominating influence of any foreign power. Signor Depretis, replying on the following day, said that the Government considered that the Berlin Treaty formed part of the public law of Europe, and they would loyally coöperate to secure its execution. The Government, he added, had not yet undertaken mediation between Turkey and Greece. In Tunis and Egypt the Cabinet desired to maintain the legitimate influence of Italy, and nothing more. On January 22d an order of the day was accepted by the Minister and adopted by the Chamber, stating that "it is necessary not only that treaties be loyally executed, but that the internal policy of the country shall not disturb the financial equilibrium or the organization of the military forces." On July 28th the new Cabinet was interpellated with regard to its foreign policy relating to Greece, Egypt, and Roumania. Signor Cairoli in reply said that it was impossible fully to discuss so delicate a subject, more particularly as the Government had only recently taken office, and had yet to make a complete examination of the documents and the acts of its predecessors. Regarding Greece, he might declare that the Government would faithfully maintain the Treaty of Berlin, and he was glad that the part in which the plenipotentiaries of Italy and France had agreed in taking an initiative at the Congress was in accord with the principles of nationality Italy had always professed. Italy had close relations with Greece and felt profound sympathy for her, and she would not be untrue either to the one or the other. In Egypt Italy had never failed in pro-

tecting her subjects, and had sustained her rights in order that other Powers might not have exclusive influence.

A provisional treaty of commerce with France was signed on January 15th, and ratified by the Chambers in February. It was to be in force for one year, and secured to the two countries the treatment of the most favored nations. A treaty of commerce with Austria was sanctioned by the Chambers in January.

On May 19th the civil-marriage act, providing that the civil act shall in all cases precede the religious ceremony, was passed by the Chamber of Deputies, by a vote of 163 to 101, after inserting amendments to the effect that penal action instituted against married persons who have gone through the religious ceremony shall be stayed on their registering their marriage before the civil authorities. The bill was strongly opposed by the clerical deputies, while the Minister of Justice declared that civil marriage as regarded by the law contained nothing detrimental to the privileges of the Church, but only protected those of the state.

The Chamber of Deputies on June 30th approved, after a debate extending over two months, by a vote of 257 to 96, the Ministerial railroad bill, which provides for the construction of 6,020 kilometres of railroad within twenty-one years, at an annual expenditure on this account of 60,000,000 lire.

The seizure of a Republican flag at Milan, on which occasion several arrests were made and a number of persons wounded, was made the subject of an interpellation. Signor Cavallotti, of the Extreme Left, attacked the Government, declaring that the Ministries of the Right, and even the Austrian Government, had not been as intolerant as the present Ministry. Signor Depretis, the Minister President, declared that the prefects had only done their duty; that the country desired peace and order, which only a strong government could give. Signor Tajani, the Minister of the Interior, in speaking of the Republican Associations, said that they numbered over 20,000 members, and that, wherever the Government had come in contact with them, it had been found that they were preparing to overthrow the existing order of things, and no Government could tolerate such a state of affairs. The debate terminated on April 4th in a vote of confidence, which was carried by 273 to 37 votes. All parties of the Right, Center, and Left voted in favor of the Government, excepting the 37 members of the Extreme Left headed by Signors Cavallotti and Bertani.

In the beginning of April General Garibaldi arrived in Rome, and called a meeting of the leaders of the Republican party for the 21st. In his letter convoking the meeting he said that he considered it to be the duty of the Republican party to rally all its forces in the field of legal agitation, in order progressively to secure that liberty which is their undoubted right, but which now depended on the whim

of a Minister or the programme of a Ministry. Universal suffrage is the fundamental basis of reform. Those who obey the laws ought to make them. Those who are obliged to fight in defense of their country should also have the right to elect their syndics and their representatives in Parliament. This, he said, is the basis of social justice. He told those who impugn this that the people to whom the *toga virilis* is denied were considered capable of first founding with their arms and afterward confirming by their vote the unity of Italy; and he said that the dreaded phalanx of the Clericals is also desirable in Parliament, seeing that the establishment of two conflicting principles will dispel the languor which now renders it impotent and arouse all the energies of which Italy is capable to vital discussions. The meeting organized under the presidency of General Garibaldi. A resolution was adopted for the establishment of a central committee in Rome, with sub-committees in the provinces, to agitate for universal suffrage and other reforms. The meeting also sent a greeting to "our brethren of Italy unredeemed." Garibaldi made a speech, in which he said that the Constitution must be reconsidered, and Italy must be armed to be ready to claim the unredeemed provinces.

Considerable attention was aroused by a pamphlet entitled "Italicæ Res," which appeared in Vienna in August. The author was Aloys Ritter von Haymerle, brother of the new Austrian Minister of Foreign Affairs, colonel in the Austrian general staff, and for five years military attaché to the Austrian embassy in Rome. In this pamphlet he spoke of the Italia Irredenta party as a powerful agent, likely sooner or later to imperil the peace between Italy and Austria. He described this party as one "which, under the banner of the nationality principle and the theory of natural boundaries, did not permit the country to obtain peace, and in order to bring about new complications attempted to impress upon the mind of the nation the facts that the honor of Italy would remain sullied and its political existence doubtful as long as the smallest part of the Italian-speaking people remained subject to a foreign Government." At the same time he pointed out that the agitation of the party was directed only toward those portions of Italy under Austrian rule. On the other hand, he declared most decidedly that the policy of the Italian Government, as well as the sentiments of the large majority of the Italian population, were hostile to these aggressive demonstrations. In September both Count Andrassy and Baron Haymerle assured the Italian Ambassador at Vienna that they regretted the publication of the pamphlet, and disapproved the political comments contained in it. In Italy the pamphlet was very generally denounced, even by the Conservatives, who oppose the Government wherever they have an opportunity. The pamphlet was answered by the Italia Irredenta Association in another

pamphlet, entitled "Pro Patria," which was very bitter in its tone against Austria, and declared that no friendship between the two countries was possible until the Austrians had left Italy. It defined as unredeemed Italy the government of Innsbruck, including the districts of Roveredo, Trent, Botzen, Brunnecken and the Giudicaria di Glovenza, the districts of Trieste, Gorizia, Pisina, and Adelsberg in Illyria, the Hungarian Littoral districts, and a part of the county of Agram in Croatia.

An eruption of Mount Etna took place at six o'clock on the evening of Sunday, May 25th. The sight was described as being very grand at Taormina. An opening occurred on Monday on the northern side, from which issued dense volumes of smoke and flames. Showers of ashes fell on Messina, where a severe undulatory shock of earthquake was felt on the 27th. Reggio in Calabria was covered with a lurid cloud, and large quantities of ashes also fell in that city. Three new craters opened, distant from each other about twelve miles, in the form of a triangle. A number of brilliant balls of fire were thrown to a great height on the night of the 28th, and burst like rockets, emitting a fiery shower. The stream of lava was estimated at seventy metres in width. The eruption increased on the night of June 2d. The Government on June 4th appointed a commission to visit Mount Etna and report on the volcanic phenomena. The most serious of the openings was that between the Monte Frumento and Monte Nero, an equal distance between Randazzo and Linguaglossa. At this spot the land was highly cultivated, and here the flow of lava was very great indeed. Here stood the bridge of the Pisciaro, which carried the national road over the river of that name as it descended from the mountain to the Alcantara River. This bridge was carried away by the avalanche of lava, and the road was overflowed for about 100 metres. The other two points of outbreak were—one between Bronte and Aderno, on the western slope, the other between Giarre and Aci Reale, on the southern. The former at one time seemed to threaten the town of Aderno, but all three craters gradually subsided in the beginning of June. The eruption was accompanied by a loud, rumbling noise and by earthquakes, and caused consternation and panic among the neighboring population. The loss of property and life was very great.

The destruction of Pompeii eighteen centuries ago was celebrated in the ruins of that city on September 26th, in the presence of a large number of scientific men and other spectators. From a pavilion erected in the ancient Basilica Professor Ruggieri, the director of the excavations, delivered an address explaining the newest mode of prosecuting discoveries, and giving an account of some of the more important discoveries that have been made since the excavations were commenced. He attempted to describe to the guests assembled the city

as it must have appeared eighteen hundred years ago, and referred to the account of the destruction of the city and Herculaneum given by the younger Pliny in his famous letter to Tacitus narrating the death of his uncle, the elder Pliny. Count Guanciali and Mgr. Mirabelli then declaimed Latin verses commemorative of the event. After a visit to the ruins, excavations were begun under Signor Ruggeri's superintendence. A large number of

vases, articles of jewelry, kitchen utensils, and coins were found, which were presented to the museums of Naples and Pompeii.

Giovanni Passanante, the man who attempted to assassinate King Humbert in 1878, was sentenced to death. At the instance of the King, however, a decree was signed by the Ministry commuting the sentence of death to one of penal servitude for life, and Passanante was then sent to the Island of Elba.

J

JAPAN, an empire in eastern Asia. The sovereign bears the title of "Tenno" or "Mikado." The reigning Mikado, Muts-Hito, was born at Tokio, September 22, 1852, and succeeded his father, Komei-Tenno, in 1867. He was married on December 23, 1868, to Princess Haruko, born April 17, 1850, daughter of Prince Idchidgo. There is no regular law of succession, and, in case of the death or abdication of the Mikado, the crown does not generally devolve upon his son, but upon either the eldest or most distinguished member of the Shi Shinnô, the four imperial families of Japan. These families are the Katzura, Arisugawa, Fushimi, and Kannin. The power of the Mikado is unlimited in temporal as well as spiritual affairs. He acts through an executive ministry divided into nine departments, viz., of the Imperial House, Foreign Affairs, War, Navy, Finance, Interior, Public Instruction, and Ecclesiastical Affairs. At the side of the Ministry stand the "Sain" or Senate, composed of thirty members, and the "Shôûi" or Council of State, of an unlimited number of members, both nominated by the Mikado, and consulted by him at his pleasure.

The area, according to an official publication in 1877, is 146,613 square miles. The population on January 1, 1876, was 34,338,404, of whom 17,419,785 were males and 16,918,619 females. The population of the principal cities was as follows: Tokio (1872), 595,905; Tokio with suburbs (1876), 1,036,771; Kumamoto, 300,000; Kioto or Miako (1872), 238,663; Osaka (1877), 281,119; Kajosima, 200,000; Yokohama (1872), 61,553; Kanasawa, 60,000; Nagasaki (1876), 47,412; Niigata (1872), 33,772.

The budget for 1879-'80 was as follows (in yens—1 yen = 99·7 cents):

REVENUE.	
1. Customs.....	2,181,810
2. Ground-tax.....	41,000,950
3. Mining dues.....	11,537
4. Tax on the salaries of officials.....	81,992
5. Taxes on the products of the northern provinces.....	863,971
6. Tax on alcoholic liquors.....	4,507,272
7. Tobacco-tax.....	348,674
8. Stamp dues, patent dues, etc.....	2,787,123
9. Receipts from mines.....	218,960
10. Railroads.....	391,100
11. Mint.....	506,000
12. Other receipts from public works.....	78,880
13. Public lands.....	712,560
14. Miscellaneous receipts.....	1,647,746
15. Reimbursements.....	813,804
Total.....	55,651,379

EXPENDITURES.

1. Public debt.....	21,200,281
2. Civil list and appanages.....	877,000
3. Pensions.....	1,059,404
4. Council of State.....	800,566
5. Senate.....	142,480
6. Ministry of Foreign Affairs.....	170,960
7. " of the Interior.....	1,273,500
8. " of Finance.....	1,505,300
9. " of War.....	7,190,100
10. " of the Navy.....	2,636,800
11. " of Public Instruction.....	1,189,970
12. " of Public Works.....	591,800
13. " of Justice.....	1,814,800
14. " of the Imperial House.....	805,700
15. Colonization.....	1,513,174
16. Land-tax reform.....	970,000
17. Provincial administration.....	3,756,700
18. Postal administration.....	1,050,000
19. Funds to promote industry.....	1,005,084
20. Police.....	2,456,453
21. Priests, temples.....	185,000
22. Public buildings, canals, etc.....	1,957,200
23. Ambassadors and consuls.....	500,000
24. Miscellaneous.....	1,877,514
25. Unforeseen expenses.....	1,500,000
Total.....	55,651,379

The public debt on July 1, 1879, was as follows:

1. Home debt:		
Bearing interest at 4 per cent..	11,327,675	} 228,631,180
" " 5 " ..	46,412,555	
" " 6 " ..	39,425,290	
" " 7 " ..	107,997,015	
" " 8 " ..	14,592,225	
" " 10 " ..	8,876,370	
Bearing no interest.....	9,439,792	
Paper money.....	118,427,992	
		851,493,854
2. Foreign debt:		
Bearing interest at 7 per cent..	10,865,120	} 11,829,120
" " 9 " ..	1,464,000	
Total.....		863,327,974

From this amount should be deducted:

Reserve fund.....	50,898,372
Outstanding loans.....	7,495,220
Total.....	58,393,592
Debt not provided for.....	804,933,382

The Japanese army in 1878 was composed as follows:

ARMS.	Peace footing.	War footing.
Infantry (46 battalions).....	29,569	43,003
Cavalry (3 squadrons).....	390	450
Artillery (10 divisions or 20 batteries).....	2,420	2,960
Engineers and train (17 companies).....	1,670	2,060
Coast artillery (9 companies).....	720	900
Officers.....	2,009	2,343
Total.....	36,777	51,721

The navy in 1879 comprised 10 steam-vessels, of an aggregate of 2,930 horse-power, and with 49 guns. Three of the vessels are ironclads. The fleet is manned by 3,500 men, inclusive of 200 officers.

The foreign commerce in the years 1868 and 1874-'79 was as follows (in yens):

YEARS.	Imports.	Exports.	EXCESS OF	
			Imports.	Exports.
1879...	29,815,853	24,014,700	5,200,653
1878...	32,563,864	25,524,570	7,039,294
1877...	25,900,541	22,566,708	3,033,833
1876...	24,087,515	27,660,406	3,551,951
1875...	29,975,627	13,011,110	11,964,517
1874...	23,461,814	19,815,064	4,146,750
1868...	10,698,071	15,553,472	4,860,401

The countries principally concerned in the commerce of 1879 were as follows:

COUNTRIES.	Imports.	Exports.
Great Britain.....	16,190,232	3,436,941
China.....	4,667,434	5,733,925
United States.....	3,437,955	7,435,627
France.....	3,295,704	6,000,238
Germany.....	1,017,111	84,368
East Indies and Siam.....	995,494	433,910
Belgium.....	179,090	35
Australia.....	93,644	177,670
Italy.....	65,560	703,312

The imports of precious metals in 1879 amounted to 11,052,556 yens, and the exports to 2,791,405.

The movement of shipping in the ports open to foreign commerce was as follows in 1878:

NATIONALITY.	Vessels.	Tons.
British.....	836	285,430
American.....	124	167,434
German.....	57	24,505
French.....	83	45,807
Japanese.....	64	108,936
Others.....	50	84,603
Total.....	664	661,520

There were besides 29 French mail-steamers of 48,264 tons, 27 American mail-steamers of 124,968 tons, and 26 British mail-steamers of 25,519 tons.

The aggregate length of railroads in operation is 105 kilometres. Eight lines of telegraph have an aggregate length of 2,934 kilometres.

The postal administration of Japan has been rapidly improving since the country, on June 1, 1877, joined the World's Postal Union. According to the annual report of the Postmaster-General, the total number of postal stations on June 30, 1878, was 3,792. The number of letters sent was 47 millions, an increase of 23.1 per cent. over the preceding year. The number of postal cards was 10 millions. The number of money-orders has increased 21.1 per cent.; of letters and parcels sent to foreign countries, 10.4 per cent.; of letters, etc., received, 16.7 per cent. The postal savings banks, which the Government has introduced but recently, are meeting with great favor, and have attained the number of 292; the ag-

gregate number of the deposits has increased 88.3 per cent., and the aggregate value 270 per cent. The financial year 1877-'78 was the first in which the receipts of the department exceeded the expenditures (5.9 per cent.).

A new educational law was promulgated on September 29, 1879. All educational establishments, including public and private schools and libraries, are to be under the care of the Minister of Education. The schools are divided into primary schools, higher schools, colleges, and normal and technical schools. Primary schools are to be established in all cities and villages, but this provision need not be carried out wherever there is a good private school. The school age comprises the sixth to the fourteenth year, and during this period all children are to attend school for at least sixteen months. Corporal punishment is not permitted.

An important change in the monetary affairs of the empire was made in September. According to an official decree of the Government, the silver yen of 416 grains, and 900 fine, is to be accepted in future at par with the Mexican dollar, not only by the Government, but also by the subjects of Japan in all their private transactions. At the same time the two foreign banks in Yokohama, the Oriental Bank and the Hong-Kong and Shanghai Bank, gave notice that in future they would accept the yen at par with the Mexican dollar, and would keep their accounts in dollars.

The number of foreign residents in 1879 was 2,475, or 17 less than in 1877. They were divided among the different nationalities as follows: British, 1,067; Americans, 479; Germans, 300; French, 230; Dutch, 105; Portuguese, 95; others, 209. The number of Chinese in the same year was 3,028.

The silk season which closed in June, 1879, was not a successful one. The principal features of the season had been the increasing importance of the trade with America, and the falling off of the English trade. Up to June 19th the export had reached 19,070 bales, as against 21,975 bales in the previous year. The whole production of the silk season of 1878-'79 was 63,210 Japanese bales, of about 75 pounds each.

The remaining local autonomy possessed by the Loochoo Islands was suppressed in 1879, and the administrative system which prevails throughout Japan Proper has been extended to these islands. The Loochoo (or Liu Kiu) Islands have an area of 808 square miles, and 167,000 inhabitants. They formerly paid a tribute to Japan, but they retained a sort of relative independence until 1609, in which year the Daimio of Satsuma, the southwest corner of Japan, obtained permission from the Shogoon to set out on an expedition for the final conquest of the islands. He succeeded, and from 1609 to 1868 they formed part of the territory of the Princes of Satsuma, being governed by them under the Shogoon. A nominal king was allowed to continue to exist in

Loochoo. When, eleven years ago, the feudal system was swept away in Japan, and all the domains of the Daimios were absorbed in the empire, the so-called King of the Loochoo Islands became simply an ordinary subject of the Japanese Government, like all the other local princes who were then mediatized; but he received from the Mikado a title of consolation, which placed him foremost among the nobility of the land. The political sovereignty of Japan was regularly applied to his country, though a certain local autonomy was still left to it on administrative questions. A proof of the application of the sovereignty of Japan to the islands was given in 1874, when the Mikado sent a force to Formosa to avenge the murder of some shipwrecked Loochooans, nearly involving Japan in a war with China, which claimed to be the suzerain of Loochoo; but China finally recognized the right of the Mikado to protect his Loochooan subjects, and paid an indemnity. As China had never abandoned her claims to the islands, the Chinese Ambassador in Tokio has protested against the annexation.

Early in the year the Mikado issued the following decree on the subject of economy:

Order and economy in all things form the basis of all good government. It is essential to avoid unnecessary expense, and, to ameliorate the conditions of existence of the people by all practicable means, every one must conscientiously and strictly do his duty. I desire that henceforth the greatest possible economy be enforced in the construction of the ministries and other public buildings. The prefects of the different fuses and kens of the empire will all of them, so far as they are concerned, act in strict accordance with the spirit which leads me to issue this decree. They will seek to reduce expenses as much as possible, so as not to exceed the credits allowed to them by the budget. Above all things, they will constantly bear in mind that they are not to impoverish the people.

The following notification from the Minister of the Imperial Household, published in the Yokohama papers in March, shows how practically the Mikado is applying his decree to his own house:

Of his gracious will, his Majesty the Mikado has notified the necessity of practicing the greatest economy. It is therefore ordered by his Majesty that the expenses of food and all other household matters must be reduced.

Considerable excitement was produced in July in consequence of the British Minister's interference with the Japanese quarantine regulations. As cholera prevailed in the southern parts of the empire, a strict quarantine was ordered for Yokohama. The United States Minister issued immediate instructions for the compliance of Americans with the quarantine regulations. The British Minister denied the right of the Japanese Government on account of extra-territorial jurisdiction, and declared that any English ship should break quarantine and be protected in doing so by British men-of-war. Owing to indignant remonstrances from influential quarters, especially from Governor Hennessy of Hong-Kong, who was at that time visiting Japan, the British Minister

modified his attitude and consented to cooperate with the Japanese Government; but he still asserted his right to break quarantine at that place. The German Minister supported the British Minister. All the other diplomatic representatives were indifferent, except the Russian Minister, who sided with the United States Minister.

General Grant arrived at Nagasaki June 21st. By imperial decree his reception was to be in all respects identical with what would be accorded the reigning monarch of any European country. On his arrival at Nagasaki he received an address of welcome by a committee of thirteen, chosen to represent all alien nationalities there.

JEWS. The sixth Council of the *Union of American Hebrew Congregations* was held in New York, beginning July 8th. More than two hundred delegates were present, representing twenty-five States. Mr. William B. Hackenburgh of Philadelphia was chosen President. The report of the Executive Board represented that the feeling in favor of a union of the Hebrew people had grown, and recommended for the consideration of the Council the topics of a stricter observance of the Sabbath, the establishment of a young ladies' seminary, the encouragement of agricultural pursuits, and further legislation respecting civil and religious rights. The Board, to whom the subject had been referred at the previous meeting of the Council, had decided that it was inexpedient for the present to introduce the system of circuit preaching; but, as the decision had been unfavorably commented upon by the small communities which felt the want of Sabbath-schools and able sermons, the subject was again recommended to consideration. A report was adopted favoring the erection of a new building for the Hebrew College in Cincinnati. A clause opposing the opening of a branch of the college in New York was objected to, and was referred back for modification. A report on the observance of the Sabbath was adopted, to the effect that "the religious welfare of the Jewish community depends greatly on the preservation of the Sabbath. It is necessary for us, as for all religious bodies, to have certain ideas in common, and to have certain outward symbols to express them. The means for obtaining a better observance of the Sabbath are, however, not within the reach of the Council. Persuasion, example, and education alone can produce a proper sentiment on the subject; no legislation by us can influence the matter." Some of the speakers on this report desired to have a specific mention made of the seventh day as the Sabbath that was intended; but their views did not prevail, a general agreement being manifest that no other day could be regarded as the Jewish Sabbath. A report on circuit preaching recommended the practice, and gave the names of a number of ministers who had volunteered to engage in that

work. The sum of \$1,000 was appropriated to put into execution a plan to provide volunteer visiting preachers for such communities as are not able to support a minister. The duties of the circuit preachers will be to organize congregations, awaken the religious spirit, and establish religious schools. Each minister will have a salary fixed by the Executive Board, and his expenses, not more than \$500 a year, will be paid, except when the community visited can furnish the money. A report on the subject of a young ladies' seminary admitted that the establishment of such an institution would be desirable, but remarked upon the lack of funds for the purpose. A committee was appointed to consider the advisability and feasibility of establishing two self-sustaining seminaries, one for boys and one for girls, and report at the next session of the Council.

A committee of the Board of Delegates to whom the subject had been referred in the previous year presented a report in favor of the encouragement of agricultural colonies and the training of youth to agricultural pursuits, and the following recommendations were adopted on the subject: "That a tract of land should be purchased large enough to accommodate at least fifty families and support a model-farm school; that managers of Jewish schools and charitable institutions should introduce into the institutions elementary instruction on the subject; that the opportunity now opens for a good investment of money by capitalists; and that the Executive Board of the Council be empowered to select from their number a committee of five on agriculture, to solicit donations of land, farming implements, and money; to allot to each family in the colony from fifty to eighty acres of land that shall be rent-free for seven years, after which the land taken up shall be offered to the incumbent for a reasonable price, the money received to be applied to the purchase of other land, and so on; to purchase such additional tracts of land as may from time to time in the colonial life be expedient, and as the funds on hand may allow; and that the Board's committee should consult with kindred organizations as to the best means of accomplishing the project of the colony."

The Committee on Statistics reported that they had made no further progress. It appeared, however, that 115 congregations were now joined to the Union; that for the last fiscal year the sum of \$4,374 had been received for the college from congregations, with yearly contributions of \$957, \$3,837 as gifts to the sinking fund, and \$1,821 for the support of indigent students. The miscellaneous receipts had been \$2,647, and the total disbursements \$11,619. The college had a balance on hand of \$3,055, and \$2,453 in the sinking fund. Expressions of fellowship were exchanged with the Alliance Israélite Universelle of Paris, the Anglo-Jewish Association of London,

the Alliance of Vienna, and the Deutsche Gemeinde Bund of Leipsic.

The first instance of the interchange of fraternal courtesies between Jews and a Christian church in the United States took place in St. Louis on June 29th. The Second Baptist Church in that city having been burned, the congregation were given the use of the Synagogue Shaari Emeth for purposes of worship until they could provide themselves with a new building. At the close of the period, when the Baptists were about to go to their own church, a joint religious service of the two congregations was held in the synagogue, with prayer, hymns from the Jewish and Baptist hymn-books, Scriptural lessons, and addresses by the Baptist pastor and the Jewish rabbi.

A plan has been under consideration in England for the reorganization of Jews' College, which contemplates a division into junior and senior classes. Candidates for admission into the junior class must have passed the matriculation examination of the University of London, and be between sixteen and twenty years of age. The course of study in this class is arranged for three years, during which the students shall attend classes at the University College. Candidates for the senior class shall have passed the second B. A. examination of the University of London, and shall occasionally have opportunities of practicing the arts of preaching, reading, and teaching, and of being instructed in the theory and practice of *Shechitah* and *Milah*. The Council shall grant certificates of competency to students who have qualified themselves for the offices of minister, preacher, reader, and teacher of religion. An elementary class is also to be established. In Germany societies have been formed among the rabbis and teachers of various provinces to promote a new methodical system of instruction, and the German Board of Delegates is working with the same object. In Austria a sharp impetus has been given to education by the efforts of the Vienna Alliance and the Lemberg "Shomer Israel."

The *Alliance Israélite Universelle* of Paris has branches in every prominent European capital; its agents are in active communication with the most distant Jewish communities in India, China, Abyssinia, etc.; and its schools in Palestine, Turkey, Morocco, and other countries are making rapid progress. Its political influence was exhibited at the Congress of Berlin, and its schools in the East attest the efficacy of its educational influence.

An *International Jewish Convention*, under the auspices of the Alliance Israélite, met in Paris on August 12th, and was attended by about two hundred delegates, among whom were some of the most distinguished representatives of the race in Europe and America. M. Crémieux, President of the Alliance, presided. The opening addresses dwelt chiefly upon the stipulation for the emancipation of

the Jews in Roumania in the Treaty of Berlin as marking an event of great importance and an occasion of joy. The Rev. H. S. Jacobs of New York spoke of the great influence which America was destined to exercise in Jewish affairs, and of the interest which was felt in the United States in Jewish progress. A vote of thanks was given to the American delegates. The subject of education was prominent among the matters considered by the Convention, and whatever related to the establishment and improvement of schools in the East was received with favor. A proposition was adopted to commemorate Jewish emancipation in the East by means of a medal. Propositions concerning the organization of the Alliance and modifications of its constitution were much debated, and a final decision upon them was postponed till the next year.

JULIO, E. D. B., a painter, born on the island of St. Helena, near the spot where the great Emperor lingered out his years of captivity, in 1843, died in Georgia, September 15, 1879. He was the son of an Italian father and a Scotch mother, and inherited his poetic and artistic tendencies from one and his indomitable perseverance from the other. At an early age he was sent to Paris, where he received a careful education. During the war he removed to America and settled at the North. The fragility of his constitution and his natural sympathies induced him to move South. He established himself in New Orleans, and was successful as a portrait painter. Ambitious and

like every true artist, dissatisfied with his own powers of execution, he abandoned his career and went back to Paris to become a pupil of Bonnat. On his return to this country he began in New Orleans a school of art. His best known painting, engravings of which are widespread, is "The Last Meeting of Lee and Stonewall Jackson." It is a composition of considerable merit. The faces of the two Southern leaders are admirable likenesses. Though essentially a portrait-painter, Julio was ambitious of excelling in landscape. He painted many Louisiana scenes, but his work does not compare with that of the lamented Clague, who alone has caught the very trick of the indolent waving moss pendent from the wide-spreading branches of the live-oaks, the sharply defined shadows of the leaves, the transparent atmosphere, and the dark untroubled waters. Though Clague had no rival and left no successor, Julio bore some impress of his genius, and paid him the homage of sincere admiration. Unfortunately his career was untimely nipped. To try change of air, he went to Georgia, but consumption was too far advanced. He left many unfinished works. His "Diana" is a striking and graceful figure. The coloring is defective, but the drawing is fine. He was a rapid and skillful draughtsman. His crayon sketches are meritorious. One of his pictures was exhibited at the Centennial and favorably criticised. It was entitled "Harvest Scene," and represented cane-cutting on a Louisiana sugar plantation.

K

KANSAS. The biennial session of the Legislature of Kansas commenced on January 13th. Lieutenant-Governor L. U. Humphrey presided in the Senate; and in the House Sidney Clarke was chosen permanent Speaker.

An election of a Senator in Congress, to fill the vacancy caused by the expiration of the term of John James Ingalls, was concluded on January 31st. Mr. Ingalls was reelected. The vote on each ballot was as follows:

CANDIDATES.	Tuesday.	Wednesday.	Thursday.	Friday.
Ingalls.....	60	63	72	86
Anthony.....	26	26	25	0
Simpson.....	17	17	17	0
Phillips.....	11	14	13	0
Campbell.....	6	4	0	0
Horton.....	8	2	2	80
Pomeroy.....	2	2	3	0
Goodin (Dem.)...	20	22	17	1
Mitchell (Green.)..	19	13	13	2

Charges of bribery in the election were immediately made, and the following resolution was adopted by the House:

Whereas, It is charged that during the progress of the late Senatorial election acts of bribery and corruption were resorted to, to influence the votes of members of this House for United States Senator; and,

Whereas, It is also charged that offers were made to pay large sums of money for votes for Senator, and that in some cases these corrupt offers were made by members of this House; and,

Whereas, The honor of the State, the integrity of this House, and the character of the Senate of the United States demand that a full and impartial investigation should be had of all the facts and circumstances connected with the aforesaid charges; therefore,

Resolved, That a committee of five members be appointed, whose duty it shall be to investigate all charges of bribery and corruption connected with the late Senatorial election, and all charges of corruption in office made against the recently elected Senator, to the end that the innocent may be vindicated, and all acts of bribery and corruption, if any, shall be found, exposed, and punished.

A similar resolution was adopted in the Senate, and for the sake of economy it was proposed to change the committee into a joint one, but the House refused to concur.

The committee of the House submitted three reports, one a majority and two minority. The chairman reported that the charge that acts of bribery and corruption were resorted to with intent to influence the votes of members of the House was sustained; but no acts of bribery and corruption were proven against Senator Ingalls.

Another member of the committee reported

that the evidence submitted fully convinced him that Mr. James S. Merrett was a general manager in the interest of Senator Ingalls at Topeka during the pending of the late Senatorial election, and had general charge of his rooms and the direction of his affairs; that he was aided and assisted in his plans to reelect Senator Ingalls, among others, by Mr. J. S. Danford and Mr. Calvin Hood; that Senator Ingalls and those parties employed corrupt and illegal means to secure the election of said J. J. Ingalls to the United States Senate, and but for said improper influences his election would not have been obtained.

The majority of the committee reported that they had examined about forty-five witnesses, and that they find from the testimony that John J. Ingalls, the recently elected United States Senator, used no corrupt means to secure his election to the United States Senate, and that neither of the late Senatorial candidates was guilty of bribery or corruption in the late Senatorial election; and they further said that Ingalls, the recently elected United States Senator, had not been guilty of any corruption in office; and that there was no evidence against any member or members of the House which would warrant or justify their expulsion.

The House adopted the report of the majority by a vote of yeas 60, nays 44.

The following resolution was also adopted by the House:

Whereas, The testimony taken by the Investigation Committee discloses the fact that certain members of this House did, during the late Senatorial contest, take especial pains to place themselves in position to be offered money to influence their votes, and did, in some instances, actually receive money, though not from either of the Senatorial candidates; therefore, be it

Resolved, That the conduct of all such members is deserving of, and this House does administer upon them, its severest censure, committing them to their constituents for their ultimate condemnation, which they so justly deserve.

The vote was—yeas 51, nays 48.

A committee of the Senators in Congress subsequently investigated the charges against Senator Ingalls, and made a report entirely exonerating him, but condemning many of the proceedings at the election.

During this investigation a question was raised which is of far more importance than the matter then at issue. The committee summoned the telegraph operator to appear before them, and bring any original messages in his possession. The operator sent to them a communication stating that he was ready to appear, but that he had been instructed by the management of the Western Union Telegraph Company to decline to produce any original telegrams in his possession, as the custodian thereof for the company; and further, that the company had forwarded by mail a communication inclosing the answer which it desired him to make in its behalf in support of its right to withhold from any tribunal original messages, or the contents of original messages, intrusted

to it for transmission from one person to another. The operator by order of the House was arrested by the Sergeant-at-Arms, on an attachment "for a contempt in refusing or neglecting obedience to the summons (*sub pena duces tecum*) before the investigating committee of the House of Representatives of the State of Kansas," and was imprisoned. Meantime the answer of the company was received. It presents their view of the legal aspect of the question of the inviolability of telegraphic messages of individuals, and is one step toward the final decision of the question which must ultimately be made. The points embraced in their answer were as follows:

The Telegraph Company distinctly disavows all partisan feeling or interest in the investigation ordered by the House, and which is being prosecuted before the committee appointed for that purpose. The company has no desire to hinder, defeat, or delay any investigation ordered or conducted by any tribunal for the discovery of any illegal act against the State, or against the rights of an individual. Their objection is, that the company ought not to violate the confidence of its patrons, and that to compel it to do so would be against public policy, and most dangerous to public and private security. The senders of twenty-five millions of messages a year, intrusted to the confidence of the Telegraph Company, representing as they do the capital, the enterprise, and the intelligence of the country in every department of human affairs, have a peculiar claim upon all departments or branches of Government for protection from the seizure of their private communications, and especially from any use of them which would be liable to intensify political excitement. The Telegraph Company has therefore adopted, as a rule for the guidance of all its officers, agents, and employees, that no messages, whether original or copy, in any office of such company, shall be taken or removed from the actual possession or control of the company without the consent or direction of the company's Executive Committee, or of its Board of Directors. The sacredness of this confidence is recognized in some States by statutes prescribing penalties for a voluntary betrayal—a security which the law has not given to those ordinary communications between private parties from which analogies are drawn supposed to justify the application of the *sub pena duces tecum* to telegrams. During the period in which the law affecting them has been in process of adaptation from the law of evidence upon analogous topics, a disposition has been shown to apply to telegrams some of the considerations of public policy which impute sanctity to a letter confided to the post-office, and to demand the same protection to the same communication when confided to this *quasi* public agency, which holds a power over men's affairs through its possession of their secrets exceeding that which any Government obtains through the mere physical custody of sealed letters. Telegraph companies naturally desire to enhance the public confidence in the safety of communications intrusted to them, and they have strenuously endeavored to establish some ground, either of entire exemption from, or of regulation of, the control over the contents of their files asserted by courts and legislative bodies. These ideas find support in some respectable places where neither the interest nor feelings of the telegrapher can be supposed to have influence.

Judge Cooley, in the last edition of his work on "Constitutional Limitations," under the head of "Constitutional Protection of the Citizen against unreasonable Searches and Seizures," declares his solemn judgment that the agents of the telegraph can not be lawfully compelled to produce the messages confided to them for transmission over their wires under a *sub pena duces tecum*, and clearly and emphatically ex-

presses his opinion that certain decisions of some of the State courts, affirming their power to require the production of such messages, are founded upon erroneous doctrines and unsound reasoning.

The Telegraph Company is aware that in several instances decisions have been made adverse to the position herein contended for. These cases, or the principal ones, are the case of E. W. Barnes, before the lower House of Congress in January, 1877; the case of *The State vs. Litchfield*, 58 Maine, 267; the case of *Henister vs. Freedman*, 2 Parsons's "Selected Cases," 274; and the case of *National Bank vs. National Bank*, 7 West Virginia, 544.

In the case of Barnes, a local telegraph manager at New Orleans, the witness was subpoenaed to produce telegrams before a committee appointed in December, 1876, by the lower House of Congress, to investigate the alleged frauds in the Presidential election in Louisiana. Barnes declined to produce the messages. His answer was referred to the Judiciary Committee, and that committee, on the strength of the cases *The State vs. Litchfield* and *Henister vs. Freedman*, above cited, decided that the witness must produce the messages. It is believed, however, that the opinion of Judge Cooley, already quoted, and which was written as a direct reply to the arguments presented in the case from Maine, far outweighs the reasoning of the Court. The cases of *Henister vs. Freedman* and *National Bank vs. National Bank* are no stronger than the case from Maine, and are therefore fully met and answered by the convincing reasoning of Judge Cooley.

As against the decision of the Judiciary Committee of the House of Representatives in the Barnes case, we may cite the opinions of Senators Conkling and Sherman in the case of Turner, a telegraph operator who was subpoenaed before a committee appointed by the United States Senate to investigate certain alleged frauds in Oregon shortly after the Presidential election of 1876. In the discussion before the Senate, as to the power and authority of the Senate to compel the witness to produce certain telegraph messages, Mr. Conkling, although interested politically in supporting the investigation then on foot, believed that an abuse of power was involved, and that a precedent dangerous to private rights would result; and Mr. Sherman said he thought there ought to be a statute defining the nature of the testimony which may be brought out in such cases, the limits within which it can be called for, and the circumstances or foundation which should be laid, before telegrams should be produced. The opinions of these eminent statesmen, and eminent lawyers as well, ought to have great weight in determining a question so momentous as that involved in the question of the power of this House to compel the Telegraph Company to open up to the whole world the secret affairs of every citizen, whether personal, business, or political.

The case of *Babcock*, before Judge Dillon (3 Dil. Ct. Ct. R., 566), has also been quoted as adverse to the claim of inviolability for telegraph messages. But this question was not raised in that case, as will appear in the opinion of Judge Dillon, page 569, where he says: "No objection is made on the ground that these messages are privileged, confidential communications; that is, the Telegraph Company does not insist that they stand in any different relation from what private persons would if they had custody of the same papers." The only question decided was whether the *sub poena duces tecum* sufficiently described the messages. The case was decided in 1876, before the Presidential election of that year. The question of the inviolability of the confidence existing between the sender or receiver of a message and the Telegraph Company had not then been much discussed nor much considered. Since that time the question, by reason of the momentous interests involved in its decision, has challenged the attention of the reading public throughout Europe and America, and it is not too much to say that careful, thoughtful, prudent men everywhere are fast reaching the conclusion that the best interests of the government and the people de-

mand that the seal of confidence reposed in the telegraph companies by their patrons shall not be violated.

The operator was released in this instance without the production of the messages.

The following resolution was adopted in the Senate—yeas 22, nays 12:

That the Senators of the State of Kansas are hereby instructed, and the Representatives in Congress are requested, to make all reasonable efforts to secure such a change in the Federal judiciary system as will take from the United States courts all civil jurisdiction, whether by original action or removal from State courts, except by appeal or writ of error from State courts of final resort in cases as now authorized.

An act was passed to repeal the annual levy of one mill on the dollar for school purposes. This was an important tax for the welfare of the schools, and the constitutionality of the act was finally sustained by the State Supreme Court. Section 3 of Article VI. of the Constitution, among other things, provides that the interest on the sale of public lands "and such other means as the Legislature may provide by tax or otherwise shall be inviolably appropriated to the support of common schools." In pursuance of this provision of the Constitution, the Legislature in 1861 passed a law (section 5, chapter 76) declaring, "There is hereby levied and assessed annually one mill on the dollar for the support of the common schools of the State." This law was reenacted in section 76, chapter 92, general statutes of 1868. The proceeds of this tax were distributed semi-annually, in March and July, by the State Superintendent, to the several school districts in the State, in proportion to the number of school children therein. In the year 1878 the one-mill tax amounted to \$138,698, or sixty cents to each child of school age in the State. For the year 1879 the amount would have been about the same per capita. For years the constitutionality of this law has been questioned, it being held that an annual levy, year after year, is in violation of section 24, Article II., of the Constitution, which reads, "No money shall be drawn from the Treasury except in pursuance of a specific appropriation made by law, and no appropriation shall be for a longer time than two years" (under the old provision, one year). Because of the uncertainty of the levy under the Constitution, and because it was claimed by many that the eastern portion of the State, with the greater part of the taxable property of the State, was paying for the education of the children of the west, the Legislature attempted to repeal the law. This bill for the repeal of the school-tax levy was first introduced in the House. After its passage there it was discovered that the law of 1868 had been reenacted in 1876, and that in the opinion of many of the members, if the bill should become a law, it would be of no effect. Consequently, the bill never reached the Senate; but the same provisions were inserted in the revenue act and became a law. Its effect is to strike off about one month's salary of teachers in each city or school district in the State.

Another act was passed relating to school-books. It requires the school-district boards of officers to designate a particular series of school-books, and then to make no change for the ensuing five years. Another act was passed to regulate the sale of school lands. It provides that all new sales shall be made on twenty years' time and seven per cent. interest. All renewals of purchasers who have never been in default shall be on twenty years' time and at seven per cent. interest. All renewals of those in default shall remain on ten years' time and ten per cent. interest. Such renewal to be made prior to October 1, 1879.

During the year ending on July 31, 1879, the whole number of school districts was 5,575; increase for the year, 439. The whole number of persons between the ages of five and twenty-one years, as reported, was: males, 160,542; females, 150,768; total, 311,310. The increase in school population was by far the greatest of any year in the history of the State. It represented an immigration to the State of not less than 160,000 persons, and was as follows: males, 23,140; females, 21,595; total, 44,735. Thirteen counties report an increased school population of more than 1,000 each. The number of persons enrolled in public schools some portions of the year was: males, 107,095; females, 101,314; total, 208,409; increase for the year, 30,603. The average daily attendance on public schools was: males, 62,120; females, 61,876; total, 123,996; increase for the year, 17,064. The reports show an increase in the length of the school-term. In 1878 the average for the State was 22-6 weeks, and in 1879 it was 24-6 weeks, the increase for the year being two weeks. The number of different teachers employed in the common schools of the State for the year was: males, 3,128; females, 3,579; total, 6,707.

The sources from which the common-school fund was derived were:

Balances from preceding year.....	\$261,467 72
State annual school fund.....	262,506 50
Sale of bonds for building purposes.....	272,110 04
District taxes.....	918,835 24
All other sources.....	53,649 52
Total receipts.....	\$1,578,563 02

The school expenses were as follows:

For teachers' wages.....	\$1,012,699 16
To superintendents of graded schools.....	10,958 42
For rents, fuel, and incidentals.....	274,260 15
For text-books.....	10,772 91
For district libraries.....	4,026 82
For maps and apparatus.....	19,999 45
For sites, buildings, and furniture.....	258,082 50
Total.....	\$1,590,794 30

At the close of the last fiscal year, June 30, 1879, the permanent common-school fund of the State, deposited with the State Treasurer, amounted to \$1,601,631.92, \$1,523,226.03 of which was invested as follows: United States bonds, \$140,000; Kansas State bonds, \$607,925; Lawrence city bonds, \$100,000; school-district bonds, \$675,301. Sixty-six normal institutes were held during the year, at an ex-

pense of \$18,357.17, \$15,941.33 of which was for instruction, and \$2,405.84 for incidentals. These institutes were in session from four to six weeks each, and in them 6,050 teachers received instruction.

An act was passed defining the term of duration and existence of certain railroads. The act extended for seventy-nine years the charters of all railroads granted by the Territorial Legislature, together with some five others. The charters of the former were for twenty years, and expired on February 11th.

The regulation of freights and fares was regarded as one of the most important subjects before the Legislature. There are about 2,500 miles of railroads in operation in the State. Their assessed value is \$15,525,033. The law of the State prohibits the railroad corporations from charging over six cents per mile for transporting passengers. Other sections of the law relating to the classification of and charges for carrying freight are still less restrictive. A bill to create a Board of Railroad Commissioners was proposed, but not passed. Another to regulate, control, and establish rates of fare and freight on railroads, establish rules to regulate the same, and provide for the punishment of a violation of the provisions thereof, was brought forward in the House, but failed to become a law.

The taxation of the railroads is secured by the laws of the State, which require that all property shall be assessed at its value in money. Property other than railroad property is assessed by local assessors. Railroad property is assessed by a "State Board of Railroad Assessors," consisting of the Lieutenant-Governor, Secretary of State, Auditor of State, Treasurer of State, and the Attorney-General. The assessment of all classes of property in the State does not exceed sixty per centum of its "value in money." All the real estate of railroad companies connected with the right of way and used in the daily operation of the road is assessed with the track, ties, iron, etc. All other real estate is assessed by the local assessor of the township or city in which the real estate is situated. Personal property, as rolling-stock, ties, iron, timbers, material, tools, moneys, etc., are assessed to the railroad corporation the same as to individuals. The franchises of railroad companies are not taxed. The property of the railroad corporations being taxed, the stock is not taxed. The receipts are not taxed, except that portion of receipts over expenditures which is found to be surplus on March 1st each year. All moneys and all credits in excess of debts on hand March 1st are taxed. The total value of all classes of rolling-stock is ascertained from a sworn inventory by the company, and the valuation apportioned equally to each mile of road. Local taxes are levied by the local authorities upon the railroad property in the several counties, cities, townships, and school districts, as returned by the State Board of Assessors. State taxes are appro-

tioned by the State Board and collected by the County Treasurer of the counties through which the roads run. The annual taxes are divided so that they can be paid in semi-annual payments on December 20th and June 20th. All taxes unpaid at those dates have a penalty of five per centum added. All taxes on personal property (for the purposes of taxation all railroad property is held to be personal property), after the dates above mentioned, shall be collected by the sheriffs of the several counties by seizure and sale of property. This law has been in force for three years, and is giving satisfaction to the people and the corporations. Under its provisions the assessment of railroad property has increased three millions of dollars over the assessments made by local assessors. The taxes assessed on the right of way, track, road-bed, rolling-stock, tools and materials, telegraph lines, etc., for 1879, amounted to \$490,323.

A joint resolution was passed by the Legislature recommending that a State constitutional convention should be called.

The estimated assessment of property for 1879 was \$140,000,000, and for 1880, \$145,000,000. These estimates would require, to meet expenditures, a tax-levy of four mills, distributed as follows: for general revenue, three mills; for Capitol extension, one half mill; for sinking fund, one tenth mill; for interest, four tenths mill. The following items are from the statement of the assessment of personal property for 1879:

PROPERTY.	Number.	Total assessed value.	Average assessed value.
Horses	240,250	\$7,765,463 94	\$32 34
Neat cattle.....	892,014	8,533,020 02	10 63
Mules and asses.....	36,287	1,467,720 05	40 04
Sheep	248,842	280,077 25	1 14
Hogs	574,733	873,677 56	1 52
Wagons	65,351	1,342,257 70	20 35
Carrriages	11,695	376,379 20	32 23
Flanfortes	1,833	173,733 00	92 27

The agricultural products of the State show annually an increase in amount and value. The values of these in 1878 are thus reported by the Secretary of the Board of Agriculture:

Field products.....	\$49,914,434 33
Increase in total value of farm animals	6,401,871 30
Products of live stock.....	10,415,339 32
Products of market garden.....	247,510 29
Apitarian products.....	55,141 15
Horticultural products.....	2,642,770 87

Total valuation of farm products for 1878. \$63,677,067 31

Acres in organized counties, 33,599,600; in unorganized counties, 18,443,920; acres under cultivation, 6,538,727.85; increase of cultivated acres during the last six years, 3,567,120.85; increase from 1877 to 1878, 943,422.86. The acreage of wheat in 1879 in the State was greater than in the previous year by 223,104 acres, making the aggregate for winter wheat amount to 1,297,525 acres. During the last three years the area in winter wheat has increased over 100 per cent. The area in spring wheat was over 412,139 acres. The area in

corn was 2,925,070 acres, an increase of 589,588 acres over 1878, and of 60 per cent. during the past three years. The area in oats was 573,928 acres; in potatoes, 65,000 acres; in flax, 69,383 acres; in castor beans, 68,179 acres. The area in tame grasses, clover, millet, timothy, and blue-grass, aggregated 139,976 acres, and in prairie, meadow, and pasture, 484,019 acres. The total area in all farm crops aggregated 7,757,130 acres, an increase during the past year of 1,218,403 acres. The winter wheat was unusually fine. The corn promised the largest yield ever known in the State. The live-stock reports show an increase during the past three years of 51 per cent. in horses, 97 per cent. in mules, 46 per cent. in milch cows, 44 per cent. in other cattle, 116 per cent. in sheep, and 283 per cent. in hogs. The farm dwellings erected during the year number 15,952, valued at nearly \$3,000,000. The population of Kansas on the 1st of March, 1879, was 839,978, an increase of 141,481 during the previous year. At the same date there were 2,444 miles of railway in the State, and 528 miles were built during 1879.

There were 8,025 sheep reported killed by dogs for the year ending March 1, 1879. The number that died by other causes was 19,021. There were 1,059,640 pounds of cheese made in the State during the year, and 14,506,494 pounds of butter. The value of poultry and eggs was \$393,070.48, while the value of animals slaughtered or sold for slaughter was \$8,665,143. The produce of market gardens footed up \$307,292.48. Chickens and eggs foot up more than gardens. There are but 31,190 stands of bees in the State, and they made 370,398 pounds of honey, and 10,949 pounds of wax. There are in the State 1,867,192 apple-trees in bearing, 58,482 pear-trees, 4,784,076 peach-trees, 169,940 plum-trees, 443,726 cherry-trees. Those not in bearing are: apple, 3,978,062; pear, 154,265; peach, 4,049,801; plum, 254,968; cherry, 678,426. Fruits of all kinds, except grapes, were a very short crop. Most of the counties reported an average crop of grapes, but in a few the crop was light. The number of acres in vineyards was 3,418, and 84,079 gallons of wine were made.

The charitable institutions of the State are in a prosperous condition. They are controlled by twenty-five persons, divided into five boards, as follows: Regents of the Normal School, five; Regents of the State University, six; Regents of Agricultural College, six; Trustees of Charitable Institutions, five; and Directors of the Penitentiary, three. The total amount paid to the members of the Boards for the fiscal year ending January 30, 1879, amounted to \$5,626,600. The consolidation of the control of the several charitable institutions, which placed them all in the hands of one board, was made in 1876, and has worked well.

The debt of Leavenworth county and city, in bonds issued to aid in railroad construction, exceeded at the beginning of the year \$2,000,-

000, which was 30 per cent. of the taxable property of the county and 40 per cent. of that of the city respectively. The interest remained unpaid so long that the creditors became wearied with waiting, and brought suit on their bonds. The United States Court gave judgment in their favor, and ordered the County Commissioners to levy a tax to pay the judgments. This order the Commissioners declined to obey, and they were cited before the Court to answer why they should not be punished for contempt. Popular meetings were then held both at Leavenworth and Lawrence, at which the Commissioners were exhorted to persist in their refusal, even if they had to go to prison. The resolutions declare that they were elected on this very issue, with the understanding that under no circumstances would they levy a tax to pay the interest, and it was expected that they would keep their pledge. Some of them publicly declared that they would not obey the order of the Court. The following resolution manifests the defiant attitude of the people:

Resolved, That the tax-payers of Leavenworth County will stand by the Board of County Commissioners in its efforts to compromise the railroad indebtedness as long as they are governed by the wish of the tax-payers as expressed in this motion, and will protect them from personal loss and pay all expenses that are necessary to be incurred in an effort to bring about a compromise of this indebtedness; and in fighting it to the end, if the members have to be sent to jail, the county will compensate them for their time while detained from their business, and if they are compelled to pay any fines, the county will fully indemnify them.

These proceedings, as in all other cases, led to an arrangement.

The decline in the amount of life-insurance policies in the State during the year was \$1,180,534, although there was an increase in the number of policies.

The movement, or "exodus" as it was called, of colored families from the States on the lower part of the Mississippi River to Kansas is treated elsewhere in these pages. It is sufficient to show here in the manner in which they were received by the people and their condition on arrival. This is briefly done in the following appeal to the friends of the colored people:

TOPEKA, KANSAS, June 26, 1879.

TO THE FRIENDS OF THE COLORED PEOPLE:—The directors of the Kansas Freedman's Relief Association, in view of the present situation, deem it proper to make public this address, and ask the friends of the colored people for further aid in caring for the helpless and destitute refugees.

This is a matter not local to our State, but is one of national concern. It involves the solution of a great question, important alike to the people of the whole country, and if properly met will go very far to work a cure of the ills of the freedmen of the South. If we prove equal to the occasion, and can assist these people who are seeking homes in the North and utilize their labor, those who remain behind will discover a kindlier feeling and better treatment in the South.

In organizing this association we were moved by two controlling motives. The first was one of humanity. Many of them were old and decrepit, and many young and helpless, and with few exceptions were

destitute. They were landed on the river banks by hundreds, in the chilly days of early spring, after a long and tedious journey, fraught with hardships and privations. Many were sick and dying from exposure, and many were suffering for food, clothing, and medical assistance. The simplest dictates of humanity demand immediate and organized effort for their relief.

Another incentive to meet this emergency was to maintain the honored traditions of our State, which had its conception and birth in a struggle for freedom and equal rights for the colored man. She has shed too much blood for this cause to now turn back from her soil these defenseless people fleeing from the land of oppression.

We have not sought to stimulate or encourage their migration hither. We have always endeavored to place before the colored people of the South the plain facts, hoping thus to properly restrain an improvident hiegra, based upon delusive hopes and expectations. We have also sought to impress upon them that other Western and Northern States possess equal advantages for homes for the laboring man. In brief, we have undertaken, so far as lies in our power, to provide for the destitute of these people, who come voluntarily among us, the common necessities of life, and to assist them in obtaining situations where they can earn a livelihood.

We have made an effort to establish a colony about fifty miles west of this city in Wabaunsee County. Finding that good land could be bought for \$2.65 per acre, we are locating about thirty families on forty acres each. This is university land, one tenth to be paid down and the balance in nineteen years at 7 per cent. interest. We have furnished for their use teams and some agricultural implements, built barnacks to be used in common, and furnished rations. We also agreed to make the first payment for them. Some ground has been broken and planting done, but it was too late to realize much this season. This is an experiment, and so far seems successful, but it requires more money than we anticipated. The ultimate success of this colony must depend on future contributions. The refugees have established three other colonies, one in Graham, one in Hodgeman, and one in Morris County. The association is not responsible for these, but they will need assistance.

This association has taken charge of, and aided more or less, about three thousand of these people, and there are still here and on the way from St. Louis about four hundred more. We have received money from all sources, \$5,819.70. We have expended and incurred obligations for the whole of this fund. A large quantity of clothing and blankets have been received, and we have a large lot of clothing now on hand. What we need is money with which to obtain shelter, medical assistance, and furnish transportation to such places as will give them employment. This we must have or else relinquish all further efforts at organized assistance to these refugees.

The good people who have already so generously contributed to the cause have our sincere thanks.

All contributions should be sent to Governor John P. St. John.

JOHN P. ST. JOHN, President.

JNO. FRANCIS, Treasurer.

P. I. BONEBRAKE, Auditor.

ALBERT H. HORTON, Chief Justice.

C. G. FOSTER, U. S. District Judge.

JAMES SMITH, Secretary of State.

J. C. HEBBARD, Secretary.

WILLARD DAVIS, Attorney-General.

Board of Directors—N. C. McFarland, T. W. Henderson, and J. B. Jetmore.

KENTUCKY. The question of a revision of the Constitution of Kentucky was submitted by the Legislature to the voters at the election in August, 1879. A majority vote against revision determines the question until it may be again submitted by the Legislature. It is

regarded as one of the defects of the existing Constitution that some of its provisions operate against the progress of internal improvements. The Legislature is not expressly empowered to levy taxes, contract debts, or make appropriations for internal improvements. The consequence has been that a local system of taxation has been adopted for internal improvements, and such numbers of counties and towns in the wealthier sections of the State have levied taxes and contracted debt to make their own improvements that, if they are not absolutely unable, they are at least unwilling to submit to further taxation, should it be proposed under this general provision of the Constitution, to construct internal improvements in those counties in other sections of the State unable to provide the means by local taxation. By reason of this the Legislature has become powerless to levy taxes and contract debt on behalf of the State for improvements in those counties and parts of the State where they are necessary to develop their resources, or elsewhere for the general benefit of the State. That this local system of taxation has reduced the State to this helpless condition is evidenced by the failure of the last Legislature to vote a dollar to repair river improvements. This has led to unavailing petitions to Congress for aid. Another defect is the present mode of organizing the judiciary department.

The receipts of the State Treasury for the fiscal year ending on October 10, 1879, were, with the balance on hand of the previous year, \$2,166,192; the expenditures were \$2,095,321. Although this presents an apparent balance of \$70,870, there was really a deficiency, owing to the amount of outstanding claims unpaid. This was ascribed by the Auditor to a reduction of the revenue tax from twenty to fifteen cents on the hundred dollars, the increase of litigation and crime, the multiplication of courts and asylums for the relief and protection of the unfortunate, etc.

The total amount of the bonded indebtedness of the State, exclusive of the school fund, which is a permanent loan, is \$180,394. The ample resources of the sinking fund to pay this indebtedness are as follows:

Net proceeds of the redemption of the 5-20 gold-bearing interest bonds of the United States, purchased under the act of March 19, 1873, by the Commissioners of the Sinking Fund.....	\$296,671 72
406 shares of stock in the Bank of Louisville....	32,450 00
Stock in turnpike roads (estimated) worth.....	500,000 00
Total resources.....	\$769,151 72

The amount of bonds due and unpaid, to wit, \$6,394, it is supposed will never be presented for payment, judging from the length of time they have been due, and from the additional fact that the interest ceased on them after maturity. It is supposed they have been lost or destroyed.

The condition of the schools and school system of the State is rather unfavorable. The resources of the school fund are: a bond of the

Commonwealth held by the Board of Education, \$1,327,000; bank stock, 735 shares in Bank of Kentucky, valued at \$73,500; total, \$1,400,500; besides dividends on Bank of Kentucky stock, tax on capital stock of the Bank of Shelbyville, Farmers' Bank of Kentucky, Farmers' and Drovers' Bank, fines and forfeitures for gambling, tax on every \$100 worth of taxable property in the State, tax on dogs over six months old (one dollar on each dog in excess of two owned or kept by any *bona fide* housekeeper, and on each dog in excess of one owned or kept by any person not a housekeeper), and the non-transferable bond for the surplus bearing interest at six per cent. per annum, the whole bond aggregating \$345,447.30. The total receipts from all these sources at the end of the fiscal year were \$826,426.67, and the warrants paid amounted to \$819,887.25. Of the collections, the dog tax amounted only to \$965.70, and the tax on billiards to \$2,605.57. The total collections only give about \$135 to each of the six thousand school districts into which the State is divided, and this is not enough to keep a school in operation three months out of the year.

The number of children of school age in the State is placed at 400,000 whites and 50,000 colored. The *per capita* has fallen to \$1.60 for white and 52 cents for colored children. At the same time about 200,000 white and 25,000 colored children do not attend the schools. The negro tax collected by the sheriffs amount only to \$25,716. Nevertheless, 1,800 school-houses have been built during the last eight years, while there are 7,000 school districts in the State. The Superintendent says: "The school-buildings of Louisville alone are worth nearly as much as all the school-houses in the rural districts. Louisville, with a population of about 175,000, expends \$250,000 annually on her system, almost one third the whole cost of education to the State. If our people, in the same proportion with those of Louisville, would patronize education, we would expend annually \$3,750,000 on our common schools, which would be about seven dollars to the pupil child included in the census, and almost seventeen dollars to every one in attendance at any time during the scholastic year."

At a State Convention of colored teachers held in Louisville on August 27th, a memorial to the Legislature was adopted, in which they say:

We, the colored teachers of this Commonwealth, in convention assembled, do, after having given the subject our most careful study and attention for the past two years, most respectfully represent: First, that the present colored school fund is wholly inadequate for the purpose of securing to the colored children of the Commonwealth general elementary instruction; that in a great many school districts schools are not held at all, and in many others the *pro rata* of the school fund is not sufficient to allow trustees to obtain any but incompetent teachers, who squander, as it were, the public money without securing to the children those educational advantages designed by the creation of the colored common-school system. In this connection

we respectfully call your attention to the fact that the average salary of colored teachers in this State is only about \$50 per annum, or about one third the average salaries of colored teachers in the other ex-slave States; and furthermore, the *per capita* which our fund yields is only about one fourth that given a white child, with a difference of four years in the limit of school age in favor of the white child, while in other States the *per capita* and limit of school age are the same for the colored as for the white child. Believing that, while this great difference remains, our common-school system will not only not accomplish the object for which it was intended, but will in time be entirely abrogated on account of its inefficiency, we do most respectfully ask at the hands of your honorable body an equalization of the *per capita* and limit of school age for all the children of this Commonwealth, as the only true means of securing to every child the necessary educational facilities.

Second, that the majority of the colored teachers of this State, by reason of the failure on the part of the State to make provision for normal instruction, are wholly incompetent as instructors. While the other ex-slave States have found it especially necessary to organize and foster, in many instances by State appropriations, normal schools for the education of colored teachers, which amount to twenty chartered colleges and twenty-nine normal schools, we have not a single normal school organized by aid of Kentucky for the same purpose; and while nearly or quite \$20,000,000 have been expended on the colored people of the South for educational purposes since the close of the war, a very small proportion of this vast amount has found its way into Kentucky.

The acreage of wheat was larger than in 1878, but there are no means by which to determine its extent. The crop was estimated between 8,000,000 and 9,000,000 bushels. The corn-crop was fair, but suffered in consequence of the damage to the seed, which is left in the field, from the severe winter and the heavy rains late in the season. Tobacco was subject to the same drawbacks and casualties as the corn-crop. Much of it was damaged by wind, hail, and rain. The extent of the damage could be stated only approximately. The crop was much below the previous year. The hemp-crop, although it grew out better than was anticipated, was very short compared with any previous crop, and of light fiber and inferior quality. Much of it was caught by the heavy rains after being cut, and consequently considerable of the gluten washed off. In addition, it was discolored by the rains instead of being bright and lively, as Kentucky hemp usually is. The fall crop of grass was finer than any in a score of years, and it compensated for the short spring crop and half crop of hay. The crop of Irish potatoes was short, yet sufficient was raised for home use, and of medium quality. The season was unusually favorable to the growth of sweet potatoes, and the crop was large and of extra quality. The same may be said of the other great garden staple, cabbage. Live stock of all kinds was reported in good and thrifty condition, and unusually exempt from disease. In fact, not a single disease was mentioned in any locality in the State; on the contrary, there was a remarkable exemption from those pests, hog and chicken cholera. The bees had a hard time, and many stands perished during the winter.

The drought ran through the entire honey-making season, and they were unable to lay in their usual store. There had not been one swarm this year where there are usually fifty.

The number of idiots in the State is 738. These are supported by the State at an expense of \$75 each, making a total of \$56,850. An examination as to the localities of the State to which they belong shows the following results: Jefferson County, embracing the city of Louisville, with a population of over 200,000, has only sixteen idiots; while Wayne County in the mountains, with a population of 10,602, has thirty idiots. Again, Kenton County, embracing the city of Covington, has a population of about 40,000 inhabitants and four idiots, while Whitley County in the mountains, with a population of 8,278, furnishes twenty-three idiots. Fayette County, with a population of 26,656, has one idiot, while Morgan County in the mountains, with a population of 5,975, has twenty-one idiots. Daviess County, with a population of 20,714, has seven idiots, while Wolf County in the mountains, with a population of 3,603, has thirteen idiots. Henderson County, with a population of 18,457, has four idiots, while Harlan County in the mountains, with a population of 4,415, has eighteen idiots. Campbell County, with a population of 27,406, has one idiot, while Clay County in the mountains, with a population of 8,297, has twenty-three idiots. At least three fourths of the idiots generally drawing pay from the Treasury are in the sparsely settled counties in Eastern Kentucky, familiarly known as the mountain counties.

The condition of the State Prison of Kentucky, according to the representations of Governor Blackburn, is truly horrible. The number of convicts at the close of the year was 969, with only 780 cells for their reception. The Governor says:

This terrible state of affairs required, as a necessity, that 378 of these wretched men should be thrust and immured two in a cell, although these cells were but 3 feet 9½ inches wide, 6 feet 3½ inches high, and 6 feet 8 inches long. These small, dark, ill-ventilated cells did not even contain sufficient air to support one man, and the death-record gives us abundant proof of this fact. From the 1st of January last up to the present time, there have died 74. This is a fearful mortality.

To show the terrible torments some of these convicts must endure, we quote from the testimony of Dr. William Rodman, an eminent physician of Frankfort, upon this subject. In a suit of the State against Jerry South, the present lessee of the Penitentiary, to recover money due the State, the defendant South introduced as a witness Dr. Rodman, who, being duly sworn, testified as follows: "That he had been a physician to the penitentiary for about eight years, and is well acquainted with the cell-houses and workshops. The cell-houses have been as bad as they well could be. Each man ought to have in his cell 840 feet of air; they get there 170 feet to two men. This has affected the health of the men in the prison, and very materially their working capacity." The Black Hole of Calcutta, so abhorred in history, was not much worse than this. Only think of it: two human beings crowded together in these dark, unwholesome little dens. To what beastliness may it not lead; yes, to what beastliness has it not already led! Ask those

who have kept your prison, and they will tell you; but shuddering delicacy will turn away and avert its head at the disgusting recital. The revelations would remind you of Sodom and Gomorrah. Let not such things be even under the very shadow of our Capitol. Remember, our Constitution says cruel punishment shall not be inflicted. If this is not cruel, the English language has lost all meaning.

There are in the State three asylums for the insane, but these are overcrowded, because of various counties thrusting into them a class of incurable epileptics and idiots. Many of this class of unfortunates are entirely harmless and quite rational, except when in epileptic convulsions, which occur at intervals of weeks or more, and last but a few hours. There is also an Asylum for the Blind at Louisville, a Deaf and Dumb Asylum at Danville, and the Feeble-Minded Institute at Frankfort. The condition of these institutions is represented as very favorable. The number of children in the last-named institution is 131. The receipts of the year were \$32,579, and the disbursements were \$28,045. Of the operation of the institution the superintendent thus speaks:

Less than one year ago a carpenter shop was erected, and a practical mechanic employed to teach them, and several boys put to that trade. They have progressed so satisfactorily, that they can now be sent to any part of the premises to do the most intricate work. Some months afterward a shoe-shop was furnished with necessary tools and leather, a teacher, also a practical mechanic, employed, and several boys put to that trade. So that now we are doing all the work required about the institution in carpentry, and also making and mending all the shoes used in the institution, saving largely in annual expenditures in this direction, teaching the boys valuable trades, and enabling the management, in the course of a few years, to send out annually a class of competent workmen. It is believed that the number of self-sustaining boys thus leaving every year will be at least equal to the number desiring admittance, and in this way we shall be able to provide for all the children of this class in the State; for as these boys improve, and get from under the immediate care of their instructors, others will take their places, until all who are old enough will be engaged in some industry.

The geological survey of the State is nearly completed. Four volumes have been published and two are ready for publication. The most considerable part of the work that yet remains to be done is the topographical surveying necessary to complete the State map. This work has already so far advanced that a relatively small expenditure will secure as complete and accurate representation of the geography and geology of the State as has yet been given of any State in the Union.

The success of fish-culture has been very encouraging. Many millions of young fish have been placed in the waters of the State, and abundant results are anticipated.

The number of insurance companies now regularly authorized to transact business in Kentucky is ninety-six, of which nine are life and eighty-seven are fire companies. One of the life and nine of the fire companies are organized and operated under the laws of Ken-

tucky; eight of the life and sixty-three of the fire companies are organized under the laws of other States; and fifteen fire companies are of foreign countries. The amount of insurance upon lives and property of citizens of this State, December 31, 1878, was \$116,567,851. The premiums received during that year from this State were \$1,860,591, and the losses paid amounted to \$1,028,397. Of these amounts, \$22,655,687 were issued by Kentucky companies, \$93,912,164 by companies of other States and foreign countries. Kentucky companies collected in the State, for 1878, \$335,545, and companies of other States and foreign countries collected \$1,525,046. Companies of the State paid for losses \$120,528, and companies of other States and foreign countries paid \$907,869. Not included in the above statement is the business of two accident and three mutual fire companies, the three latter being companies whose operations are confined to this State alone.

The number of the colored population of the State is 250,000. According to the assessment returns in the Auditor's office, the following results are shown:

WHITES.	
Total value of property for taxation, 1879....	\$341,949,321 00
Total tax on same, at 40 cents per \$100.....	1,367,797 28
BLACKS.	
Total value of property for taxation, 1879....	\$3,088,554 00
Total tax on same, at 45 cents per \$100.....	13,898 49
Total valuation for 1878.....	\$354,019,676 00
Total tax for 1878.....	1,416,078 70
Total valuation for 1877.....	353,012,736 00
Total tax for 1877.....	1,532,050 94
Total valuation for 1876.....	396,584,456 00
Total tax for 1876.....	1,586,137 94
Total valuation for 1875.....	417,602,638 00
Total tax for 1875.....	1,579,212 09

The value of the railroads, as made by the State Board of Equalization for taxation, is as follows:

	Valuation.
St. Louis and Southeastern.....	\$610,734 00
Memphis, Paducah, and Northern.....	306,425 00
Paducah and Elizabethtown.....	585,498 20
Mobile and Ohio.....	199,325 00
Chicago, St. Louis, and New Orleans.....	392,261 75
St. Louis, Iron Mountain, and Southern.....	12,368 18
Nashville, Chattanooga, and St. Louis.....	63,000 00
Owensboro and Nashville.....	105,000 00
Louisville and Nashville and Great Southern.....	5,677,571 00
Louisville, Cincinnati, and Lexington.....	2,267,444 00
Louisville Railway Transfer.....	20,650 00
Elizabethtown, Lexington, and Big Sandy.....	256,978 00
Lexington and Big Sandy, Eastern Division.....	176,900 00
Eastern Kentucky Railway Company.....	125,771 00
Southwestern Railroad.....	20,852 27
Louisville and Harrod's Creek Narrow-gauge.....	55,400 00
Mt. Sterling Coal Road.....	42,000 00
Kentucky Central.....	1,273,925 00
Division and Lexington Railroad, Northern	
Division.....	451,700 00
Maysville and Lexington Railroad, Southern	
Division.....	236,700 00
Cincinnati Southern Railroad.....	2,600,950 00
Shelby Railroad Company.....	140,675 00
Total.....	\$15,644,084 40

The increase is \$703,000 over the assessment for 1878.

The State guards who were sent to quell disturbances in Breathitt County in December,

1878, returned in March with thirteen of the principal actors. It was generally considered that the disorders there had not grown out of barbarism, or any relapse from the social status. An imperfect organization has resulted from the practical isolation of the people, the unlettered authorities, and the absence of schools and moral example. They need the contact of more advanced communities.

A great excitement was produced in the State by the killing of John M. Elliott, one of the Judges of the State Court of Appeals, by Thomas Buford. The tragedy occurred on the steps of the Capital Hotel in Frankfort on March 26th. Buford had embarked all the property that he owned, together with the whole estate of his sister, since deceased, in a tract of land in Henry County, and, the parties from whom he purchased failing to make a title to the land, a suit was pending before the Court of Appeals for the rescission of the trade, and the repayment to Buford of the twenty or thirty thousand dollars which he had paid on the property. A little more than a year previous, under a decision of the Circuit Court, the farm was sold for the deferred payments still due from Buford—some twelve thousand dollars—and the parties from whom he had purchased became the buyers, bidding in the property for the sum of twelve thousand dollars, thus taking from him, without recourse, the twenty odd thousand dollars already paid, and leaving him a pauper. This decision and sale were appealed to the highest Court in the State, and the decision was rendered on March 21st sustaining the sale, and leaving him to brood over his entire loss of everything. Buford was convicted of the murder and sentenced to hard labor in the State Prison during his life. The case was brought to the Court of Appeals for revision, and on filing the record, a paper in the nature of a protest against any action in the case by the present members of the Court was presented. To this the Court acceded, and the Governor appointed special judges to try the case.

The election of State officers was held on August 1st. In preparation for the same, the Democratic Convention assembled at Louisville on May 2d. John W. Stevenson was chosen permanent chairman. The following nominations were made for State officers: For Governor, Luke P. Blackburn; for Lieutenant-Governor, James E. Cantrill; for Attorney-General, P. W. Hardin; for Auditor, Fayette Hewitt; for Treasurer, James W. Tate; for Superintendent of Schools, J. Desha Pickett; for Register of Land-Office, Ralph Sheldon.

The following resolutions were adopted:

The Democracy of Kentucky, in convention assembled, reaffirm their attachment to the Constitution of the United States and the Union of the States, as the best guarantee for the liberties of the people and their prosperity and happiness.

They rejoice in the fact that it is in their power to recognize that all the States are restored to their political autonomy.

They hereby record their solemn protest that a popular verdict at the polls has been reversed by the action of an Electoral Commission, and they declare that, while in the interest of peace that result was acquiesced in, yet it shall not be held as a precedent for future violations of right and justice. Though thus deprived of control of the executive power in the administration of the Federal Government, they congratulate the people of the country at large that the popular will, expressed at the polls, has secured the supremacy of a Democratic majority in both Houses of Congress.

In further expression of our views, we resolve that we have viewed with intense interest the issue between the Congress of the United States and the President, and contemplate with unfeigned anxiety and condemnation the unprecedented attitude assumed by the Executive in his message rejecting the supplies tendered by the people for the support of their army, upon the wholesome condition that no military force should be used at their elections.

Resolved, That we heartily endorse the position taken by our Senators and Representatives in Congress in coupling with the appropriation bills now pending a demand for redress of grievances by the repeal of existing laws which tolerate the presence of soldiers at the polls, the continuance of test-oaths as a condition for jury service, and the employment of supervisors and deputy marshals to control elections.

Resolved, That in this great issue between the people and a partisan Executive we have implicit confidence in our Senators and Representatives, and, endorsing their action up to the present, hereby assure them of our hearty support in whatever action they may take to maintain the fundamental principle that the military power shall be kept subordinate to the civil, and that elections shall be free from executive interference.

Resolved, That we approve the action of the General Assembly in submitting to the people the question of calling a convention for the purpose of forming a State Constitution, and we hereby commend the call to the favorable consideration of the Democratic voters of the State.

Resolved, That we approve the measures heretofore adopted to create a general and efficient system of common-school education, and pledge the Democratic party to take such steps as from time to time experience may demonstrate to be wise to so perfect the system as to furnish every child in the State the means of a fair English education.

The Republican Convention for the nomination of State officers assembled at Louisville on April 10th. John D. White was elected chairman. Walter Evans received the nomination for Governor; for Lieutenant-Governor, O. S. Deming; for Attorney-General, A. H. Clark; for Auditor, J. Williamson; for Treasurer, R. P. Stoll; for Superintendent of Schools, M. McIntire; for Register of Land-Office, John H. Wilson.

The following resolutions were adopted:

The Republicans of Kentucky contemplate with pride the history and achievements of the Republican party of the United States. We hold up to the world the record it has made, both in war and in peace. We do not ask that any of it be forgotten; on the contrary, we point to its great deeds, and recall them to remembrance: the suppression of armed rebellion, its unparalleled magnanimity to the overthrown enemies of the Union, the emancipation and enfranchisement of an enslaved race, its determined purpose to honestly pay the national debt, its further stand on the side of honest money, the skill and prudence of its financial management, and its steadfast purpose that justice and right shall be done to all citizens of the United States under the laws, without distinction of race or color or previous condition of servitude.

We firmly adhere to the principles declared by the Republican party in the platform adopted at Cincinnati in 1876. The education of the people of all classes is a matter of the first necessity to the welfare of the State, and it is a wise and most economical use of public resources to advance to the highest efficiency our common-school system, and we pledge our hearty support to any system of public schools that will advance that end. A convention should be called at the earliest practicable time to revise our State Constitution, and we urge upon all the people of the State the duty of voting on all proper occasions in favor of calling such convention.

We condemn in the strongest terms the gross mismanagement of public affairs in this State by the Democratic party, which has had entire control of the State for the past fourteen years. It has failed to foster a common-school system worthy of the name, and has robbed the children of the State. It has sacrificed the important interests of State internal improvements, and, while it makes a boast that the State has no debt, we have the mortifying spectacle of a State with no public works or enterprise, and meager, antiquated, and inadequate police institutions. By useless and reckless extravagance, the current expenses of the State are nearly three times as great as before the war, while there is no reason or excuse for their being any greater.

By continuous appeals to the lower passions of the people, and by the constant laudation and encouragement of that spirit of contempt for constituted authority lately rampant in the rebellion, the people of the State have been educated into a disregard of law and order, until the good name of Kentucky has been blasted in the estimation of our sister States. The frequent necessity for using the militia to suppress disorder, and the lawless spirit which stops short of no crime, from the lynching of obscure white and colored persons to the assassination of judges on the bench, is the natural outgrowth of the pernicious teachings of the Democratic party.

The Republican party demands such a change in the conduct of our State affairs as will encourage our own people to remain in the State, instead of going from us, and induce immigration into our borders that our soil may be tilled and our resources developed.

While we favor economy, we demand that it be practical in cutting off useless extravagances, and we favor a more generous and liberal expenditure of the public money for the purpose of fostering our internal welfare, and aiding and encouraging our citizens in the general betterment of the condition of the State.

It is a cardinal principle of the Republican party that the currency of the country shall be sound and uniform in value, regulated by the authority of the nation, and convertible into coin at the will of the holders. The national debt should be paid in the most scrupulous good faith. We are proud that the Republican party has already been able to pay off a large portion thereof, and fund the remainder at a low rate of interest. We are proud that the Republican party, in the face of bitter Democratic opposition, has been able to resume specie payment; that it has established a currency that circulates with equal readiness in all parts of the country; and that it has made such a record upon financial questions that the whole world has an abiding faith that, so long as it remains in power, our national credit will remain unimpaired.

The Federal and State governments are part of one system, alike necessary for the common prosperity, peace, and security, and ought to be regarded alike with cordial, habitual, and immovable attachment. Respect for the authority of each, and acquiescence in the just constitutional measures of each, are duties required by the plainest considerations of national, State, and individual welfare; but the Constitution of the United States and the laws made in pursuance thereof are the supreme laws, anything in the Constitution or laws of

any State to the contrary notwithstanding. The legislative and judicial departments of the government are independent of each other, and each should be left to exercise its own duties under the Constitution.

The right of the President to veto a measure is as clear as the right of Congress to pass it. We therefore witness with indignation the present lawless attempt on the part of the Democratic Congress to coerce the President into subserviency to its views by the threat of withholding appropriations. In the trying position in which the President is thus placed, he is entitled to the encouragement and support of all good citizens. The declared purpose on the part of the Democratic members in Congress, to refuse appropriations until he yields to their demand, is revolutionary in its spirit; and as in 1861 secession was resorted to by those who could not control the Government in their own way, so now this declared determination to rule or starve the Government is another exhibition of rebellion, and every consideration of duty to the country demands that the President shall resist, by every constitutional means in his power, this spirit of lawlessness.

The Republican party is committed to the doctrine that every voter is entitled to one vote, and but one. Holding this doctrine, it stands in no terror of those wise and timely laws enacted by Congress to secure honest elections.

We have seen with pride and pleasure the distinguished honors paid to ex-President Grant by all classes in Europe. His services in war, and his patriotism and ability in the discharge of the high civil duties to which the confidence of his countrymen respectively called him, his wisdom, prudence, moderation, and integrity of character, entitle him to this striking and remarkable exhibition of courtesy and respect abroad, and to the lasting gratitude of his own people. His name and fame are inseparably linked with the most important events in our country's history. It is our pleasure thus to declare our admiration and esteem for him, our gratitude to and our confidence in him.

There was also a National ticket nominated, as follows: For Governor, C. W. Cook; for Lieutenant-Governor, D. B. Lewis; for Attorney-General, I. H. Trabue; for Auditor, Henry Potter; for Treasurer, W. T. Hardin; for Superintendent of Schools, K. C. McBeath; for Register of Land-Office, Gano Henry.

The result of the election was as follows: For Governor—Blackburn, Democrat, 125,799; Evans, Republican, 81,882; Cook, National, 18,954. For Lieutenant-Governor—Cantrill, Democrat, 124,368; Deming, Republican, 81,201; Lewis, National, 18,487. For Attorney-General—Hardin, Democrat, 224,495; Clark, Republican, 78,819; Trabue, National, 18,380. For Auditor—Hewitt, Democrat, 124,424; Williamson, Republican, 80,749; Potter, National, 18,364. For Treasurer—Tate, Democrat, 124,173; Stoll, Republican, 81,067; Hardin, National, 18,334. For Superintendent of Schools—Pickett, Democrat, 124,480; McIntire, Republican, 80,858; McBeath, National, 18,342. For Register—Sheldon, Democrat, 123,688; Wilson, Republican; 46,298, O'Dogherty, Republican, 26,739; Henry, National, 18,192. In the Legislature the Democrats had a large majority.

The proposition for a Constitutional Convention was defeated.

L

LAWRENCE, JOHN LAIRD MAIR, Baron, a British statesman, born March 4, 1811, died June 27, 1879. His education was directed with a view to civil service under the East India Company, and in 1829 he received his first appointment as writer to the Company. He held in the succeeding years various posts, and on all occasions discharged his duties with such ability that in 1843 he was appointed Commissioner of the Trans-Sutlej Provinces. For short periods at about the same time he acted as Resident at Lahore. The second Sikh war, which broke out in 1848, resulted in the annexation of the Punjab. A Board of Administration was appointed for the government of the new province, consisting of Mr. John Lawrence, his brother Henry, and Mr. Mansel; and in 1852 John Lawrence was made Chief Commissioner. Under this government the Punjab was ruled so wisely and so satisfactorily to the native population that, although newly annexed, the province stood almost alone in its adherence to the English when neighboring and distant districts broke out in open mutiny against foreign rule. The new administrative system had greatly ameliorated the condition of the people of the Punjab, and order and peace had taken the place of lawlessness. Upon the outbreak of the mutiny, the vigilance and energy of John Lawrence contributed materially to the work of upholding English supremacy in India. Skillfully turning to account the natural configuration of the province, he isolated it from the mutineers by stopping all means of communication. In 1858-'59 he was the first Lieutenant-Governor of the province. In 1856 he was made a K. C. B., and in 1857 G. C. B. He was created a baronet in 1858, sworn a member of the Privy Council, and on the creation of the order of the Star of India was made K. S. I. The Court of Directors of the East India Company granted him a life pension of £2,000, which, under a special act of Parliament, he continued to enjoy, together with his full salary, when he became Viceroy of India. He succeeded Lord Elgin in that post in December, 1863, and held it for the usual period of five years. In April, 1869, he was created Baron Lawrence. After his final return from India, he took a prominent part in philanthropic and educational movements in England. On the formation of the London School Board in 1870 he was chosen its chairman, and he held that post until 1873, when he resigned. In questions of Indian politics he continued to take an active interest, and during 1878 and 1879 he frequently wrote letters to the "Times," in which he warmly opposed the Afghan policy of the Government—a policy which was a distinct departure from that which he had carried out, and which had

been described by the phrase of "masterly inactivity." In India the news of his death called forth expressions of grief and sympathy from all classes of the people, and the Viceroy in Council ordered that on July 1st, at all the seats of government throughout India, the flags should be lowered to half-mast, that thirty-one minute-guns should be fired at sunset, and that the last gun should be fired and the flag dropped at the same time.

LINDERMAN, Dr. HENRY R., Superintendent of the United States Mint, born in Lehman township, Pike County, Pennsylvania, December 26, 1825, died in Washington, January 28, 1879. He studied medicine with his father, and completed his course at the University of New York. He returned home, and practiced his profession till 1853, when he was appointed chief clerk in the office of the Director of the Mint at Philadelphia, in which position he continued for twelve years, when he resigned to engage in private business. He was appointed Director of the Mint in 1867, and held that office for two years. On account of his great experience and thorough knowledge of such subjects, he was appointed by Secretary Boutwell to examine the mints on the Pacific coast and adjust some intricate bullion questions. He made many valuable reports to the Treasury Department upon various subjects connected with the mint service. In 1869-'70 he was associated with Comptroller Knox in the preparation of the coinage act of 1873, which was a codification of all the mint and coinage laws of the United States, with important amendments, and established the mint and assay offices of the United States as a bureau of the Treasury Department at Washington. When this act took effect, on April 1, 1873, he was appointed by President Grant Superintendent of the Mint, and organized the Mint Bureau in the Treasury Department, and from that time had the general supervision of all the mints and assay offices in the United States. His reports as Superintendent of the Mint are exceedingly valuable documents. The one for 1877 contained an elaborate and able argument in favor of the gold standard. He was the author of a volume on "Money and Legal Tender," published in June, 1877, which has received the highest praise. Dr. Linderman was socially a genial and kind-hearted gentleman, and accustomed to the practice of a liberal hospitality.

LITERATURE, AMERICAN, IN 1879. Contemporaneous American literature is not less distinctively national in character than that of former epochs, nor comparatively less prolific and nationally complete. Yet it has lost its more salient and effective national characteristics. The attention to literary correctness and æsthetic refinement, and the repugnance to

any kind of excess, which seem at present to be the dominant principles in American letters, can only be cultivated at the expense of spontaneous force and originality. The present movement is a true characteristic phase in the national literary development, not a factitious effort to correct national shortcomings upon foreign models. In accurate æsthetic perceptions and true artistic impulses the belletristic writers in America are now distinguished above those of any other nation. An analogous sagacity and balance of mind, a self-critical power, and the perception of the true aims of investigation and limits of speculation, characterize the scientific workers and authors and the scholars and historians of America. Although few publishers can say that it has been a satisfactory year, owing to the peculiar condition of the trade, the press has been unusually busy, and the public has consumed a large amount of literature this last year. Judging the state of the national intelligence by the quality of the books provided for its requirements which meet with the strongest demand, an encouraging elevation of the standard of literary taste is noticeable. A still more satisfactory phenomenon is the lively and widespread interest taken in science and in art. Science and the arts have come under the influence of the democratic spirit. Through cheap popular treatises, written in language which is universally understood, and by the auxiliary means of improved processes of pictorial reproduction, a knowledge of the elementary principles and leading facts in the sciences, and some acquaintance with the æsthetic purposes of art-production and familiarity with the best examples of art, have become a part of popular education.

In the departments of *Religion and Philosophy* the publications have not been numerous, but include some works of exceptionally high character. Religious literature has certainly fallen off in bulk, compared with other classes of books, of late years; but, when examined in all its aspects, the phenomenon does not prove discouraging to the friends of religion. The volumes of crude sermons, meditations, and rhapsodies, with which the press formerly teemed, are replaced by other popular reading, some of it more intellectually edifying. The sectarian controversies on minor dogmas have been silenced by the nobler warfare with anti-theological thought. The scientific assailants of religion are confronted by champions of the faith who are quite their equals in mental culture and dialectical skill. The tone and substance of the religious and popular theological books which now issue from the press betoken an advancement in intellectual comprehension and refinement in the religious community. The character of the more serious doctrinal and exegetical works of the day shows a corresponding elevation of standard in scholarship and mental training among professional theologians. The learning of foreign scholars,

notably the German, has been made use of, but not without subjecting it to the more alert and thorough critical methods of American thought and assimilating it to the national type of mentality. In speculative metaphysics there is no vitality, the theologians and their scientific antagonists occupying the whole arena of philosophical literature. Professor George D. Fisher's "Faith and Rationalism" is a temperate and philosophical defence of evangelical truths, written with considerable dialectical power (New York, Charles Scribner's Sons). "Practical Theology" is a manual of homiletics by Professor J. J. van Oosterzee (Boston, Houghton, Osgood & Co.). The late Rev. Dr. Charles Hodge's "Conference Papers" contain an able exposition of Christian doctrines. "Society the Redeemed Form of Man" (Houghton, Osgood & Co.) is a thoughtful expression of liberal religion by Henry James. A popular book by Professor Swing is "Motives of Life" (Chicago, Jansen, McClurg & Co.). "Studies in the Model Prayer" is an analysis of the Lord's Prayer by the Rev. Dr. George D. Boardman (New York, D. Appleton & Co.). "The Epiphanies of the Risen Lord," by the same author, is an elegant illustrated volume in which the appearances of Christ after the Resurrection are recounted. Dr. G. Uhlhorn's "Conflict of Christianity with Heathenism" (Charles Scribner's Sons) is a translation of a learned work on the rise of Christianity, vividly presenting the forces, intellectual and physical, which combined to crush the infant Church. The Rev. Dr. Joseph A. Seiss, in "A Miracle in Stone" (Philadelphia, Porter & Coates), gives a clear and popular account of the Great Pyramid of Gizeh, and insists on the miraculous nature of the coincidences detected by Piazzzi Smyth and others between its proportions and various astronomical measurements and other physical facts. "Voices from Babylon," by the same author, is a volume of speculations on the fulfillment of prophecy. The American translation of Lange's Commentary on the Bible is completed by the issue of the volume on Numbers and Deuteronomy (Charles Scribner's Sons). A "Commentary on Paul's Epistle to the Romans," by Professor W. G. T. Shedd, is published by Charles Scribner's Sons. "The Book of Job: Essays and a Metrical Paraphrase" (D. Appleton & Co.), by Rossiter W. Raymond, contains besides the paraphrase thoughtful and scholarly comments and elucidations. "Sacred Cities," by the Rev. Dr. John S. Lee, is a popular description of Biblical places, of which a second edition has appeared (Cincinnati, Williamson & Cantwell). "Apostolic Fathers and Apologists of the Second Century," by the Rev. G. A. Jackson, is the first number of a series of "Early Christian Literature Primers" (D. Appleton & Co.).

The interest felt in the recent developments of *Science* is as keen in the United States as in any country; but the original investigators in science are yet comparatively few in America,

and the instructors upon whom the public relies for scientific information are most frequently the writers and scientists of other lands, particularly the English popularizers of science. Professor Ernst Haeckel's "The Evolution of Man," published by D. Appleton & Co., is the great text-book on Darwinism, the accepted and authoritative exposition of the theory of descent. Professor Haeckel in preparing this work had the double object in view of presenting and elucidating in one orderly whole his doctrine of evolution, and collecting and coordinating the evidence in its support, and that of instructing and convincing the general public. The task of rendering popularly intelligible a scientific exposition of new theories is most difficult to accomplish in any language, and is rarely attempted in German; but Haeckel, although as a pioneer of science obliged to invent many new terms, expounds his subject with remarkable lucidity, which is well preserved in the translation. "The Human Species," by Quatrefages, the distinguished French anthropologist and geographer, forms the twenty-seventh volume of the "International Scientific Series," published by D. Appleton & Co. of New York; this volume not only bears the impress of the author's unrivaled learning and profound grasp of his subject, but, with the exercise of a rare degree of literary skill, the theme has been enveloped in a most attractive garb and rendered exceedingly fascinating. Professor Rood's contribution to the "International Scientific Series," "Modern Chromatics," is more than a handbook of instruction; it is a work of original research in this difficult and inchoate branch of science, and a guide as well to the artistic use of color. Dr. B. Jay Jeffries's "Color-Blindness, its Dangers and its Detection" (Houghton, Osgood & Co.), is a systematic treatise on this defect, which has been the subject of much investigation of late in different countries, the results of which are digested in this volume. "The Multitudinous Seas" (D. Appleton & Co.) is a picturesque and scientific account of the ocean and its phenomena, by S. G. W. Benjamin. Elliott Coues's "Birds of the Colorado Valley," printed at the Government Printing-Office in Washington, is the first part of a great work on American ornithology, entitled "Passeres to Laniidæ." The eminent naturalist who has undertaken this task has wisely sought to render the work intelligible to non-scientific readers by discarding the scientific nomenclature in his account of the life-history of the birds. Charles Pickering's "Chronological History of Plants" (Boston, Little, Brown & Co.) is a posthumous work containing a vast amount of recondite information, but which is imperfectly digested and faultily arranged, being published without revision in the unfinished form in which it was left by its author.

In *Mechanics* and the applications of science to the practical uses of life, the American nation is not behind the others, nor its literature

poorer or less extensive. A description of late electrical inventions is given in George S. Prescott's "The Speaking Telephone" (D. Appleton & Co.). A valuable practical treatise on surveying and locating railroads has been written by William F. Shunk, entitled "The Field Engineer" (New York, D. Van Nostrand). "Railroad Accidents," by Charles Francis Adams, Jr. (New York, G. P. Putnam's Sons), is an account of the more noteworthy catastrophes on railroads and a practical inquiry into the causes and the means of preventing such accidents. Other works on mechanical subjects are William M. Burr's manual on fuel combustion, published by John Brothers of Indianapolis; Emory Edwards's "Marine Steam-Engine" (Philadelphia, H. C. Baird & Co.); W. Kent on the "Strength of Materials" (New York, D. Van Nostrand); "Manual of Power for Machines, Shafts, and Belts," and "History of Cotton Manufacture in the United States," by S. Webber (D. Appleton & Co.). A systematic and exhaustive treatise on breeding domestic animals to develop desired points and qualities, by Dr. Manly Miles, is entitled "Stock-Breeding" (D. Appleton & Co.).

The medical profession of America is distinguished for its progressive activity. A very extensive special literature is published embodying the latest researches in *Medical Science*, American and European. A popular literature for the spread of medical and hygienic knowledge has lately appeared, which is more satisfactory in its character and more effective in its form than anything of the kind which has preceded it. Besides the excellent "Health Primers" published by D. Appleton & Co. (see LITERATURE, BRITISH, IN 1879), a similar series of "American Health Primers" has been issued by the Philadelphia publishers, Lindsay & Blakiston, the contributors to which are American physicians exclusively: it includes "Summer and its Diseases," by Dr. James C. Wilson; "Winter and its Dangers," by Dr. Hamilton Osgood; "The Throat and the Voice," by Dr. J. Solis Cohen; "Eyesight, and How to Care for it," by Dr. G. C. Harlan; "The Mouth and the Teeth," by Dr. J. W. White; and "Hearing, and How to Keep it," by Dr. Charles H. Burnett. Dr. Richard McSherry's "Health, and How to Promote it" (D. Appleton & Co.), is an excellent work of the same class, as is also "Emergencies, and How to Meet them" (G. P. Putnam's Sons), by Professor Burt C. Wilder. "The National Dispensary" (Philadelphia, Henry C. Lea), by Drs. Alfred Stillé and John M. Maisch, is a much-needed comprehensive, critical digest of the material contained in the last edition of the "United States Pharmacopœia," presenting the present condition and reflecting the latest accepted principles of materia medica. A presentation of the homœopathic views on the action of medicinal remedies is given by Dr. Carrol Dunham in "Lectures on Materia Medica" (New York, Francis Hart & Co.). Among the new works on special

medical subjects may be mentioned the translation by J. O. Green of Hermann Schwarze's treatise on the pathological anatomy of the ear (Houghton, Osgood & Co.); F. Mortimer Granville's "Common Mind-Troubles" and "The Secret of a Clear Head" (Salem, S. E. Cassino); a translation of Hoffmann and Ultzmann's treatise on urine examination (D. Appleton & Co.); Galabin's text-book of female diseases (Lindsay & Blakiston); and J. Gamgee's treatise on yellow fever (D. Appleton & Co.), which he thinks originates on ships.

A few books have been published during the year upon subjects connected with the *Law*, which, from their character or the form in which they are presented, are of interest to the lay public. A contribution to the question of international copyright, treating of the theories of ownership in literary property which guide legislation and judicial decisions in both Great Britain and America, and arguing in favor of an international guarantee of authors' rights, is Eaton S. Drone's "Treatise on the Law of Property in Intellectual Productions" (Boston, Little, Brown & Co.). G. H. Putnam and Appleton Morgan have published opinions on the same subject, the former in one of G. P. Putnam's Sons "Economic Monographs," and the latter in an open letter to Secretary Evarts, published by Aug. Brentano, Jr., of New York. E. M. Gallaudet's "Manual of International Law" (New York, A. S. Barnes and Co.) is based on Calvo's French treatise. A revised and final edition of Professor Woolsey's standard work on this subject has been issued. A popular treatise on a legal subject of much interest to the investing community is "A Treatise on the Law of Railroad and other Corporate Securities," by Leonard A. Jones (Houghton, Osgood & Co.). "The Law of the Road," by R. Vashon Rogers, Jr. (San Francisco, Sumner, Whitney & Co.), aims to instruct the general public in legal principles; and to render the study attractive, the book is interspersed and enlivened with wit and anecdote. It is one of a series of such books, another of which, by the same author, is "The Law of Hotel Life." A manual of the laws relating to shipping and admiralty according to British and American decisions has been compiled by Robert Desty (Sumner, Whitney & Co.); and the same subject is treated in Theodore M. Etting's essay on "Admiralty Jurisdiction in America" (Philadelphia, Rees, Welsh & Co.). In the series of "Economic Monographs," published by G. P. Putnam's Sons of New York, is an interesting tract by E. R. Squibb on the subject of the adulteration of food and its legislative prevention. The law of extradition is set forth in a special treatise by S. T. Spear (Albany, Weed & Parsons). Other new works are G. W. Brandt's treatise on "The Law of Suretyship and Guaranty," and M. T. Cooley's "Treatise upon Wrongs and their Remedies" (Chicago, Callahan & Co.); a "Treatise upon the Law of

Principal and Agent," by W. Evans (Chicago Legal News Co.); a compilation of the insolvent statutes actually in force in the different States and Canada, by Raphael J. Moses, Jr. (New York, Baker, Voorhis & Co.); "Commentaries on Lunacy Laws," by James Ordronaux (Albany, J. D. Parsons, Jr.); a treatise on the "Law of Eminent Domain," by H. E. Mills, and one of Seymour D. Thompson on the "Liability of Stockholders" (St. Louis, F. H. Thomas & Co.).

In *Philology* America produces her share of books. The completest dictionary of the English tongue is the product of American scholarship; and the enterprise of its publishers and the learning and industry of American scholars are sufficient to prevent this great work from becoming antiquated. The new edition of Webster's "Unabridged Dictionary," edited by Chauncey A. Goodrich and Professor Noah Porter (Springfield, G. & C. Merriam), contains an appended biographical pronouncing dictionary, and a vocabulary of five thousand new words which have gained currency since the last edition was issued. Andrews's edition of Freund's Latin lexicon had been for a generation the instrument with which American students have obtained their knowledge of Roman literature. In Harper's "Latin Dictionary" the old work has been thoroughly worked over and considerably augmented by Charlton T. Lewis and Charles Short. Professor W. Dwight Whitney has published an improved grammar of classical Sanskrit and the older dialects (New York, B. Westermann & Co.). "The English Language: its Grammatical and Logical Principles," by Harris R. Greene (Houghton, Osgood & Co.), is an elementary theoretical treatise on English grammar. R. Morris's "Elementary Lessons in Historical Grammar" deals with accidence and word-formation (D. Appleton & Co.). Brother Azarias's "Development of English Literature" is an excellent text-book (D. Appleton & Co.), as also J. H. Gilmore's "The English Language and its Early Literature." Rasmus B. Anderson has published an English translation of the "Younger Edda" (Chicago, S. O. Griggs & Co.).

An improvement can be remarked year by year in the methods and quality of the instruction in American schools, and a system of pedagogics adapted to the national needs is slowly and quietly developing. Among the works treating of the methods of *Education* may be mentioned the study of James H. Hoose "On the Promise of Methods of Teaching," the tract of Fitch on the art of questioning, and that of Bennett on national education in different countries (Syracuse, Davis, Baldwin & Co.); also the essays of Hamerton, McCosh, and others on the higher education (New York, A. S. Barnes & Co.). A hand-book of the requirements for admission into the different colleges, by A. F. Nightingale, is published by D. Appleton & Co. The lectures delivered at

their summer's meeting have been published in Boston by the American Institute of Instruction. O. F. Adams, Jr., has published essays on "The Public Library and the Common Schools" (Boston, Estes & Lauriat). The theory of tuition according to the laws of the mind is discussed in "Education as a Science," by Alexander Bain (D. Appleton & Co.), reprinted for the "International Science Series." Ernst Haeckel's "Freedom in Science and Teaching" (D. Appleton & Co.) is his famous assertion of the rights of science insured by the German Constitution, in reply to the warnings of Virchow. The text-books for school use are improving in rango and quality. Several publishing houses vie with each other in producing excellent books of this class; and educators and writers of ability are devoting their talents more and more to the preparation of school-books. Nevertheless a movement has commenced in some of the States in favor of official text-books. Many of the popular scientific manuals of small size which are issuing in series and singly from the press are well adapted for text-books, and are often used for the purpose.

In the field of *Literary History and Criticism*, Professor Moses Coit Tyler's important work on the "History of American Literature" (G. P. Putnam's Sons) is the most notable production of the year. The first two volumes only bring the subject down to the year 1765. The author endues the literature of the American colonies with a charm and interest which as literature purely it lacks entirely, by tracing through it the germination and development of American ideas. Only in the highest reaches, and as the latest product of the most modern mental methods and discipline, has it been possible to write the intellectual history of an age or race; and the effort of Professor Tyler to deal with the evolution of American social and political thought, animated as it is all through with a contagious enthusiasm, can not fail of an elevating and broadening influence on national education. "Some Newspaper Tendencies," by Whitelaw Reid (New York, Henry Holt & Co.), is a clear and practical explanation of the practice and purposes of American journalism. "Studies in German Literature" (G. P. Putnam's Sons) consists of a course of lectures by the late Bayard Taylor on the classical authors of Germany and the early periods of her literature. Homer's "Short History of German Literature" (St. Louis, G. I. Jones & Co.) is a well-written and comprehensive survey of the chief currents of German thought and literature.

The growing interest of the public in *Æsthetics* is satisfied by a number of books of high character. "Conversations on Art Methods," by Thomas Couture (G. P. Putnam's Sons), is a translation by S. E. Stuart of a book which has exerted considerable influence on contemporary art. Another book which marks a great development in art thought and meth-

od is "Ruskin on Painting," containing the pith of his "Modern Painters," published in D. Appleton & Co's "Handy-Volume Series." Eugène Véron's "Æsthetics" (Philadelphia, J. B. Lippincott & Co.), translated by W. H. Armstrong, is an exposition of the principles of reform in art and of revolt against the rigid rules of French classicism, and an appeal in favor of the liberal catholicity advocated by Viollet-le-Duc. Anthony's American edition of Jacob von Falke's "Art in the House," with notes by Charles C. Perkins (Boston, L. Prang & Co.), is an illustrated work on decorative art, which, as might be expected from its German source, suggests a wider range of decorative conceptions, derived from the more comprehensive study of the history of ornament in all times and countries, than the numerous treatises which have their source in the late movement in decorative art in England, which has also spread to America; the work of the German professor is also interesting as a history of domestic architecture and ornament from ancient times down to the present. Seemann's "Illustrations of the History of Art," an extensive German pictorial work, has been reproduced by L. Prang & Co. of Boston. Among the literary outcroppings of the recent popular interest in the ornamental arts is an illustrated volume by Jennie J. Young on "The Ceramic Art" (New York, Harper & Brothers); it is a book of peculiar interest, in that it shows the history and condition of the American production in the potter's art. A technical work on the same subject, entitled "A Practical Treatise on China-Painting in America" (New York, John Wiley & Sons), has for its author Camille Piton of the National Art-Training School in Philadelphia. "Bibelots and Curios" (D. Appleton & Co.) is a manual for collectors by Frederic Vors. S. G. W. Benjamin's "Art in America" (Harper & Brothers) is a critical and historical sketch of the development of the fine arts in the United States. Helmholtz's discoveries in acoustics and their bearing on musical art are ably discussed in William Pole's "The Philosophy of Music" (Houghton, Osgood & Co.).

The present activity of thought upon subjects relating to *Politics and National Economy* manifests itself in numerous productions by the pen. "A True Republic," by Albert Stickney (Harper & Brothers), is a treatise on American politics, and an appeal for certain constitutional changes for the purpose of avoiding the evils resulting from party conflicts and the spoils system. "A Proposal for a Reform in the Federal Executive," by Mortimer G. Tibbits, favors a responsible executive chosen by Congress (New York, Brentano's Literary Emporium). Sir George Campbell's "White and Black" gives the opinions of a member of the British Parliament on the negro question formed during a visit to America (New York, R. Worthington). The question of civil-service reform, viewed in the light of British example, is pre-

sented by Dorman B. Eaton in a book entitled "Civil Service in Great Britain" (Harper & Brothers). "The Currency Question" (G. P. Putnam's Sons) is an argument against inflation and against State banks, by Judge Robert W. Hughes of Virginia. Secretary John Sherman's principal writings on subjects connected with finance and taxation are given in a volume of "Selected Speeches and Reports" (D. Appleton & Co.). Charles Francis Adams, Jr., deals with the political questions connected with railroading in a volume on "Railroads, their Origin and Problems" (G. P. Putnam's Sons). Roscher's standard German treatise on political economy has been translated by John J. Lalor and published by Henry Holt of New York. Professor Francis A. Walker's "Money, Trade, and Industry" (Henry Holt & Co.) is a valuable contribution to political economy, discussing the relations of money to commerce and production, and defining the true nature of money from the standpoint of the political economists with great clearness and force; a branch of economical science which has a peculiar present interest to the American public, being involved in some of the living questions of politics. Professor Roswell D. Hitchcock, in "Socialism," while deprecating the theories of the socialistic teachers of Europe, appeals to Christian sentiment to supply the links of sympathy and fellowship whose absence embitters and antagonizes the different classes of society. "Labor and Capital Allies, not Enemies" (Harper & Brothers), contains the substance of an argument presented before the Hewitt Congressional Committee by Edward Atkinson. The Rev. Joseph P. Thompson discusses socialism and the labor question in "The Workman: his False Friends and his True Friends" (American Tract Society). Henry Ammon James's essay on "Communism in America" (Henry Holt & Co.) received the Yale Porter prize in 1878. A series of "Economic Monographs" (G. P. Putnam's Sons) includes "Honest Money and Labor," by Carl Schurz; "National Banking," by M. L. Scudder; "Bimetallism," by Hugh McCulloch; "Labor-making Machinery," by F. Perry Powers; and "Andrew Jackson and the Bank of the United States," by William M. Royall. The "Industrial History of the United States," by Albert S. Bolles (Norwich, Conn.), is a work on an important subject, compiled with considerable labor. The "American Almanac and Treasury of Facts" for 1879 is a compilation of well-selected statistics, by A. R. Spofford (New York, American News Company). The "Primer on the Natural Resources of the United States" (D. Appleton & Co.) is a useful compendium by J. H. Patton. "The Commercial Products of the Sea," by P. L. Simmonds (D. Appleton & Co.), is the first general treatise yet written on this interesting subject. Holyoake's "History of Coöperation in England" (J. B. Lippincott & Co.) is a work of exhaustive research, a faithful and comprehensive account of an important economical development.

A moderate number of books of *Travel and Geography* of a light and popular character have been produced, and some with more studious and thoughtful contents. "Four Months in a Sneak-Box" is a narrative of a voyage in a small hunting-boat on Western rivers, by Nathaniel H. Bishop (Boston, Lee & Shepard). Updegraff's "Bodines" is a narrative of the experiences of two amateur fishermen upon their excursions in the woods of Pennsylvania (J. B. Lippincott & Co.). "The Witchery of Archery" (Charles Scribner's Sons), by Maurice Thompson, is an entertaining book of descriptions of nature by one fond of roving the woods with a long-bow in his hand, and a manual of the sport of bow-shooting. "A Fool's Errand, by one of the Fools," is a caustic account of the social condition of the South by an officer of the Federal army who lived there for several years after the war (New York, Fords, Howard & Hulbert). Mrs. H. W. Beecher's "Letters from Florida" (D. Appleton & Co.) are descriptions of that subtropical State, presenting its advantages as a sanitarium. J. Codman's "The Round Trip by Way of Panama" is an excellent descriptive and statistical account of the Pacific and Rocky Mountain States and Territories (G. P. Putnam's Sons). William H. Rideing's "A-Saddle in the Wild West" (D. Appleton & Co.) is a remarkably entertaining book of travel in the Western country, relating experiences passed through in the Wheeler Expedition, and graphically describing the scenes and objects encountered. "The Great Fur Land" is an illustrated volume descriptive of the Hudson's Bay Territory, by H. M. Robinson (G. P. Putnam's Sons). "Brazil, the Amazons, and the Coast," by Herbert H. Smith (Charles Scribner's Sons), is an account of travels and explorations in Brazil by a naturalist who is at the same time an intelligent observer of social and economical conditions. "Around the World with General Grant," by John Russell Young, is published by the American News Company in the form, growing in favor, of a subscription part book. An account of the ex-President's tour has also been written by J. M. Keating, "With General Grant in the East" (J. B. Lippincott & Co.). "The World's Paradieses" is a readable account of the most noted sanitarium, by S. G. W. Benjamin, published in Appleton's Handy-Volume Series, which includes also "The Alpenstock," an agreeable description of Alpine scenes and explorations, by W. H. Rideing. Horatio King's "Sketches of Travel" is a narrative of European travel by ex-Postmaster King (Washington, J. Bradley Adams). William Winter's "Trip to England" (Boston, Lee & Shepard) is filled with the sentiments inspired in a mind of tender sensibilities on visiting the scenes of historic memories. "Spain in Profile," by James Albert Harrison (Houghton, Osgood & Co.), is a volume of impressions and descriptions

of travel. "Tyrol and the Skirt of the Alps," by George E. Waring, Jr. (Harper & Brothers), is a pleasant and instructive work of travel, handsomely illustrated. One of the finest subscription books produced in recent times is the great geographical work of Elisé Reclus, "The Earth and its Inhabitants," issued in parts by D. Appleton & Co. The Rev. Dr. S. O. Bartlett's "From Egypt to Palestine" (Harper & Brothers) is a historical study of the exodus of the Hebrews from Egypt, as well as a narrative of travels through the scenes of their wanderings; the theories of rationalistic commentators are critically examined, and the supernatural character of the recorded miracles is strenuously maintained. The book is most valuable as a collated digest of hypotheses and discoveries of Biblical antiquities; but the Biblical learning of which it is full is animated and brought much nearer to the reader by the graphic descriptions of the scenes and objects from actual observation, and by the narrative of personal experiences in the Wilderness, written with the sympathy and feeling of an ardent student of the Bible and believer in its literal interpretation. H. Ballantine's "Midnight Marches through Persia" (Lee & Shepard) is an account of a horseback journey full of adventures, containing interesting information on the life and manners of the people and the commercial resources of the country. "Progressive Japan," by General Le Gendre (San Francisco, A. L. Bancroft & Co.), contains well-considered opinions on social and political reforms in Japan. The author writes with a knowledge of and a sympathy for Japanese traditions and culture, and protests against violent innovations foreign to the national spirit. "The Sunrise Kingdom," by Mrs. Julia D. Carrothers (Philadelphia, Presbyterian Board of Publication), is a record of missionary life in Japan. "China and Japan," by the Rev. J. D. Wiley (Cincinnati, Hitchcock & Walden), is an account of travels and residence in those countries.

Although no special impulse toward historical studies has manifested itself, several works of *History* of unusual ability and scholarship, and of enduring value, have first seen the light during the past year. An account of the prehistoric remains in the burial mounds and caves of Kentucky, Missouri, and Mississippi, with speculations as to the aboriginal American people, is given by A. J. Conant in "Footprints of Vanished Races in the Mississippi Valley" (St. Louis, C. R. Barnes). John T. Short's "The North Americans of Antiquity" (Harper & Brothers) is a popular manual of the discoveries and theories of antiquarian research on the early inhabitants of America. J. A. Farrer, in "Primitive Manners and Customs" (Henry Holt & Co.), discusses the problems connected with the savage stage of development. M. D. Conway, in "Demonology and Devil-Lore" (Henry Holt & Co.), gives the fruits of many years' study of a subject

which, notwithstanding its historical importance, might be soon lost and hidden in the lumber-room of antiquarianism had not the present author allowed his mind to become fascinated and so thoroughly saturated with this theme that he bestowed upon it the thought and research which many historians devote to a much wider field of investigation. A series of "Essays in Anglo-Saxon Law," by Henry Adams, H. Cabot Lodge, Ernest Young, and J. Laurence Laughlin (Little, Brown & Co.), is a work of comparative jurisprudence in which the authors have expended on their different subjects the long and deep research, enlightened by the newer school of historical jurisprudence, which the originals of our legal institutions demand. As one of the first products of American study in a field of investigation that has only been cultivated in countries which afford literary leisure or support a literary class, it is a hopeful and gratifying phenomenon. "A Popular History of the United States" (Charles Scribner's Sons), commenced under the nominal editorship of the late William Cullen Bryant, is a hasty compilation by several hands, bearing few marks of serious research, and carelessly edited, but popular in its literary form and choice of materials, and rendered still more attractive by numerous woodcuts. The "History of New York during the Revolutionary War," by Judge Thomas Jones, is a document of great historical value, containing a record of the events of the Revolution and trenchant reflections on men and politics by an ardent Tory; having been kept until now out of the reach of historians even, its publication in full by the New York Historical Society is well justified by the graphic and lively style in which it is written, as well as by the historical materials which it contains. "The Constitutional and Political History of the United States" (Chicago, Callaghan & Co.), translated from the German of H. von Holst, is the most studious analytical work which has appeared on the political development of the American Republic. Written by a foreigner after a searching critical examination, it gives a more complete, objective, and judicial criticism of American political institutions than a native historian could present, but not without a bias, derived from his own nationality, in favor of a strong and supreme centralized government. Alexander Johnston's "History of American Politics" is a record of parties and political questions conveniently summarized, and a useful book for American students. General George W. Cullum has ably recounted the military history of the second war of the United States with England in "Campaigns of the War of 1812-'15" (New York, James Miller), in which many valuable historical facts have been gleaned and admirably digested from inaccessible and scattered documents.

The republication of the classics of American oratory serves the double purpose of preserving models of the grand, impressive, and full-

flavored national style of rhetoric, which has since too often degenerated into empty bombast, and of keeping before the minds of the people the inherent and ever-recurring problems of the American form of government. The "Addresses and Orations" of Rufus Choate (Little, Brown & Co.) preserve and exemplify those characteristics of poetry and imagination and harmonious flow, which at one time, together with a high moral inspiration, distinguished American oratory, and of which the speeches of Rufus Choate furnish some of the purest, if not the most brilliant examples. Webster's more famous speeches have also been published, accompanied with a critical essay by E. P. Whipple (Little, Brown & Co.).

Several of the *Biographies and Memoirs* published during the year are chiefly valuable through the light they shed upon history. "Petrus Martyr" is an account of the earliest historian of discoveries in America, the fruit of researches in American libraries, written by H. A. Schumacher, German Consul-General, and issued by the German publisher E. Steiger of New York. The Diary of Judge Sewell, which presents a vivid picture of life and manners in Boston at the end of the seventeenth and the beginning of the eighteenth century, has been often used by colonial historians, but has been recently published in its entirety for the first time by the Massachusetts Historical Society. "The New Puritan," by James S. Pike (Harper & Brothers), is an account of Robert Pike, a man ahead of his age who lived in the days of Salem witchcraft. J. N. Arnold's "Life of Benedict Arnold" (Chicago, Jansen, McClurg & Co.) contains new facts, and is an attempt to rescue the name of the impetuous and selfish officer from the obloquy which has attached to it. "The Life of Albert Gallatin," by Henry Adams, and the "Writings of Albert Gallatin" (J. B. Lippincott & Co.), contain, though in an excessively voluminous form, a valuable store of information upon an eventful formative epoch in American history, and introduce to the reader a man who, from his high character and the important part he played in politics, deserves not to be forgotten. "The Life and Epoch of Hamilton," by Judge George Shea (Houghton, Osgood & Co.), is a panegyric essay upon the life and works of that statesman, containing much biographical information that is new concerning the earlier portion of his career. "The Life of David Glasgow Farragut," by his son Loyall Farragut (D. Appleton & Co.), is a book of deep and varied interest; the great naval commander is made to tell the story of his own life, as far as possible, by extracts from his diaries, clear and vigorous in style, manly and elevated in tone, and full of individuality, containing life-like sketches of the principal officers in the American navy, and spirited accounts of the sea-engagements from the war of 1812 down to the close of the civil war; it is a valuable contribution to American history, as well as a biog-

raphy of a man of rare force and purity of character. "John Lothrop Motley," by Dr. Oliver Wendell Holmes (Houghton, Osgood & Co.), is a generous tribute of praise to a dead friend, and a vindication of Motley's character and conduct as a diplomatist. "Destruction and Reconstruction" is a book of personal reminiscences of the war of secession by General Richard Taylor, of the Confederate Army (D. Appleton & Co.). The "Memoir of S. S. Prentiss" (Charles Scribner's Sons) preserves the memory of a once famous wit and orator, and reveals the social condition of the Southwest in the ante-bellum times. The "Personal Memoirs" of E. D. Mansfield is a volume of interesting reminiscences by a veteran Western journalist (Cincinnati, Robert Clarke & Co.). A most interesting volume of reminiscences relating to the history of the Napoleonic era is the "Memoirs of Madame de Rémusat," containing remarkable revelations concerning Napoleon, and novel details of the secret history of the First Empire, and interesting pictures of court life (D. Appleton & Co.). "Bismarck in the Franco-German War, 1871" (Charles Scribner's Sons), is a translation of a diary kept by the Chancellor's secretary, Dr. Moritz Buseh, the Boswellian minuteness and unreserve of which has aided in rendering the personality of the German statesman much more familiar to the world than it was before the publication of this curious work. Two French works on the late President Thiers and the events in which he was a prominent actor have been published in translations: "The Government of M. Thiers, from the 8th of February, 1871, to the 24th of May, 1873," by Jules Simon (Charles Scribner's Sons), and "The Life of Louis Adolphe Thiers," by François le Goff (G. P. Putnam's Sons).

A few of the biographical publications of the year, of literary, artistic, or personal interest, are equally worthy of note. "Hector Berlioz" is a collection of the letters and musical criticisms of an erratic and impetuous man of genius, who did much for the development of musical art both as a critic and as a composer; these interesting memoirs are translated by William F. Apthorp, and published by Henry Holt & Co. Mrs. Frances Anne Kemble's "Records of a Girlhood" (Henry Holt & Co.) is a pleasant volume of reminiscences of intellectual society in England and America fifty years ago, recalling the very life and atmosphere of the past generation. An agreeable volume of literary biography by Professor Hjalmar H. Boyesen, published by Charles Scribner's Sons, deals with the lives and works of Goethe and Schiller, reflecting the spirit and tenor of German criticism; it is a work which bears the impress of sincere and sympathetic labor, written in a clear and masterly style. A series of biographies of "American Authors" is published by Sheldon & Co. of New York. "A Life Worth Living," by Leonard Woolsey Bacon (New York, Anson D. F. Randolph &

Co.), is a memoir of Mrs. Emily Bliss Gould, an American Protestant lady who devoted herself to labors of reform and education among the poor of Rome. The "Life of Mrs. Eliza A. Seton," by the Rev. Dr. Charles J. White (Baltimore, Kelly, Piet & Co.), is a biography of a lady whose memory is held in high reverence by the Roman Catholics of America, the foundress of the order of the Sisters of Charity in the United States.

There is no lack of writers of *Essays* in the United States; yet, owing to the facilities afforded by the periodical press for the publication, and the preservation also, of their productions, they are seldom reproduced in book form. "Locusts and Wild Honey," by John Burroughs (Houghton, Osgood & Co.), is a collection of essays written in the best vein of this consummate literary artist and lover of nature, whose works appeal with singular force to the admiration of the American public as being instinct with poetry, but with a poetry which accepts and allies itself with science and common sense. Some of the earlier articles in the "North American Review," by famous American authors, have been collected into a volume by the editor, Allen Thorndike Rice (D. Appleton & Co.). Judge J. D. Caton's "Miscellanies" are essays on a variety of subjects, social and scientific (Houghton, Osgood & Co.).

A considerable number of books of *Poetry* have been published during the past year. The younger poets seem to lack the true inspiration, the flavor of the soil, and the vigorous and natural powers of expression, with which the older generation stirred and enchanted the popular mind. An edition of Longfellow, published by Houghton, Osgood & Co., is one of the most ambitious and elaborately illustrated publications ever attempted in America; about half of the pictures are actual views and portraits of places and persons mentioned by the poet. The "Poems" of Sarah Helen Whitman (Houghton, Osgood & Co.) were inspired more perhaps by association with poets and admiration for their works than by an original poetic instinct; yet they must find admirers for their own sake, as not only true to the models chosen, but delivering the sentiments of a high-toned and thoughtful mind. The sonnets of George McKnight, "Life and Death" (Henry Holt & Co.), have nothing of the nature of the modern sensuous and picturesque poetry; they deal with moral truths, and carry more weight and dignity in that they have no garnish whatever derived from poetical figures and imagery of either the present or a past manner, while still remaining strictly poetical in form and substance. J. J. Piatt's "Poems of House and Home" (Houghton, Osgood & Co.), containing many pieces which have not appeared in former collections, is marked by a unity of spirit and theme, the subjects being such as have given the poet some of his best inspirations. Nora Perry's "Her Lover's Friend, and other Poems" (Houghton,

Osgood & Co.), are poems with dramatic subjects, depicting the experiences of different imaginary characters in a variety of situations, some of them serious studies of the passions and some of a lighter nature. A new volume of poetry by Mrs. S. M. B. Piatt, "Dramatic Persons and Moods" (Houghton, Osgood & Co.), contains more subtle psychological studies, presented in a more elaborate but less lucid poetical form. "Along the Way," by Mary Mapes Dodge (Charles Scribner's Sons), is a volume of pleasant and simple lyric poetry. "In Berkshire with the Wild Flowers," by Elaine and Dora Goodale (G. P. Putnam's Sons), is a second series of poems by two young New England girls, whose subjects are supplied by the native flora of the district. "A Masque of Poets" is a volume of the "No Name Series" (Roberts Brothers), containing anonymous contributions from the poets, which present the variety of theme and manner that might have been expected, and are generally marked by a freshness and excellence which could not have been expected in a collection of invited poems. "Briefs of a Barrister" is the title of a volume of society verses by E. R. Johns (G. P. Putnam's Sons). The first collection of the ballads of Thomas Dunn English is published by Harper & Brothers. Robert D. Joyce's "Blairid" is a historical poem based on old Irish legends, written by the author of "Deirdré" (Roberts Brothers' "No Name Series"). Henry Abbey's "Poems" (D. Appleton & Co.) relate to historical subjects; they have already been published and well received in England. "All Quiet along the Potomac, and other Poems," is a collection of short pieces of verse on domestic and pathetic subjects by Ethel Lynn Beers (Philadelphia, Porter & Coates). "The Historical Poetry of the Ancient Hebrews," by Michael Heilprin (D. Appleton & Co.), is a scholarly critical disquisition, with new translations of the poetical books of the Bible.

Novels stream from the press in an increasing flood. Those who deprecate the influence of this kind of literature should remember that an increase in the novels which figure in the lists of the booksellers means a decrease in a pernicious class of fiction with which they come into competition, which spreads false views of society, false principles of morality, and all kinds of misinformation. In many novels of the better kind much serious thought and much genuine information are interwoven in the web of the story. A fair general education is often attained from the reading of novels alone. Moreover, the realistic novel of the day is not open to the strictures usually passed upon fiction. Although not altogether free from adventitious allurements and tricks of art, its purpose, to hold the mirror up to society, to embody sociological facts, makes it a genuine study of history of the highest character. For the first time in the history of American literature there has arisen a school of American

novelists, who draw their inspiration from the well-spring of nature and model their dramatic personages after social types actually observed. In a new edition of "Uncle Tom's Cabin," containing also a bibliographical account of the work and its translations in all the literary languages of the world, Mrs. Stowe gives a simple and touching recital of the genesis of this epochal book in her mind. "The Lady of Aroostook," by W. D. Howells (Houghton, Osgood & Co.), is one of the most noteworthy novels which have been produced in the United States; it is more rounded and more artistically complete than the preceding works of the author, and is characterized in a fuller measure by the fine qualities which distinguish his style, refined humor, well conceived and finely sustained characters, bright, incisive strokes of characterization, shrewd observation of life and manners, and a fine appreciation of æsthetic propriety. In two novels by Henry James, Jr., "The Europeans" and "Daisy Miller," his favorite study of contrasted types of character, developed under the variant social conditions of Europe and America, is still his theme, handled with the dramatic consequence in character-drawing, the gleaming wit, and the finished neatness of style which make his sketchy stories finished products of novelistic art despite their scanty and poor materials. "An International Episode" is another recent study in the same limited field of observation, even slighter in dramatic construction and thinner in substance than its predecessors. Frances Hodgson Burnett, who in a former work has depicted life among the humble classes in Lancashire with great force, originality, and naturalness, now appears with a fresh novel of similar character, and not behind her former writings in truthful character-drawing and dramatic force. Three of Mrs. Burnett's earlier stories, "Kathleen Mavourneen," "Theo," "Pretty Polly Pemberton" (J. B. Lippincott), it was an injustice to reprint after her riper and better work. "Airy Fairy Lilian" (J. B. Lippincott) is an exhilarating novel of the lightest kind. George W. Cable's "Old Creole Days" contains several novelettes by a new author, which are saturated with the local color of scenes fruitful of materials for romance; the creole life is treated with artistic instinct and affords a fascinating story. "Signor Monaldini's Niece" (Roberts Brothers), one of the numerous class of cosmopolitan novels, written by an American resident in Rome [Miss M. A. Tincker], is still one of the best constructed and most workmanlike stories in the "No Name Series." "As it may Happen" (Porter & Coates) is a novel of American scenes containing some strong realistic touches. "The Colonel's Opera Cloak," a number in the second "No Name Series" (Roberts Brothers), is a lively and laughable story. "Detmold, a Romance," by W. H. Bishop (Houghton, Osgood & Co.), belongs to the better class of American novels; the characters are clearly outlined and

well developed, the dramatic theme original but not extravagant nor unpleasant, and the style refined and correct. "Modern Fishers of Men" (D. Appleton & Co.) is a faithful study of life in a small American town. "A Gentle Belle," by Christian Reid [Francis S. Fisher], is one of Appleton's "Handy-Volume" books. "Colonel Dunwoddie, Millionaire" (Harper & Brothers), is a realistic picture of life in the Southern States. Charles Scribner's Sons have published Frank R. Stockton's laughable stories of "Rudder Grange." "Tales of Table Mountain" (Houghton, Osgood & Co.) are some of Bret Harte's later short stories. "Gordon Baldwin; The Philosopher's Pendulum; Liquidated; The Seer" (D. Appleton & Co.), are four international stories whose scenes and characters are taken from the various countries where the author has resided; they are well conceived and possess strong and good qualities. Hjalmar H. Boyesen's "Falconberg" is an idealized story, whose characters are Norwegian emigrants, in which the virtues of the Scandinavian character and the sentiments of American liberty are gracefully and eloquently depicted. A romance by F. Hassaurek, "The Secret of the Andes" (Cincinnati, Robert Clarke & Co.), presents with historical fidelity the condition of the Peruvians after the conquest and their longings and struggles for liberty. Another historical romance, "The Puritan and the Quaker" (G. P. Putnam's Sons), is a well-written picture of life in old New England. "Captain Nelson" (Harper & Brothers) is a tale of colonial times by the well-known antiquary and historian, Samuel Adams Drake. The following may be mentioned among the other successful novels of the year: "The Unknown City," by W. F. Washburne (Jesse Haney & Co.); "The Felmers," by Sada Elliott (D. Appleton & Co.); "Di Cary," by M. Jacqueline Thornton (D. Appleton & Co.); Bertha M. Clay's "Lady Damar's Secret" (G. W. Carleton & Co.); Miss Susan Warner's "My Desire," a story of the present (Robert Carter & Brothers); "The Breton Mills," by Charles J. Bellamy (G. P. Putnam's Sons); "An Earnest Trifler" (Houghton, Osgood & Co.); "His Majesty, Myself" (Roberts Brothers' "No Name Series").

Translations and adaptations from the leading Continental novelists, as well as all the more popular novels which the numerous novel-writing profession in the British Isles produce, are required to satisfy the large capacity of the American public for this class of literature. The more important translated novels offered to the public during the year are as follows: "The Maid of Stralsund," by the masterly Dutch novelist De Liefde (New York, Dodd, Mead & Co.); "A Thorough Bohémienne," by Mme. Charles Reybaud, one of the "New Handy-Volume Series" (D. Appleton & Co.); Henry Gréville's [Mme. Durand's] "Bonne-Marie" and "Philomène's Marriages" (Philadelphia, T. B. Peterson & Co.), the scenes

of which are laid in the native land of the author, which she lately occupied as a new and fruitful field for her delicious social pictures; "The Diary of a Woman," by the refined and admired Octave Feuillet (D. Appleton & Co.); "Raymonde," by André Theuriet (D. Appleton & Co.); "Jean Têtero's Idea," by the popular Cherbuliez (D. Appleton & Co.); "L'Assommoir," "Nana," and other works by Emile Zola, the leader of the French realists (T. B. Peterson & Brothers); "At a High Price," by E. Werner [E. Burstenbinder], published in the "Cobweb Series" of Estes & Lauriat; "Young Mangars," by André Theuriet (D. Appleton & Co.); "Castle Hohenwald," by Adolph Streckfuss, translated by Mrs. Wister (J. B. Lippincott & Co.); E. Marlitt's [Eugenie John's] "In the Schillingscourt," translated by Mrs. Wister (J. B. Lippincott & Co.); "Markof, the Russian Violinist," another bright novel from the French of Henry Gréville (T. B. Peterson & Brothers); and "Tales from the German of Paul Heyse" (D. Appleton & Co.), which acquaint the reader with the most agreeable modern writer of short stories.

LITERATURE, BRITISH, IN 1879. Not more than a moiety of the literature required for the intellectual nourishment of the people of the United States is the product of American pens. A nation of readers, the Americans avail themselves of the labors of the numerous profession of well-trained writers in England to such an extent that the enumeration of the products of American literature proper gives a very incomplete idea of the literature actually required and consumed. The widely separated and politically divided English-speaking nations are becoming reunited in taste, thought, and feeling through reading the same literature. They form more truly than formerly a single reading public. The successful English author is sure of an American public, and American authors are read and admired in Great Britain. The use of a common literature in these two distant, populous, and progressive countries is most salutary in preserving in its purity and power a noble and expressive language, in correcting false and erratic tendencies, and in infusing new thought and stimulating intellectual activity, now in the one nation, now in the other.

Herbert Spencer's "Data of Ethics" (New York, D. Appleton & Co.) is the first part of the final and most important of the series of works in which the author's system of philosophy is unfolded. The profoundest expositor of the synthetic principles and method which form the groundwork of present science, Spencer has already attained a commanding position as a guide and philosopher. If the evolution doctrines are to become the belief of the future, this may prove a supremely epoch-making book; for the establishment of a basis of morality, a settled faith, though founded on science, must lead to a revival of conscience, must erect a fundamental sanction, and reawaken the springs and principles of moral action which

are relaxed in an age of drifting skepticism. The "Problems of Life and Mind" of the versatile and skillful author, George Henry Lewes, are his maturest and most thoughtful work. The first one of the third series, "The Study of Psychology, its Object, Scope, and Method" (Boston, Houghton, Osgood & Co.), was left unfinished at his death, and is given to the world by his widow, who supplied the necessary work of editing and revision. "The Realistic Assumptions of Modern Science Examined" is a controversial treatise by Thomas M. Herbert (New York, Macmillan & Co.). William Hurrell Mallock's "Is Life Worth Living?" is one of the cleverest of that author's volumes of satirical, trifling, airy reflections on the intellectual conflicts of the age, written with the levity of a mind which seems neither to possess a serious faith nor to be troubled by serious doubts (New York, G. P. Putnam's Sons). Maudsley's "Pathology of the Mind" (D. Appleton & Co.) is a valuable addition to physiological psychology. An admirable series of elementary works on special scientific subjects, "Text-Books of Science" (D. Appleton & Co.), includes "The Elements of Mechanics," by Professor T. M. Goodeve; "Metals," by C. L. Bloxam; "Introduction to the Study of Inorganic Chemistry," by Dr. W. A. Miller; "Theory of Heat," by the late Professor J. C. Maxwell; "The Strength of Materials and Structures," by J. Anderson; "Electricity and Magnetism," by Professor F. Jenkins; "Workshop Appliances," by C. P. B. Shelley; "Principles of Mechanics," by Professor Goodeve; "Introduction to the Study of Organic Chemistry," by Professor H. E. Armstrong; "The Qualitative Chemical Analysis and Laboratory Practice," by Professor T. E. Thorpe; "Telegraphy," by W. H. Preece and J. Sivowright; "Railway Appliances," by J. W. Barry; "The Art of Electrometallurgy," by J. Gore; "Introduction to the Study of Chemical Philosophy," by W. A. Tilden; "The Elements of Machine Design," by Professor W. C. Unwin; "Treatise on Photography," by De W. Abney; and "The Study of Rocks," by Frank Rutly. Professor Grant Allen, in "The Color Sense" (Houghton, Osgood & Co.), combats the theory of Magnan and Gladstone that the perception of colors is a faculty developed in man through civilization. Of Roscoe and Schorlemmer's "Treatise on Chemistry" (D. Appleton & Co.), the second volume deals with the metals in a very complete and comprehensive manner. Gegenbauer's "Elements of Comparative Anatomy" (Macmillan & Co.) is the standard work on zoölogy treated from the standpoint of the evolutionist school, now for the first time placed within the reach of English readers.

Among the small, readable manuals for popular instruction, which have multiplied so greatly within the last few years, none will serve a better purpose than the series of "Health Primers" (D. Appleton & Co.), prepared by

several eminent medical and scientific men in London, including "Exercise and Training," "Alcohol," "The House and its Surroundings," "Premature Death," "Personal Appearances in Health and Disease," "Baths and Bathing," and "The Skin." Benjamin Ward Richardson's "A Ministry of Health," and other addresses, are earnest appeals in the interest of sanitary progress.

A number of books of *Travel* of unusual interest have been published. The Rev. R. W. Dale's "Impressions of America" (D. Appleton & Co.'s "Handy-Volume Series") is a highly appreciative account of American institutions and society. "Our Autumn Holidays on French Rivers," by J. L. Molloy, is a lively narrative of a boating excursion, recounted in a refreshing tone of youthful frolic and enjoyment of outdoor life (Boston, Roberts Brothers). "Through Asiatic Turkey," by Grattan Geary (London, Sampson Low, Marston & Co.), contains the views of an intelligent and judicious observer of the Turkish question, formed on the spot by the aid of a knowledge of the language and customs of the country. A more studious and systematic work on Asiatic Turkey is McCoan's "Our New Protectorate" (London, Chapman & Hall), in which is gathered a mass of economical, geographical, social, ethnic, political, and religious information upon the Turkish provinces. "Six Months in Ascension," by Mrs. Gill, is a most interesting record of experiences and observations of an English lady who accompanied her husband to the lonely island in the middle of the South Atlantic Ocean on the expedition for the determination of the sun's parallax. Mosely's "Notes by a Naturalist on the Challenger" is an agreeable recital of experiences and observations on the famous scientific voyage, a popular narrative which touches on the scientific purposes and results of the expedition only where they are of interest to the reading public (Macmillan & Co.). "Wanderings in Patagonia," by Julius Beerbohm, is one of Henry Holt & Co.'s "Leisure-Hour Series." "A Few Months in New Guinea" is an account of a residence in that little-known land by Octavius C. Stone (Harper & Brothers).

In the department of *History*, several important works have appeared in the branch of historical sociology which deals with the origin of civilization, in which such fruitful results have been obtained through the application of the methods inaugurated by the comparative philologists. Pezzi's "Aryan Philology," translated by E. S. Roberts (London, Trübner & Co.), is a compendium of the science of comparative philology itself in its present condition. Professor W. E. Hearn of Melbourne, in "The Aryan Household" (London, Longmans, Green & Co.), groups together the researches into the constitution of early society for the purpose of constructing a picture of the life of the primitive Indo-European race. A translation of Duncker's "History of An-

tiquity," by Evelyn Abbot, is being published by R. Bentley & Son of London; it is from a revised edition, and gives the latest results of Biblical research and hieroglyphic and cuneiform interpretations. A compendium of the researches in Aryan antiquities and the prehistoric condition of society, under the title of "The Dawn of History" (Charles Scribner's Sons), has been compiled in a form adapted for easy popular reading by C. F. Keary. The subject of comparative mythology is ably and exhaustively treated by the Rev. Sir George W. Cox in "The Mythology of the Aryan Nations" (London, C. Keegan Paul & Co.); he goes farther than his predecessors in tracing affiliations between the legends of the different nations, and affirms that all the Aryan national epics had their source and groundwork in the same original pantheistic interpretation of the phenomena of nature. "Fairy Tales, their Origin and Meaning," is a popular account of the historical origin of legends by John Thackeray Bunce, forming the twenty-fifth volume of Appleton's "New Handy-Volume Series." In "Lectures on the Origin and Growth of Religion" (Charles Scribner's Sons), Max Müller has at last broached a subject in which he is no longer a mere popularizer of other men's discoveries and retailer of others' thoughts. In his life-long philological studies the subject of comparative religion was so attractive to his cast of mind that in this he has hammered out ideas of his own. Spencer Walpole has executed his contemporary history of England, "A History of England from the Conclusion of the Great War in 1815" (London, Longmans, Green & Co.), with a bold and steady hand; it is a sagacious inspection into the politics and a luminous review of the social and literary development of England in the recent period. Justin McCarthy's "History of Our Own Times" (Charles Scribner's Sons) is an extremely graphic and entertaining as well as a judicious and impartial survey of recent British history, commencing at the accession of Queen Victoria. "The French Revolutionary Epoch" (D. Appleton & Co.) is a history of France from the French Revolution to the close of the German war by the able translator of Taine, Henri Van Laun. In "The Renaissance in Italy" (New York, Henry Holt & Co.) John Addington Symonds has given a philosophical study of one of the most interesting revolutions of ideas and manners in the history of European civilization. The able history of the luxuriant development of art and the attendant revolution in thought and manners in France under the invigorating influence of the humanistic and classical revival, entitled "The Renaissance of Art in France," by Mrs. Mark Pattison (London, C. Keegan Paul & Co.), is a fitting supplement to the exhaustive study of the movement at its fountain-head by Mr. Symonds. George Finlay's "History of Greece," revised by H. F. Tozer (Oxford, Clarendon Press), is the ripe and

learned work of a sagacious historian, embracing the history of the whole Hellenic race and extending down to the most recent times: the present edition is almost a new work, every paragraph showing the marks of revision, and a large amount of new matter having been added. "New Greece," by Lewis Sergeant (Oassell, Petter & Galpin), records the remarkable material and political progress of the Greeks during the present century, and defends their aims and claims in relation to the Eastern question. A contribution of considerable value to the history of the last century is the Duc de Broglie's "The King's Secret" (Cassell, Petter & Galpin), containing the secret correspondence of Louis XV. "Selection from the Correspondence of the late Macvey Napier, Esq." (Macmillan & Co.), is a book which initiates the reader into the secret councils of the "Edinburgh Review," and reveals the literary privacy, the jealousies and ambitions of the leaders of the great Whig party. "The Letters of Charles Dickens" (Charles Scribner's Sons) is a book which acquaints the reader more thoroughly with the character of the great novelist than any of the lives and reminiscences of him which have appeared. Philip Gilbert Hamerton, in "The Life of J. M. W. Turner, R. A." (Roberts Brothers), rescues the memory of the great English painter from the cloudy regions to which the extravagant panegyrics of Ruskin had consigned it, dealing with the artist and his work with judicial calmness, and with the subtle discrimination which has given the author note as an appreciative and well-balanced art-critic. A biographical dictionary of "Artists of the Nineteenth Century" (Houghton, Osgood & Co.) contains the name of every recent artist of the least note, and is made up of original information obtained by extensive correspondence and painstaking inquiry by Mrs. Clement and Lawrence Hutton. James Anthony Froude's "Cæsar" is a historical sketch, written in the author's brilliant and elegant style, in which the action of history is presented with vivid picturesqueness (Charles Scribner's Sons). Two books of biography by Professor J. R. Seeley, "The Life and Adventures of Ernst Moritz Arndt," and "The Life and Times of Stein" (Roberts Brothers), illustrate the condition of Germany in the Napoleonic era. Dr. Samuel Smiles never took up a subject for biographical preaching better adapted to awaken the sympathies of his readers than the modest and enthusiastic student of nature, "Robert Dick, Baker, of Thurso, Geologist and Botanist" (Harper & Brothers). The biographical monographs on "English Men of Letters" (Harper & Brothers) are short studies on the representative men of English literature by representative English critics of the most modern stamp and tendencies—Leslie Stephen writing on the character and works of Samuel Johnson, Richard H. Hutton on Walter Scott, James H. Morrison on Gibbon,

John A. Symonds on Percy Bysshe Shelley, William Black on Oliver Goldsmith, Mark Pattison on Milton, Dean Church on Spenser, William Minto on Daniel Defoe, and Professor Shairp on Robert Burns. The most important of the series from its philosophical and tendential character is Professor Huxley's study of Hume; another of the volumes, which must have considerable influence on political thought, is the study of Burke, by the editor of the series, John Morley. The series contains a sketch of Thackeray by his brother-novelist Anthony Trollope, which, if it does not give a thoroughly adequate estimate of the subject, is a frank discussion of the scope and mission of the English novel from the point of view of one who has won distinction in composing them.

Among the recently published collections of *Essays*, the first volume of the series "Gleanings of Past Years, 1844-'78," of William E. Gladstone (Charles Scribner's Sons), is a book as replete with thought and scholarship as the former productions of the literary statesman; the first of the seven contains the essay on America, "Kin beyond Sea," which aroused considerable feeling against the author on its first publication. In Matthew Arnold's new volume of "Mixed Essays" (Macmillan & Co.) the philosophical critic makes a strenuous appeal, notably in the lecture on "Equality" here reproduced, in favor of a more invigorating and humaner culture for the middle ranks of society. A volume of "Essays Historical and Theological" has been published (London, Rivingtons), written by the thoughtful and learned late Canon Mozley, and showing great intellectual grasp, acute historical criticism, originality of thought, and unusual powers of literary expression. "Essays in Romance, and Studies from Life," by John Skelton (Edinburgh, W. Blackwood & Sons), is a new volume by the essayist whose graceful and poetic thoughts and observations have been hitherto published under the pseudonym *Shirley*. A. Hayward's "Selected Essays" (Scribner & Welford) are most entertaining sketches on historical and social subjects, filled with pointed illustrations and anecdotes. "The Gamekeeper at Home," "The Amateur Poacher," and "Wild Life in a Southern County" (Roberts Brothers), are three pleasant books on nature and rural scenes in England. "Literary Studies" (Longmans, Green & Co.) is a volume of essays by the late Walter Bagehot, in which the same ripe judgment and sagacious insight that rendered him preëminent among financial writers is brought to bear on various subjects of literary criticism which a broad culture and fine æsthetic sensibilities made his own. Two books have been published on the father of modern German literature, "Lessing," by James Sime (London, Trübner & Co.), and "Gotthold Ephraim Lessing," by Helen Zimmern (Longmans, Green & Co.). Of the three great masters in German literature Lessing, the

most comprehensible to English readers, has remained comparatively unknown and unstudied; an interest in this poet and leader of thought is now first awakened in England. A translation of his "Dramatic Works" has also been published by George Bell & Sons of London, five of the comedies and two tragedies, one of which is "Miss Sarah Sampson," appearing for the first time in English versions. "Studies in the Literature of Northern Europe," by Edmund W. Gosse, the English poet (C. Keegan Paul & Co.), is a scholarly work in literary history, in which Milton's indebtedness to the contemporary Dutch poet Vondel for a part of the plan of his epic is pointed out for the first time, and in which the characteristics of Scandinavian literature are unfolded with unusual critical acumen and appreciation. G. B. Selkirk, the author of "Ethics and Æsthetics of Modern Poetry" (London, Smith, Elder & Co.), is a thoughtful critic with original ideas who has lately come before the public.

The present is an era in which the poetical form is little cultivated. Among the few works of *Poetry* published during the year, there is none which seems a genuine product of the age except the poems of Robert Browning. "The Lover's Tale" is a poem which was written by Alfred Tennyson at the age of nineteen: published first without his consent, he, conscious of its inferiority to his later works, concluded to give it to the world in a better and revised form (Houghton, Osgood & Co.). Robert Browning's new volume of poems, "Dramatic Idyls" (Smith, Elder & Co.), is not freer than his former works from his faults and mannerisms, capricious involutions of language, vague fancies, and obscure phraseology; neither is it lacking in his noble traits of genius, dramatic force, intense human sympathy, and deep insight into the human soul. Edwin Arnold, editor of the London "Telegraph," has written an epic poem on the life of Buddha, entitled "The Light of Asia" (Roberts Brothers), in which a profound knowledge of the spirit of Buddhism and of Oriental life, thought, manners, and history is worked up into a poem of unusual power and grandeur. "The Sonnets of Michael Angelo Buonarrotti and Tommaso Campanella" have been produced by J. A. Symonds with excellent notes and explanations (Smith, Elder & Co.). Roberts Ffrench Duff's translation of the "Lusiad" is reprinted by J. B. Lippincott & Co.

The English novel also seems to have entered upon a period, not of degeneration, but of abeyance. There are more good novels produced now than ever before; but since the death of the two great masters of English fiction, and since George Eliot has retired from the field, no great work can be found in their number. George Eliot's "The Impressions of Theophrastus Such" is a group of character-sketches, which are marked by the fine powers of psychological analysis and deep philosophy

of life which characterize the author's novels. William Black in "MacLeod of Dare" attempted a high but too difficult task—to characterize the savage passions which at times possess members of society—the same fierce passions which are the burden of many romances, idealized, and made to appertain to civilized society, but here correctly distinguished as a lurking taint inherited from a wild, undisciplined ancestry. "The Return of the Native," by Thomas Hardy, is a powerful novel of a high dramatic character, the actors in which are English country-people, from whose humble life the author has woven a web of deep tragic interest.

LITERATURE, CONTINENTAL, IN 1879. FRANCE.—In France there is considerable attention paid to philosophical speculations by the opposite schools of theological and positive thinkers. In the essays on "Philosophes Modernes Étrangers et Français," A. Franck assumes an original position. Funck-Brentano has written a severe criticism of Stuart Mill, Herbert Spencer, and the Utilitarian group of thinkers ("Les Sophistes Grecs et les Sophistes Contemporains"). From the positive point of view, the most important book of the season is Schutzenberger's "Traité de Chimie Générale." M. Buisson's "Dictionnaire de Pédagogie et d'Instruction Primaire" is exhaustive and accurate. Compayré, in a historical review of education in France, treating of the theories of the Jansenists, the Jesuits, and the eighteenth-century philosophers on this subject, and Félix Pécaut in "Études au Jour le Jour sur l'Éducation Nationale," both advocate reforms in educational methods proposed by Michel Bréal and Jules Simon.

Several learned historical works have appeared. Lenormant's "La Monnaie dans l'Antiquité" has reached the third volume. Boidit has published an exhaustive study of Demosthenes and his epoch. Renan's large work on the origins of Christianity is approaching its conclusion ("L'Église Chrétienne"). M. Guiraud endeavors to show, in opposition to Professor Mommsen's view, that right was on the side of the Senate in the contest it carried on with Julius Cæsar. An interesting work is Demay's study of costume in the middle ages as illustrated by seals, in which the illustrations add much to the value of the book; as they do also in Duruy's volumes on Roman history.

The illustrated books are increasing in number and in excellence. Among these may be noticed the history of Tobit, illustrated by Bida and published by Hachette; M. Duplessis's "Histoire de la Gravure"; and another of the pictorial books by Paul Lacroix, published by Didot, "Le XVII^e Siècle, Institutions, Usages, Costumes." The fifth volume of the "Géographie Universelle" is devoted by Élisée Reclus to a description of Russia and Scandinavian Europe. Vivien de Saint-Martin's geographical dictionary has reached the

end of its first tome. M. de Valroger publishes useful researches on the origin and character of Celtic civilization ("Les Celtes et la Gaule Celtique"). M. Gebhardt, in "Les Origines de la Renaissance en Italie," treats of the various causes which led to the outburst of the intellectual revolution to which the name of Renaissance has been given. The publication of the famous *recueil* of satirical songs collected by Gaignières and Clairambault will do much toward making us acquainted with the secret history of the eighteenth century. M. de Loménio's work on the Mirabeaus, the memoirs of Mme. de Rémusat, Mme. de Bloqueville's biography of Marshal Davout, and the life of General Dessaix, are useful contributions to the history of the Revolution and of the Empire. M. Dareste has completed his popular history of France by two volumes on the Restoration. Henri Martin's large work is continued down to the Treaty of Campo Formio.

The furor which exists at present for productions of the last century, such as the poems of Dorat and of Bernis, the tales of Crébillon the younger, and even the very free novelettes of La Morlière, lies at the door of Arsène Houssaye and MM. de Goncourt, who have made the eighteenth century their favorite theme for historical and biographical sketches. The authors of "Henriette Maréchal" and "Germine Lacerteux" especially enjoy the talent of making the most of *inédits* documents, and their history of the Duchesse de Châteauroux and her sisters is the natural accompaniment of the previous volumes on Mme. Dubarry and Mme. de Pompadour. Coming to our own times, we find a memoir of the caricaturist Gavarni, and one of Théophile Gautier, both interesting, but with such an abundance of details never meant for publication that, if the fashion sets in for biographizing great men after that style, the lives of our future great men will be as unreadable as the novels of MM. Zola ("Nana"), Huysmans ("Les Sœurs Vatarde"), or Ernest Daudet ("Les Rois en Exil"). M. Pons is still more to be blamed for his exposure of the worst side of his hero's character in "Sainte-Beuve et ses Inconnues." Alphonse Karr's *log-book* ("Le Livre de Bord") is extremely amusing, and full of noteworthy particulars about the history of French literature during the last fifty years. The same praise can be bestowed upon the reminiscences of M. Werdet.

Victor Hugo's "Pitié Suprême" is the only poetical composition of importance.

Besides the outrageous productions of the realistic novelists mentioned above, Bélot of the same school has produced the "Femme de Glace," in which he outdoes his master. The novelists of the more refined class, such as Henry Gréville, Mme. de Chandeneux, and Mme. Th. Bentzon, seem to lack the vigor and originality of these dissectors of morbid morality.

GERMANY.—Although the materialistic teachings of Haeckel and his school, or the less pos-

itive materialistic skepticism of Dubois-Reymond, have taken possession of the minds of a large number of thinkers, yet the philosophy which occupies the strongest position to-day in Germany is a revival of the Kantian doctrines. A school of thinkers have assumed the designation of Neo-Kantian, and occupy themselves with logic and the problems of the mind. An important treatise on inductive logic has been written by W. Wundt. Kehrbach is at work upon a commentary on Kant's "Critique of Pure Reason." The history of philosophy is being treated by W. Windelband.

Valuable materials are placed at the disposal of the new school of history by the issue, undertaken at the expense of the German Emperor, of an accurate edition of the correspondence of Frederick the Great, as well as by the memoirs of Prince Metternich, which his son promises. The liberal opening of the Record Offices at Berlin and Vienna, so long jealously closed, will make possible in the future an impartial history of the ancient rivals. To impartiality H. von Treitschke's "German History in the Nineteenth Century" makes no pretense. A band of historians, at the head of which stands W. Oncken, has undertaken a comprehensive "Universalgeschichte in Einzeldarstellungen," which is designed to fill forty volumes. The first installments, "Egyptian History," by Johannes Dümmichen, and the "Ancient Persian History to the Extinction of the Kingdom of the Sassanids," by Ferdinand Justi, are all that could be wished. Carl Hillebrand is writing a history of France from Louis Philippe to Napoleon III. Following upon the magnificent illustrated work on "Egypt" by George Ebers, has appeared a similar book on "Hellas and Rome," by Falke, the art-historian.

Gottfried Semper's great work on "Style in the Fine Arts" is being reissued. Hermann Hettner has treated of art and literature in Italy in his "Italian Studies."

Oscar Lenz and Hübbe-Schleiden have both produced "Studies of West Africa," the one from Senegal, the other from Ethiopia. The "Wanderbuch" of Field-Marshal Moltke would attract attention on account of its authorship, even were its contents less valuable.

The autobiographical sketches with which Franz Dingelstedt, under the title of "Münchener Bilderbogen," has supplemented his "Bilderbuch" of last year, closely resemble a novel. The daughter of Dingelstedt's former associate, the powerful minister of the literary King Maximilian, has published from her retirement in America a revelation of her relations to the agitator Lassalle, which has had a remarkable run. The "Bismarck Letters" are letters of the Prince to his wife, his friends, and his sister and confidante Malwina. The political life and activity of Bismarck is revealed in L. Hahn's collection of his speeches, his dispatches, and diplomatic acts arranged in chronological order, without note or comment. "Die

Famille Mendelssohn is the title of a pleasant book compiled from family papers by Sebastian Hensel, the nephew of the composer Mendelssohn, and the son of his darling sister Fanny.

The mystic poetry of Siegfried Lipiner, a Galician Jew by origin, marks a reaction from the pessimistic atheism which has been the tone of German poetry since Heine. Lipiner's latest poem, entitled "Renatus," is intended to describe those who have been reborn in the light of a new faith. Paul Heyse's "Verse aus Italien" is distinguished by classic smoothness.

Wilbrandt—whose "Maler," together with G. Freytag's "Journalisten," may be considered the best among recent German comedies—has been less successful with his last two productions, the comedy "Der Thurm in der Stadtmauer" and his "Natalie," a piece written in Iffland's style. A comedy entitled "Rosenkranz und Guldennstern," by Klapp, has gone the round of all the theatres in Germany.

Berthold Auerbach has published an instructive novel in the style of "Waldfrüd," under the title of "Forstmeister." Friedrich Spielhagen has, since the publication of his romance "Sturmflut," appeared with a three-volume novel entitled "Plattland." "Eekenhof," by Theodor Storm, may be considered one of the chief works of the year. Almost as much power is exhibited in the romantic tale "Der Schelm von Bergen," by Julius von der Traun (Alexander Schindler). Gustav Freytag has brought his historical pictures, given in the continued romance "Die Ahnen," down to the period of the Thirty Years' War. Louise von François has produced another admirable historical novel, "Die Katzenjunker."

BELGIUM.—In Belgium many pens are busied with subjects connected with the national history. "Le Siècle des Artevelde," by Léon Vanderkindere, is an exhaustive study of the foreign politics, the aristocracy, the democratic revolution, the economical movement, political centralization, the artisans, agricultural laborers, religion, clergy, thought, ideas, and morals of Flanders and Brabant during the fourteenth century. "L'Histoire Politique Interne de la Belgique," by Edm. Poulet, professor at the University of Louvain, is a powerful sketch. J. Künziger has published a short but interesting history of the Netherlands in the sixteenth century, under the title of "Nos Luttes contre l'Intolérance et le Despotisme." The late Minard van Hoorebeke's "Description de Méreaux et de Jetons de Présence, etc., des Gildes et Corps de Métiers des Pays-Bas" gives an account of the societies of artisans of Ghent and other places. Eug. van Bommel edits "La Belgique Illustrée," which supplies a pictorial and historical description of the principal towns and districts. Ferdinand Vanderhaeghen is preparing a general bibliography of the Netherlands, in which he proposes carefully to describe all the books printed in the Low Countries during the fifteenth and sixteenth centu-

ries, and also the principal works that have been published since.

Godefroid Kurth, professor at the University of Liège, in his voluminous work entitled "Sitting Bull," examines the question of the Redskins of the United States from a point of view strictly Catholic. J. Dauby has devoted an interesting book to the question of "Grèves Ouvrières," and J. Stevens one to that of "Prisons Cellulaires en Belgique." Georges de Laveleye has treated a subject which is the question of the day, "Les Bilans et les Inventaires."

Paul Voituren, in his work "Le Libéralisme et les Idées Religieuses," extols a new religion. Aristide Astruc, chief Rabbi of Belgium, has published a broad and original study entitled "Entretiens sur le Judaïsme, son Dogme et sa Morale." "La Philosophie Scientifique," by Captain H. Girard, is a bold attempt to prescribe a general method for all sciences.

Max Roose has finished his magnificent work on the Antwerp school of painters.

Chief among the writers in Flemish, Hendrik Conscience continues his artless and simple narratives of Flemish habits and customs. A remarkable production is a work entitled "Drie Novellen," by Miss Virginie Loveling.

The most noteworthy drama is a little play from the pen of Emiel van Goethem, entitled "Tony en Belleken."

HOLLAND.—Holland is prolific in novelists who delight in portraying with more or less idealization the simple lives of the poor. Israel is exceedingly successful in depicting the hopes and sorrows, the joys and hardships of the Dutch fishermen, and Cremer in his pictures of the comfortable and good-natured Dutch farmers and their families. Three younger writers have appeared, MM. Otto, Martin Kalf, and Justus van Maurik, who paint their Dutch interiors from the home-life of the humbler classes of townfolk. MM. Ten Brink and Wolters, among a number of other popular story-writers, have produced good novels.

Two new poets have arisen who give good promise of future excellence—Gosler, author of "Licht en Schaduw," and Waalner. Emants has written a poem, in three cantos, entitled "Lilith."

Under the inappropriate title of "Causeriën," Berckenhoff has published a readable volume of letters to a supposed lady friend on art and criticism. The Rev. J. Craandijk has just issued the fourth volume of the "Wandelingen door Nederland," beautifully illustrated by Schipperus's drawings. Van Assendelft de Coningh has written a pleasant book, recounting his forty years' experience as a sailor, called "Ontmoetingen ter Zee en te Land." Busken Huët has published another volume of "Literarische Fantasiën," containing essays on Victor Hugo, Paul de Kock, Lord Lytton, etc. Another valuable book of this fascinating but often paradoxical author is "Het Land van Rubens."

DENMARK.—After a rather long period of

stagnation, signs of vigorous progress are apparent, mainly the result of the efforts made by the able critic Georg Brandes. His last work is "Benjamin Disraeli, Earl of Beaconsfield."

The author of "Jason with the Golden Fleeco" has followed his first production with others equally lifelike, clear, and free from false decoration. Another pseudonymous writer, "Diodoros," has produced under a general title, "The Eternal Strife," three poems demanding notice for their graphic style, earnest feeling, and graceful humor. A. Skram has published a boldly realistic romance called "Gertrude Colbjörnson." K. Gjellerup tells in "The Idealist" the story of an enthusiast with "humanitarian" views of life. In Schandorph's story in verse called "Youthful Days" the hero is a young man of our times whose will is energetic, while his practical aims are not clear. Erslev, in his historical sketch "King and Vassal in the Sixteenth Century," gives able descriptions of old institutions and their relations. "Insignificant People" is a collection of stories by Carit Etlar. In "Religion and Politics," given in the shape of the last will and testament left by a Socialist, the writer, whose pseudonym is "Theodoros," assumes an independent ideal position.

SWEDEN.—The work which has caused the greatest excitement in Sweden of late, "Röda Rummet" ("The Red Chamber"), contains accounts of the artistic and literary life of Stockholm. The young author, August Strindberg, is acknowledged by every one to be most gifted, but he belongs to the school of Zola. The volume is of special interest as being the first of its kind in Sweden. The author is also eager to show not only that this world is the worst of all possible worlds, but that the artistic-literary world of Stockholm is especially bad. An admirable collection of novelties is "Gamla Kort" ("Old Bard"), by Claes Lundin. Richard Gustafsson calls his latest work "Metropolitan Types." Another group of tales, "Svart pa Ilvitt" ("Black upon White"), is by Frans Hedberg. The popular novels published under the signature "H." are by the wife of a professor in the principal university.

A promising new poet bears the name of Baath. Oestergren has produced a new volume of poems. The splendid collection of popular Swedish ballads has been republished with notes by R. Bergström and J. L. Höijer.

Professor G. Retzius, the famous anthropologist, has published a work on Finnish craniums.

A Positivist disciple, Dr. A. Nyström, has written a studious essay on Comte and his doctrines.

NORWAY.—In Norway the fermentation of religious thought has impregnated the entire literature. The dramas of Ibsen and Björnsterne Björnson are saturated with religious speculations. The new dramas of the latter, "Leonarda" and "Det nye System" ("The New System"), are indignant protests against

the hypocrisy and Philistinism of modern society. Ibsen's latest work, "Et Dukkehjem" ("The Doll's House"), is a masterly tragedy of domestic life.

There is no lack of novelists in Norway. Their favorite subject hitherto, peasant life, has at last been abandoned for more fruitful fields. The sketchy novelettes of Alexander Kjelland, a young author of genius, are the best productions of the year.

The new theory of Professor S. Bugge and Dr. A. Chr. Bang, that Scandinavian mythology is derived from Greek and Roman sources or based upon Christian legends, is creating a good deal of excitement in intellectual circles.

POLAND.—Historical research has the most attractions for Polish scholarship. A number of collections of historical materials, such as the "Diplomatic Codex of Great Poland," the "Monumenta Poloniae Historica," etc., are being published. "The Ancient History of Poland," a posthumous work by Julian Bartoszewicz, and Professor Bobrzynski's "Outlines of Polish History," are remarkable books. The latter has created much stir owing to the gloomy views the author takes of the events and actors in Polish history. Several works upon subjects connected with the literary history of Poland have appeared.

Poetical literature has degenerated in Poland as well as in other countries. The few volumes of verse published are of indifferent quality.

In theatrical literature, the most noteworthy productions are "Article 264," a broad comedy, by Kas. Zalewski, and "Dama Treflowa," a comedy of unusual excellence, by the same writer.

The most prolific of authors, Joseph J. Kraszewski, has produced no less than ten new novels during the year. Mme. Elise Orzesko, in "Meir Ezofowicz," depicts the life of the Polish Jews with remarkable power and fidelity. Other new novels are by "T. T. Jez" (Sig. Milkowski) and Sig. Kaczowski, the historical novelist.

BOHEMIA.—Literary activity was greater in 1879 in Bohemia than in any preceding year. More and more interest seems to be taken in the national literature, and more ambitious works are written and published than formerly.

In poetical literature may be mentioned Verchlicky's translation of the "Divina Commedia" and his "Myths," and particularly Heyduk's "Grandfather's Bequest," a charming love-tale, and at the same time an allegorical eulogy of popular song. Pokorny's "Under the Bohemian Sky" and "Unerotic Songs" are written in a pleasant vein of satire.

In drama the most conspicuous productions of the year are the comedy entitled "The Literary Tilt-Yard," by Vesely, and J. Fric's tragedy "Svatopluk and Rostislav."

There is an increased abundance of novels, by Steankovsky, Jirasek, Berta Mühlstein, and others.

Sobotka's work on "Plants and their Sig-

nificance in the Songs, Stories, Myths, etc., of the Slavonian Race," is a valuable contribution to primitive Slavic history. Sembera's "Middle Ages" is a still more interesting study of Slavic history. Other important works on history have been published. The travels of Dr. Emil Holub are awakening much interest.

HUNGARY.—An important event has been the completion of the greatest poetical work of the chief Hungarian poets. John Arany, under the title of "Toldy Szenelme" ("The Love of Toldy"), an epic poem, has concluded his famous Toldy trilogy, of which the first part, a description of the youth of the hero, was published in 1846, while the third part, in which the fall and the death of Toldy are related, came out in 1854.

"Rab Ráby," a new novel by Maurice Jókai, is a story of the time of Joseph II. It is founded on a memoir published in Strasburg in 1797.

Francis Pulszky's memoirs make a valuable contribution to history from the light they throw on the Revolution of 1848. A delightful volume of memoirs, by a deceased actress, Mme. Dery, has been published. The posthumous works of Count Stephen Széchenyi, a distinguished patriot, have attracted much attention.

Some most interesting works on comparative philology have appeared, such as Professor Budenz's "Comparative Dictionary," which has reached the division of words commencing with vowels; those in the Finn-Ugrian as well as in the Tatar-Turkish languages are few compared with those commencing with consonants. Vambéry has edited the poems of the Turkoman bard Makdunkuli. Professor Genetz has published some Lapponian texts. The Codex of Festus, a part of the literary treasure presented to Hungary by the Sultan, has been edited by Professor Tewrewk. A systematic grammar of the Magyar language in its relations to cognate tongues has been written by Professor Simonyi. Salomon's "History of Buda-Pesth in Antiquity" and Baron Radranszky's "Mediæval Households in Hungary" are both valuable accessions to the national history.

ITALY.—The study of the national literature draws the attention of Italian authors more than any other subject at present. Signor Bartoli continues the publication of his "Storia della Letteratura Italiana." He has also prepared a catalogue of the National Library in Florence. Professor Del Lungo devotes two thick volumes to proving the authenticity of the Chronicle of Dino Compagni. Dr. Attilio Hortis has published an able study on the Latin works of Boccaccio.

Senator Marco Tabarrini has written an interesting account of the life and studies of Gino Capponi. A biography of Manzoni contains some interesting letters of his. P. G. Molmenti has written a good critique on Goldoni; and a volume of the poet's inedited letters has been published. An intensely inter-

esting book is the autobiography of the famous living sculptor, Giovanni Dupré.

The novels of Zola and the poetry of Lorenzetti find many admirers and imitators. "Giacinta" is a novel by a brilliant author, Capuana, which has the full flavor of French naturalism. Two more novels of the ultra-realistic school are "Candaule," by R. Sacchetti, and "Cesare," by Bruno Sperani (pseudonym of a lady). Among others are a beautiful story by Barrili, "Il Tesoro di Golconda," and a historical novel, the scene of which is laid in Rome in the seventh century, "Saturnino," by R. Giovagnoli; finally, the spirited sketches of Matilde Serao, a young Greek lady settled at Naples, and of Giovanni Faldella. Edmondo de Amicis and Salvatore Farina are each of them busy with a novel.

An interesting revelation of Nihilistic thought is given in a volume by G. B. Arnando. In protest and in contrast to the realistic productions is the "Grido" of the poet Rizzi, and the "Anticaglie" of Felice Cavallotti. "Lachrymæ," a volume of elegiac verse by Giuseppe Chiarini, "L'Acqua," by Giuseppe Regaldi, and Rapisardi's translation of Lucretius, are poems of merit and beauty.

Senator Tullio Massarani has written a volume of admirable art criticism, "L'Arte a Parigi."

Vittorio Bersezio describes in an attractive manner the reign of Victor Emanuel, giving importance to the literary movement under that monarch. Signor Ruggiero Bonghi sums up in a single volume of lectures, conceived in a large fashion and in broad outlines, the whole of the ancient history of the East and of Greece.

Count Terenzio Mamiani, the venerable patriot and philosopher, has just brought out a remarkable volume entitled "La Religione dell'Avvenir." Count Mamiani is a Neo-Platonist who has studied St. Augustine and St. Thomas, a poet and a dreamer, whose instincts and sympathies are those of an artist, and whose religion of the future is the apotheosis of art-feeling.

SPAIN.—There is at present considerable literary activity in Spain. A work of unusual value is the life of Las Casas by Don Antonio Fabié. Of the "Documentos inéditos para la Historia de las Indias" twenty volumes have already appeared. Several other books on the history of discoveries in America have been published by the Government, among them a large collection of early maps; also the reprint "Tres Relaciones de Antigüedades Peruanas." Professor Costa has written a learned and valuable essay upon the Celts in Spain.

An astonishing amount of poetry is published in Spain annually, but of little value. The considerable array of novels are most of them after French models. Plays and playwrights abound, but most of the dramas are of an ephemeral character. Rubi, Echegaray, and Selgas have produced new theatrical pieces.

Several valuable works on scientific subjects of a practical bearing have appeared, such as "La Vid Comun," by Rojas Clemente, reprinted at the expense of the Government, Maffei's work on mining, and an able treatise on forestry by Don Luis de la Escosura.

PORTUGAL.—Among the few works published in Portugal may be mentioned the studies of Oliveira Martin on the early historical developments in the Iberian Peninsula; a good satirical poem by a poet of the last century, Antonio Diniz da Cruz e Silva, now printed for the first time; "Os Noivos," an excellent realistic novel, by Teixeira de Queiroz; "O Senhor Ministro," a portrayal of Lisbon society, by the same author; and a book of travels containing acute and brilliant notes on French society, by Ramalho Ortigão. In a series of novels published under the title of "Phototypias do Minho," José Augusto Vieira has discovered in the interesting customs of the Minho a new and fertile subject for fiction.

In works of philosophy and politics radical and positivistic notions are gaining ground.

LOUISIANA. The regular session of the Legislature commenced on January 6th and closed on February 1st. The Senate was called to order by Lieutenant-Governor Wiltz. In his brief address reference was made to the pestilence of the previous summer, which visited many localities of the State and destroyed thousands of lives, and the great philanthropy displayed by the people of the North, East, and West to the sufferers. He suggested that the representatives of the people "should record these facts in monumental resolutions upon their statute-books, coupled with a vote of thanks in suitable terms, so that the world may know that we are not ungrateful, and so that our children's children may remember the great calamity that fell upon their ancestors, and the noble generosity with which the women and children of distant lands came to their rescue."

In the House, J. C. Moncure was chosen Speaker. He believed that the Legislature should do little else than consider the expediency of holding a Constitutional Convention, and passing the laws necessary for that object.

One of the earliest measures adopted by the Legislature was the act providing for the session of a State Constitutional Convention. The election of delegates was directed to take place on March 18th, and the assembling of the Convention on April 21st.

The following joint resolutions, offered in the Senate, passed both Houses:

Whereas, During many months of the past year an epidemic pestilence of the most virulent character prevailed at the capital and throughout a large portion of the State of Louisiana, carrying sorrow, distress, and death into thousands of homes; and

Whereas, In the days of our mourning and sore trouble, magnanimous strangers in all sections of the United States and in many foreign lands voluntarily came to the relief of our afflicted people, with contributions aggregating \$1,100,000; therefore, be it

Resolved by the Senate and House of Representatives of the State of Louisiana in General Assembly convened, That the earnest, heartfelt thanks of the people of this Commonwealth be and are hereby tendered to all those large-hearted philanthropists who contributed so spontaneously and munificently to the relief of the Louisiana sufferers by the yellow-fever epidemic of 1878.

Be it further resolved, etc., That we, the representatives of the people of Louisiana, deem it right and proper thus to acknowledge and commend this unsurpassed philanthropy, and to place upon our statute-books this testimonial of gratitude, so that, in all time to come, those who follow us, while remembering the calamity that fell upon their ancestors, may be reminded of the noble generosity of the men, women, and children of other States of the Union, and of distant lands, who came to their relief in the days of their affliction.

In the Senate the following joint resolution was offered:

Resolved by the Senate and House of Representatives of the State of Louisiana in General Assembly convened, That the State Government is fully equal to the discharge of the duties for which governments are organized, the protection of life, liberty, and property. That the interference of the General Government in our internal affairs is a reflection upon our civilization, a reproach to republican governments, and calculated to engender bitterness and strife by intermeddling with domestic affairs which can well be adjusted by the people interested, before the constituted authorities of the State.

On its second reading the following amendment was offered and accepted:

Whereas, The Constitution of the United States has not conferred the right of suffrage upon any one, and the United States have no voters of their own creation in the States, but the matter of suffrage is left entirely with the States themselves, with the reservation of the provisions of the fifteenth amendment, which has invested the citizens of the United States with a new constitutional right, to wit, the exemption from discrimination in the exercise of the elective franchise on account of race or color or previous condition;

Whereas, The functions of Congress under this constitutional amendment are limited to prevent, by proper legislation, the denial or abridgment by a State of the right of a citizen to vote, on account of race, color, or previous condition of servitude of the voter:

Resolved, That sections 5506, 5507, 5508, and 5509 of the Revised Statutes of the United States are in derogation of the Constitution of the United States and of the amendments thereof, in this, that the Federal Government, by these sections, assumes plenary jurisdiction of the matter of suffrage, without reference to the action of the States as such, and without interference on their part to deny or abridge the right of suffrage as indicated in the said constitutional amendment.

Resolved, That the proceedings in the United States Circuit Court at New Orleans against citizens of various parts of the State of Louisiana, and the subjecting of numerous citizens thereof to the hardships of arrest from distant homes, and their removal to New Orleans to be tried for alleged offenses against the above-stated sections of the Revised Statutes, are pregnant with the gravest consequences; and the people of this State can not but protest energetically against such harsh and unwarrantable prosecutions.

Resolved, That this protest of the State of Louisiana, which, by her laws and in her courts, does make no discrimination between her citizens on account of race, color, or previous condition of servitude, be respectfully laid before the President of these United States and the Senate and House of Representatives of these United States.

Subsequently the resolutions were made concurrent instead of joint, and passed the Senate by yeas 21, nays 9. They also passed the House. The Governor transmitted a copy to the President of the United States with the following letter:

EXECUTIVE DEPARTMENT, STATE OF LOUISIANA, }
NEW ORLEANS, February 18, 1879. }

To His Excellency R. B. Hayes, President of the United States:

I have the honor of transmitting herewith to your Excellency (in accordance with the provisions thereof) a duly certified copy of "concurrent resolutions" passed by the General Assembly of the State of Louisiana at its last session.

In doing so, I desire, as Governor of Louisiana, to express, in reference to the prosecutions now pending in the Circuit Court of the United States against citizens of Louisiana, under the sections of the Revised Statutes alluded to in the resolution, my profound regret that, in a matter of such importance as to call forth the legislative action of a State, a Judge of the Supreme Court of the United States should not be present to participate in the decision of the vital questions which those cases involve, so as to afford the amplest opportunity of having them passed upon by the highest tribunal of the land, the Supreme Court of the United States.

Any decision which might be rendered in those cases, resting upon a mere concurrence of opinion of two Judges of inferior jurisdiction (the effect of which concurrence would be to bar the presentation of the legal questions involved to the Supreme Court of the United States), would not carry with it the weight and authority which the importance of the issues raised and the sense of justice and right of the American people absolutely and imperatively require.

I have the honor to sign myself, with great respect, your Excellency's obedient servant,

FRANCIS T. NICHOLLS,
Governor of Louisiana.

The election of a Senator in Congress was accomplished only after a large number of joint meetings. At the last one there were 33 Senators and 88 Representatives present. The nominations were H. C. Warmoth and B. F. Jonas. Mr. Jonas received 98 votes and Mr. Warmoth 28. The former was declared to be elected. His term commenced on March 4, 1879. He was a lawyer of distinction in New Orleans. He has held many positions of trust and honor, and has filled them well. He has been a member of the House, a member of the State Senate, and Attorney of the city of New Orleans. In the canvass of 1872 he was nominated for Lieutenant-Governor on the Democratic ticket, but, in order to consolidate the anti-Republican vote, he gave way to Mr. Penn. In 1877 he lacked three votes of the nomination for Senator, which was conferred on Senator Spofford. (See "Annual Cyclopædia," 1878, page 497.)

The following act for the prevention of cruelty to animals was passed:

Sec. 1. *Be it enacted, etc.*, That section 816 of the Revised Statutes of the State shall be amended and re-enacted so as to read as follows:

"Sec. 816. Whoever shall wantonly or maliciously cruelly beat, maim, disable, starve, or otherwise ill-treat any domesticated animal, including those specified in the foregoing section, shall, upon conviction, be fined not exceeding \$100, or imprisoned not exceeding three months, or both, at the discretion of the court."

There was a failure to pay the interest falling due on the State debt on January 1st. The subject was brought before the Legislature. By the Auditor's report the tax system of the State seems to be greatly defective in regard to the payment or non-payment of taxes and the inequality of assessments. The practice of non-payment by many owners of taxable property is most persistent. The evil has grown to so great a magnitude that there is a class of non-taxpayers, whose interests are so large and influence so extensive that it is almost impossible to deal with them effectively. The compulsory collection of their past-due taxes would amount to practical confiscation. By the imperfect system of assessment, the property of others is largely undervalued and almost entirely escapes taxation. Some striking illustrations of inequality of valuation are presented in the Auditor's report. For instance, the whole State of Louisiana appears to own household goods, jewelry, silver plate, mechanics' tools, and other such personal property to the value of \$1,716,530, of which only \$22,340 worth appears to be owned in the country. What is still more remarkable is, that only ten country parishes own any of these articles, and forty-seven parishes are entirely destitute of them. It appears, further, that while the city of New Orleans has 25 per cent. of the population of the State, the assessments of real estate for New Orleans are 61 per cent. of the assessments of the State. That is to say, New Orleans appears to be between two and three times as rich as the rest of the State. The real estate of New Orleans is valued at \$104,000,000, and the real estate of the country parishes at \$73,000,000, so that all the land in the State of Louisiana, with its houses, fences, cotton-gins, sugar-houses, steam-engines, etc., is worth only three dollars an acre, according to the official assessments. The rate of taxation previous to the session of the Constitutional Convention had been fixed at 5½ mills on the dollar to meet the interest on the outstanding State bonds, which yielded a gross amount of \$973,500 upon a total assessment of about \$117,000,000. Allowing 25 per cent. for deductions on assessments, compensation to assessors, and commissions for collection, it would net \$730,125 to meet a debt of \$821,105.15, leaving a deficiency of \$90,980.15 at the end of the year. The debt at that time was estimated at \$13,000,000, and the interest (at 7 per cent.) at \$910,000; and the net amount of taxes at \$730,125, which left a deficit of \$180,075. This deficit, the Auditor said to the Legislature, "can only be met by an increase of the interest-tax, or by a compromise with the bondholders, thereby reducing the interest to such a rate as will enable the State hereafter to meet its obligations promptly. Whether a compromise can be effected I am unable to say; but is it not better for the bondholders to receive their interest punctually, at a lower rate than now fixed by law, than to wait for an indefinite period?"

It should be recollected that the funding act was passed at a time when the *bona fide* owners of the soil of this country had no say-so in the affairs of this government; and, poverty-stricken to-day, they are unable to come forward. No one seems to be benefited by this state of things; and while the taxpayers have to apply for relief at the hands of the Legislature, I merely caution those who hold the obligations of the State, and are pressing their claims, not to do so to the injury of the people. That the interest now due will eventually be paid, I have no doubt. The only question to be settled is, when can it be paid, and what time will be granted to do so? Not invested with any power in the premises, I am compelled to refer the whole subject to your honorable body, and trust that, by wise legislation, the State may be relieved from its present financial difficulties."

The exceptional causes which operated to produce financial embarrassments in New Orleans during 1878 were such that even the teachers of the public schools of the city received no pay after the middle of August to the close of the year. In a report to the Legislature the State Superintendent suggested, as the only remedy to be found, the withholding of the contributions of the city to outside parishes. By the State law New Orleans is required to keep open the public schools for ten months in the year, and to pay annual salaries to the teachers. During a course of years the city has been contributing out of the State school-tax collected from her property-owners at least \$120,000 annually toward the education of the children of several poor parishes in Middle and Southeast Louisiana. While during periods of prosperity this generosity was possible and proper, the Superintendent was of the opinion that it was only justice that, during the utter inability of the city authorities to discharge the obligations imposed upon them by law, owing to the profound financial distress which crippled every branch of industry in the community, so recently afflicted by a dread pestilence, this annual contribution should, for the present year at least, be voluntarily declined by the usual beneficiaries, and returned to New Orleans, to enable the directors of the schools to rescue their teachers from embarrassments and destitution. He urged, therefore, that a special act should be passed by the Legislature authorizing him to apportion back to the city of New Orleans such an amount of State school-taxes, paid by her citizens into the State Treasury for the years 1877 and 1878, as will enable the City Board of School Directors to discharge, as far as practicable, all outstanding obligations for the month of December, 1877, and the last four months of the year 1878. A bill for this object failed to pass.

The public school fund of the State includes, first, the "current school fund," or State tax of two mills on the dollar value of property in

the respective parishes of the State, collected and paid into the State Treasury. The amount of this tax levied for collection in the year 1878 was \$345,000, or about \$1.20 per child of school age in the State; but the amount collected and rendered apportionable to the parish boards was only \$208,159.69, or about 76½ cents per child. This is but a small fraction of the \$500,000 deemed necessary in the general appropriation act of March 22, 1878, as the State's contribution toward the support of good free schools in every locality of the State where such schools were needed. Second, the poll-tax of one dollar imposed upon all adult male inhabitants of the State, for school and charitable purposes. The amount of this tax paid into the State Treasury during the year 1878 aggregated only \$14,620.60, showing conclusively that only a few of "all male inhabitants of the State" have been required to contribute this tax; and of this amount the free public schools have been allowed to receive only one fourth. The State Constitution has required all taxation to be equal and uniform throughout the State, and imposed on the General Assembly the obligation to "levy a poll-tax on all male inhabitants of the State over twenty-one years old"—authorizing it, at the same time, to raise this capitation tax to one dollar and fifty cents per annum. Legislation was therefore needed in obedience to the mandate of the Constitution to enforce payment of the poll-tax by every male inhabitant, so that it might not continue to be paid by property-owners alone, who are required to pay other taxes also for the support of the government and the schools.

The system of schools in operation in New Orleans is known as that of separate schools, one set being for white children and another set for colored children. The right of the directors to establish these separate schools was brought to a judicial test in the case of *Bertonneau vs. the Board of Directors of the city schools of New Orleans and others*, in equity. The decision was rendered by Judge W. B. Woods of the United States Circuit Court in February. The Judge said:

The grievance, and the sole grievance, set out in the bill, is that complainant's children, being of African descent, are not allowed to attend the same public schools as those in which children of white parents are educated. Is this a deprivation of a right granted by the Constitution of the United States? The complainant says that the action of the defendants deprives him and his children of the equal protection of the laws, and therefore impairs a right secured to him and them by the fourteenth amendment to the Constitution of the United States. Is there any denial of equal rights in the resolution of the Board of Directors of the city schools, or in the action of the subordinate officers of the schools, as set out in the bill? Both races are treated precisely alike. White children and colored children are compelled to attend different schools. That is all. The State, while conceding equal privileges and advantages to both races, has the right to manage its schools in the manner which in its judgment will best promote the interest of all. The State may be of opinion that it is better to educate the

sexes separately, and therefore establish schools in which the children of different sexes are educated apart. By such a policy can it be said that the equal rights of either sex are invaded? Equality of right does not involve the necessity of educating children of both sexes, or children without regard to their attainments or age, in the same school. Any classification which provides substantially equal school advantages does not impair any rights, and is not prohibited by the Constitution of the United States. Equality of rights does not necessarily imply identity of rights.

These views have been held by the Supreme Court of Ohio in respect to a law under which colored children were not admitted as a matter of right into the schools for white children. *State vs. McCann et al.*, 21 Ohio State, 198. See also *State vs. Duffy*, 7 Nevada, 342, and *People vs. Gaston*, 13 Abb. (New York), 160, where substantially the same doctrine is held. See also the able concurring opinion of Mr. Justice Clifford in *Hall vs. De Cuir*, 95 U. S., 491. In the State of Georgia there is a law forbidding the intermarriage of white persons and persons of African descent. It was held by Mr. Justice Erskine, of the United States Court, that this law was not obnoxious to the fourteenth amendment to the Constitution. (*Ex rel. Hobbs and Johnson*, 1 Woods, 537.) The argument in support of this decision is that the law applies with equal force to persons of both races. Its prohibition applies alike to black and white, and the penalty for disobedience falls with equal severity on both. These authorities, it seems to me, fully sustain the views above announced by this Court.

The last point was that the establishment of separate schools was contrary to the Constitution of the State. The Court said: "Whether the directors of the New Orleans schools are the State, or so represent the State that their acts are to be considered the acts of the State, it is unnecessary to decide. The Court has no power, and it does not sit, to supervise the conduct of State officers, unless such conduct impairs some rights conferred by the Constitution of the United States, or unless the citizenship of the parties gives it jurisdiction. Otherwise the Court will not and can not take cognizance of violations of State law or State constitutions, by the officers of a State."

A bill was introduced to repeal the charter of the Louisiana State Lottery. This charter was granted in 1868 for a term of twenty years, and the company paid an annual license fee of \$10,000. As this had been in part paid for the year 1879, the point discussed turned on the legality of an immediate repeal. The Senate adopted March 31st as the date for the repeal to take effect, and passed the bill. In the House the vote was 63 yeas to 20 nays. The repeal, however, failed to become effective, the law being regarded as violating a regular contract.

The elections for delegates to the seventh State Constitutional Convention was held on March 18th. The vote was much less than had been anticipated, being under 70,000, which was smaller than at any election during the twelve previous years. The delegates elected from senatorial districts were divided politically as follows: Democrats 29, Republicans 5, National 1, Independent 1; total, 36. The delegates from parishes were divided as follows: Democrats 69, Republicans 27, National

1, Independent 1; total, 98. The total was: Democrats 98, Republicans 32, Nationals 2, Independents 2. Mr. L. A. Wiltz was chosen President of the Convention, having received 102 votes, and Pierre Landry 27. One of the first resolutions adopted by the Convention was the following—yeas 76, nays 49:

Resolved, That there is no intention whatever entertained by this body of impairing or restricting the political, civil, or religious rights of any class of citizens of this State on account of race, color, or previous condition of servitude, but on the contrary the intention is to defend and maintain the rights of the colored citizens as guaranteed by the Constitution of the United States and of this State, under the new Constitution about to be formed.

There were two or three seats of delegates contested. In a case from East Carroll Parish, the question turned on the citizenship of the sitting delegate. The majority report was in his favor, while the minority recommended that he be ousted. Mr. Girard moved the rejection of the majority report, saying: "It has been said there are no laws requiring qualifications for members of the Convention. This was true, because no laws could be framed to govern the duties of a Constitutional Convention. Consequently the Convention would naturally follow the rules of other general assemblies. It was repugnant to every sentiment of Americans to allow foreigners and aliens to represent them. He could not recognize any one as a true son of Louisiana who would favor allowing aliens to make an organic law for this State. It was admitted that no man could be a citizen of two States; the party in question could not be a citizen of both Louisiana and Ohio." Mr. Warmoth said "he did not believe a man had to be a Louisianian to occupy a seat in the Convention. This is an assemblage of the people's representatives in their primary capacity. The Convention has no laws or regulations governing its proceedings. There is no law of any kind to limit the power of the people to send a representative to this Convention. A parish might send a woman or any one else, and it would be a piece of impertinence to say such a representative should be turned out." The motion to reject the majority report was lost—yeas 28, nays 83.

The question relating to the powers of a Constitutional Convention was incidentally discussed. It came up in connection with the majority and minority reports on an ordinance making appeals to the Supreme Court from certain parishes returnable in New Orleans in 1880. The majority report advised the rejection of the ordinance, principally because it partook of a legislative character and had nothing to do with the preparation of an organic law. The minority report favored the ordinance, and claimed that unless some such provision was made the appeals could never be taken, which would be an act of injustice. Judge Land moved to reject the majority report, and touched on the powers of the Convention. He said:

The powers of the Convention were only limited by the Constitution of the United States. He contended, in discussing the power of the Convention, that they had the supreme power to frame a Constitution without submitting it to the people. In support of this proposition he cited a list of constitutions which had never been submitted, as follows: The constitutions of Virginia, 1776; Ohio, 1802; Pennsylvania, 1776 and 1790; South Carolina, 1776 and 1790; Tennessee, 1796; Vermont, 1777, 1786, and 1793; Missouri, 1820; New Hampshire, 1776; New Jersey, 1776; New York, 1777, and amendments adopted by the Convention of 1801; North Carolina, 1776; Kentucky, 1792; Illinois, 1818; Indiana, 1816; Delaware, 1776, 1792, and 1831; Florida, 1865; Connecticut, 1776; Alabama, 1819 and 1867; Arkansas, 1836; Georgia, 1777, 1789, amendments adopted 1795 and 1798, and amendments to Constitution of 1780 adopted in 1812, 1818, 1824, 1835, 1840, 1841, 1843, 1847, and 1849. The question of whether the Convention was bound by the call of the Legislature had long since been decided in the negative. The Convention of 1845, which was composed of the ablest jurists of Louisiana, had, by a vote of 66 to 6, decided that the Legislature had no right to prescribe its limits. From these facts he concluded the Convention had power to make a Constitution without submitting it. In the Convention of 1812, after the Constitution had been passed and signed by the President, the Convention passed a separate and distinct ordinance, having no connection with the Constitution.

Mr. George disagreed with Judge Land on the question of the Convention's power to frame a Constitution without submitting it to the people. It was true the Convention was the representative of the people, but only to the extent of performing those duties for which they had been called. He attached but little importance to the precedents read by Judge Land, but he thought the opinions of Judge Cooley, the great constitutional lawyer, were entitled to greater weight. This was a progressive age. The rights of the people were better understood and maintained to-day than a hundred years ago. It would be found that, in the majority of cases, the Constitutions not submitted had been framed in the early days of the States, and when everything was crude and unsettled.

Mr. Caffrey declared that the sovereignty of the people could not be alienated or transferred. It is true they might delegate certain powers to representatives, such as in the case of the Convention. He did not hesitate to say that if the Convention attempted to frame a Constitution without submitting it to the people, it would surely be defeated. When the Convention was called by one branch of the government, and when it was expressly stipulated in that call that the Constitution should be submitted to the people, he felt it his duty, as a dutiful citizen, to obey the dictates of the call. If this Convention did not submit the Constitution, the people would call another Convention, and this would be the remedy to defeat the Convention. Referring to the argument used by those supporting the other side of the question, that the Georgia Convention passed an original law in appropriating \$25,000 to pay its expenses, Mr. Caffrey said this proved nothing as to the power of the Convention. When the people of Georgia called the Convention they implied that nothing should be done to prevent its meeting; and, as no provision had been made to pay the expenses of the Convention, it was only natural that the Convention itself should make the appropriation. It was right, because in doing so the Convention only followed the implied wish of the people that they should meet. In following out this idea the speaker asserted that this Convention could sit longer than sixty days, or could appropriate an extra amount, because these actions would be in compliance with the wish of the people that the Convention should frame an organic law, and it might be necessary to sit longer, or to have more funds, to frame this law.

Mr. Pardee took the ground that the Convention had no power to legislate, as the Constitution of the United States declared that every member of a Legislature should take an oath to support the Constitution of the United States, and the Convention had passed a resolution declaring it was not necessary for its members to take such an oath.

The most important subject that came before the Convention was that of the State debt. It was referred to a committee of seventeen members to examine and report upon. Two sub-committees were appointed, one consisting of four members, and the other of two members. The sub-committee of four made a report which embraced the facts relative to each class of original bonds as set forth in the report of the State Auditor to the Convention. They also examined all the acts of the Legislature pledging the faith of the State to the payment of her obligations, and to ascertain whether or not adequate provisions for their redemption at maturity and the payment of interest had been made under the requirements of the Constitution. The questions before them were: 1. Whether the Legislature of 1874 was competent to bind the people of a free State? 2. Whether any evidence exists in the office of the Secretary of State showing the adoption by the people of the constitutional amendments of 1874? A report of three of the sub-committee held that the Legislature that passed the act of 1874 was not chosen by the people, but was upheld by the military arm of the Federal Government; the funding act was therefore invalid. With regard to the second question, it held that the constitutional amendments of 1874 were not ratified by the people, the returns having been counted by the Returning Board in violation of the facts.

One member of the sub-committee submitted a minority report, saying that the Legislature of 1874 was recognized by the Government of the United States, and therefore it was a competent body. With regard to the second question, Mr. Caffrey urged "that public officers are presumed to do their duty. The amendments have been duly promulgated and acted on; under them millions of bonds have been funded, and the question of whether there is sufficient evidence in the office of the Secretary of State of their adoption has been swallowed, as it were, by the great fact that the amendments have been acted on and acquiesced in by the people, and by every department of government."

A recapitulation of the details embraced in the majority report of the sub-committee presented the following results:

BONDS RECOMMENDED TO BE PAID.	
Relief of State Treasurer.....	\$693,500
New Orleans and Nashville Railroad.....	453,000
Floating debt.....	500,000
State Penitentiary.....	500,000
Free School Fund.....	1,193,500
Seminary Fund.....	186,000
Total.....	\$3,486,000

This amount was subsequently increased to \$4,000,000 by additions for interest.

BONDS RECOMMENDED NOT TO BE PAID.

New Orleans, Jackson, and Great Northern Railroad	\$619,000
New Orleans, Opelousas, and Great Western Railroad	536,000
Vicksburg, Shreveport, and Texas	248,090
Baton Rouge, Gross Tete, and Orleans Railroad	180,000
New Orleans, Mobile, and Texas Railroad, first issue	875,000
New Orleans, Mobile, and Chattanooga Railroad, second issue	750,000
New Orleans, Mobile, and Texas Railroad, third issue	2,500,000
North Louisiana and Texas Railroad Company	1,122,000
Beuf and Crocodile Navigation Company	80,000
Floating debt	2,450,000
Purpose paying certain debts	978,000
Relief of P. J. Kennedy	184,000
Mississippi and Mexican Gulf Ship Canal Company	480,000
Certificates of indebtedness	250,000
Levee bonds, first issue	1,000,000
" " second issue	4,000,000
" " third issue	2,960,000
Planters' Consolidated Association	581,447
Total	\$19,698,447

The other sub-committee, consisting of two members, was instructed to inquire and report whether or not the body or assembly of men who passed the so-called "funding act of 1874" was a constitutional Legislature, competent to bind the people of a free State, and whether or not there was any legal evidence in the office of the Secretary of State to show that the so-called "constitutional amendments of 1874" were ratified by the people. They reported that it was a matter of public history, established and proven by the testimony taken in 1873 before the committee of the United States Senate on Privileges and Elections, that in December, 1872, and January, 1873, the State-House was seized by a regiment of soldiers of the United States army, and the legally elected Legislature was, by overpowering force and illegally, prevented from assembling and choosing its own officers, and judging of the elections and qualifications of its members, according to the Constitution of the State. Therefore the body of men alleged to have passed the "so-called funding act" of 1874 was not a constitutional Legislature competent to bind the people of a free State. They also reported that there was no evidence in the archives of the State that the "so-called" constitutional amendments of 1874 were ever ratified or adopted by the people. The returns of the election were not to be found in the archives of the State, nor was there in the office of the Secretary of State any compilation, or certificate, or proclamation showing, certifying, or proclaiming that said "so-called amendments" to the Constitution had been ratified or adopted by the people. There was in said office a mutilated copy of the newspaper called the "New Orleans Republican," of December 24, 1874, in which were printed what purported to be the certificates of J. Madison Wells, Thomas C. Anderson, J. M. Kenner, and Casanave, purporting to certify the vote of a portion of the people of the State on the constitutional amendments. This publication on its face omits entirely the vote of four large

populous parishes, and the sub-committee were assured by the fifth member of the Returning Board that it falsified and altered the actual vote in many of those parishes which it purported to state. These men had no constitutional authority to determine whether or not the constitutional amendments had been adopted; and if they had, their certificate and finding was not on file or on record in the office of the Secretary of State.

The main Debt Committee, upon the reception of these reports, appointed a sub-committee to draft an ordinance to be submitted to the Convention based on the reports of the sub-committees, and recommending the payment of about \$4,000,000 of the debt. This ordinance was prepared and endorsed by a majority of the main committee, and presented with a report to the Convention. At the same time a report from the dissenting minority of seven was also presented. The majority say in their report that they considered it to be their first duty to inquire into the validity of the constitutional amendments claimed to have been adopted in 1874, and that they were unable to find any legal evidence in the office of the Secretary of State to indicate that the amendments were ever adopted by the people. They then investigated the acts of the Legislature pledging the faith of the State, with the results contained in the ordinance of \$4,082,358 of valid claims. They then say: "The theory or principle upon which your committee have prosecuted their inquiry and based their recommendation is, that no invalid nor fraudulent debt should be paid by the people of the State, and that the valid and honest debt should be paid." The fact that a part of this debt had subsequent to its creation been scaled and funded they thus meet and answer: "They are unable to concede that the funding of any portion of the debt has given it any greater validity than it originally possessed; and, on the other hand, they do not admit that the absolute repudiation of forty per cent. of debt detracts in the least from the validity of that which was legal and honest." They then proceed to say that if the State was in a condition to be generous, they probably would not have regarded it as so necessary to invoke a strict construction of the law and the Constitution; that their sympathy for a small class of creditors should not induce them to do injury to a far greater number of persons equally entitled to all the sympathy that human nature can bestow. After expressing their exceeding regrets that any recommendation of theirs "should necessarily affect deleteriously the interests of any other than their own citizens," and that they would "greatly prefer that all the ills that may arise from the final settlement of this long-questioned debt should be borne by our own people alone," they conclude the whole matter of the non-payment of the debt by a reference to "the eternal fitness of things," thus:

But may it not be in the order of the eternal fitness of things that those who directly or indirectly (unwittingly, it may be) aided to tear down the basis of our former great prosperity should share some of the ills that have so long and so powerfully borne upon the once proud and wealthy people of Louisiana!

E. E. KIDD,

Chairman of the Committee.

The following members of the committee concur in this report: H. R. Lott, G. W. Munday, Joseph Henry, B. R. Forman, David John Reid, J. M. Moore, J. C. Vance, B. F. Jenkins, H. M. Favrot.

Those who signed this majority report were estimated to represent an assessed valuation of \$25,295,750.

The minority of the committee made a very able report, in which they gave the reasons for their dissent. They say:

The startling results of the report of the committee necessarily induce hesitation and reluctance in accepting the principles which have guided the committee in reaching its conclusions. The mind is dazed by the annulment of nearly twelve millions of bonds by a stroke of the pen; and, although in times of revolution, when the imagination is superheated by political excitement, such an extraordinary act may be accepted as the necessity of the occasion, one can not witness it in the midst of profound peace without grave apprehensions of its justice and propriety. Doubtless, some who approve the measure are amazed at the moderation of the committee, but the undersigned do not believe a majority of this Convention are in accord with the views expressed by the committee, or after due consideration will sustain its report.

The committee have found that of all the bonds issued by the State, outstanding on January 1, 1874, and which, according to the committee's report, amounted to \$27,987,500, only a fraction thereof—to wit, \$3,436,000—is legal; and they reject \$19,693,447.50 as of no force, legal or moral. Of the amount of the debt found by the committee to be legal, to wit, \$3,436,000, the State is entitled to \$1,329,500 to be carried to the credit of the free-school fund and the seminary fund, leaving outstanding in the hands of third parties \$2,156,500. To whom this \$2,156,500 is to be paid can not be ascertained, as the bonds considered valid by the committee have been exchanged at 60 cents on the dollar for consols, issued under the act of 1874, and the particular consols thus issued in exchange for these bonds can not be identified. The result is that the State owes itself \$1,329,500 as trustee for the purposes of education, and it also owes to a nameless creditor \$2,156,500. How this unknown creditor is to be ferreted out puts the imagination at fault, and hence all that the Legislature can do is to advertise for him as is done in the case of unknown heirs of vacant successions, and retain the amount of the debt in the Treasury until he appears; for it is impossible to make the exchanges proposed in the ordinance reported by the committee, since the bonds recognized by the ordinance as valid and exchangeable have been surrendered and canceled by the owners, who have accepted consols in lieu thereof.

What strikes the mind in contemplating the plan of the committee is, that the State is held bound to pay bonds when purchased by itself as an investment of the school funds, while the State is considered discharged from responsibility for the same kind of bonds when purchased by individuals. For instance, the free-school fund was partially invested in railroad bonds issued by the State prior to the war; the amount of railroad bonds thus purchased was \$401,000, including \$18,000 of the bonds issued to the Nashville Railroad Company. If third persons who invested in the same kind of bonds are to be deprived of their rights for the reasons set forth by the committee, it seems to be just that the State and its school fund should be subjected to the same heroic treatment.

The committee in its report completely disregards all moral and legal obligations on the part of the State to refund the consideration received by it for any of the bonds declared to be illegal. The difference between a fraudulent bond and a bond void for want of power to issue it is well known, and important consequences flow from it. If a debt be contracted in fraud, and the debtor receive no consideration for it, then there is no legal or moral obligation on the part of the debtor to respect his contract. But if a State or corporation issues a bond in a manner not authorized by the Constitution of the State or the law creating the corporation, though the bond may be void, the obligation to restore the consideration received for it subsists in law and in equity.

In the case of *McCracken vs. San Francisco*, 16 California Reports, p. 629, Chief Justice Field as the organ of the Court held that, although the ordinance passed by the Common Council authorizing the sale of the real estate belonging to the city of San Francisco was void, yet the obligation to restore what was unjustly received was independent of the restraining clauses of the city charter. The obligation to restore the price of the sale made, and which had been received by the city, it was held, arose from the obligation to do justice, to restore what belongs to others, which rests upon all persons, natural or artificial; and, in the language of the Court, "it may well be doubted whether it would be competent for the Legislature to exempt the city, any more than private individuals, from liability under circumstances of this character." The same doctrine is announced by the Court of Appeals of New York, in the case of the *Oneida Bank vs. Ontario Bank*, 21 New York, 490. In that case, a bank issued an illegal certificate prohibited by the banking laws of New York; yet the holder of the certificate was allowed to recover back the consideration paid to the bank, and the endorsee of the void certificate was held entitled to recover the consideration received by the bank from the payee of the certificate; the endorsee of the void certificate was regarded as equitable assignee of the consideration given for it.

In the light of these suggestions, it is not enough to show that the bonds issued by the State are void for non-compliance with constitutional provisions. It is necessary to go a step further, and establish that the State received no consideration for the bonds issued by it. Every sentiment of honor and justice demands that he who receives what does not belong to him should restore it. If the bonds are void, the State has received something for nothing. Law and justice concur in the enforcement of the duty on the part of the State to surrender that something to its true owner.

A statement is then made in the report of the amount of money received on each class of bonds which it was proposed to repudiate. From this it appears that since the war the State received in cash \$6,893,507 for \$12,141,240 of bonds and State notes, reduced by funding to \$7,294,744. Yet it was proposed, with the exception of \$500,000, to reject as void these \$7,294,744 of consols, for which the State has received in cash \$6,893,507.31, or within \$401,256.69 of the face value of the bonds. The circumstances connected with other issues of bonds are then stated, and the minority further say:

The undersigned have entered into this discussion merely to remove the impression which seems to have taken possession of the minds of some, that the eleven and a half millions of consols now constituting the debt of the State represent no legal obligations of the State, and are based on no valid consideration. But the funding act of 1874, and the contemporaneous constitutional amendment, created a tribunal to determine the validity of the obligations tendered in exchange for consols, and authorized the creditor to appeal to

the courts, in case the Funding Board rejected his claim. Subsequently the authority of the Funding Board was restricted by the supplemental funding act of 1875, which prohibited the funding of certain classes of bonds until their validity was established by a decree of the Supreme Court. The bonds mentioned in said supplemental act constituted about one half of the State debt. Hence the outstanding consols represent bonds adjudicated by the Funding Board or the Supreme Court to be valid obligations of the State. This adjudication is conclusive on the State. Hence the Supreme Court, through Chief Justice Manning as its organ, in May, 1878, said: "We regard the faith of the State as irrevocably pledged to the payment of her consolidated bonds issued under the authority of that act (1874), and to the payment of such other bonds as may be issued under the sanction of the decree we shall make herein. The contract with the holders of these bonds is one which, in the language of the constitutional amendment, the State can by no means and in no wise impair." (State *ex rel.* Pacific Railroad *vs.* Nicholls, Governor, 30 A., 986. In the same case, page 981, the Court say the funding act was approved January 24, 1874, and on the same day an amendment to the Constitution was approved. "This amendment has become a part of the Constitution by its subsequent ratification by the voters at the polls." The Supreme Court of the State had already decided in July, 1875, that "this amendment was adopted, and it now forms part of the organic law of the State." (27 A., 579, Forstall's case.)

The Supreme Court of the United States, in the case of *McComb vs. Board of Liquidation*, say: "On the day of passing this act [speaking of the funding act of 1874] the General Assembly passed another act, proposing to the people of the State an amendment to the Constitution of the State, which was adopted at the ensuing election." This case was decided in October term, 1875 (2 Otto, 531). The Nicholls General Assembly on the 12th of March, 1877, passed an act the title of which is as follows: "An act to enforce effectually the constitutional amendments proposed January 24, 1874, ratified at the general election held on November 2, 1874, relative to the State debt and the funding thereof; to protect the interests of the State and the holders of the bonds issued by virtue of said amendments; for that purpose to amend and reenact an act, . . . No. 3, approved January 24, 1874," etc. This act is No. 53 of the regular session of 1877, approved by Governor Nicholls, the first section of which provides "that act No. 3, approved January 24, 1874, pages 39 to 42 inclusive, statutes of 1874, commonly known as the funding bill, entitled 'An act,' etc. . . . be and the same is hereby amended and reenacted as follows," etc.

Under these circumstances, the undersigned never conceived it possible that any one would undertake to assail the validity of the bonds issued in pursuance of the provisions of the act of 1874 and the constitutional amendment of that year, on the grounds stated by the committee. All departments of the State Government had recognized the binding force of the funding act and the constitutional amendment enforcing it. The Supreme Court of the State on two occasions, and the Supreme Court of the United States on one occasion, expressly declared that the amendment was ratified by the people of the State. The funding act has been accepted by the Supreme Court of the State as one of the statutes of the State from the day of its passage to the present moment. The creditors of the State were invited to surrender the bonds held by them at a discount of forty per cent., and accept in lieu thereof the consols authorized by the legislation of 1874; the process of funding the entire debt of the State under that legislation has been going on undisturbed for five years, and it may be said the funding is almost complete. The Nicholls General Assembly, on the 12th of March, 1877, so far from repudiating the legislation of 1874, passed a law to amend and reenact the funding bill and enforce the constitutional amendment.

Who now has the constitutional power to say that

the act of 1874, with its contemporaneous constitutional amendment, is not the law of the land so as to affect contracts entered into under it; or that it shall not remain so until those contracts are satisfied? Any contrary declaration by this Convention will be disregarded by judicial tribunals. The undersigned are not prepared to announce to the world that the State of Louisiana refuses to recognize a contract which all of its courts, as well as all the courts of the United States if called on to enforce it, would not hesitate to use the judicial power of the State or nation to enforce. When a man refuses to pay debts recognized by the courts of the country as legal, and to enforce which they will exert their judicial power, it is said that he repudiates his debts. There is no reason why the same terms should not be predicated of similar conduct on the part of the State, except the desire to use diplomatic and euphuistic language when speaking of a sovereign. The fact is, whether a Legislature be a Legislature is a political question, and therefore it is a question of force. The Legislature that is, and exerts its authority to legislate, and which can enforce its enactments, is the Legislature of the State. In this country the Legislature of a State is that Legislature whose laws the President of the United States will enforce, if called on so to do by the Legislature if in session, or the Governor of the State when the Legislature can not be convened. This has been adjudged many years ago, if adjudication were necessary. (Luther *vs.* Borden, 7 Howard, p. 42.) It is matter of history that the President of the United States recognized the Legislature of 1874, and would have enforced its enactments if resisted.

The report was signed by the following members of the committee: Thomas J. Semmes, D. Caffrey, Hugh Breen, H. C. Warmoth, M. Cahen, G. Legardeur, Jr. One absent member, McConnell, approved. These members were stated to represent an assessed valuation of \$102,075,769. The report closed with the recommendation that a special committee of nine should be appointed to ascertain whether or not an equitable adjustment of the consolidated debt of the State contracted under the legislation of the year 1874 can be effected.

These reports were subsequently considered by the Convention, and a debate ensued which continued through several daily sessions. A motion was then made that, for the purpose of ascertaining definitely and making arrangements to pay the trust fund due the Agricultural and Mechanical College, the matter of the State debt be recommitted to the special committee of eighteen on that subject, and that said committee have full power to reconsider the whole subject of the State debt. On a subsequent day the chairman reported back the majority report, with an additional ordinance to pay the trust fund of the Agricultural and Mechanical College, amounting to \$185,000. A minority report was also presented, advising that the principal of the debt be paid, with interest at three per cent. for five years and four per cent. afterward. A second minority report was presented which advised that the debt should be scaled to an amount just between its highest and lowest market value since the funding act, and to pay four per cent. interest.

On the next day (June 30th) a motion was made to adopt the majority report. Then a motion was made to substitute the minority

report. While this motion was before the Convention, a motion was made to amend the minority report by extending the three per cent. interest to ten years instead of five years. This was lost—yeas 49, nays 80. The minority report was then lost—yeas 47, nays 82. The majority report was then put to vote and lost—yeas 40, nays 89. A motion was then made to reconsider the vote by which the minority report was lost. This was agreed to. A substitute for the minority report was then offered, to scale the debt to seventy-five cents on the dollar with four per cent. interest. An amendment to this was offered, that the debt should be scaled to fifty cents on the dollar, with four per cent. interest. Another amendment to the substitute was offered, that the debt should remain intact, and that interest be paid at the rate of two per cent. for five years, three per cent. for ten, and four per cent. afterward. An amendment was offered to this last proposition, that it be three per cent. interest for ten years, and four per cent. afterward. This was lost—yeas 51, nays 63. Another amendment to this proposition, that the debt bear two per cent. interest till maturity, was lost—yeas 23, nays 99. On the question to give the bondholders their choice between seventy-five cents at four per cent. and the face of the bond at two per cent. for five years, three per cent. for ten years, and four per cent. afterward, the vote was—yeas 25, nays 91. To amend the minority report by allowing three per cent. interest for fifteen years and four per cent. afterward, the vote was—yeas 67, nays 59. Finally, all the proposed amendments were lost, especially those for scaling the debt below seventy-five cents on the dollar. After much subsequent discussion, the whole subject was disposed of by the adoption (yeas 71, nays 41) of the following ordinance, to be submitted to a popular vote :

ART. 1. *Be it ordained*, That the interest to be paid on the consolidated bonds by the State of Louisiana be and is hereby fixed at two per cent. for five years from the 1st of January, 1880, three per cent. for fifteen years, and four per cent. thereafter; and there shall be levied an annual tax sufficient for the full payment of said interest, not exceeding three mills, the limit of all State tax being hereby fixed at six mills. Provided, the holders of consolidated bonds may, at their option, demand in exchange for the bonds held by them bonds of the denomination of five dollars, one hundred dollars, five hundred dollars, one thousand dollars, to be issued at the rate of seventy-five cents on the dollar of bonds held and to be surrendered by such holders, the said new issue to bear interest at the rate of four per cent. per annum, payable semi-annually.

ART. 2. The holders of the consolidated bonds may at any time present their bonds to the Treasurer of the State, or to an agent to be appointed by the Governor—one in the city of New York and the other in the city of London; and the said Treasurer or agent, as the case may be, shall endorse or stamp thereon the words, "Interest reduced to two per cent. for five years from January 1, 1880, three per cent. for fifteen years, and four per cent. thereafter"; provided, the holder or holders of said bonds may apply to the Treasurer for an exchange of bonds, as provided in the preceding article.

ART. 3. *Be it further ordained*, That the cou-

pons of said consolidated bonds falling due the 1st of January in the year 1880 be and the same are hereby remitted, and any interest tax collected to meet such coupons are hereby transferred to defray the expenses of the State Government.

Be it further ordained, and it is hereby ordained by this Constitutional Convention, That the foregoing provisions and articles relative to the consolidated debt shall not form a part of this Constitution, except as hereinafter provided, as follows :

At the election held for the ratification or rejection of this Constitution, it shall be lawful for each voter to have written or printed on his ballot the words, "For ordinance relative to State debt," or the words "Against ordinance relative to State debt"; and in the event that a majority of the ballots so cast have on them the words, "For ordinance relative to State debt," then the said foregoing provisions and articles of this ordinance shall form a part of the Constitution submitted if the same is ratified; and if a majority of the votes so cast shall have endorsed on them the words, "Against ordinance relative to State debt," then said provisions and articles shall form no part of this Constitution.

This ordinance was to be submitted to the vote of the people on the same day with the Constitution.

The reason advanced for scaling the debt by those who sustained it was that the question of ability or inability of the people to pay was the one on which the action of the Convention turned.

The provision of the Constitution for the relief of the delinquent taxpayers declared all interests, penalties, costs, fees, and charges whatever on taxes and licenses due to the State or any political corporation, prior to January 1, 1879, and still unpaid, to be remitted. All property forfeited to the State or any political corporation for non-payment of taxes shall be redeemable by paying the principal due at any time previous to January 1, 1881, with eight per cent. interest subsequent to January 1, 1880.

The preamble to the Bill of Rights was as follows :

We, the people of the State of Louisiana, in order to establish justice, insure domestic tranquillity, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, acknowledging and invoking the guidance of Almighty God, the Author of all good government, do ordain and establish this Constitution.

Article 6 of the Bill of Rights was as follows :

ART. 6. There shall be neither slavery nor involuntary servitude in this State otherwise than for the punishment of crime, whereof the party shall have been duly convicted.

The General Assembly is authorized to create a Bureau of Agriculture. The State tax on property is not to exceed six mills on the dollar, or five mills if the State debt ordinance is not adopted. No parish or municipal tax, for all purposes whatsoever, shall exceed ten mills on the dollar; and for bridges and other special objects there shall be no increase of tax unless first submitted to a vote of the property-owners and approved.

Among the other provisions of the Constitution are the following :

No qualification of any kind for suffrage or office, nor any restraint upon the same, on account of race, color, or previous condition, shall be made by law.

The General Assembly shall establish in the city of New Orleans a university for the education of persons of color, provide for its proper government, and make an annual appropriation of not less than five thousand dollars for its maintenance and support, nor more than ten thousand dollars.

Women twenty-one years of age and upward shall be eligible to any office of control or management under the school laws of this State.

The school funds of this State shall consist of:

1. The proceeds of taxation for school purposes, as provided in this Constitution;
2. The interest on the proceeds of all public lands heretofore granted by the United States for the use and support of the public schools;
3. Of lands and other property which may hereafter be bequeathed, granted, or donated to the State, or generally for school purposes;
4. All funds or property, other than unimproved lands, bequeathed or granted to the State, not designated for other purposes;
5. The proceeds of vacant estates falling under the law to the State of Louisiana.

The Legislature may appropriate to the same fund the proceeds, in whole or in part, of public lands not designated for any other purpose, and shall provide that every parish may levy a tax for the public schools therein, which shall not exceed the State tax; provided, that with such tax the whole amount of parish taxes shall not exceed the limits of parish taxation fixed by this Constitution.

The General Assembly may provide for the organization or establishment of a State Board of Education, and of Parish Boards of Education; provided, that the members of said Boards shall serve without compensation.

The general exercises in the public schools shall be conducted in the English language and the elementary branches taught therein; provided, that these elementary branches may also be taught in the French language in those parishes in the State or localities in said parishes where the French language predominates, without incurring additional expense.

The term of the State offices is four years. The State capital is to be removed to Baton Rouge.

The general features of this Constitution are similar to those of others. It was provided that the election should be held on the first Tuesday in December, and at the same time there should be chosen all the State officers and members of the General Assembly. The term of all such officers shall commence on the second Monday in January, 1880. The final adjournment took place on July 23d, it being the eighty-first day of the session.

The subject of the resources of the State was alluded to in the Convention. Although the amount of the staples produced is large, they are subject to a very serious discount for the expense of the necessaries of life, which are largely imported for consumption. Thus it may prove that a free State in which the agriculture is devoted to such staples as cotton, sugar, and tobacco is not so rich as one in which the cereals and kindred crops are cultivated. From a statement made in the Convention it appears that the State assessment in 1877-'78 was about \$177,000,000, of which the parish of Orleans represents \$109,000,000,

sugar parishes (sixteen in number) \$26,700,000, thirty-six cotton parishes \$33,400,000, and five parishes (part cotton and part sugar) \$8,250,000. The cotton parishes represent a production of about \$29,000,000; sugar parishes, \$19,000,000. The position of the State in 1860 was: Assessed values, \$420,000,000; liabilities, outside of property banks, \$4,700,000. After the war, December 31, 1865: Assessed values reduced to \$200,000,000; liabilities, outside of property banks, \$5,780,000. Levees all destroyed, plantations wrecked, everything to be replaced and repaired. There is no record of the cotton crop prior to 1872-'73; but estimating on the basis of the total cotton crop of the country, the pro rata of Louisiana can not be put down in the year 1867-'68 at over 300,000 bales; crop of sugar same year, 37,645 hogshheads. Beginning in 1872-'73, the records show the following productions: Cotton, 434,000 bales; sugar, 108,520 hogshheads; gradually increasing year by year until in 1877-'78 Louisiana occupied the third rank as a cotton-producing State, the crop of cotton being 645,000 bales; sugar, 208,841 hogshheads—within 50,000 hogshheads of her average crop before the war, and only surpassed by ten crops in all her history as a sugar-producer. During the same period her rice productions increased from 52,206 barrels in 1872-'73 to 140,785 in 1877-'78, and 157,770 in 1878-'79. Of the fruit crop, which has become an important item in the exports, 30,000 barrels of oranges passed over one route alone. In 1865 there were two small oil factories; now there are six, consuming 100,000 tons of seed, exporting in 1877-'78 3,280,650 gallons of oil and about 60,000 tons of cake, representing a value, together, of over \$3,000,000. There are now two cotton factories, five sugar refineries, soap and ice factories, representing \$2,000,000—all sprung up since the war. The imports from the interior in 1877-'78 were \$143,000,000, against \$135,000,000 in 1876-'77. The exports during the same period were \$69,000,000 in 1876-'77, against \$84,000,000 in 1877-'78. In 1877-'78 Louisiana produced quite \$50,000,000 in cotton, sugar, molasses, rice, and manufactures.

The following summary shows the relative proportion of direct taxes on real and personal estate from the levy of 1877 (collected in 1878) paid by the city of New Orleans, and that paid by the country during 1878 and the first quarter of 1879, as shown by the Auditor's report:

Parish of Orleans in 1878.....	\$908,550 70
Parish of Orleans, first quarter of 1879.....	106,875 25
<hr/>	
Total parish of Orleans.....	\$1,015,425 95
Country parishes in 1878.....	189,730 15
Country parishes, first quarter of 1879.....	454,322 85
<hr/>	
Total country parishes.....	\$644,052 00
Total for the State.....	1,669,468 95

In addition to the above, the licenses paid in during 1878 were:

Parish of Orleans	\$155,414 50
Other parishes	107,494 44
Total present assessed value of property.....	177,270,294 00
Total present assessed value of parish of Orleans property	111,184,064 00
Total present assessed value of property of country parishes	66,135,234 00
Total amount of taxes levied in parish of Orleans	1,922,479 00
Total amount of taxes levied in country parishes	727,457 00
Percentage of taxation in Orleans	63
Percentage of taxation in country parishes....	87

In addition to the above taxes for State purposes, the parish of Orleans was called upon to expend, on account of city government during 1878, the sum of \$2,318,620, of which \$1,667,018 consisted of tax on real and personal estate. The total direct tax burden, city and State taxes, upon property in New Orleans last year was, therefore, \$2,889,497. The average rate of taxation for local purposes in the country, as shown by returns to the Auditor, is less than one per cent. The rural parishes, therefore, bear a total tax for parish and State purposes of about 20 or 21 mills, aggregating \$1,388,839.

The consolidated 7 per cent. bonds were quoted at 60 to 67 in January, but were 20 per cent. lower at the end of the year.

The Democratic State Convention to make nominations assembled in New Orleans on October 6th, and was organized by the election of F. B. Peche as chairman. The nominations were as follows: For Governor, Louis A. Wiltz; for Lieutenant-Governor, S. D. McEnery; for Attorney-General, J. C. Egan; for Secretary of State, W. S. Strong; for Auditor, Allen Jumel; for Superintendent of Schools, E. H. Fay. The platform adopted was as follows:

Resolved, as heretofore declared, That our designation of Democratic party of Louisiana is significant of the power of the whole body of the people, and is used to express our determination to secure every citizen of the State the equal rights guaranteed to him by the Constitution of the United States and its amendments, and the laws made in pursuance thereof, and to promote reform in every department of the State Government.

Resolved, That the Democratic party of Louisiana has no other object in view than to preserve for the present generation and for posterity the national Government according to the spirit of the framers; to protect and guard the rights of the States as determined by the Constitution and the decisions of the courts of justice; to promote and advance popular education, enforce a proper subordination of the military power to civil authority, protect the purity of elections, and encourage and develop the material resources of our people.

Resolved, That the improvement of the Mississippi River, the building of levees on the bank, so as to afford ease and safety for commerce, and a channel for navigation, as well as to protect the valley from inundation, and the keeping open of the mouth of the river, is a work of national importance, evidently warranted by a just construction of article I, section 8, of the Constitution of the United States, which confers upon Congress the power to regulate commerce.

Resolved, That the union and cooperation of all citizens of Louisiana is earnestly invited, in order to secure the adoption of the Constitution now offered for their consideration, and to prove by a great and overwhelming popular vote that the people of the State have exercised their rightful power to ordain and establish for themselves an organic instrument of government, and to do away with for ever and consign to

oblivion the Constitution of 1866 as a relic of wrong and military oppression.

Resolved, That the counting of the electoral vote of Louisiana in favor of Rutherford B. Hayes for President of the United States, and William A. Wheeler for Vice-President, was notoriously a fraud on popular rights, effected by evil machinations, the plots and conspiracies of the late odious Radical State administration and their aiders and abettors at home and abroad; and that the Democratic party of Louisiana, appealing to the evidence of the case as now published by authority, arraign the authors of this great crime against liberty and the Constitution for the just condemnation of their fellow citizens.

Resolved, That the Democrats of the Senate and House of Representatives of the Congress of the United States are entitled to the grateful acknowledgments of the country, for the zeal and fidelity and courage shown by them in securing the passage of laws by which the interference of the military at the polls has been prohibited and the trial by jury in the Federal courts made impartial.

Resolved, That the rights, the liberties, the interests and honor of Louisiana demand that her rightfully chosen Senator in Congress, Henry M. Spofford, be at last recognized and duly seated.

Resolved, That Francis T. Nicholls, now Governor of Louisiana, is entitled to the grateful acknowledgments of his fellow citizens for his patriotism and public services, his devotion to Louisiana, and his success in effecting the redemption of her liberties.

The Republican State Convention assembled in New Orleans on October 21st, and nominated for Governor, Taylor Beattie; for Lieutenant-Governor, James M. Gillespie; for Attorney-General, Don A. Pardee; for Auditor, Clodius Mayo; for Secretary of State, James D. Kennedy (colored); for Superintendent of Schools, M. F. Bonzeno. The following is a synopsis of the resolutions:

First—We hold that our government is national in its character and composed of States free in their separate spheres, but subordinate to the national Government. Second—It is the privilege, right, and duty of the national Government to guarantee a free republican form of government to each State. Third—No government of, for, and by the people can exist when the ballot is not free, nor when the result of the ballot is changed by fraudulent and corrupt returns. Fourth—We favor a protective tariff. Fifth—That it is the duty of the national Government to improve the rivers and harbors of the nation, especially the Mississippi River and its tributaries. Sixth—Favors national aid for the southern route to the Pacific coast, and advocates striking from all treaties of clauses therein which place one and all upon the basis of the most favored. Eighth—Favors the encouragement of American shipping by subsidies. Ninth—Holds it to be the duty of the national Government to secure by all means the construction of a canal or other system of transportation across the isthmus of Darien, and insist that no non-American nation or native shall have a pre-dominating influence in the management thereof. Tenth—Asserts that the honor of the State and its citizens as well as their national interests are pledged to an attempt in good faith to pay the State debt represented by consolidated bonds issued under the constitutional amendments approved and ratified by the people in 1874, that ordinance constituting a valid contract which is guaranteed by the State. Eleventh—That if misfortune should prevent a full compliance with the letter and spirit of our bonds, their settlement should be sought after consultation with our creditors as our equal, which shall at the same time be just to them and commensurate with our resources. Twelfth—Avers that good faith with the creditors demands that the vote of the party should as a unit be cast against the State debt ordinance of the proposed Con-

stitution, but the question of adoption or rejection of the Constitution is left to the individual conviction of the voters. Thirteenth—Holds that the judicial department of the government should be kept free and unpolluted by the political turmoil, recognizing honest differences of opinion as to the proper construction of the constitutional and statutory laws, and recommends therefore that each of the great political parties be represented upon the bench.

A resolution was adopted, setting forth that if colored people are allowed to vote and have their votes counted, they will remain in the State; if not, they will be forced to emigrate.

A resolution was also adopted declaring General Grant their unalterable choice for President in 1880. The election of Dumont, who is an out-and-out Sherman man, as permanent president of the Convention, is considered an endorsement of the Administration.

At the election on December 8th, the vote given for the Constitution was 86,494; against it, 27,346. The vote for the ordinance relative to the State debt was 59,932; against it, 49,445. The vote for State officers was as follows: For Governor—Wiltz, Democrat, 74,769; Beatie, Republican, 40,760. For Lieutenant-Governor—McEnery, Democrat, 76,003; Gillespie, Republican, 39,961. The other Democratic candidates were elected by about the same majorities. The division in the Legislature was: in the Senate, 31 Democrats, 25 Republicans; in the House, 76 Democrats, 17 Republicans, 2 Independents, 1 National. The vote for members of Congress was in favor of the Democratic candidates: First District, Gibson; Second, Ellis; Third, Acklen; Fourth, Elam; Fifth, King; Sixth, Robertson.

The domestic exports from New Orleans for the year ending July 31, 1879, amounted to \$63,624,797; the imports for the same period amounted to \$7,141,989. The steady increase of depth in the water at the mouths of the Mississippi has attracted the attention of ship-owners. Two new lines of steamers have been added to the foreign trade, and another will come in a few months. The Morgan New Orleans and Texas Railroad is completed to Vermillionville, where it connects with the Louisiana Western, affording a through line to Houston. The New Orleans Pacific is rapidly extending. The cotton trade shows a decline of 200,000 bales, which is ascribed to the epidemic and the low stage of water. The yield of sugar was the largest since the war. The receipts of grain were 10,678,306 bushels.

The power of the judicial department to order a tax-levy came up before the Supreme Court of the United States, in the case of *Morris Ranger vs. the city of New Orleans*. The litigation arose out of an application for a writ of *mandamus* to compel the authorities of that city to levy a tax to pay certain judgments rendered against it upon bonds issued to the New Orleans, Jackson, and Great Northern Railroad Company. The city set up as a defense that there was no legislative authority for the levy of such a tax. The petitioner demurred to this answer, but the

Circuit Court overruled the demurrer and denied the writ, whereupon the petitioner took an appeal. The Court below proceeded on the principle that the power of taxation belongs exclusively to the legislative branch of the government, and that the judiciary can not direct a tax to be levied when none is authorized by the Legislature. The Supreme Court held, however, in a careful opinion delivered by Justice Field, that, although the power of taxation is a legislative prerogative, it may be delegated to a municipal corporation, and that when such a corporation is created the power of taxation is vested in it as an essential attribute for all the purposes of its existence, unless its exercise is in express terms prohibited. When, therefore, authority to borrow money or incur an obligation to carry out any public object is conferred upon a municipal corporation, the power to levy a tax for its payment or the discharge of the obligation accompanies it, and this, too, without any special mention that such power is granted. It is always to be assumed, in the absence of clear restrictive provisions, that when the Legislature grants to a city the power to create a debt it intends that the city shall pay it, and that its payments shall not be left to its caprice or pleasure. Whenever a power to contract a debt is conferred, it must be held that a corresponding power of providing for its payment is also conferred. The latter is implied in the grant of the former, and such implication can not be overcome except by express words of limitation. In the present case the indebtedness of the city of New Orleans is conclusively established by the judgments recovered. Owing the debt, the city had the power to levy a tax for its payment, and it was clearly its duty so to do. The payment was not a matter resting on its pleasure, but a duty to the creditors; and having neglected that duty, a *mandamus* should have been issued to enforce its observance. The judgment of the lower Court must therefore be reversed and the cause remanded, with directions to issue the writ in compliance with the petition.

There were apprehensions that a repetition of the negro exodus would take place in the winter of 1879-'80; but the condition of the colored laboring people seemed to have much bettered itself, and no large number of them seemed disposed to emigrate. The share system was still the mode of payment in use, none being paid wages except in the sugar districts. The cotton crop on the bottom lands was excellent, and most of the laborers had money saved up at the end of the year. On the hills the yield was poor, and a part of the population moved to the low lands. Contracts were readily entered into for the next season, even in Tensas and Madison parishes, where the most fears were felt.

LUTHERANS. The following is a summary of the statistics of the Evangelical Lutheran Church in the United States, as they are given in the "Church Almanac" for 1880:

SYNODS.	Ministers.	Congregations.	Members.
I. GENERAL COUNCIL.			
Ministerium of Pennsylvania.....	199	883	79,883
Ministerium of New York.....	69	65	25,409
Pittsburgh Synod.....	72	143	11,994
Texas Synod.....	29	25	4,550
District Synod of Ohio.....	29	73	7,000
Augustana Synod (Swedisch).....	180	813	40,154
Michigan Synod.....	25	43	4,600
Canada Synod.....	25	45	5,711
Indiana Synod.....	15	45	2,104
Holston Synod.....	13	27	1,800
Synod of Iowa (German).....	135	230	17,700
Augustana Synod (Norwegian).....	18	70	7,000
Total.....	762	1,467	207,205
II. SYNODICAL CONFERENCE.			
Joint Synod of Ohio (6 districts).....	185	303	90,467
Joint Synod of Missouri (3 districts).....	659	833	229,771
Wisconsin Synod.....	83	149	35,223
Norwegian Synod.....	166	500	64,200
Minnesota Synod.....	31	50	10,000
Illinois Synod.....	25	85	5,752
Total.....	1,149	1,975	436,015
III. GENERAL SYNOD, SOUTH.			
Synod of South Carolina.....	32	47	5,344
Synod of Virginia.....	31	53	4,043
Synod of Southwest Virginia.....	21	43	2,750
Mississippi Synod.....	7	9	865
Georgia Synod.....	8	12	761
Total.....	99	174	13,263
IV. GENERAL SYNOD, NORTH.			
Maryland.....	70	86	11,629
West Pennsylvania.....	65	110	16,994
Hartwick.....	30	32	4,092
East Ohio.....	41	87	6,090
Francean.....	23	34	2,933
Allegheny.....	49	135	11,474
East Pennsylvania.....	76	95	18,719
Miami.....	28	35	3,419
Wittanberg Synod.....	43	64	5,679
Olive Branch.....	18	31	2,235
Northern Illinois.....	31	44	1,924
Central Pennsylvania.....	23	74	7,421
Iowa.....	26	28	1,188
Northern Indiana.....	40	73	3,507
Southern Illinois.....	11	24	1,473
Central Illinois.....	22	25	1,317
New York and New Jersey.....	46	37	6,901
Susquehanna.....	39	40	6,632
Pittsburgh.....	20	55	4,410
Kansas.....	24	26	734
Ansgari.....	25	20	1,800
Nebraska.....	19	23	1,800
Warburg.....	36	23	4,057
Middle Tennessee.....	18	31	1,779
India Mission.....	4	..	2,056
Total.....	840	1,217	124,792
V. INDEPENDENT SYNODS.			
Synod of North Carolina.....	23	43	4,509
Tennessee Synod.....	21	65	7,500
Buffalo Synod.....	13	24	3,200
Hauge's Nor. Evan. Luth. Synod.....	21	58	5,860
Conference of Nor. Dan. Luth. Ch'rch	64	279	18,564
Synod of Maryland (German).....	8	9	2,710
Angsburg Synod.....	10	18	1,208
Total.....	163	491	43,454

Total for the Church, 58 Synods, 3,015 ministers, 5,224 congregations, 824,825 members.

The German "Almanac" of Messrs. Brobst and Diehl (Allentown, Pa.) gives the following:

General Council—761 ministers, 1,455 congregations, 210,170 communicants; Synodical Conference—1,169 ministers, 1,873 congregations, 291,444 communicants; General Synod,

North—838 ministers, 1,290 congregations, 122,573 communicants; General Synod, South—98 ministers, 175 congregations, 13,436 communicants; Synods standing alone—221 ministers, 581 congregations, 51,572 communicants; total, 58 Synods, 3,087 ministers, 5,376 congregations, 689,195 communicants. The compiler of the statistics for this work says that the number of ministers may be regarded as correct, but that the number of congregations and communicants assigned to some of the Synods is taken from the reports of the previous year.

The "Church Almanac" gives a list of 17 theological seminaries, four of which are connected with the General Council, four with the General Synod, North, five with the Synodical Conference, one with the General Synod, South, one with the North Carolina Synod; the remaining two Scandinavian. The literary institutions include 18 universities and colleges, 12 classical schools, and 7 seminaries for young women. There are 30 institutions of mercy, including orphans' homes and schools, hospitals, infirmaries, and immigrant and negro missions. The list of periodicals includes 12 weekly publications, of which 6 are English, 3 German, and 3 Norwegian; 13 semi-monthly, of which 10 are German and 3 Norwegian and Danish; 39 monthly, of which 14 are English, 13 German, 5 Swedish, and 7 Norwegian and Danish; one German bi-monthly, one English and one Norwegian quarterly publications, and six annual calendars in the English and German languages. Most of the monthly publications are intended for the use of Sunday-school teachers and scholars.

The *General Synod* met in its twenty-ninth Convention at Wooster, Ohio, June 11th. The Rev. W. D. Strobel, D. D., of Rhinebeck, N. Y., was chosen President. Reports were made of the operations of the boards and benevolent societies of the Synod during the past two years. The receipts of the Pastor's Fund Society had been \$1,250, and its disbursements \$1,050. The assets of the Publication Society above all its liabilities were \$33,239. The circulation of the periodicals issued by the Board was as follows: "Lutheran Sunday-School Herald," 36,000; "Angsburg Teacher," 5,500; "Angsburg Lesson Leaf," 26,500; "Primary Lesson Leaf," 12,000; and 22,000 "Lesson Books," containing the lessons from January to July, 1879. The receipts of the Board of Home Missions for two years, some of which were from bequests, had been \$25,686, and its expenditures \$23,973. The Board had sustained 51 missions, of which 11 were new ones, while 5 had become self-sustaining; and it had now 47 missions under its care, with 63 congregations, 4,183 members, and 50 Sunday-schools with 5,433 scholars. The amount of \$20,000 a year was appropriated for the work of this Board. The receipts of the Board of Foreign Missions for two years had been \$38,938, and its expenditures \$37,056.

Debts resting against the Board of \$7,000 in the United States and \$2,000 in India had been paid, and the current expenses of the two missions had been promptly met. The India mission (at Goontoor) returned 4,731 baptized natives, of whom 2,086 were adults and regular communicants, with 813 candidates for baptism, and reported a net gain in one year of 1,191. Several Sunday-schools had been organized. The mission was conducted at an average cost of nearly \$11,000 a year. The African mission, conducted at an average cost of about \$3,750 a year, had forty Christian families residing in its neighborhood, and more than sixty children in its school. A project for forming a second station in Africa, if it be found expedient, was approved. The pledge of the Synod of \$10,000 a year for Church extension was continued for two years. The Committee on Sunday-Schools reported that about 10,000 scholars had been added to the rolls of these schools during the past year. The committee had secured a representation on the International Lesson Committee and the International Executive Committee. The reports of the literary and theological institutions showed them to be prosperous. A resolution was passed declaring it to be the judgment of the General Synod that the policy of the Church should be, for the present, "rather to strengthen and enlarge the colleges and theological seminaries we have than to found new ones; and that the organization of new institutions of these grades, when needed, should take place, not under an irresponsible individualism, but only under the direction of responsible Synods or the General Synod, except in cases where generous men may found and permanently endow them by their own large gifts and legacies." The District Synods were advised to permit the contributions of German churches for education to be appropriated for the theological training of young men for work among German Lutherans. A committee of German ministers was appointed to prepare a plan for promoting German theological training. A Scandinavian Secretary was appointed to lay the work of the Synod before the people of that nationality.

The eighth annual meeting of the *Synodical Conference* was held at Columbus, Ohio, in July. About fifty delegates were in attendance, representing the Synods of Illinois, Minnesota, Missouri, Ohio, Wisconsin, and the Norwegian Synod. The Rev. W. F. Lehman was reelected President. The discussion of doctrinal questions was continued, and the 14th and 15th theses on Church Fellowship were adopted as follows:

14. It is in decided conflict with the Confession when, in an ecclesiastical body calling itself Lutheran, the doctrinal discipline which God's Word requires is not exercised, and the popular theory of open questions is accepted.

15. It is not in accord with the Confession when a Synod or larger ecclesiastical body makes no efforts to have the discipline in doctrine and life which Christ

requires, and which is more particularly defined in Matthew xviii. 15-17, gradually brought into exercise in its congregations.

The mission among the negroes was represented as in a flourishing condition, and the opening for extending the work as promising. A German and an English periodical are published in the interest of this mission. A plan for the establishment of an English theological quarterly review at Columbus, Ohio, was adopted, dependent on its approval by the Synods, and Professor M. Long of Columbus and the Rev. F. A. Schmidt were designated to be its editors. A plan was adopted for the formation of State Synods, the chief features of which are as follows: The German Synods connected with the Conference are to form State Synods; these State Synods are again to form two or three joint Synods, one east of Indiana, one to embrace the northwestern, another to embrace the southwestern States and Territories; the Norwegian Synod not to be affected by these boundaries, and English Synods to belong to the joint Synods in whose territory they lie. The Synods thus formed are to establish a joint theological seminary at Milwaukee, Wisconsin, with three faculties, German, English, and Norwegian; or with two faculties, if the Norwegians prefer to have a separate seminary. The Conference recommended that the celebration of the three hundredth anniversary of the adoption of the Augsburg Confession be celebrated on the 25th of June, 1880. Hereafter, the Conference will meet biennially.

The *General Council* met at Zanesville, Ohio, October 9th. The Rev. C. P. Krauth, D. D., presided. Reports were presented from the institutions and enterprises of the Council, as follows: The income of the Immigrant Mission in New York from October 1, 1877, to October 1, 1879, had been \$1,806, and the expenditures \$1,799. The income of the Emigrant Home Association for the two years ending April 1, 1879, had been \$13,544, and the expenditures \$13,174. A favorable report was made of the working of these institutions, which are for the care and comfort of Lutheran immigrants on their arrival at New York, and they were commended for greater liberality of support by members of the Church. The total receipts of the Foreign Mission Committee for the two years had been \$11,473, and its expenditures had been \$11,291.

The most prominent business before the Council consisted in the discussion of the theses which had been prepared by the Rev. Dr. Krauth by order of a previous General Council on "Pulpit and Altar Fellowship," and the continued consideration of the proposed new "Constitution for Congregations." The theses on "Pulpit and Altar Fellowship" were designed more fully to establish and explain the position of the Council on the so-called Galesburg rule, adopted in 1875, which declared in substance that Lutheran pulpits were for Lu-

theran ministers, and Lutheran altars for Lutheran members only. This rule, the resolution of adoption asserted, "accords with the Word of God and with the Confessions of our Church," but admitted that there might be exceptions, to be judged according to particular circumstances. Upon the question arising the Council decided that the present consideration of the theses was for discussion, to bring out more fully the views of the Church, with the object of arriving at a uniform understanding of the rule. Of the "Constitution for Congregations," section 4 of Article IV., relative to the duties of the pastor, was adopted. It provides that the pastor "shall conduct the public service of God's house on the Sundays and other festival days of the Church year; shall permit no one to occupy the pulpit of whose soundness in the faith confessed by the Lutheran Church there is reason to doubt; shall carefully give instruction to the young and all others needing it; shall watch over the Sunday-school and other schools of the Church; shall confirm those who, having been duly instructed, give satisfactory evidence that they are desirous of being faithful followers of Christ. He shall baptize publicly, except in special cases, and all private baptisms shall be publicly announced. He shall administer the Lord's Supper to all those who desire to come to it, if he has been notified, and of whose fitness, both as to faith and life, he is satisfied, as also, if he shall judge best, to members unable, from age or sickness, to come to the house of God. He shall be active in the work of a pastor, most of all among the poor, the sick, the sorrowing, and among all those whose spiritual estate es-

pecially demands his care. He shall perform the marriage ceremony in strict accordance with the laws of the State and of God; shall use the burial service for the dead who die in the fellowship of the Church; shall earnestly urge and carry out the discipline of the Church; shall promote all wise plans of Christian beneficence and effort, and shall labor to prevent all deadness and fanaticism, all schism, heresy, separation, and alienation in the congregation."

The committee having the subject in charge reported that a seal for the General Council had been prepared. The custody of the seal was given to the President. A committee was appointed to prepare for the next meeting of the General Council a paper setting forth the true relation of confirmation to adult baptism, and the principles involved in the determination of the proper liturgical forms for those ministerial acts. The attention of the Church was directed to the former action of the Council adverse to secret societies, and the Synods were urged to prevent pastors connected with them from being members of any society disapproved in that action. A report of the work of the district Synods mentioned much that had been accomplished in the work of education and missions by those bodies, and showed that many new points had been occupied by the churches of the Council. A committee was appointed to arrange for the tercentenary anniversary of the adoption of the "Formula of Concord." The further consideration of the theses on "Pulpit and Altar Fellowship" was recommended to the next Convention of the General Council.

M

MAINE. The regular session of the State Legislature commenced on January 1st. J. Manchester Haynes was elected President of the Senate, and Melvin P. Frank Speaker of the House. The session closed on March 5th. It had been confined almost wholly to local affairs and questions.

Among the resolves passed was one submitting to the people constitutional amendments providing for biennial elections and biennial sessions of the Legislature, and changing the term of office of Governor, Senators, Representatives, and other State officials, from one to two years. These amendments were to be passed upon by the people at the September election, and if a majority of the votes cast were in favor of them they were to become a part of the Constitution.

The act relating to the Industrial School for Girls was so amended as to allow inmates to be received between the ages of seven and fifteen years.

Another act was passed providing that the fact that the defendant in a criminal prosecu-

tion did not testify in his own behalf should not be taken as evidence of his guilt.

An act to prevent the adulteration of sugar and molasses provides that no person shall knowingly, willfully, or maliciously sell or offer, or expose for sale, within this State, any sugar, refined or not, or any molasses, which has been adulterated with salts of tin, terra alba, glucose, dextrine, starch sugar, corn sirup, or other preparations from starch, under the penalty of a fine not exceeding \$500, or imprisonment not exceeding one year.

Deaf-mutes who are fit persons for instruction are to be sent to the Asylum in Hartford, Connecticut, or to the Portland school.

The salaries of the State officers were fixed as follows: Governor, \$1,500; Secretary of State, \$1,200; Treasurer, \$1,600; Adjutant-General, \$900; Judges of the Supreme Court, each \$2,000; Attorney-General, \$1,000.

The operation of the act creating free high schools in cities, towns, and plantations was suspended for one year.

Towns are authorized to loan money, not ex-

ceeding five per cent. on the regular valuation, to aid in the construction of railroads, upon the approval of the same by a two-thirds vote of the citizens.

The sum of \$1,800 was appropriated to the support of the three normal schools in the State.

No change whatever was made in the prohibitory law. An attempt was made to declare native wine, etc., not intoxicating within the meaning of the law, and an attempt to repeal the act relating to the duties of sheriffs and county attorneys, known as the "Enforcement Act," but both were unsuccessful.

An act was passed providing that freight and passage over all railroads in the State should be at equitable rates; that shippers of freight should have a right to elect which road, south or west of Portland, their freight should be shipped over, and all agents of roads shall follow directions explicitly, and there shall be no discrimination by connecting roads against any road in regard to passengers.

Certain cities and towns that loaned their credit to the Knox and Lincoln Railroad Company, finding that it would be inconvenient for them to raise money to pay their bonds coming due within two years, obtained authority to issue new bonds and sell them to raise money for that purpose.

The act relating to the State College of Agriculture and Mechanic Arts was amended so as to allow a reasonable charge to students for tuition, to be determined by the trustees. No appropriation was made for the college.

The act allowing the employment of detectives by the State was repealed.

The Farmers' Bank at Bangor was granted a charter as a State bank, but without power to issue bills to be used as currency. This was formerly a national bank, and surrendered its charter as such.

The publication of the reports of the Board of Agriculture is to be omitted, and the salary of the Secretary is reduced to \$100 per annum.

The use of weirs was limited to one eighth of the channel of any river. The annual close-time of lobsters for canning purposes was fixed from August 1st to April 1st, and no lobsters less than 10½ inches shall be sold or exposed for sale between those dates, under penalty of \$5 for each lobster. Fishing for porgies with steamboats and seines was further restricted by prohibiting such fishing in bays and harbors the entrance to which is two miles wide or less. Plover is omitted from the list of birds protected.

The amount of appropriations was \$1,329,028, of which \$353,000 was for interest on the public debt. The State tax was four mills on the dollar, the same as in the preceding year. It amounts to \$899,712.

The Land Agent was authorized to convey by deed all lands held by settlers under contract, without the performance of further settling duties. In 1826 all of the wild lands, af-

ter they had been surveyed, were divided between Maine and Massachusetts. Aroostook County being thus opened, and its value becoming known, it was necessary for roads to be built. To bring about any action relative to the lands, concurrent resolves of the two States were necessary. But a large portion of the State, which belonged both to Maine and Massachusetts, was not laid out into townships, and from 1843 to 1850 surveys were made. Then it was thought best for the State to purchase Massachusetts's share of the property, and it was done in 1853, the State paying \$362,500. Then the State gave it away to railroads, but with the provision that if any tract was found suitable and was wanted by settlers it should be surveyed, roads built, and put into the market at not more than one dollar per acre. This land has all been sold by the State, and it now only owns the fees from 72,000 acres, which the settlers hold not by deed but by certificate. The Treasury of the State does not derive one cent from this arrangement. The chief condition which was to benefit the State was the performance of the road labor.

The following resolutions relative to the resumption of specie payments passed the Senate, but failed in the House:

Resolved, That the resumption of specie payments by the United States on the 1st day of January, A. D. 1879, after a suspension of seventeen years, is greeted with satisfaction and approval by the Legislature of Maine.

Resolved, That the attainment of coin resumption puts an end to the myriad evils inseparable from an irredeemable, depreciated, and fluctuating currency, gives to labor a sure reward, places our commercial exchanges upon the only stable foundation, renders a healthy and permanent revival of business possible, and, best of all, preserves the faith of the nation inviolate.

Resolved, That national honor, public credit, and private interest alike demand that specie resumption, now happily achieved, shall be maintained honestly and uninterruptedly at every hazard; and to this end our Senators and Representatives in Congress are requested to use their best endeavors.

Resolved, That a copy of these resolutions be sent to each Senator and Representative from Maine in the Congress of the United States.

An act was passed for a valuation of all property in the State based upon "the full, fair cash value thereof." The reductions in the annual expenditure made by the Legislature amounted to \$91,850.

The census of the Penobscot tribe of Indians taken in January, 1878, amounts to 450 persons. Their annual election was held on Wednesday, November 6, 1878, at which Stephen Stanislaus was elected Governor, Saul Neptune Lieutenant-Governor, and Sabattis Dana delegate to the Legislature of 1879. Public schools were taught during 1878 at all the places designated in the act making appropriations for their support. In some of them the money had been fully expended at the end of that year; others consumed the entire amount some months later. The day-school on Oldtown Island averaged about fifty schol-

ars. The moral and social condition of that portion of the tribe residing at Oldtown was notably improved in 1878, through the special efforts of Father O'Brien, one hundred and twenty-five having signed the pledge. Bishop Healey of Portland last summer established a community of Sisters of Mercy on Oldtown Island, and they inculcated principles of morality, industry, and economy. An evening school had been established there. Low wages, continued depreciation in the price of baskets and other wares usually made by the tribe, and decreasing demand for their labor, prevailed during 1878; yet many of the Indians made improvements in their dwellings, and they have erected several new buildings, and generally have devoted more labor and attention to agricultural pursuits. More land than usual had been cultivated. The Legislature at this session made the following appropriations for this tribe: Interest on trust funds, \$4,429.70; annuity, \$1,800; agricultural purposes, \$700; bounty on crops, \$450; agent's salary, \$200; instructor in agriculture, \$100; schools, \$385; repairs on schoolhouse, \$30; salary of priest, \$100; salary of Governor, \$50; salary of Lieutenant-Governor, \$30; repairs on chapel, \$150.

The whole number of the Passamaquoddy tribe at the time of taking the census was 513, of whom 268 were males and 245 females. The whole number of deaths during 1878 was 26, 20 being of children under ten years of age. The principal causes of the deaths among the children were whooping-cough and scarlet fever. Included in the number of deaths among the adults were Governor Newell Neptune and wife. He had held the office of Governor for many years, and was much respected by the tribe. The portion of the tribe residing at Pleasant Point had taken much more interest than usual in farming, and it was their intention to persevere in that direction in the future. The following appropriations were made by the Legislature for this tribe: May dividend, \$400; November dividend, \$300; poor, \$2,000; agricultural purposes, \$600; crops and plowing, \$450; salaries of Governor and Lieutenant-Governor, \$140; wood, \$200; road repairs, \$50; contingent expenses, \$100; educational purposes, \$300; salary of priest, \$100; dressing for land, \$100; salary of agent, \$200; contingent fund, \$500.

A report of the schools during the preceding year was made by the State Superintendent to the Legislature at this session, containing the following details: Whole number of scholars between four and twenty-one, 214,797; decrease from the previous year, 2,620. Average attendance in summer schools, 102,805; increase, 1,823. Average attendance in winter schools, 108,940; increase, 1,287. Whole number of different scholars registered in schools during the year, 155,150; decrease, 378. Number of districts in State, 4,005; decrease, 34. Number of parts of districts, 344; decrease, 10. Number of schoolhouses, 4,215; decrease, 7;

number built during the year, 82, costing \$92,746. Estimated value of all school property, \$3,063,418. Number of male teachers employed in summer, 274; in winter, 2,280. Number of female teachers employed in summer, 4,540; in winter, 2,389. Average wages of male teachers per month, excluding board, \$32.63; average wages of female teachers per week, excluding board, \$3.98. Amount of money expended for common schools, \$936,648; decrease from the last year, \$15,229. Balance unexpended, \$90,205. Among the needs of the schools, the Superintendent says, "Another is better teachers. The times demand a higher grade of culture than formerly, and that the schools shall be, more than ever before, nurseries of purity, morality, and uprightness of thought and action. Again, the times demand better supervision, and a revolution in our system of employing, examining, and certifying teachers."

At the State Educational Association held at Brunswick a short time previous to this report, numerous papers were read. One of them urged the necessity of a change in the system of examination of teachers and schools, and advocated the appointment of a board of examiners in each county. It said:

One of the reasons for examining boards as proposed is that many persons too young are permitted to teach. At the examination of fifty teachers at one of our normal schools, it was found that 12 per cent. began teaching before fifteen years of age. Persons of too poor attainments are employed. Many teachers are employed who have no fitness for the work, knowing nothing of plans and methods, and the great mass of the twelve hundred committeemen employed in the different towns in the State are as ignorant as the teachers of the best ways and means of school management. The importance and responsibility of the teachers' work is not felt by very many teachers or committeemen. What importance can be attached to any work which any boy or girl of fifteen or eighteen years of age may undertake with a week's or a day's preparation, as their friends or themselves may take a notion that it would be a good thing to do? In some communities, so far is the idea of teachers' qualifications from the right one, that ignorant agents, falling in with the vulgar prejudice of the ignorant against the learned, refuse to employ well-educated and trained teachers, and prefer the more ignorant and less skillful. The cause of these deficiencies is not in agents, but in the examining committees, whose duty by law is to examine all applicants, and certificate those qualified and reject those who are not. Often these boards are made up of lazy, good-natured men, who do not wish to reject those whose fathers and mothers they know, and often as ignorant of the best methods of school requirements as of calculating an eclipse.

The number of deaf and dumb in the State is nearly 350, of whom 125 are between the ages of four and twenty-one years. Fifty of these are at the asylum in Hartford. To this institution, on account of this class of persons, the State has paid the sum of \$216,000, and to other institutions outside of the State enough more to make the total amount \$298,251.

A statement of the Secretary of State says that the cost paid by the State to persons defending criminals in 1871 was \$600; in 1872, \$200; in 1873, \$1,075; in 1874, \$2,647.50; in

1875, \$1,250; in 1876, \$677; in 1877, \$280; in 1878, \$725; total cost from 1871 to 1878, \$7,454.

The returns made by the inspectors for cities and towns show the number of barrels of pickled fish inspected by them during the year ending November 30, 1878, to have been as follows: Mackerel, 23,434; herring, 4,081; cod, 15; shad, 67; alewives, 6; swordfish, 14; total, 27,611.

At the close of the year 1878 there were forty-two fire, fire-marine, and marine insurance companies organized under the laws of the State, and authorized to do business therein, of which one was stock fire-marine, two were stock marine, one was mutual fire-marine, one was mutual marine, and thirty-seven were mutual fire insurance companies. During the previous six years the risks written in Maine amount to \$466,383,678.73, and the premiums paid to \$6,758,383.61. The companies have paid for losses the sum of \$4,495,969.07. At the close of the year 1878 there were ninety-five fire, fire-marine, and marine insurance companies of other States and countries authorized to transact business in Maine, of which ninety-one were stock and four mutual companies. The aggregate amount of tax on premium receipts paid by the several companies was \$8,241.20. The domestic stock companies received premiums on marine risks amounting to \$228,844.24, and paid losses on the same amounting to \$182,558.07, or 80 per cent. of losses to premiums. The companies of other States and countries received premiums amounting to \$736,634.71, and paid losses amounting to \$665,935.20, or 90 per cent. of premiums received. The assets of the mutual companies that made returns amounted to \$753,079.08, of which amount \$639,184.64 consisted of premium notes.

The statement of the Treasurer of the Maine Beet-Sugar Company represents that industry as improving. The pulp produced from the beet is one of the great benefits arising from its culture. Twenty-three tons of beets per acre is the average in Europe; one ton of beets makes 400 pounds of pulp, which is worth more than the beets themselves for feeding purposes. When dry the beet has 13 per cent. of sugar. If kept until spring, the sugar is reduced to 8 per cent. Pulp is sold at \$1 per ton, the railroad transports it for 80 cents, and this is equal to hay at \$4 per ton. Twenty pounds of pulp, ten pounds of straw, and one pound of meal is the feed per day of a cow in Europe. The farmers in the vicinity of Portland raised from 14 to 40 tons of beets per acre; average amount of sugar, 11 per cent. In 1878 fifty acres of beets were raised in that section, and as many more in Aroostook. A capital of \$150,000 is required for the manufacture of the sugar. No one can raise beets at a profit but a farmer, and no one can manufacture but a refiner. Deep plowing, early planting, and early thinning out are essential.

Forty tons per acre is not a large yield with good cultivation. In France the beet-producers receive \$3.50 per ton; the company paid \$4.

A statement of the amount of ship-building on the Kennebec River has been prepared, which shows the number and tonnage of vessels built there from 1781 to 1879, classified according to rig, to have been as follows:

VESSELS.	Number.	Tons.
Steamers.....	43	7,649.85
Ships.....	846	658,980.30
Barks.....	286	118,789.85
Brigs.....	669	126,887.61
Schooners.....	1,018	117,716.29
Sloops.....	129	7,840.87
Scows.....	8	529.49
Barges.....	8	786.96
Total.....	2,947	1,088,551.22

During this time vessels have been built in Augusta, Hallowell, Gardiner, Farmingdale, Richmond, Bowdoinham, Pittston, Vassalboro', Waterville, Sidney, and Chelsea.

A National Home for disabled volunteer soldiers is located at Togus, near Augusta. The number of soldiers and sailors aided by the institution during 1878 was 1,351; admitted, 267; readmitted, 121; honorably discharged, 92; dishonorably discharged, 6; transferred to other branches, 45; deserted, 47; average number present during the year, 836; belonging to regular army, 17; volunteer service, 1,330; navy, 4; disabled during the war of rebellion, 1,340; Mexican war, 2; war of 1812, 9; one colored man. Of the whole number, 216 came from Maine, 521 from Massachusetts, 296 from New York, 95 from New Hampshire, and the remainder from several other States in the Union; 568 were native-born, and 783 foreign-born; 573 were married and had children; 627 were common laborers, the remainder having trades; 917 could read and write; 434 could do neither; one had lost both arms, 60 one arm, 70 one leg; 4 were totally blind, 18 partially blind; 11 partially insane, one totally insane. Pensions have been paid to 664, to the amount of \$70,272.98; of this sum \$10,023.23 was retained for the purposes of the Home, \$27,296.75 used for the benefit of relatives, and \$4,185 retained in trust for pensioners. The boot and shoe manufactory has been carried on, employing 55 of the men, with a total product of \$12,819.20 and a net profit of \$4,255.21. Total value of farm products, \$7,756.38, including 275 tons of hay. Total number of inmates employed for pay, 257; paid out for labor the past year, \$22,385.98. There are 4,326 volumes in the library, 22 daily newspapers, 115 weeklies, and other periodicals and publications. Protestant and Catholic religious services are held weekly, and temperance organizations sustained. The total amount paid for expenses of the Home during the year was \$108,647.12; average cost of keeping each man—with clothing, \$134.25; without, \$119.37. Many of the men have

brought their families there, and live in cottages near the Home, receiving their ration in kind and carrying it home.

The Industrial School for Girls contained at the last report 34 inmates, and 36 in homes. The proportion of older girls is unusually large. Some are grown to more than ordinary woman's size, and are capable of efficient service.

The Agricultural College asked of the Legislature an appropriation of \$6,000, in addition to \$3,200 received as interest, to meet its necessities, as follows: To pay for instruction, \$4,000; for apparatus, \$1,000; for current expenses, \$1,000. For 1879 the catalogue shows an attendance of 101 students who have entered for the full course of four years, besides those who are pursuing a special course. One hundred have graduated, and most of them entered upon active and useful pursuits. The instruction in shop-work, on the Russian plan, although the means were inadequate, was very satisfactory.

The vexatious question of mileage which troubled the members of the Legislature was decided against them. The Constitution says, "The expenses of the House of Representatives in traveling to the Legislature and returning therefrom once in each session, and no more, shall be paid by the State," etc. The Revised Statutes say, "Each member of the Senate and House of Representatives shall be paid an annual salary of one hundred and fifty dollars for the regular annual session of the Legislature, and two dollars for every ten miles travel from his place of abode, once in each session." The members voted themselves mileage both ways, viz., going and returning. The Governor refused to approve of the act, and with the Council referred the question to the Justices of the Supreme Court. The Justices, looking at the statute alone, said: "The limitation of once in each session excludes the idea of more than once. The member is entitled to mileage on the first day of the session, and this mileage is all to which he is entitled."

A case involving the meaning of the words "tippling purposes" came before the courts. The liquor law forbids the sale of cider for "tippling purposes." The defendant admitted that he had sold cider to be carried away from his premises, and such was the proof; but it also appeared that the persons who bought the cider took it out by the roadside and into the neighboring fields, and there got drunk upon it. The defense contended that the words "tippling purposes" meant drinking upon the premises. But the Judge presiding, after fully explaining to the jury the meaning of the word tittle, charged them that "a man may as well tittle in the street as in a building—in his own house as in the shop where the liquor is sold." And he gave them further instruction to the same effect. Upon exceptions taken to the charge of the Judge, the full Court decided that the exceptions must be sustained, holding in effect that, in order to

convict a person of selling cider for "tippling purposes," the Government must prove that the tippling was done in the shop or building kept by the defendant.

A convention was held at Augusta on June 2d of the surviving members of the Senate and House of Representatives of 1851, who voted for the passage of the original Maine Liquor Law, as well as other friends of prohibition, the occasion being the twenty-eighth anniversary of the signing of the bill by Governor Hubbard. One of the members stated the action of the Legislature on the subject. He said:

The bill had been twice passed before, but failed to receive the Governor's signature. The search and seizure act was perfected in 1853, which takes right hold of the critter himself. This law was remodeled in 1855, improved, and made very stringent, so that our friends who were opposed to it thought it almost unendurable. In 1856 a new Governor arose "who know not Joseph," and the Maine Law was swept from our statutes. To one Phineas Barnes of Portland was assigned the task of drafting a license law, which passed, and which contained no local option. This amounted to about the same as free rum. This law remained until 1858, and then was reenacted the Maine Liquor Law, which, with its amendments, has since remained. This law has given Maine a world-wide reputation, and this is something to be thankful for.

An address to "the temperance people of the world," reported by Neal Dow, thus describes the Maine legislation on the subject:

To show conclusively the position which this policy now holds in the public opinion of Maine, it is only necessary to mention the facts that since 1851 several acts additional to the Maine Law, all in the direction of greater stringency, have been passed, except that in 1856 there was a general breaking up of political parties, and one came into power by which the law was repealed, and a license law substituted for it. But at the next election that party was ignominiously defeated by a tremendous majority, and the Maine Law was reenacted in a more stringent form, and was submitted to a popular vote, by which it was approved by more than four to one, and since that day there has been no attempt at repeal. In 1871 an act additional, of greater stringency than any which had preceded it, was adopted without a dissenting voice in either House; and at the session of 1879 a question came up for the modification and the amelioration of the penalties and the requirements of the law, which was promptly defeated by the emphatic vote of 127 to 17. This latter vote may be fairly considered as marking the present condition of public opinion of this State upon the whole principle and policy of prohibition, and the determination of the people to suppress the liquor-traffic.

In the same address the following results are ascribed to the operation of this law:

It is not too much to say that the quantity of liquor now smuggled into the State and sold in violation of law is not one tenth so large as it was before the law. This great change in the habits of the people procures an enormous saving in the wages of labor and in the resources of the State, which were formerly so largely squandered and wasted in strong drink. By some slight additions to the law, the absolute extirpation of the traffic may be easily effected. This saving in the money and morals of the people by the suppression of the liquor-shops has produced most important results, which may be seen everywhere throughout the State. Better houses and buildings, public and

private, better farms, better ways of life, and increased prosperity, mark very emphatically the result of prohibition. No one who knows what Maine was before the law, and what it has been since, and is now, can fail to see the wonderful change for the better in all its interests, public and private.

On the other hand, a writer who has visited Maine, and claims to have obtained some knowledge of the operation of the law in the State, says:

It is so strictly enforced that you can not get a bottle of sherry or brandy at a drug-store, except upon the prescription of a physician, and then the quantity sold is limited to a pint in every instance. No wine is sold to be drunk at dinner in hotels. A person's private supply must be replenished outside of the State. The only authorized liquor-dealer is the State government. A "State Liquor Agent" is appointed by the Governor, who opens a warehouse. Twenty citizens of any town may petition to have a town agency opened, and the Governor makes an investigation of the case. If he is favorably disposed, a town agent is appointed, who rents a building and is supplied with liquors from the State agency. When a person wants a pint of brandy he applies to the local agent, but he can not have it unless he is known to be a reputable citizen, or can find some "reputable citizen" to identify him as such. The brandy is sold only for "medicinal or mechanical" purposes, the mechanical largely predominating. When the applicant receives his liquor, he registers his name in a book that is open for the inspection of the public. Great care is supposed to be taken against allowing this transaction to be repeated too frequently. So much for the manner in which the law is enforced. Now as to the manner in which the law is not enforced. The city of Portland has a population of 35,000, and one local agent suffices to accommodate all the demands made in the legal way; but it is not to be supposed that nearly all of those 35,000 people abstain from the use of intoxicating liquors. Five per cent. of them drink as much as they would if there were a saloon on every corner. A system of social clubs prevails, by means of which the law is successfully evaded. An ordinary club is organized, procures and furnishes rooms. A side-board is one of the articles of furniture, and it is well laden. A member of the club drops in, helps himself, and extends the courtesy of the club to a friend. The waiter in attendance registers the amount and quality of the liquor drunk, and at the end of the month the treasurer of the club "assesses" the individual "club dues" to a corresponding amount. The popularity of these clubs throughout the State is marvelous.

A mass State Temperance Convention was held at Augusta on January 22d. Governor Garcelon presided. A series of resolutions was adopted, which return sincere thanks to God for the progress made in the cause; express a firm conviction of the righteousness of the principle of prohibition; declare that scientific investigation has proved that alcohol is not essential even as a medicine; recognize the evil of liquor agencies and call for a more strict supervision; assert that while many druggists are honorable men, they should not have special privileges in the sale of intoxicating liquors; express opposition to the wholesale transportation of liquors into the State by public carriers, railroads, etc.; call for legislative enactment on the same; urge temperance organizations to action; call for the education in temperance principles of the children and youth, and ask parents, guardians, and teachers to do their duty in this respect; demand the use of tem-

perance text-books in our schools; and request Congress, by constitutional amendment, to forever prohibit the importation, manufacture, and sale of alcoholic drinks.

The National or Greenback-Labor Convention assembled at Portland on June 3d. There were 910 delegates. William M. Rust was selected for President of the Convention. Joseph L. Smith was nominated for Governor, and the following resolutions were adopted:

This Convention reaffirms the cardinal principles enunciated in the platform of the National Greenback Convention of Maine, holden at Lewiston June 5, 1878, and looks with pride and satisfaction at the endorsement of the same by the people at the September election, and the rapid growth of the party in the country at large, the vote at the latest elections showing the unprecedented increase from 82,000 in 1876 to 130,000 in 1878.

That the increase of coin bonded indebtedness of the Government in a time of profound peace, from \$1,100,000,000 in 1865 to \$2,000,000,000 in 1879, is a fact so startling as to alarm every friend of the country.

That the reduction of the rate of coin interest, and at the same time increasing the principal to such an amount as to vastly increase the coin interest continually, under the pretext of economy by the reduction of the rate of interest, is such a deception and fraud upon the people as to merit the most severe condemnation.

1. *Resolved*, That we favor the unlimited coinage of gold and silver, to be supplemented by full legal-tender paper money, sufficient to transact the business of the country.

2. *Resolved*, That we favor the immediate use of the coin in the Treasury for the reduction of the bonded debt.

3. *Resolved*, That we favor the substitution of greenbacks for national-bank notes.

4. *Resolved*, That the volume of our money should not vary with the chance production of the precious metals or the caprice of corporations.

5. *Resolved*, That a graduated tax on incomes is imperatively demanded, to the end that the capital of the country may equally bear its burdens.

6. *Resolved*, That we oppose all subsidies or legalized monopolies, and denounce as one of the highest crimes corruption at the ballot-box. We favor few and simple laws, and those vigorously enforced.

7. *Resolved*, That we hereby denounce communism in all its forms and phases.

This Convention also congratulates the people of Maine upon the reforms inaugurated by the Nationals and carried forward by the last Legislature of Maine, whereby the expenses of the State and counties have been greatly reduced, while the efficiency of the public service has in no way been impaired; and we demand a continuance of the policy of retrenchment and all true reform and the practice of the most rigid economy in all departments of the public service.

The decay of American shipping is a subject that justly causes anxiety and alarm, and its revival should enlist the closest attention of our entire people; and we demand such legislation as shall cause its early restoration.

The Republican State Convention assembled at Bangor on June 26th. The number of delegates present was 1,238. F. A. Pike was selected for temporary and permanent President. On the third ballot Daniel F. Davis was nominated for Governor. The following resolutions were then adopted:

The Republican party of Maine presents to the people of the State the following statement of its aims and principles: It believes that this is a "nation"

and not a "confederacy" of States, and that the national Government is supreme on all subjects lodged with it by the Constitution. It recognizes as one of these subjects the right and duty of the national Government to protect the citizen in the exercise of all his constitutional and legal rights, none of which are more important than a free, fair ballot, uninfluenced by fraud or violence. It believes that existing laws for the protection of the American citizen should not be repealed, and it condemns as revolutionary the attempts of the Democratic party in Congress to force the Executive to consent to such repeal by aid of refusal of appropriations necessary for the existence of the Government. It appreciates the noble and patriotic position taken by the President and the Republican members of both Houses of Congress, in sustaining wise and just laws against the treasonable and revolutionary course of the Democratic party in Congress; and it hereby pledges them its hearty support in their efforts to uphold the financial credit of the Government and to insist upon free elections and the rights of the United States to enforce its own laws.

It protests against the reopening by the Democratic leaders of exciting and sectional issues, which had been settled by the victory of the national arms over the rebellion, and calls upon loyal men everywhere to sustain by their votes the fruits of that victory.

It believes now, as always, in good honest money for the people, and it opposes an irredeemable paper currency as the worst curse that can be inflicted upon a nation. It rejoices that the Government's promises to pay are now kept, and that the paper currency of the country is redeemable on demand in coin; so that now the dollar of the laborer is as good as that of the capitalist. It condemns all schemes to tamper with the currency of the people and thereby again unsettle public confidence, now happily fast being restored.

It recognizes temperance as a cause which has conferred the greatest benefit on the State, and it sustains the principle of prohibition, which in its opinion has so largely suppressed liquor-selling and added incalculably to the sum of virtue and prosperity among the people. It believes that every interest of the State and its people urges the thorough and impartial enforcement of all the laws.

It believes that State affairs should be conducted economically and prudently, and that the expenses of administration should be kept as low as consistent with the efficient operation of its several departments.

The Democratic State Convention assembled at Bangor on July 1st. Abram Sanborn was selected for temporary and permanent President. Governor Alonzo Garcelon was re-nominated, and the following resolutions were adopted:

Resolved, That the partisan acts of a Congress that withdraws the control of elections from honest electors and places them in the custody of the tools of the Executive, are not designed to secure an honest vote, but to enable a fraudulent Administration to perpetuate its power.

Resolved, That the power to buy up the refuse of every city, under the name of deputy marshals, without limit as to their number and price, and at the expense of the public Treasury, and the power in a single minion of the Executive to arrest and imprison, with or without warrant, any and as many of the peaceable electors as he may choose to keep from voting, are powers that can not be trusted to any administration.

Resolved, That we approve the efforts of the Democratic members of Congress to secure the repeal of these outrageous laws. So contrary are they to all the traditions of the builders of our republican system, that we do not hesitate to declare no further appropriation should be made by Congress to carry them into effect.

Resolved, That we condemn the action of Republican leaders in keeping alive sectional issues and the

hatreds engendered by war, and we call upon true men and patriotic citizens everywhere to recognize no North, no South, no East, no West, but one whole country, composed of equal States in one inseparable Union.

Resolved, That we are in favor of a currency of gold, silver, and paper, the paper to be kept at par with coin at all times, and are in favor of free, unlimited coinage of silver.

Resolved, That we approve the measures of economy and the reduction of State expenditures inaugurated by the union of the Democrats and Greenbackers of the last Legislature, and insist upon their continuance in the future, as the only salvation from ruinous taxation or hopeless bankruptcy.

Resolved, That the Democrats of Maine take pride in again presenting to the people of the State the name of Hon. Alonzo Garcelon of Lewiston as a candidate for reelection as Governor, believing him to be a worthy, true, and honest exponent of the principles this day enunciated. The cautious, dignified, and faithful manner in which he has discharged his responsible duties in the past is an ample guarantee that he has the character and ability successfully to maintain and carry forward all the great and varied interests of the State.

The election was held on September 8th, and the vote for Governor was as follows: Davis, Republican, 68,766; Garcelon, Democrat, 21,688; Smith, National, 47,590. The returns of the election of members of the Legislature, as made up by the Republican press, after the election, made the Senate to consist of 19 Republicans and 12 Democrats, with a Republican majority of 7; and the House to contain 89 Republicans and 61 Democrats, with one Republican vacancy by death. This gave a clear Republican majority of 28, and when the vacancy was filled, 29.

The State Constitution provides that at the town meetings for the choice of Representatives, the selectmen shall "receive the votes of all the qualified electors present; sort, count, and declare them in open town meeting and in the presence of the town clerk, who shall form a list of the persons voted for, with the number of votes for each person against his name; shall make a fair record thereof in the presence of the selectmen and in open town meeting. . . . And fair copies of the lists of votes shall be attested by the selectmen and town clerks of towns and the assessors of plantations, and sealed up in open town and plantation meeting; and the town and plantation clerks respectively shall cause the same to be delivered into the Secretary's office [at Augusta] thirty days at least before the first Wednesday of January annually. And the Governor and Council shall examine the returned copies of such lists, . . . and twenty days before the said first day of January annually shall issue a summons to such persons as shall appear to be elected by a plurality of all the votes returned, to attend and take their seats. But all such lists shall be laid before the House of Representatives on the first Wednesday of January annually, and they shall finally determine who are elected." In section 4 of the second part of the same article, the same provision in regard to the duty of the Governor and Council

is made applicable to Senators. Section 32 of chapter 4 of the Revised Statutes provides that the whole number of separate ballots given shall be counted and "distinctly stated, recorded, and returned," and, as amended by chapter 213, acts of 1877, after directing the counting of votes for ineligible persons, declares that the person having the highest number of votes shall be declared to be elected, "and the Governor shall issue a certificate thereof." In 1878 this section was amended by the addition of a proviso that it should not be construed to give the Governor and Council any authority to determine questions of eligibility in cases of Senators and Representatives. The statutes contain many and minute regulations respecting the manner in which Senators and Representatives shall be elected, but, the Republicans claimed, "whether these regulations are or are not observed in an election, whether the votes deposited and counted did or did not conform to the statute requirement, whether the check-lists were tampered with, or whether voters were bribed, are questions into which the Governor and Council have no authority to inquire. Their only duty is to examine the returned copies of the lists of votes, and to issue a summons to such persons as appear to be elected by a plurality of the votes returned."

About the middle of November a great excitement began to prevail among the Republicans, which was caused by rumors that the Governor and Council would endeavor to count out the Republican majority in the Legislature and count in a Fusion (Democrats and Nationals) majority. The Governor and Council arrived at Augusta on Monday, November 17th, and assembled at the State House in the afternoon, where they were visited by a sub-committee of distinguished Republicans gathered from all parts of the State. The report says:

The conference between the sub-committee and the Governor lasted some time, and resulted in the Governor giving the following specific assurance: That the returns should not be considered open in the sense of allowing any amendments or corrections under the statutes, until the Committee of the Council on Elections should report the result of their canvass to the Governor and Council, and that there would be twenty days from that time for any corrections allowed by law, and for any hearings that might be desired. He further gave the assurance that this understanding should be adopted by the Council and made a matter of record, and public notice given thereof.

In addition to the foregoing, Governor Garcelon gave the following concluding assurance: "Ample opportunity will be given to correct any errors in the returns which can be corrected under the statutes. If any returns are fatally defective, you must take the consequences." The Council immediately after went into session, when the Committee on Elections reported that they had canvassed a part of the returns and opened the whole, and that twenty days from this date would be allowed for corrections under the statutes.

Numerous unsuccessful applications were made to the Council for a hearing by persons who conceived their interests to be in danger. The words of the statute on this point are as follows:

The Governor and Council, on or before the first day of December, in each year, shall open and compare the votes so returned, and may receive testimony on oath to prove that the return from any town does not agree with the record of the vote of such town, in the number of votes or the names of persons voted for, and to prove which of them is correct; and the return when found to be erroneous may be corrected by the record. No such correction can be made without application within twenty days after the returns are opened, stating the error alleged, and reasonable notice thereof given to the person to be affected by such correction.

On Saturday, November 22d, the following order of the Governor and Council was issued:

Ordered, That the Secretary give public notice that the Governor and Council will be in session from December 1st to the 13th, for the purpose of examining the returns of votes for candidates for Senators, Representatives, and county officers.

Candidates claiming irregularities or other causes presumed to vitiate their election, will have reasonable opportunity to be heard either personally or by duly authorized counsel.

Applications to the Supreme Court were made for a mandamus to the Secretary of State commanding him to exhibit the returns in the cases specified. The petition and response and arguments of counsel were heard, but the Judge concluded to dismiss the application. At the same time, on December 9th, access was given to the returns by the Governor and Council. It appears by the statement of Governor Garcelon that the returns of the election were placed in the hands of a sub-committee of the Council, to examine in detail and report upon the same to the Council. On the basis of this report the Council acted. In a speech at Lewiston on December 27th the Governor says:

If there has been any act of my life which I am proud of, it is of the performance of my duty in tabulating and counting those returns. We have simply followed the Constitution and laws as interpreted by the Supreme Court, time and time again. The Constitution prescribes certain things for cities and towns to do at an election. If the requirements of the Constitution are not complied with, there is no legal election. These provisions were made for the purpose of securing an honest election. It turns out sometimes that there are informalities in returns. The Legislature undertook to provide by law for correcting this. That correction must be made by the record. If there is no record, what can returns be corrected by? If the record is like the returns, where can a correction come in? Now, when this avalanche of Republican statesmen came in on me at Augusta, it popped into my head that their very object was to see the returns and then go home and see that their records were made all right. In the case of Portland the returns were illegal, and the records were sent for. Lo! the record was found to be just like the returns. Republicans say the intention of the voters must be regarded, and not the Constitution and law. The Selectmen of the town of Danforth had the presumption to go to the clerk and demand that he change and correct the records. I have a letter from Mr. Berry, town clerk, saying he was threatened with fine and imprisonment unless he complied. That is what comes of this amending the records. Amend your records three months after election, and where is the result of an election? The tabulations were made upon the basis of the Constitution as explained by the Court, as far as possible. The circumstances that have surrounded me have been unfavorable. I have in reality had to face a frowning world on account of the foul lies of

the Associated Press, and the vituperation and slander heaped upon me for over a quarter of a century.

Again, in a published defense of his proceedings, after stating the provisions of the Constitution, he speaks of the statutes, and the action of himself and the Council under them, thus:

So much for the Constitution. Supplementary to this the statutes provide (chapter 4, section 32) that in order to determine the result of any election by ballot, the number of persons voted for shall first be ascertained by counting the whole number of separate ballots given in, which shall be distinctly stated, recorded, and returned. Blanks are not to be counted as votes, and votes for persons not eligible to the office shall not be counted as votes; but the number of such blanks and the number and names on ballots for persons not eligible shall be recorded and return made thereof. These provisions of the Constitution and the laws apply to cities as well as towns and plantations, and impose upon them—that is, the municipal officers—the duty of examining and comparing the lists of votes given in the several wards, of which the city clerk shall make a record, and return thereof shall be made in the same manner as selectmen of towns are required to do.

Such are the plain and unmistakable provisions of the Constitution of this State, and in the discharge of their duty of examining the returns and issuing certificates of summons to the parties appearing to be elected, the Governor and Council have not only endeavored to follow both the letter and spirit of the Constitution, and laws made in accordance therewith, as indicated by their own judgment, but the advice of their duly appointed legal officer, aided by the best legal talent in the State.

And here let it be remembered that the decision of the Governor and Council is not final. The Constitution makes the Senate and House of Representatives, respectively, the final arbiters of the election of their own members. All the lists or returns which have been confided to the Council are to be laid before the Senate and House of Representatives on the first Wednesday in January annually, and they shall finally determine who are elected.

With these directions and requirements before them, what are the Governor and Council required to do? To examine these returns, ascertain their validity, and compare them with the provisions of the Constitution and the law. And, first, they must have been sealed in open town meeting and in presence of the selectmen, and by necessary implication must come into the hands of the Governor and Council in that condition. Secondly, they must be genuine returns, coming from *bona fide* towns or plantations, legally constituted and organized. Thirdly, they must be signed by the legal officers of the towns—that is, as decided by the courts, by a majority of the municipal officers of a town or city—and certified by the clerk. Fourthly, they must contain a statement of the whole number of ballots cast for the officers voted for, and the office for which he was voted to fill. Fifthly, the name of each person voted for, with the number of votes against his name that were thrown for him. Sixthly, the names of the officers signing the returns must be written with their own hands (as per judicial decision, 68 Maine, page 587). Applying these rules to the various returns, a tabulation of the persons voted for the different offices, with the votes each has received, determines the result.

In the inspection of returns and tabulation of the same, which has just been completed by myself and Council, it has been our purpose to apply to every return the same rule, to wit: Compliance with the requirements of the Constitution and the law, without fear or favor; and if the result as to the political complexion of the Legislature is different from what was claimed by politicians interested in influencing the elections in other States, it is owing in part to the fact

that the claim was unfounded, and in part to the carelessness of municipal officers in making their returns.

The truth is, the popular vote was against the Republican party, and in the Representative and Senatorial districts the vote was extremely close. In addition to the fact that several persons fail to receive their certificates in consequence of "fatal defects" in the returns from their towns or cities, there are others who would have been presumably elected but for the carelessness of the voters themselves or the ignorance of the candidates or those who provided ballots at the elections. The Judges of our Supreme Court have decided that ballots cast for William H. Smith and W. H. Smith are ballots to be counted separately. Several changes have resulted from this condition of affairs. In one county persons with as many as four different combinations in initials received the Republican vote and two the Democratic. That county was entitled to only one Senator, and there was no alternative but to give the certificate to the person having the highest number of votes. In the Dumfries district, already notorious, the name of the Republican candidate was Charles A. Rolfe. The town of Danforth voted for Chas. Rolfe. The result was that his competitor received the certificate, and from like causes other changes have occurred.

The great hue and cry about "conspiracy," "fraud," etc., arises from the fact that we have taken the Constitution for our guide, fortified by the opinions of the Supreme Court of the State and the advice of several of the foremost legal gentlemen of the forum, and have not permitted substitution, alteration, or unauthorized amendments of the returns transmitted to us for examination, and by us to be transmitted to the Legislature for their final action.

The sub-committee of the Council to whom the returns were submitted made public on December 26th their report to the Council of their proceedings, as follows:

Your committee, in submitting this report, deem it necessary to state specifically certain facts connected with the returns from many of the towns, cities, and plantations which have materially affected the result of the canvassing of the votes returned. There are many returns which, owing to fatal defect, can not be counted, but we shall specify only those which have affected the result. Article 4, part 1, section 5, of the Constitution, regulates the manner of electing Senators and Representatives of the Legislature, and also the process of transmitting to the Governor and Council the evidence by which they are to determine who have been elected. This section provides, in case of towns and plantations, that municipal officers shall, in open town and plantation meetings, at the close of election day, sort, count, and declare the votes cast, and form a list of all persons voted for, and after the name of each person thus voted for shall write the number of votes received by him. This list shall be recorded in open meeting by the clerk, and a copy of this recorded list shall be signed by the selectmen and attested by the clerk and sealed up in open meeting. This copy of the recorded list, thus attested, is to be deposited in the office of the Secretary of State within thirty days thereafter. Section — of the Revised Statutes requires that, in addition to the foregoing specific mandatory provisions of the Constitution, the returns shall state the whole number of ballots cast at the election. The same section of the Constitution requires that the Governor and Council shall open and compare the returns thus transmitted, and from them determine who appears to be elected, and the Governor is to issue to such persons as thus appear to be elected a summons to take seats in the Legislature. Of course, the first requirement is that the returns shall be made and sealed up in open town or plantation meetings. We understand that this is required in order that electors may be present and see that the returns are made in accordance with the facts; and we are of the opinion that the returns not made up in

open meeting are illegal and can not be counted, and we have acted upon this belief in making our tabulations. Several protests, accompanied with affidavits to support them, against counting the returns specified therein, have been considered by us. These protests allege that the said returns should not be counted, because they were not made up in open town meeting, but after the meeting was closed, in some private office or store, when no one but a portion of the municipal officers were present, and in some cases only the clerk. This condition of things in several cases has been proved to our entire satisfaction, and we rejected the returns thus defective in our tabulations. In the case of the town of Stoneham, an affidavit was signed by two selectmen, who established the fact that they signed the returns in blank, and the town clerk took them home and filled them up, and the selectmen have no knowledge of what the returns contain. For the foregoing reasons we rejected, in our tabulation, the representative returns from the towns of Jay, Stoneham, Lisbon, Webster, and Farmington. The returns from the town of Seaport have also been rejected because they were not sealed up in open town meeting. By means of these rejections, five persons will receive seats in the Legislature who would not have been seated had the returns from the aforesaid towns been made up as the Constitution requires. They are James White, of Jay district; Louis Voter, of Farmington district; N. Bradbury, of Stoneham district; Joshua Jourdan, of Seaport district; Leonard Beal, of Durham district. The Supreme Court have held that municipal officers shall sign the returns with their own hands, or make their mark, otherwise the returns can not be counted. We found several returns fatally defective in this particular, and accordingly rejected them by this rule laid down by the Court. New Sharon has also been rejected by us. This rejection upsets the election of one representative. We found several returns fatally defective because the seal is attested by the town clerk. The Supreme Court held that such returns are not legal, and we rejected them. They are quite numerous, but we shall specify only such as affect the result of the election. The representative returned from the town of Lebanon is one of them. Its rejection affects the election of one representative, viz., Stephen Lord. Vanceboro and Albany are like cases, and the rejection of the returns from these towns affects the election of two representatives. The representative districts in most cases are composed of several towns. In some towns the full Christian names of candidates seem to have been used, and in others only the initials, and we hesitated as to whether we could count the initial names with the full names. On examination of the law we find the Supreme Court held that the Governor and Council must count them as distinct and separate persons. By adopting this rule laid down by the Court, the election of five representatives seemed to be affected, viz.: F. W. Hill, of Exeter; Aaron Woodcock, of Danforth district; James Clark, of Newcastle; John Brown, of Hodgdon district; and James Leighton, of Blank district. The Revised Statutes require in the case of plantations, in addition to the forms required by the towns, that the list of voters of plantations be sent to the Secretary of State, otherwise the returns from such plantations shall not be counted. We found the returns from several plantations irregular in this particular, and we specified them in our tabulations. It will then appear the rejection of those returns affects the election of two representatives. The statute requirement of setting forth in the returns the whole number of ballots in many cases was not complied with. We found it had been the practice of the Governor and Council for many years to reject such returns, and we have not deemed it safe to deviate from this long-established interpretation of the law, so fully recognized by our predecessors, and in making our tabulations have omitted all such returns. It will be perceived that this rejection affects several representatives in the county of Washington. One candidate

for the Senate seems to have been voted for in some towns by the name of John F. Wallace, Jr., and in others by the name of Jno. T. Wallace; but we tabulated the votes as thrown for two different men, as we have no legal knowledge that the same person is meant. Two sets of returns were sent in to the Secretary of State from the town of Fairfield, each of which contradicts the other; and as it was impossible from the conflicting character of the returns to determine the result of the election, we rejected the returns from that town in our tabulations. The rejection affects the election of one representative. Accompanying and attached to the representative return from the town of Skowhegan there was a statement signed by the selectmen that a certain number of ballots were protested as being illegal, under section 29, chapter 4, Revised Statutes. One of the ballots objected to was attached to the returns. The selectmen allege how many such ballots were thrown, and in this certificate they inform the Governor and Council that they make the return subject to the legality or illegality of that kind of ballot. The ballot was in the form of an ordinary sheet of paper, folded to make two leaves. On one of the pages half of the candidates' names are printed, and on the next page the balance of the names of candidates appear. We are fully satisfied that this kind of ballot is clearly in violation of the letter and spirit of the foregoing-named statute, and we accordingly rejected a number of ballots in making our tabulations. A protest was filed against counting the returns from the town of Cherryfield, on the ground that the officers who attested the returns were not legal officers. Affidavits were presented with the protest to establish the fact that not one of the legal selectmen presided at the making out of the returns and the receiving of the votes. One selectman was a foreigner, and could not legally hold office. The Superior Court have held that a board of town officers consisting of less than three is not a legal board. Acting upon this opinion, we rejected the returns from Cherryfield. This affects the election of one representative. Several protests and affidavits to support them were referred to us, asking the rejection on account of bribery and intimidation of voters, and on account of legal defects in calling the town meeting, also on account of improper check-lists. The copy of the record presented to us from the town of Skowhegan shows that for the election in that town only one copy of the warrant was posted, and the record does not show that one was posted in the town. Objection to the counting of the votes of the city of Auburn was made because voters' names were added to the check-lists in three of the wards, in violation of the law, while voting was going on election day. The affidavits filed fully establish the fact, and other affidavits show a similar condition of things in other cities. We consider these facts as not legally cognizable by the Governor and Council as a canvassing board, and we disregarded them in our tabulations. We recommend the reference of all such papers to the Legislature. The returns from Portland are defective because they do not comply with the constitutional requirement which provides that the names of all persons receiving votes shall be stated in the returns. A large number of votes were returned from said city as scattering, and there was no possible means afforded by the returns to determine for whom such votes were thrown. The returns from the cities of Saco, Lewiston, Bath, and Rockland are fatally defective, because they were not signed by a majority of the aldermen. Under the statutes and by decisions of the courts, such returns can not be counted, and we have been obliged to reject them. It will devolve on the House of Representatives to determine in the first instance, and finally, who have been elected to the House from these cities, as we have no legal evidence before us to determine that question.

A correspondence ensued between ex-Governor Morrill and Governor Garcelon, in which the former proposed that the disputed points

should be submitted to the Supreme Court for adjudication. To this Governor Garcelon replied on December 27th, saying:

You intimate that it is in my power to restore peace, tranquillity, and good feeling to the State and all its inhabitants by asking the opinion of the Supreme Judges on each law-point involved in the variations of the count from the returns. Nothing would give me greater pleasure than an authoritative opinion upon the points involved in the present condition of affairs, and also upon such as might be likely to arise. Please to indicate the points that occur to you which have not already been adjudicated upon, and I doubt not that we may be able to secure a satisfactory solution of the doubtful complications, or, if not satisfactory, at least such as may be deemed authoritative.

On December 28th ex-Governor Morrill again wrote, and submitted a series of fourteen questions for opinions of the Supreme Court; but Governor Garcelon declined to approve of them, and they were not submitted. Subsequently the Governor and Council submitted the following series of questions to the Court:

1. When the Governor and Council decide that there is no return from a city on which representatives can be summoned to attend and take their seats in the Legislature, is it their duty to order a new election, or is it competent for the House of Representatives, if it shall appear that there was an election of such representatives, to admit them to seats, though no return thereof was made and delivered to the office of Secretary of State?

2. Is it competent for the Governor and Council to allow the substitution of other evidence in place of the returned copies of such lists as are provided for in article 4, part I, section 5, of the Constitution, to enable them to determine what persons appear to be elected as representatives to the Legislature by a plurality of all the votes returned?

3. Is a return signed by a minority of the selectmen of a town, or the aldermen of a city, valid within the requirements of the same section?

4. Is a return by the aldermen of a city which does not give the number of votes cast for each person voted for as a member of the Legislature, and does not show what persons were voted for as such member in any one of the several wards of such city, a valid return within the requirements of the same section?

5. Are returns from towns or cities which are not attested by the town or city clerk valid within the same section?

6. Have the Governor and Council a right to reject returns of the election of members of the Legislature, required by the same section from the officers of towns, which were not made, signed, and sealed up in open town meeting?

7. Is the return of two persons purporting to be the selectmen of a town valid and sufficient evidence of the vote of the town, when it appears that there were at the time of the meeting at which the election was had but two selectmen of that town?

8. Can a person who is not a citizen of the United States at the time be legally elected or constituted a selectman of the town?

9. If a ballot has a distinguishing mark in the judgment of the Governor and Council, such as would make it illegal under the statute, have they authority to disregard it in their ascertainment of what persons appear to be elected, where it appears by the official return of the officers of the town that such vote was received by the selectmen subject to the objection, and its legality referred to the Governor and Council for decision?

10. If the names of any persons appear in the return without any number of votes being stated or carried out against them, either in words or figures, is it the duty of the Governor and Council to treat those persons as having the same number of votes as another

person received for the same office, and whose name is placed first in the return, if they find dots under the figures or words set against such other person's name?

11. Have the Governor and Council the legal right to decide what kind of evidence they will receive, and what the mode of proceeding before them shall be, to enable them to determine the genuineness of returns required by the article and section of the Constitution above mentioned?

12. If the Governor and Council have before them two lists of votes returned from the same town, differing materially from each other in the number of votes returned as cast for the same persons, but identical in all other respects, both having been duly received at the Secretary's office, and they have no evidence to enable them to determine which is the true and genuine return, are they required to treat either of them as valid, and if so, which?

On January 3, 1880, the Court unanimously made an answer to the questions, which was entirely in opposition to the views of the Governor and Council. The answer of the Court is not inserted here, because it was unheeded by the Governor, and on account of its length.

Meantime the certificates of election had been sent out to the members of the Legislature, and that body convened on January 7th. Seventy-eight Democrats and Nationals had received certificates of membership in the House of Representatives. That body assembled and proceeded to organize under the assistant clerk as presiding officer. A committee introduced Governor Garcelon, who administered the necessary oath to each member who presented himself, and then stated that seventy-six had been qualified. Only one Republican (Eugene Hale) was qualified, but during the session of the day another appeared and was qualified. Seventy-six votes constitute a quorum of the whole House of 150 members, and during all the preliminary measures the objection was raised by the single Republican member that there was no quorum voting. This was overruled by the chairman. John C. Talbot was chosen Speaker by 72 votes, and the Clerk was then chosen by 74. The objection of no quorum voting was overruled by the Speaker, who said that he had the highest authority for ruling that a majority of the whole number elected constitutes a quorum, and 70 was that number.

The Senate was called to order by the Secretary of the previous year. The Governor came in and administered the oaths of office. When it came to the election of officers the Republicans did not vote, and the candidates of the Fusion (Democrats and Nationals), Mr. Lamson of Waldo County and Mr. Andrews of Augusta, were respectively chosen President and Secretary.

The term of office of Governor Garcelon expired at midnight on the 7th, and the President of the Senate became *ex officio* Governor until a successor should be elected by the Legislature.

Thus far, nothing of an official authority had appeared, except the documents inserted above and the unheeded answer of the Supreme Court to Governor Garcelon. On the Republican side there was no official to speak, and whatever was attempted was merely the action of

private individuals, and of no avail. They were, in fact, entirely powerless.

On January 12th the following order was issued :

HEADQUARTERS FIRST DIVISION, M. M., }
AUGUSTA, January 12, 1880. }

General Orders No 3.

First. The attention of all military organizations now in the service of the State, and of all men liable to military duty in this State, is directed to the following orders :

STATE OF MAINE, ADJUTANT-GENERAL'S OFFICE, }
AUGUSTA, January 3, 1880. }

General Order No. 12.—1. The several counties of this State are constituted into the First Division of the Militia of Maine. 2. Major-General Joshua L. Chamberlain is assigned to the command of the First Division. 3. The commanding officers of all military organizations accepted into the service of the State are required to report to him. He will be obeyed and respected accordingly.

By order of the Governor and Commander-in-Chief:
S. D. LEAVITT, Adjutant-General.

STATE OF MAINE, ADJUTANT-GENERAL'S OFFICE, }
AUGUSTA, January 3, 1880. }

Special Orders No. 45.—Major-General Joshua L. Chamberlain is hereby authorized and directed to protect the public property and institutions of the State until my successor is duly qualified.

(Signed) ALONZO GARCELON,
Governor.

Second. I am now discharging the duties thus devolved on me in protecting the public property and institutions of the State until a Governor is legally elected and duly qualified.

Third. Particular attention is called to the law rendering it unlawful for any body of men other than the regularly organized corps of the militia, without authority expressly given, to associate themselves together as a military company or organization, or to parade in public with arms.

Fourth. All persons and organizations will take notice accordingly, and all authorized military organizations will understand that they are to report to me for orders until they are otherwise ordered by or through me.

(Signed) JOSHUA L. CHAMBERLAIN,
Major-General.

Official :

(Signed) FRANK E. NYE,
Major and A. A. G.

About half-past 5 o'clock on the afternoon of the 12th, the Republicans, both those who had certificates of election and those without certificates who claimed to have been elected, quietly proceeded in detached numbers to the State House and took possession of the Legislative chambers. The Senate was called to order by Senator Dingley of Androscoggin, and Senator Harris of Washington was called to the chair. Prayer was offered by the Rev. Dr. Butler, member of the House from Vassalboro'. Charles W. Tilden, Assistant Secretary of the last Senate, called the roll of Senators who appeared by the face of the returns to be elected, and the eighteen Republicans answered to their names, and made a quorum. They were then sworn in by William R. Stratton, Clerk of the Courts for Kennebec County. The following officers were then elected, each receiving nineteen votes: President, Joseph A. Locke of Cumberland; Secretary, General C. W. Tilden of Castine; Assistant, George E. Brackett of

Belfast; Messenger, Charles H. Lovejoy of Sidney. The following order was then passed :

Ordered: That a committee, consisting of three members of the Senate, be appointed by the President to report to the Senate for its action whether the Senate shall call upon the Justices of the Supreme Court for their opinion touching the legal organization of the Senate for the Fifty-ninth Legislature, and to report for the action of the Senate such questions as the law and facts require in the premises.

The members of the House were called to order by Eugene Hale. Prayer was offered by the Rev. Mr. Crane, member from Winthrop. Colonel Mark Wentworth of Kittery was made temporary Chairman. Oramandel Smith of Litchfield was made Clerk *pro tem*. He called the roll of members who appeared to be elected on the face of the returns, and eighty-five Republicans so elected answered to their names, and were qualified by W. M. Stratton, an officer empowered to qualify civil officers. Mr. Strout of Portland offered an order admitting six other Republicans who were elected, but who were counted out on slight defects in the returns, all of which were amendable under the law of 1877. The Hon. George E. Weeks of Augusta was elected Speaker; Oramandel Smith of Litchfield, Clerk; and Edwin C. Burleigh of Linneus, Assistant Clerk.

Mr. Hale then offered a resolution similar to the one above passed in the Senate, which was adopted. In presenting it, Mr. Hale referred in flattering terms to General Chamberlain's judicious management, by which irresponsible men armed with muskets were removed from the State House, and the safety of the people's representatives was secured.

On January 12th Mr. Lamson, who had been elected the President of the Fusion Senate, addressed the following note to General Chamberlain :

STATE OF MAINE, EXECUTIVE DEPARTMENT, }
AUGUSTA, January 12, 1880. }

Joshua L. Chamberlain, Major-General, commanding.

DEAR SIR: Having entered on the duties of Governor of Maine, under critical circumstances, it is important for me to understand whether you are prepared to recognize my authority as such. Respectfully,

(Signed) JAMES D. LAMSON,
Governor.

To this General Chamberlain replied as follows :

STATE OF MAINE, }
AUGUSTA, January 13, 1880. }

To the Hon. James D. Lamson.

SIR: I have the honor to acknowledge the receipt of your communication informing me that you have entered upon the duties of Governor, and desiring to know if I am prepared to recognize your authority as such. The gravity of the situation and the importance of my answer to your question demand that I should give to it the most earnest attention. I am acting under authority devolved on me by virtue of the following order [given above].

In the attitude which things have now taken, the responsibility resting on me under this order involves the liberties of the people, their most sacred property, and the stability of constitutional government, their highest institution. I am thankful that you feel and understand this, and realize equally with myself the importance of our proceeding with caution. Your in-

quiry virtually calls upon me to decide a question of constitutional law, which is a matter falling not at all within the province of my department.

In my military authority I have not the privilege of submitting such questions to the only tribunal competent to decide them. The Constitution declares that the Justices of the Supreme Judicial Court shall be obliged to give their opinion upon important questions of law and upon solemn occasions when required by the civil branches of the Government, but that privilege is not accorded to the military department. Supported by the decision of the Court, I should obey without a moment's hesitation; but solemnly believing that if, at this juncture, I abandon my trust, there will be no barrier against anarchy and bloodshed, I can not, under the present circumstances, recognize your authority as Governor of Maine.

There are only two ways to settle the questions now at issue and agitating the public mind—by following strictly the Constitution and the laws, or by revolution and blood. In this alternative, and standing where I must be judged by God and man, I can only hold fast in my place, and implore those who have the power to decide these questions by appeal to the peaceful course of law. Believing that this answer must commend itself to your judgment as the only one possible for me to give, and with the highest respect and esteem, I have the honor to be your obedient servant,

(Signed) J. L. CHAMBERLAIN,
Major-General.

The Republicans proceeded with their legislative action, and submitted a statement of facts and a series of questions to the Supreme Court, which gave a decision sustaining their action as legal. This statement, with the legal points of the questions and the answers thereto, will be found under the title PUBLIC DOCUMENTS. Daniel Davis was chosen Governor by a majority of the members sitting in the Republican organization. General Chamberlain gracefully surrendered his sword to him; the Fusionists became demoralized; some went over to the other body, and some retired.

MARYLAND. The condition of the State Treasury for the last biennial period has been as follows:

Balance in the Treasury September 30, 1877...	\$397,931 13
Receipts for the fiscal year ending September 30, 1878.....	2,295,263 79
Total amount.....	\$2,693,244 92
Disbursements.....	2,480,079 14
Balance in the Treasury.....	\$204,165 73
Receipts for fiscal year ending September 30, 1879.....	2,126,826 87
Total.....	\$2,330,492 25
Total disbursements for same time.....	1,774,233 26
Balance in the Treasury.....	\$556,203 99

The debt of the State is as follows:

Sterling debt bearing interest at 5 per cent....	\$4,432,222 24
Currency debt bearing 5 per cent.....	136,654 83
Debt bearing 3 per cent.....	269,000 00
Debt bearing 6 per cent.....	6,371,700 23
Total.....	\$11,259,607 85

As an offset to this debt the State holds stocks and bonds, upon which interest is promptly paid, amounting to \$3,585,327.17, leaving as the net debt upon which interest has to be provided, \$7,674,280.18. The following stocks and bonds held by the State, which heretofore have been classed as productive, are now put down

as unproductive, the payment of interest having ceased:

Stock in Bohemia Bridge Company.....	\$15,576 99
Chesapeake and Delaware Canal Company.....	81,250 00
Bonds of Columbia and Port Deposit Railroad Company.....	60,000 00
Susquehanna and Tidewater Canal Company mortgage.....	1,000,000 00
Total.....	\$1,157,126 99

The large amount of unproductive assets owned by the State, amounting in the aggregate to \$25,000,000, would if sold be more than sufficient to provide for the entire indebtedness.

The valuation of the property of the State for 1879 was \$466,470,995; adding to this the stock and assets of corporations, valued by the Tax Commissioner at \$42,742,896, the total assessment for taxation amounts to \$509,13,891. The increase of valuation over 1878 amounts to \$37,358,577.

A number of disputed questions relating to the liability of property to taxation were carried by the State to the Court of Appeals, and some important decisions were obtained. The Court decided—1. That the stock, franchises, and property of the Annapolis and Elkridge Railroad Company are not exempted from taxation. 2. That the stock, property, franchises, and gross receipts represented or earned by the entire line of the Baltimore and Ohio Railroad Company between Baltimore and the Ohio River, and all buildings and works necessary for the operation of the railroad company within the meaning of its charter, are exempted from taxation; but that buildings owned by the company which were used in the business of warehousing were liable to taxation; that hotels belonging to the company used as places of summer resort, and interests acquired by the company in connecting roads, were liable to taxation; that interests in steamships and other corporations owned by the company, and all its interests in lines of railway built by it under franchises acquired subsequent to the date of its original charter, were subject to taxation. 3. Shares in building associations owned by residents of this State have been declared to be subject to valuation and assessment, although the whole capital of such association is invested in mortgages. 4. All bonds of other States, and of municipal and other corporations, owned by residents of Maryland, have been decided to be completely within the taxing powers of the State. 5. The bonds of all railroad and other corporations which are secured by a mortgage or mortgages upon property which is not wholly within the State are, when owned by residents of Maryland, subject to valuation and assessment in the State. 6. All shares of stocks in corporations incorporated by other States are subject to valuation and assessment in the State, whether such shares of stock were exempt from taxation by the State creating such corporation or not.

The State has five warehouses for the recep-

tion and inspection of tobacco, which have become a losing investment, and their transfer to private individuals is proposed. The average amount of tobacco received and shipped for seven years, ending September, 1878, has been 52,758 hogsheds per annum, or an aggregate of 369,306 hogsheds. The money expended for labor alone to handle and inspect this tobacco has amounted during this time to \$532,532, or an annual average of about \$76,000.

The number of insane patients in the hospital at the end of the year was 329. The increase for the last two years has been 18 per cent. per annum. There has been a marked improvement in the condition of most of the almshouses and jails in the counties, which were so severely criticised two years ago.

The total number of committals to the House of Correction up to the end of the year was 493, of whom 310 were males and 183 females. The cost of maintaining the institution to the end of the fiscal year was \$17,918. The male prisoners have been employed principally in grading the land around the building, and the females in making up the uniforms and other suitable clothing. A large number have also been engaged in sewing upon contract work, from which the sum of \$791.60 has been realized. During the year the section of the law which authorizes justices of the peace to commit "habitually disorderly" persons to the House of Correction was called into question, and the claim was set up that it was unconstitutional. Several persons were brought out upon writs of *habeas corpus*, and some were released. A test case was finally made, and argued by the Attorney-General before the Chief Justice of the State, who gave a formal opinion sustaining the validity of the law.

In the State Penitentiary the highest number of prisoners during the year was 929, and the average number 813, of whom 693 were kept constantly employed on contract work. There were only 18 deaths during the year, about two per cent. of the inmates, and the loss of time from sickness was two and a half days in the year for each man. The total cost of the support of the penitentiary for the year ending December 1st was \$85,541.40, and the receipts from all sources for the same time amounted to \$98,543.25, showing a balance to the credit of the prison and due to the Treasury of \$13,001.85. In addition to this, there has been earned by the prisoners for overwork the sum of \$8,280.62, of which they will get the benefit as they serve out their time.

The whole force of the State militia consists of one full regiment in the city of Baltimore, and a number of companies in the various counties, aggregating 1,400 men. This organization is thoroughly armed, equipped, and disciplined. The cost of the force has been reduced to \$15,000 a year.

The estimated production of the Clearfield coal region for 1879 was about 1,600,000 tons,

as against 1,270,262 tons for 1878, showing an increase of about 330,000 tons. The Cumberland region shipped 1,702,993 tons, an increase for 1879 of about 52,000 tons.

The latest published report of the condition of the public schools made by the Board of Education is for the year ending July 31, 1878. As compared with the school year 1877, the number of schools in the State shows an increase of 33, numbering in all 1,989, and the pupils an increase of 5,998, an aggregate of 156,274 for the year. The highest enrollment in any term was 127,455, or 7,169 more than in 1877, and the average attendance was 81,829, an increase of 6,103. The teachers numbered 3,071, an increase of 175. In the city of Baltimore the schools were open ten months in the year, in the counties 8·7, giving an average of 9·1 months for the whole State. The total expenditures for school purposes for city and counties during the fiscal year amounted to \$1,593,259.66, an increase of \$48,744.12 over 1877. The total expenses for county schools in 1878 were \$915,283.64, showing a decrease from those of 1877 of \$12,941.40. The Secretary of the Board states that of 69,303 children between the ages of six and eighteen years, as shown by the school census of the city of Baltimore for 1876, only 44·5 per cent. were in public schools, 12 per cent. in private schools, and 34·5 per cent. in neither. He admits that a compulsory law for school attendance has been tried elsewhere and failed, and then proceeds to suggest a different class of schools for the "neglected," based on the idea of pecuniary advantage to such as the incentive. He is firmly persuaded that the judicious expenditure of \$15 a year *per capita* would bring a majority of the neglected children within the reach of instruction, and proposes the following plan for such schools:

As to hours: Two hours a day instead of six at first. As to attendance: Irregularity no cause for loss of privileges at first. As to dress: Rags no objection; even dirt tolerated at first. As to methods of teaching: Oral and objective as far as possible. As to studies: Hand-work made prominent; memory-work diminished; music and drawing in large doses. As to other occupations: Callisthenic exercises; gymnastics and military drill; also some form of industrial occupation leading finally to the acquisition of a trade. As to rewards: A pair of shoes to the shoeless when they are earned, and not sooner; no charity given, but payment made on a given scale for work done.

Technical education has many strong advocates in the State, but nothing has yet been devised to secure it. In Baltimore the colored voters held a series of meetings for the purpose of agitation on the subject of colored teachers for colored schools. One speaker said: "If the white teachers who have been teaching our children all this time have not been able to turn out one teacher among them all, what kind of teachers must they be? It is not reasonable to suppose that a white teacher will try as hard to push a colored child as one of his own race. They will not throw their hearts into it. The white people are not very

deeply interested in seeing the negro race exalted. Then the parents get discouraged in sending their children to school. Colored people have as much right to say that colored people shall teach their children as white people have to say that colored people shall not teach their children. We have also as tax-payers a right to have some teachers." Dr. J. H. Brown, a representative colored man of Baltimore, said:

The colored teachers have been a success everywhere, in Washington, St. Louis, Charleston, and other places. In Washington there are 92 colored teachers in the colored schools; here there are 80 white teachers over the colored children. In Washington, which is the best place for a comparison, Mr. George T. Cook, a colored man, is the principal of all the colored schools. On the school board of 19 members five are colored men, and legislate alike for white and colored schools. Mr. Cook has a salary of \$2,250 per annum, and a secretary at \$650 per annum. In Baltimore there are 13 schools, one of which is a grammar and the others are primary schools. The pupils on the rolls during the year were 5,433, with an average attendance of 3,066. In Washington there are 5,954 colored scholars, 4,803 in primary schools and 1,053 in grammar schools. The average attendance is 98 1/2 per cent.; in Baltimore it is but 79.98 per cent. Why is this? The only explanation is that there is no sympathy between the white teacher and the colored pupil.

In Washington the average of promotions was 79.8 per cent. of the scholars, and still they say here the colored teacher is incompetent. The following is a statement of salaries paid to colored teachers: Six get \$1,000 per annum each; one, \$800; 8 get \$900; 12 receive \$550; 16 get \$650; 2 get \$750; 36 receive \$700; one principal of a high school is paid \$1,200; the principal of the normal school receives \$1,350; one music teacher has a salary of \$800, and a drawing teacher \$1,000. These are all colored people, and all this money is paid out by the Washington authorities to what our School Commissioners are pleased to call "incompetent" teachers.

The insurance statistics of the State for the previous year show that there were 13 Maryland fire insurance companies located in Baltimore, their premiums in Maryland amounting to \$439,577.29, and their losses paid in Maryland to \$78,064.19; there is one Maryland marine insurance company in Baltimore, premiums \$24,019.51, losses \$10,267.43; 15 Maryland mutual insurance companies in the counties, premiums \$122,755.34, losses \$91,101.56; 101 fire and marine insurance companies of other States, premiums \$848,839, losses \$430,937.83; 19 foreign fire insurance companies, premiums \$153,197.14, losses \$55,588.86. Total premiums, \$1,588,348.28; total losses, \$666,959.87. There are two Maryland life insurance companies, premiums \$104,048.80, payments to policyholders \$84,733.71, and 26 life insurance companies of other States, premiums \$1,082,473.65, payments \$1,033,330.40; total premiums, \$1,186,522.45; total losses, \$1,118,064.11. The joint-stock insurance companies of Maryland are all located in the city of Baltimore. Their aggregate capital is \$2,728,855; assets, \$5,446,996.31; liabilities, \$3,816,843.85; premiums received, \$642,776.69; losses paid, \$184,664.90; total amount at risk, \$132,121,263.90; premiums received in Maryland, \$463,596.70; losses

paid in Maryland, \$88,331.62. The fifteen mutual fire insurance companies of Maryland have assets amounting to \$3,820,219.66; liabilities, \$166,668.22; income, \$162,538.16; expenditures, \$141,601.37; amount at risk, \$49,755,821. There were 104 outside companies admitted to do business in the State. Their capital is \$39,139,274; assets, 104,216,036.96; liabilities, \$31,152,468.10; amount written in Maryland, \$112,259,395.96. The assets of the foreign companies are \$19,730,203.74; liabilities, \$9,322,273.33; amount written in Maryland, \$28,980,589.11.

Much has been said both in Delaware and Maryland relative to a ship-canal across the peninsula. At the session of the State Legislature in 1878 resolutions were adopted requesting Congress to provide for the necessary surveys of the several lines across the peninsula, in order to determine upon the best route for the canal. The sum of \$5,000 was appropriated, which was increased to \$15,000 in the allotment of Government surveys. The work was commenced in August ensuing, and the report of the result was made in February. It appears that the surveys embraced several routes. (See DELAWARE.) The advocates of the work say: "Such a canal would shorten the distance to Europe and the eastern seaboard States some two hundred miles, and avoid the dangerous coasting to the capes. Such a canal would put Chicago *via* Baltimore as near to Europe in point of time as by way of New York, with lesser charges for inland transportation; while the advantages such a cut-off would present to the Western and Southwestern States are almost incalculable. It is this consideration that gives to the project for a ship-canal across the Maryland and Delaware peninsula to the sea a national character, and entitles it, above all merely local river and harbor improvements, to Government consideration and assistance." A bill was also introduced in Congress which provides for an endorsement by the Government of the bonds of the ship-canal company, bearing five per cent. interest per annum, to the extent of four millions of dollars; one million to be endorsed when it has been officially certified that one fourth of the excavation and dredging has been completed, and the remaining three millions to be endorsed from time to time in like manner. It is further provided that, in consideration of such endorsement, the United States shall have the right of navigation through the canal free of tolls for all time for all vessels in the United States service, and also be secured by a mortgage on all the rights and property of the company—ten per cent. or \$400,000 of the amount of bonds endorsed being retained by the Secretary of the Treasury "for the formation of a sinking fund for the redemption of the principal and interest of said bonds."

The business of the port of Baltimore for the fiscal year from July 1, 1878, to July 1, 1879,

as compared with the preceding year, was as follows:

VESSELS.	1878.	1879.
ENTRANCES.		
Sea-going vessels.....	1,408	1,778
Coastwise ".....	1,437	1,468
Total.....	2,845	3,241
CLEARANCES.		
Sea-going vessels.....	1,475	1,729
Coastwise ".....	1,794	1,571
Total.....	3,269	3,600

This shows a gain in 1879 of 396 entrances and 331 clearances; total, 727. The tonnage dues collected in 1878 were \$107,450.80, and in 1879, \$130,153.30; increase, \$22,702.50. Of the arrivals in the foreign trade in 1879, 330 were American vessels, tonnage 108,102, and 1,448 foreign vessels, tonnage 1,234,184, against 329 American, tonnage 119,284, and 1,146 foreign, tonnage 885,905, for 1878. Of the clearances for foreign countries in 1879, 320 were American, tonnage 109,814, and 1,409 foreign, tonnage 1,227,321, as against 329 American and 1,146 foreign for 1878. The value of imports for the same period was: 1877-'78, \$16,938,028; 1878-'79, \$14,147,155. Value of exports for 1877-'78, \$45,633,501; 1878-'79, \$57,563,905. The statement of custom-house receipts from all sources is as follows:

YEARS.	Duties.	Currency.	Fees.
1877-'78.....	\$2,848,380 13	\$165,459 26	\$21,318 89
1878-'79.....	1,899,053 04	136,961 13	24,659 77

The decline in the amount of the duties collected in 1879 is thus explained by the Collector of the Port:

The decrease is due to the non-importation of sugar, the decline in the revenue from which, as compared with last year, was \$1,078,253. If our imports of sugar had been maintained, the revenue collected at the port would show a gain of \$128,980.91 over last year. The destruction of the sugar business of Baltimore, which has been so complete as to cause the suspension of four large sugar refineries and two molasses refineries, is due to the prosecutions of Baltimore importers by the Treasury Department. This has lost us the Demerara and Cuba raw-sugar trade, now transferred to Boston, New York, and Philadelphia, while the revenue of the Government has not been increased by it at all. It has increased the apparent cost of collecting revenue at this port, and has thrown many laborers out of work, the actual cost being reduced \$5,272.92 as compared with 1878. The general trade of the port, aside from sugar, shows a sensible improvement. There was a large increase in transportation in bond and in transit. The gains on salt, soda ash, and tin-plate amounted to \$168,779. The increase in warehouse and exportation entries during 1879 over 1878 was \$283,619.27, an increase of 7.88 per cent. The importation of coffee for the year 1879 comprised 535,117 bags, against 413,585 bags in 1878, an increase of nearly 30 per cent.

An attempt to import beet-sugar from Europe was made at Baltimore, but it was found to be without profit. Several samples were procured from Germany with the hope of making

a market for it which would compete with importations from the West Indies and other places. The merchant found that the cost in Germany would be 4½ cents a pound, and hoped to be able to have the customs duty levied on that basis of valuation. Upon taking the samples to the appraisers, however, they rated it at 6½ cents a pound, an advance of 2¼ cents a pound on the German valuation. The brokerage, freight, insurance, commission for buying, loss in weight, and contingencies, it was calculated, would still further increase the price, until the lowest figure at which it could be landed in Baltimore would be 7.65 cents a pound, which was so high as to preclude all possibility of making any profit by the transaction.

The operations by the United States Government and by the State for the hatching of shad at Spesutia Island, at the mouth of the Susquehanna, and near Havre de Grace, were very successful during the fore part of the year. Since the commencement of the works there in 1871, over 48,000,000 shad-eggs have been hatched, and the fish distributed in rivers in different parts of the country. Some have been sent as far as California, and many of the tributaries of the Mississippi have been stocked, also the rivers of some of the Eastern States. The labor incident to the hatching is done on a scow, which is anchored in the river in the vicinity of the fishermen who are drawing their nets. The works are also provided with a steam-launch and several small boats. These boats are used every night in gathering the supply of eggs from the fishermen. The eggs must be taken from the fish when she is just about to spawn, and it is a comparatively small portion of those which are caught that are in exactly the right condition. A fisherman, when he discovers a female shad from which the eggs may be taken, signals one of the small boats from the scow, and the man therein takes the fish, presses the eggs from her, deposits them in a suitable vessel, takes the milt from a male shad, which he places on the eggs, and returns both fish to the fisherman. In this way the night is spent, and immense numbers of eggs are procured, a female shad ordinarily yielding from 20,000 to 30,000 eggs. An average night's work secures from 350,000 to 400,000 eggs. The fisherman who procures the female shad receives in return a ticket or order which is good for fifty cents, and which is redeemed at the end of the season by the Government. The eggs, having been procured, are at once taken to the scow and placed in tin cans, which are about three feet high and a foot and a half in diameter. The bottom of the can is covered with a fine gauze netting, through which it is impossible for the smallest fish to escape. The cans are hung on wooden arms over the side of the scow, and the arms kept constantly moving up and down by steam, thus lowering the cans in the water and hoisting them part way out again. The object of this is to keep the eggs

constantly in a current of fresh pure water, and to prevent them from forming in a solid mass, which would destroy the chances of hatching them out. In from four to six days the little fish appear; they are lively, and swim around their can as if desirous to get out into the large body of water. In ten days or two weeks they are large enough to be shipped to distant points or to be cast back into the river.

One of the most important works done by the State Fish Commission consisted in the investigations conducted in the lower (or Chesapeake) bay, which resulted in the initiation of the artificial cultivation of the oyster. The statement was made early in June that Professor Brooks of the Johns Hopkins University had succeeded in artificially impregnating the eggs of the oyster; that the process of segmentation occupied four hours, and in six hours free-swimming ciliated embryos were produced. The process was explained by Professor Brooks to a visitor to his residence, who thus describes it:

Half a dozen on the half shell served on a plate, a few watch-crystals, a small glass jar, a little water, and the microscope constitute the laboratory. The oysters had been taken fresh from their beds, and opened carefully. They will live in this way for a day or two if kept in a cool place, and all the while the heart may be seen to pulsate in its little cleft next to the muscle. Close to this beating heart lay what is commonly called the "fat of the oyster," but which is really the reproductive organs. These are wrapped all around the stomach, liver, and digestive organs, the latter being the "black" or "dark part of the oyster." The flaps which extend from the opening point of the shells around the whole of one side of the oyster are his gills, through which he breathes and separates his food. His mouth is at the butt end of the shells, where the hinge joins them.

The oyster's food is microscopic organisms—plants and animals. The gills take in these with water when the shells are opened, making the sucking noise so familiar when the oyster is "feeding." The water is sifted through the gills, leaving the microscopic food on the interior surface. The food is carried by a fringe of cilia, perpetually in motion, down and between two mustachios into the mouth at the opposite end of the mollusk. These hairs or cilia on the edge of the gills vibrate continuously, and the motion which they make is like rowing. A very pretty test showing the passage of substances along the gills has been made with carmine on the fresh-water mussel under water.

Experienced oyster-shuckers at the raw box and oystermen nearly all claim to be able to distinguish the sex of the oyster by simple inspection, but there is no difference apparent to sight. Male and female oysters on the half shell can not be told apart, and indeed one in fifty is believed to be hermaphrodite. It is asserted that oysters are females when young and males when they become older and larger. Snails are known to be of different sexes at different times. But in regard to oysters the fact of sex has not been established with certainty, nor is it of importance.

To produce free-swimming ciliated embryos by artificial process, the operator pinched away with tweezers a particle of the fatty or generative part of the oyster, not knowing in advance whether it was male or female. The fragment was put into a few drops of water in a watch-crystal and stirred until the eggs were well shaken out. Useless tissue was then thrown away, leaving the water milky from the number of eggs. The microscope determined the sex.

In the present experiment the first oyster proved to be of the masculine gender. His heart was regularly

beating when the generative part was taken from him. Under the microscope the male cells appeared to be the very finest dots, perpetually in active motion. Myriads of them appeared in a single drop of water, each one being sufficient for impregnation, properly lodged. On the other hand, the female eggs are 100,000 times larger than the male cells, and are discernible by the naked eye. Female eggs remain perfectly passive when separated. Under the microscope they look to be of the size of a pea, while the male cells are no larger than a grain of the finest kind of writing-sand, if indeed they are so large.

Having been washed out into separate watch-crystals and viewed under the microscope, the eggs are mixed with the male cells. Then viewed under magnifying power, what is going on is revealed. It is a perpetual and wonderful succession of changes, every stage of which the patient scientist has noted and drawn at intervals varying from a minute to fifteen minutes. By the aid of these drawings the changes under the microscope may be anticipated, and the succession is invariably as laid down and noted by the discoverer. The male cells vigorously attach themselves to the egg in eager crowds, but one only of the many is supposed to impregnate. The first change apparent is the disappearance of the germinating vesicle, which is the round transparent center of the egg. This is accomplished in a very few minutes. The egg then becomes perfectly spherical, and remains quiet for one or two hours, when a kneading process becomes apparent. A polar globule appears on the surface of the egg, and this is the beginning of segmentation. By degrees and by regular stages, observed over and over again in the same succession, the egg becomes divided into smaller and smaller spherules. This process of division occupies two hours, and at the end of it a small, transparent, swimming embryo is formed, which is the oyster in its infantile state. The whole process occupies from four to six hours, according to the temperature. The present experiment was brought to a successful development in four hours. Professor Brooks in his previous experiments raised oysters till they had the cilia which propel the microscopic oyster, but they died without further revelation of the mystery of life. Cilia have life of their own, independent of the animal, and a nervous organization. Word was sent to me four days after the beginning of the last experiment that the embryos were still alive and doing well. Professor Brooks has had the satisfaction of developing them until he could clearly trace their digestive organs, and is inspired with the hope that continued watchfulness will enable him soon to see the infants begin to take on their armor of shells.

As in many other cities and States, so in Baltimore there was an extensive effort made to enforce a Sunday law. So stringent was its application that excursion parties by steamboat and railroad were stopped, including in one instance an excursion of religious people destined to a camp-meeting. This led to the formation of a Liberal League by those opposed to the law. Their views were expressed in the following resolutions:

Whereas, The Constitution of the United States, from beginning to end, in spirit and in letter, is framed in accordance with the principle of the total separation of church and state, and the treaty with Tripoli, signed by George Washington, as a part of the supreme law of the land, declares emphatically that "the Government of the United States is not in any sense founded on the Christian religion";

And whereas, Notwithstanding these facts, the administration of the national Government and the administrations and constitutions of the several State governments maintain numerous practical connections of the state with the church, thereby violating the spirit of the United States Constitution and the glori-

ous traditions which dedicate this country exclusively to the natural rights of man ;

And whereas, The welfare and peace of the republic, the equal religious rights of its citizens, and the most precious interests of civilization, alike require that all the political and educational institutions of the nation which are supported by taxation should be more faithfully conformed to the spirit of its fundamental law ; therefore,

Be it resolved, That, as a means to the accomplishment of this object, we urge the adoption of such a "religious freedom amendment" of the United States Constitution as shall effect the complete secularization of the Government in all its departments and institutions, State and national, and shall secure to every American citizen the full enjoyment of his opinions on the subject of religion, without molestation, disability, or deprivation of any civil or political right.

Resolved, That we advocate the equitable taxation of church property ; the total discontinuance of religious instruction and worship in the public schools ; the repeal of all laws enforcing the observance of Sunday as the Sabbath ; the cessation of all appropriations of public funds for religious institutions or purposes of any kind ; the abolition of state-paid chaplaincies ; the non-appointment of religious fasts, festivals, and holidays by public authority ; and whatever other measures or principles may be necessary to the total separation of church and state.

Resolved, That we promote by all peaceable and orderly means active agitation and propagandism of the great principles of religious liberty and equal rights, and in all other proper and practical ways promote the final emancipation of the state from the control of the church, and to foster the development of that natural intelligence and morality which constitute the necessary and all-sufficient basis of secular government.

One of the Baltimore City Judges, in his charge to the grand jury, argued in favor of the law as a police measure. He is thus reported :

While disavowing all puritanical notions or prejudices in regard to the manner in which the Christian day of rest should be observed, the Judge bore testimony as a magistrate to the value and necessity of a Sunday law restricting and regulating the sale of liquor as a measure of police, and as a security for the preservation of public order and tranquility on a day of idleness and compulsory abstinence from work. Judge Pinkney cited the docket of his Court as a witness in this respect to the beneficial results of the Sunday law. That the law itself was adopted and is maintained absolutely as a measure of police, and not upon merely temperance or moral grounds, the Judge is historically correct in saying.

The occasion of these remarks was supposed to have been furnished by the multiplication of incorporated societies or clubs for avowedly literary, benevolent, or "social" purposes, but with the real purpose, as supposed, of evading the stringent provisions of the Sunday law. In the case of two or three of the well-known social clubs of Baltimore, one of the Judges (Gilmor), when presiding in the Criminal Court, had decided that the law prohibiting the selling or giving away, or otherwise disposing of certain commodities on Sunday, wines and liquors included, had no application. The clubs in question kept no bar in the ordinary sense of the word, did not keep or sell wines, liquors, etc., for profit, and the use of such articles by members or privileged guests was no more inhibited by the law than the use of the same

articles by the guests or boarders of a hotel or members of a private family. The incorporated institutions in question were shown by the evidence at the trial to be in the nature of co-operative housekeeping establishments, and the use and consumption of liquors, etc., merely incidental to the main object of their formation, and in no sense, therefore, to be regarded as an evasion, practical or designed, of the Sunday law.

The question of the power of justices of the peace to commit to jail in default of payment of fine and costs, and in default of security to keep the peace, was thus decided in the Court of Common Pleas :

Since the establishment of the Board of Police the preservation of the public peace and order has been committed to that body, and arrests for the violation of peace and order are now made by the police force under its control, and not by constables. There is no law making it an offense to be drunk in the presence of an officer of the police force, and therefore it is not an offense for the prisoner in this case to be drunk in the presence of the officer who arrested her and who made the charge. It has been suggested that if a man is found drunk on the street and is arrested and brought before a justice, this is drunkenness "in the presence of a justice," which authorizes him to impose a fine. Such a construction of the law would, I think, be unwarrantable, because the accused would be taken against his will into the presence of the justice, and the law could not have been intended to punish him for a compulsory appearance. The justice, therefore, had no right on either ground to impose a fine upon the petitioner, and her imprisonment for the non-payment of the fine and costs is illegal.

The views of the Court on the question whether drunkenness on the public streets is an offense at common law were thus stated :

I now proceed to consider the question whether drunkenness on the public streets is an offense at common law. It is conceded that private drunkenness is an offense against morality, of which the common law takes no cognizance. Open drunkenness on the public streets of towns and cities has unhappily been always a thing of frequent occurrence in England and in this country, and, if it be a criminal offense, it is hardly possible to believe that it would not have been so decided in numerous cases. Few authorities are cited in support of the doctrine. The strongest case is that of *Smith vs. the State*, decided in Tennessee, 1 Humph., 396 ; and yet the Court in that case, while it admitted that open drunkenness was a criminal offense, held that the charge that an individual was "unlawfully, openly, publicly, and notoriously drunk" was an insufficient description of the offense, so as to put the party on his defense and satisfy him of the facts to be proved ; and the Court advised that the charge should always be that the accused was "openly and notoriously drunk upon the day stated, and upon divers other days before that time." In the case in North Carolina of the State *vs. Waller*, 3 Murphy, 229, also relied on by the State, the Court held that private drunkenness is no offense ; that it becomes so by being open and exposed to public view so as to become a nuisance ; that it must be so charged, and that the jury must so find it before the Court can render judgment. The charge in that case was that the defendant was "a common, gross, and notorious drunkard, and that he on divers days and times got grossly drunk." No case has been cited, and I suppose none can be found, where a party has been found guilty at common law on a charge of drunkenness upon a single occasion, and I am satisfied that such a conviction could not be sustained in Maryland. The doctrine of the common

law on the subject of drunkenness and disorder is, I think, this: A man who is drunk may walk the streets without being arrested, provided he does so in an orderly manner. If when he is drunk he commits a breach of the peace, or what is called a common nuisance—that is, an offense against the public order and common regimen of the State—he may be punished, not for being drunk, but for breaking the peace or committing the nuisance; but he can not be punished, nor can he be held to bail to answer for the offense, unless the breach of the peace or act of nuisance of which he is accused is described with some particularity. If, for instance, he breaks the peace by assaulting A, he should be charged with so doing; or if he commits a common nuisance by using obscene language publicly, he should be charged with that particular act. Before he can be convicted he may demand that an indictment by the grand jury be had, and that he be tried before a petit jury.

A young woman, by name Lillie Duer, committed the most extraordinary and incomprehensible act of shooting her young female friend. Both were cultivated and intelligent, and held very respectable positions. She was indicted, tried, and convicted of manslaughter. In view of the prisoner's previous good character and the recommendation of the jury to mercy, the Court remitted imprisonment, and simply sentenced her to pay the maximum fine prescribed by law, namely, \$500.

The Democratic party assembled in Convention at Baltimore on August 7th. Herman Stump was chosen President. The following nominations were made: For Governor, William T. Hamilton; for Comptroller, Thomas J. Keating; for Clerk of the Court of Appeals, Spencer C. Jones; for Attorney-General, Charles J. M. Gwinn. The following resolutions were adopted:

The Democratic Conservative party of Maryland, in State Convention assembled, resolves as follows:

1. Our acknowledgments are due to the Governor and other executive officers of this State for the firmness, ability, and discretion with which they have discharged the duties of their respective offices.

2. It will be the duty of the next General Assembly to lighten the burden of taxation in this State by abolishing all offices not necessary for the public service; by reducing all salaries and fees subject to its control to the limit of the compensation of persons engaged in similar employment in private life; by compelling the practice of economy in every detail of State, county, and municipal expenditures; and by enforcing the observance of the constitutional rule that every person in the State, or person holding property therein, ought to contribute his proportion of public taxes for the support of the government, according to his actual worth in real or personal property.

3. Public offices were not created for the benefit of individuals nor for the purpose of rewarding political services, but were intended solely for the public advantage. The perversion of their use to any other purpose is injurious to good morals and to good government.

4. The General Assembly ought, at its next session, to make such further reforms in our civil and criminal codes as are needed for the more speedy and economical administration of justice, so that every man in this State may be enabled to obtain quick and sufficient remedy for any injury done to him in his person or property, and that all offenses against the laws may be promptly and speedily prosecuted and punished, and public order be rigidly maintained.

5. The maintenance of free institutions in this State and the essential interests of its people require that all

elections should be free and pure. The General Assembly ought at its next session to provide further security for fairness in such elections by providing for a correct and accurate registration of the names of all persons entitled to vote in this State, to be made by competent officers at certain fixed successive periods of time, and by directing the first of said new registrations to be made at the earliest practicable period.

6. The obligations and credit of the United States and of the State of Maryland ought to be sacredly maintained. Neither the Federal nor the State debt ought to be increased, but provision ought to be made, as soon as practicable, for funding the debts of each at a lower rate of interest and for the gradual payment of such debts. While they continue to exist, every proper means of legislation should be adopted which may be necessary to give effect to these public obligations and to confirm confidence in their complete security.

7. When the Democratic Conservative party regained power in the Congress of the United States it enforced an economical administration of public affairs, and made the resumption of specie payments a possible event. It will be its duty to maintain the advantage thus gained by firmly establishing the credit of the country upon the basis of coin exchangeable in all the markets of the world.

8. The Democratic Conservative party of the country was deprived by fraud of all the fruits of victory in the Presidential contest of 1876. The reprobation of history will fall upon those who committed this crime against a whole people. It is the duty of that people, acting in their respective States, to protect themselves and their posterity against the recurrence of the offense, by enacting laws which will afford no future opportunity for such fraudulent practices.

9. The Democratic Conservative party of this State, faithful to the supremacy of the Constitution of the United States, rests its construction of that instrument upon the express words of the tenth amendment, adopted in 1791. The powers not delegated to the United States by the Constitution nor prohibited by it to the States are reserved to the States respectively, or to the people.

10. The Republican party in its conduct of national affairs has violated this fundamental article. It has provided by law for Federal interference in State elections. It has assumed the right to confer upon Federal courts, supervisors, marshals, and special deputy marshals the unconstitutional power of enforcing State laws. It has deliberately sanctioned the unconstitutional use of the troops of the United States at the polls in the several States. These are measures of centralization which show a determined purpose to change the organic character of the government bequeathed to us by our fathers, and such measures ought to be resisted by every means within our power.

11. We return our hearty thanks to the members of the Democratic Conservative party in Congress for their endeavors to secure impartial trials by jury in the Federal courts by the abolition of test-oaths, and for the manly steadfastness with which they have resisted Republican encroachments upon the limitations imposed by the Constitution of the United States.

12. The Democratic Conservative party of Maryland, having no other purpose to fulfill except to secure the good government of this State and to aid in the reform of the administration of Federal affairs, expects all citizens of this State who share its opinions to unite cordially in the attainment of these great objects. We therefore ask for the candidates of that party an undivided support of all its members, and we commend them to the approval of all other good citizens of this State.

A Tax-payers' Convention assembled at Baltimore on August 12th. Nine of the largest tax-paying counties were represented. William M. Merriek was chosen President of the Convention. He explained that the Convention was without partisan purpose, and did not de-

sign to favor a new party nor to combine for or against either of those existing. Their object was to redress their grievances and secure relief from the burdens of taxation. Both parties were to understand, however, that, whatever politicians might do, the people would not fear to fall out of line whenever they fail of strict fidelity to duty, and that they could not command their allegiance with empty promises nor retain it with broken pledges. Local or county taxation is enormous and burdensome, but local taxes were in their control, and it was their right to say how they should be appropriated. The greatest burdens were at their own doors, but the remedy, which was in their hands, was to give more attention to self-government, and put aside the delusion that they had done their whole duty to society by taking part in national and State politics. They must put good men into the local offices. "If we would build up our State, we shall best do it by building up the counties. Your county commissioner, like the judge, should know no man in administering the finances in which men of all parties have an equal interest and equal rights. All local affairs should be separated, as far as possible, from State and national politics."

The following resolutions were adopted:

Resolved—1. That local self-government being the germinal principle out of which free institutions of the Anglo-Saxon type have grown, its spirit should be fostered, and laws should be so framed as to vest as much as possible of administrative duty in the counties, and whenever practicable in the yet smaller divisions in the body politic.

2. That it is the duty of all good citizens to excite a generous pride in our respective counties, and to use all means to elevate the standard of our local offices, so that no man, however exalted, shall feel it beneath his dignity to share in the obligations of watching over and taking counsel with his fellow citizens about the public affairs of his county.

3. All unnecessary and superfluous offices should be abolished, and the salaries and fees of others be reduced and restricted by law. In view of the present high purchasing power of money, this may be effected without injustice or hardship to officials and with great advantage to the State.

4. The next Legislature of Maryland should, in deference to that spirit of economy which so thoroughly pervades the popular mind and which the times so urgently demand, institute such legislation as will secure necessary reforms, and reduce the expenditures of the public money to such a degree that the outlay shall be commensurate with the services rendered therefor.

5. That, so far as the reform and retrenchment of purely local expenditures in the respective counties is concerned, this Convention remits them to the judgment of the citizens of the several counties, believing that they can be best considered and regulated, and as we think very materially reduced, in every county in the State. In many counties we are satisfied that more than ten per cent. of the annual expenses can be saved if more efficient and impartial officers are selected.

6. That the Legislature has it in its power to save a large sum of money every year from the current revenue of the State by the passage of laws to enforce a more rigid compliance with the requirements of section 1, Article XV., of the Constitution of Maryland, relating to clerks of courts, registers of wills, and all other officers whose pay or compensation is derived from fees or moneys coming into their hands for the

discharge of their official duties, or in any way growing out of or connected with their offices; and also a more rigid observance of the provisions of sections 35 and 45, Article III., of the Constitution, and that the Legislature be called upon to repeal chapter 151, acts of 1865.

7. That the laws relating to the inspection of tobacco should be repealed, to relieve the producers and the State of what has become a burden to the producers and a reproach to the State.

8. That the public-school laws of Maryland are capable of great improvement, and should be amended.

9. That proper legislation should be instituted to reduce the expenses of the courts throughout the State, which have increased in the last few years to such large proportions as to add materially to a burdensome taxation.

10. That provision ought to be made by law for the speedy trial of petty offenders before justices of the peace, with the right of appeal to the Circuit Court.

11. That a committee of one from each county here represented (the President of the Convention to be the chairman) be appointed by the Chair to prepare and present to the Legislature a statement of such offices as ought to be abolished, of such expenditures as ought to be curtailed, of such salaries as ought to be reduced, and of such amendments by law as will insure a greater vigilance in those who have the supervision of public expenditures.

A resolution relating to temperance and the election of favorable candidates to the State Legislature was also adopted.

A Convention of Nationals assembled in Baltimore on September 10th. John Henley was chosen permanent President. In an address to the Convention the chairman of the National Executive Committee said: "The same question is before the people now as existed between the American colonies and their mother country. It is, Shall the government be for the few or for the people? Shall it be a government for a favored class, or for the rich and poor alike? The money power and the would-be aristocracy is making the same fight now it made under Alexander Hamilton, and when Andrew Jackson crushed it. It was defeated then, and will be now. The purchase and control of old party leaders and the manipulation of conventions by the money power created the necessity for the new party."

A preamble and resolutions were adopted, as follows:

The Greenback-Labor party of the State of Maryland, in Convention assembled, in the city of Baltimore, September 10, 1879, reiterating the grand principles of financial reform heretofore promulgated by us to the people of this State, and for the advancement of such other reforms as experience is daily proving and demonstrating the vital necessity of in all industrial pursuits, based upon such remedies as have been persistently, uniformly, heedlessly, and grossly neglected by the dominant political parties in this State and nation, namely, the so-called Democratic and Republican parties, does, in the interest of our long-suffering and law-abiding citizens, again solemnly declare, as absolutely essential to the peace, safety, and welfare of society, that the following principles should be immediately adopted and enforced as national measures:

1. The greenback dollar must be a legal tender for the payment of all debts, public as well as private, and by the Government solely issued, and protected and received as absolute money.

2. That the national Government shall issue no more interest-bearing bonds or obligations, and that

all outstanding bonds shall be redeemed in the full legal-tender money of the United States.

3. That all present issues of national-bank notes be withdrawn, and all future issues of such currency be abolished, the absolute money of the Government being substituted therefor.

4. There should be a graduated income-tax.

5. That postmasters be elected by the people.

6. That Congress provide for the establishment of a labor bureau of statistics in every State.

7. That no more public lands shall be disposed of except to actual settlers.

8. That there should be land limitation, and lands granted to corporations that have not fulfilled their contracts shall revert to the Government.

9. That eight hours shall constitute a legal day's work.

10. That no species of property, whether in stocks, bonds, or otherwise, shall be exempt from taxation.

11. That the Government should faithfully perform its pledges made to the Union soldiers at time of enlistment, especially that they receive 160 acres of land in fee-simple on being discharged, and an equitable payment per month of each soldier, according to the value of the legal-tender dollar at the time of service.

12. That no man shall be eligible to the office of President of the United States for two consecutive terms.

As State measures, we hold: 1. That such laws should be enacted by the Legislature as will secure proper ventilation and other necessary sanitary regulations of all inclosures wherein manual labor is performed.

2. That the employing of children under twelve years of age in any manufactory where manual labor is required be prohibited.

3. That prison convict labor shall never come in competition with free labor by the contract system under any means.

4. That all unnecessary offices be abolished.

5. That the Legislature shall pass a law giving to mortgagees of real estate the right of redemption five years after sale.

6. That debts due for labor performed shall be entitled to equally as stringent remedy for enforcement as any remedy tolerated by the State for the enforcement of any other debt.

7. That distress for rent be abolished.

8. That malfeasance in office shall be classed with crimes amounting to felony and punished as such.

9. That any person who offers to buy or does purchase a vote, or any person who shall intimidate a voter, shall be disfranchised.

10. That the laborer is worthy of his hire; therefore equal payment should be made for like labor performed whether by males or females.

11. In no case shall the homestead of a family to the value of \$2,000 ever be liable to sale for debt.

12. We demand a new registration law.

13. We demand that such election laws be enacted as will give to each and every contesting party one judge and one clerk at each and every voting precinct, and said judges and clerks shall be acceptable to the candidates in whose interest they are appointed.

Howard Meeks was nominated for Governor, and further nominations were left to the judgment of the Executive Committee.

The Republican State Convention assembled in Baltimore on September 12th. Milton G. Urner was chosen permanent President. The following nominations were made: For Governor, James A. Garey; for Comptroller, Samuel Mallalieu; for Attorney-General, Frank M. Darby; for Clerk of Court of Appeals, J. T. McCulloch. The following resolutions were adopted:

The Republicans of Maryland, in State Convention assembled, resolve as follows:

1. The Republic of the United States is a nation and not a league. Allegiance of the citizen is due primarily to the nation, which within its constitutional sphere is supreme, and is clothed with full power to guard its own life, protect its own citizens, regulate its own elections, and execute its own laws. The opposite doctrine of State sovereignty is the baleful mother of nullification, secession, and anarchy. Republicanism stands for national supremacy in national affairs, and State's rights in State concerns. Democracy stands for State sovereignty, with its twin heresy that the Union is a mere confederacy of States.

2. To refuse necessary supplies for the Government with the design of compelling the unwilling consent of a coordinate and independent branch to odious measures, is revolution; to refuse appropriations for the execution of existing and binding law is nullification. We arraign the Democratic Representatives in Congress as guilty both of revolutionary attempts and nullifying schemes, and we reprobate their action as calculated to subvert the Constitution and to strike at the existence of the Government itself.

3. The safety of the republic demands free and pure elections, but the Democratic party in this State and throughout the country has persistently and systematically sought to overthrow all safeguards of free suffrage. For years past in this State Democratic ruffians and repeaters have, by violence and fraud, reversed the verdict of the people expressed at the polls; juries have been packed in the interests of these criminals; and when, in rare instances, convictions have been secured, the Executive has interposed to shield them from the punishment which was richly deserved, and the infliction of which was demanded by the highest public interests. When Democratic administration of our State laws had thus made a mockery of justice, we invoked the national election laws for the protection of the voter at national elections, and immediately the whole Democratic party, through its Representatives in Congress, engaged in a determined effort to break down those laws by unconstitutional and revolutionary means. And this attempt was only prevented by the opposition of the Republican Representatives and Senators in Congress, and the vetoes of President Hayes, for which they deserve and receive our hearty approval. We pledge ourselves to spare no effort to prevent the repeal of the national election laws, and to secure from our next Legislature the best system of laws for popular elections that can be suggested or devised.

4. The people of this State can never condone the fraud that was perpetrated by the Democratic party in the election of 1875; and this being the first occasion which they have had to express their sentiments, it is now their duty, and we call upon all good citizens, to rebuke and condemn that fraud at the coming elections.

5. The Republican party neither justifies nor tolerates military interference with elections. It seeks only to protect the ballot-box from the interference of force and fraud. It repels the false charges and denounces the false pretenses of conspirators, who, while professing to favor free elections everywhere, sustain mob-law in the South; while inveighing against troops at the polls to protect citizens, refuse to prohibit armed clubs from surrounding the ballot-box to intimidate them; and, while affecting that the soldiers' bayonets will overawe free electors, remain silent when the assassin's bullet seals the fate of political independence.

6. We call upon the people to remember that the Democratic party forced the extra session of Congress without warrant or excuse; that it prosecuted its partisan purposes by revolutionary methods; that it persistently obstructed resumption, and still constantly presses disturbing measures.

7. That we heartily approve the financial achievements of the present national Administration. The successful resumption of specie payments, despite Democratic prediction and hostility, is the crowning achieve-

ment of the Republican financial policy. Followed by the returning national prosperity, improved credit, a refunded debt, and reduced interest, it adds another to the triumphs which prove that the Republican party is equal to the highest demands. Our whole currency should be kept at par with the monetary standard of the commercial world, and any attempt to debase the standard, to depreciate the paper, or deteriorate the coin, should be firmly resisted.

8. All unnecessary and superfluous offices should be abolished, and the salaries and fees of others be reduced and restricted by law. In view of the present high purchasing power of money, this may be effected without injustice or hardship to officials, and with great advantage to the State.

9. The next Legislature of Maryland should, in deference to that spirit of economy which so thoroughly pervades the popular mind, and which the times so urgently demand, institute such legislation as will secure necessary reforms, and reduce the expenditures of the public money to such a degree that the outlay shall be commensurate with the services rendered.

10. That the Legislature has it in its power to save a large sum of money every year by the passage of laws to enforce a more rigid compliance with the requirements of section 1, Article XV., of the Constitution of Maryland, relating to clerks of courts, registers of wills, and all other officials whose pay or compensation is derived from fees or moneys coming into their hands from the discharge of their official duties, or in any way growing out of or connected with their offices, and to require a rigid compliance with the provisions of the Constitution and laws of the State by the payment of all excess of their receipts into the Treasury of the State.

11. The laws relating to the inspection of tobacco should be repealed, to relieve the producers and the State of what has become a burden to the producers and a reproach to the State.

12. The public-school and jury laws of Maryland are capable of great improvement, and should be amended. All political considerations and influence ought to be rigidly excluded.

13. Proper legislation should be instituted to reduce the expenses of the courts throughout the State, which have increased in the last few years to such large proportions as to add materially to a burdensome taxation.

14. That we demand that Democratic juggling with the registration of voters shall cease, and that the next Legislature of this State shall in good faith pass such laws as will secure an honest registry, a free vote, and a fair count.

A census of the voters in the city of Baltimore was taken by the police in August, with the following result: White, 61,133; colored, 10,368; total, 71,501; total in 1877, 66,525.

The Independent Democrats of the city organized and held a convention, which they said "was called into existence by the urgent demand of the people for the redress of grievances consequent upon the corruption of party politics and the frauds practiced in the nomination and election of unworthy officials." It recognized "the great necessity of purification and reform in the State and city government, and of lessening the heavy burden of taxation which oppressed every branch of industry and all classes of the community."

A convention of dissatisfied Republicans was also held to protest against the management of the party in the city.

The election was held on November 4th, and resulted as follows: For Governor—Hamilton, Democrat, 90,771; Garey, Republican, 68,609.

The Legislature was divided as follows: Senate—Democrats, 19; Republicans, 5; Independents, 2; total, 26. House—Democrats, 63; Republicans, 21; total, 84.

MASSACHUSETTS. The State Legislature assembled on January 1st, and adjourned on April 30th. It had been in session 120 days, a period equal to that of the session of 1849 and also of 1862, but shorter than any other since the latter date except that of 1876, which continued 115 days. There were 306 bills and 53 resolutions passed, all of which were approved by the Governor, except one which he allowed to become a law without his signature and one which he vetoed.

One of the subjects first considered by the Legislature was that of retrenchment. A joint committee was appointed which investigated every department of the government, and the reduction of salaries and fees which it recommended and which were adopted amounted to \$269,632.

An act was passed to establish a Board of Health, Charity, and Lunacy, to consist of nine persons, who should serve without compensation, and have charge of all matters previously under the care of the Board of Health and State charities, and also perform the duties required in the management of the hospitals for the insane and prescribed in the laws relating to the commitment of the insane. (See "Annual Cyclopædia" for 1878—MASSACHUSETTS.) This act abolished the State Board of Health, the Board of State Charities, the Board of Trustees of the State Reform School and the State Industrial School, the Advisory Board of Women, the Inspectors of the State Almshouse and those of the State Primary School, the Trustees of the State Reform School, and the Visiting Agency. The duties thus imposed on the new organization are immense. One branch of the duties of the Visiting Agency alone was during the last three years the visitation and care of more than 6,000 children, and the placing of them in private families. So far as known, in after life about 70 per cent. of offenders of all classes do well, and nearly 95 per cent. of the dependent children. The statistics show that from July 17, 1869, to October 1, 1878, there were before the courts 17,136 complaints against juvenile offenders, of which the Agency had notice, the hearings of which it attended, and of which it has records. The hearings on the complaints resulted in the commitment of 205 to the State Nautical School, 774 to the Board of State Charities, 1,088 to the Reform School, 290 to the Industrial School, 660 to the local institutions of Boston, 415 to local and private institutions in the various parts of the State, 121 to the houses of correction; 5,340 paid money penalties; 4,392 were placed on probation; 2,945 were discharged; 67 were committed to common jails, 4 to the Reformatory Prison for Women; and 835 cases were disposed of by placing them on file, indefinitely continuing

them, or returning the offenders to the institutions where they had once been, etc.

The number of children in the State schools was 126 less October 1, 1878, than at the corresponding date in 1869; and the number of offenders therein was 253 less in 1878 than in 1869. The expenses of the State on account of its minor wards, for the years since this Agency began its work, are as follows: 1869, \$191,400.26; 1870, \$189,853.73; 1871, \$171,284.40; 1872, \$146,684.92; 1873, \$137,733.64; 1874, \$133,013.28; 1875, 142,448.52; 1876, \$137,607.06; 1877, \$134,234.18; 1878, \$154,789.43. The number of minor wards in the State in families subject to the visitation and care of the Agency exceeded the number in the Reform, Industrial, and Primary Schools by 128; and the number of visits made to them during the year 1878 was 1,738, and the per cent. of them found doing well was 85. There were 1,374 to be visited during the same year, and there remained 1,029 to be visited in 233 towns in 1879. In summarizing the work of the year 1878 it appears that 2,222 complaints against juvenile offenders before the courts were looked after; 458 investigations made upon applications for children, for the release of them from institutions or from places and for special causes. The work of finding places for children was carried on. The Agency had to do with more than 4,000 different children in a year, and with as many other persons in some way related to them.

A further consolidation was made by the Legislature in uniting the Harbor and Land Commissions. The office of the Inspector-General was consolidated with that of the Adjutant-General, and the Surgeon-General's bureau was abolished. A Prison Commission of nine persons, two of whom should be women, was established, and vested with all the rights hitherto exercised by the numerous boards connected with the State penal institutions.

An article in amendment of the State Constitution was adopted, providing that the Legislature shall assemble biennially on the first Wednesday of January, and State officers and members of the Legislature shall hold office two years, the same person to be eligible for the office of Treasurer and Receiver-General for six years successively and no more. The first election shall be on the Tuesday next after the first Monday of November, 1880, and the first session of the Legislature shall commence on the first Wednesday of January, 1881. To become of force, it is necessary that this resolution shall be adopted also by the Legislature which assembled in January, 1880, and then submitted to the people and approved by them.

A bill was presented to extend to public charitable and reformatory institutions the provisions of an act of 1875, which provides that no inmate of any prison, jail, or house of correction shall be denied the free exercise of his religious belief and liberty of worshiping God ac-

ording to the dictates of his conscience, within the place where such inmate may be kept or confined; and it shall be the duty of the officers and boards of officers having the management and direction of any such institutions to make such rules and regulations as may be necessary to carry out the intent and provisions of this act. Nothing contained in the law shall be so construed as to impair the discipline of any prison so far as may be needful for the good government and safe custody of its inmates. It was objected to the bill in the Senate, that it proposed to give to hundreds of young children the right to decide what religious ministration they should have at a time when they were at too tender a period of life to so determine; and further, that the committee reporting the bill had not heard a single superintendent or trustee of one of these institutions on the subject. In reply to this objection, one of the members of the committee said that "the committee had not summoned witnesses for the reason that the proposition seemed to be so fair and just as not to require outside evidence. He approved the bill because of the great right to religious liberty, because he believed in giving religious instruction to the young, and because the poor children of the State, the juvenile offenders, should have the same right as that enjoyed by thieves, burglars, and murderers. He showed that there were a great many Catholic children or children of Catholic parents in the State institutions, and declared that they could not be made good Protestants, though they might be made bad Catholics. He denied that children were incapable of judging for themselves, pointing to those innocents who, in ages past, had given their lives for their faith, even though they might not have been entirely familiar with its tenets." An amendment providing that the law should not apply to children under fourteen years of age was rejected. A proviso that "nothing in this act shall be so construed as to prevent the assembling of all the inmates of any State or other public charitable institution in the chapel thereof for general religious instruction, including the reading of the Bible, as the board having charge of the institution may deem wise and expedient," was adopted. The bill was ordered to be engrossed in the House, by a vote of yeas 80, nays 45; it passed, and became a law.

The subject of taxation was extensively discussed, and the State tax was reduced to half a million dollars. The actual reduction, however, exceeded \$300,000. The poll-tax due to the State and county of one dollar each, which must be paid before an elector can cast his vote at any election, was modified by an act providing that "assessors shall in each year assess upon the polls the State and county tax authorized or required by law; provided, however, that in case either of said taxes shall exceed in amount the sum of one dollar upon each poll, the excess above said amount shall then

be apportioned upon property." The act also provides that there shall be no division of the poll-tax unless the person assessed shall make application for such division.

Attempts were also made to modify the general system of taxation, among which the question of the taxation of mortgaged property was conspicuous. A bill relative to this matter was passed in the House, but rejected in the Senate. Some of the features of the bill were, that loans on mortgage of real estate should be exempt from taxation as personal property; that the mortgagee's interest shall be assessed in the city or town where the land lies; that the mortgageor shall be assessed only for the value of the real estate over and above the amount of the mortgage. Mortgageors and mortgagees are treated as joint owners until the mortgagee takes possession. All taxes assessed constitute a lien upon the property, and in case either party fails of payment within a specified time, the other party may pay both taxes; but it is provided that if the mortgagee pays the tax assessed on the mortgageor, such tax, with interest and costs, shall be added to the principal of the mortgage; also that if the mortgageor pays the tax assessed on the mortgagee, he shall have the right to deduct the amount so paid, with interest and costs, from the principal of the mortgage. Finally, it is provided that "loans on mortgage of real estate within the Commonwealth, and assessed as real estate as hereinbefore provided, shall be exempt from taxation as personal property to the amount they are assessed as real estate, and any excess above such amount shall be taxed as now provided by law." A bill was also passed which reduces the maximum rate of interest on unpaid taxes from twelve to seven per cent.

The place of women in political affairs was extensively discussed at this session. Four distinct propositions were considered. The first was that a constitutional amendment should be submitted to the people, giving to women equal political rights with men. On this proposition the Committee of the Senate held a session to hear the petitioners. Mr. T. W. Higginson attempted to refute the argument that women should not be allowed to vote because they were not able to fight. He showed that if that ability were to be made the test, a large proportion of men, especially of professional men, would be disfranchised. The report of the Surgeon-General of the United States showed that of the thousand clergymen who volunteered or were drafted during the war, 945 were declared to be physically unfit for service. Of the lawyers who volunteered or were drafted, 650 were rejected, and of the physicians, 745. You must go down to the mechanics and laborers before you can find a class of men a majority of whom will fulfill this requirement. Of the clergymen who preach that woman suffrage is wrong because women can not do military duty, only one twentieth would themselves

be accepted for such service. There is but one class of men better fitted than mechanics for military service, and that is the prize-fighting class, and therefore the constituency which sent John Morrissey to Congress was the only constituency which ever carried out this idea to the end. Mrs. Margaret W. Campbell insisted that under existing laws women were oppressed and classed with men who were weak-minded or criminal. She said that men were allowed to vote when they reached the age of twenty-one, and she asked that some age might be fixed when women could vote—thirty-one, fifty-one, one hundred and one—and some of them would try to reach that age. Mr. William Lloyd Garrison expressed his sorrow that women should be disfranchised and classed with paupers, idiots, and criminals. Senator Hayes asked him if there were not some difference between a person who was disfranchised and one who had never had the franchise. Mr. Garrison replied that the difference was slight. Senator Hayes then said that he could see no argument for woman suffrage in the proposition that paupers, idiots, and criminals could not vote. Mr. Garrison then showed the improvement which forty years had made in the condition of women in this country—how in that period they had been admitted to the pulpit, the bar, the platform, the practice of medicine, and the public service. He declared that until women were given their rights this country would be divided and corrupt. Mrs. Lucy Stone closed the case for the petitioners by asking that the committee might decide that not a part, but all of the people of mature age, sound mind, and unconvicted of crime, might have the right to vote. In answer to a question from a member of the committee as to whether or not the granting of the franchise would give too much power to ministers of religion because of their greater influence over women than over men, she said that undoubtedly there were more women church members than men, but that as women got into the pulpit the number of male church members increased, just as the female membership of churches increased under male preaching. A resolve providing for a constitutional amendment was reported by the committee, and rejected.

The second proposition considered in the Legislature was that women should be allowed by statute to vote in all municipal elections. A bill to secure this right to women was reported in the House. When it came up in the orders of the day, it was rejected without discussion or a count.

The third proposition was that women should be allowed to vote for members of school committees. A bill giving this suffrage to women was reported in the Senate, and on the question of ordering it to a third reading Mr. Gardner of Hampden County advocated the bill as a measure of expediency, and as an experiment which will demonstrate the wisdom or unwisdom of conferring the broader right of general

suffrage upon women. Mr. Winn of Franklin spoke in opposition, reviewing the history of suffrage, and urging the dependent position of women, and their physical inequality with men, as arguments against allowing the former to vote. He gave statistics to prove that since the agitation of women's rights began there has been a decrease in the number of births among the native population, and an increase in the number of divorces and of illegitimate births, and that consequently the conferring of the right of suffrage upon women would be a dangerous experiment, regarded either from a moral point of view or as a question in political economy. Mr. Burrage of Suffolk said that if the Senator's arguments were sound, society would evidently be benefited by a return to that condition of things under which women were held as slaves. He favored the bill on the ground that the State should be no respecter of persons, and that every person meeting the requirements of the Constitution in regard to the qualifications of voters should be allowed to vote, irrespective of color or sex. Mr. Ely of Norfolk advocated the bill, and contended that to give women the right to vote is simply a matter of justice. The bill finally passed the Senate—yeas 24, nays 11. In the House it was passed by a vote of 129 yeas to 69 nays. The following is the act:

As it enacted, etc., as follows:

SECTION 1. Every woman who is a citizen of this Commonwealth, of twenty-one years of age and upward, and has the educational qualifications required by the twentieth article of the amendments to the Constitution, excepting paupers and persons under guardianship, who shall have resided within this Commonwealth one year, and within the city or town in which she claims the right to vote six months next preceding any meeting of citizens, either in wards or in general meeting, for municipal purposes, and who shall have paid by herself, or her parent or guardian, a State or county tax, which within two years next preceding such meeting has been assessed upon her in any city or town, shall have a right to vote, at such town or city meeting, for members of school committees.

SEC. 2. Any female citizen of this Commonwealth may, on or before the fifteenth day of September in any year, give notice in writing to the assessors of any city or town, accompanied by satisfactory evidence, that she was on the first day of May of that year an inhabitant thereof, and that she desires to pay a poll-tax, and furnish under oath a true list of her estate, both real and personal, and she shall thereupon be assessed for her poll and estate, and the assessors shall, on or before the first day of October in each year, return her name to the clerk of the city or town in the list of the persons so assessed. The taxes so assessed shall be entered in the tax-list of the collector of the city or town, and the collector shall collect and pay over the same in the manner specified in his warrant.

SEC. 3. All laws in relation to the registration of voters shall apply to women upon whom the right to vote is herein conferred; provided, that the names of such women shall be placed on a separate list.

SEC. 4. The mayor and aldermen of cities and the selectmen of towns may, in their discretion, appoint and notify a separate day for the election of school committees; provided, that such meeting shall be held in the same month in which the annual town meeting of the municipal election occurs.

This is the first decided triumph of the wo-

man-suffragists in the State, and it gives an opportunity to subject their demands to the test of experiment.

The fourth proposition was the passage of a law to give women the right to vote on all matters relating to the sale of intoxicating liquors. The report of the committee in the Senate was unfavorable, but the Senate substituted a bill providing for special elections in cities and towns to determine whether or not liquors should be sold therein, and providing further that women might vote thereat upon the usual conditions. When the bill reached the House, a great deal of objection was made to the special election provisions which it contained, and it was quite as much upon that consideration as on account of opposition to women voting that the bill was rejected by a very large vote.

The following bill was substituted for an unfavorable report in the House; it is known as the "civil-damage bill":

SEC. 1. Every husband, wife, child, parent, guardian, employer, or other person, who shall be injured in person or property, or means of support, by any intoxicated person, or in consequence of the intoxication, habitual or otherwise, of any person, shall have a right of action in his or her own name, severally or jointly, against any person or persons who shall, by selling or giving intoxicating liquors, have caused the intoxication, in whole or in part, of such person or persons; and any person or persons owning, renting, leasing, or permitting the occupation of any building or premises, and having knowledge that intoxicating liquors are to be sold therein, or who, having leased the same for other purposes, shall knowingly permit therein the sale of any intoxicating liquors, shall, if any such liquors sold or given therein have caused, in whole or in part, the intoxication of any person, be liable, severally or jointly with the person or persons selling or giving intoxicating liquors as aforesaid, for all damages sustained, and for exemplary damages, and the same may be recovered in an action of tort. A married woman may bring such action in her own name, and all damages recovered by her shall inure to her separate use. In case of the death of either party, the action and right of action shall survive to or against his executor or administrator.

SEC. 2. This act shall take effect upon its passage.

The bill is similar to the one previously passed by the New York Legislature. It was amended by adding a section as follows: "Any owner or lessor of real estate, who shall pay any money on account of his liability incurred under this act for any act of his tenant, may in an action of contract recover of said tenant the money so paid." The clause concerning exemplary damages was stricken out; owners and lessees of buildings who should rent them for liquor-selling were made jointly responsible; and no license for the sale of liquor should be granted unless the application therefor had the signature of such owner or lessee. In the Senate the bill was ordered to a third reading by yeas 26, nays 8. In the House the vote to substitute was—yeas 105, nays 54.

The State Detective Force was abolished, and the Governor was authorized to appoint not more than two district police for each ju-

dicial district and two for the inspection of factories.

The contract system as it prevails in the penal and reformatory institutions of the State was considered, and numerous measures were proposed. A special committee reported on the subject. There are three systems adopted in the employment of convicts: The contract system, which exists in Massachusetts and nearly all the Northern prisons; the lessee system, which prevails in Georgia and other Southern States; and the public account system below described. Those who make the most complaint in the State are engaged in the boot and shoe trade; and they complain chiefly of two hundred men employed at Concord. The relative cost of labor to the value of the product in the manufacture of boots and shoes is as 1 to 3; that is, of every dollar's value of product, 33½ per cent. goes to labor, while the ratio of labor to product in prison-work is 31¼ per cent., showing that the advantage of the prison contractor is really about 2 per cent. in the production of goods on the average. The product of each person employed in the manufacture of boots and shoes in Massachusetts is \$1,858 per year; that is, 48,090 operatives—the number of persons so employed in 1875—produced \$89,375,792 worth of goods. The product of prison-work per man is \$1,142 per annum. The 200 men employed on boots and shoes at Concord produce \$228,575 worth of goods per year, on an average; the same number outside would make \$371,600 worth of goods. No contractor will object to the abolition of the contract system on personal grounds. The contractor pays for the men he contracts for through the whole year, whether the demand is good or bad, and in some cases they have allowed them to remain idle for the reason that it was less loss to pay wages than to make goods. With rare exceptions all classes agree that productive industry should and must be carried on in the prisons, and it is self-evident that competition can not be avoided so long as two men labor or are employed. While it can not be proved that any great evil growing out of convict labor exists, it must be admitted that there is a seeming, and may be at times a positive, evil existing under the present contract system. After a full discussion of the several substitutes offered, the committee conclude:

1. That convict labor should not be abolished.
2. That legislation to restrain officials in penal institutions from contracting out the labor of convicts at lower rates than the average of outside labor, without allowing contractors to employ or not the men contracted for, simply abolishes labor in such institutions.
3. The reduction of the hours of labor in prison to six per day, with the old rates of contract per day, simply abolishes labor in penal institutions.
4. The general introduction of the public account system, as a rule, simply aggravates the grievances arising from whatever competition may result from the contract system.
5. The increased diversity of employment in penal institutions tends not only to lessen whatever com-

petition now exists, but has an excellent reformatory effect upon the prisoners.

6. The employment of convicts upon public works, when it can be done, is a feature of prison labor commendable, not only from the standpoint of the labor and prison reformers, but from that also of the manufacturers and workmen.

7. The employment of convicts in breaking and dressing stone, and kindred work, while it palliates the evils of competition, induces to a large degree other conditions far more injurious to the body politic; and that work which requires the most expenditure of muscle and the least expenditure of capital is, if it can be had, the best for a large class of convicts, all things considered.

The Labor Bureau was instructed by the Legislature at its session in 1878 to make a full investigation of the question of convict labor. The annual report of the Bureau, made in February to the Legislature, contains the results of the investigation. The whole number of convicts in the United States in 1878 was 29,197; of these, there were under contract or employed in mechanical industries 13,186. The number of inmates of the penal institutions of Massachusetts November 1, 1878, was 5,048—4,097 males and 951 females; of these, 2,962 males and 748 females, 3,710 in all, were at work. There were 1,642 males and 16 females employed on contract work, the contract price ranging all the way from 5 to 45 cents per day. The earnings of these institutions for the year were \$156,959.18, and the expenses \$724,883.43. There were employed in the different industries the following: Manufacture of hats, 200; picture-moldings, 150; boots and shoes, 584; brushes, 211; cotton-ties, 26; harnesses, 70; stone-yards, 100; slippers, 165; cane-seating chairs, 270; clothing 356; crocheting, knitting, etc., 65; corset-making, 100; laundry, 65; leather, 41; prison duties, 1,307; and the location and character of the work are given in detail. At New Bedford 179 prisoners were employed on boots and shoes on public account; that is, the officers of the prison purchased raw materials, manufactured the goods, and sold them in the market, in the same manner as any manufacturing establishment. At East Cambridge 181 are so employed making brushes, and at Deer Island 100 on stone-work. In all, 745 are working on public account and 1,658 on contract work—a total of 2,403 engaged in industrial labor; and there are 1,338 prisoners in the State without employment. The 13,186 convicts employed in mechanical industries in the State Prisons of the United States earn an average of 40 cents per day, which gives \$1,624,518.90 as their gross earnings for the year. At \$2 per day—the average price for labor outside of prisons—these men would earn \$8,122,576. The whole injury done to labor, if any, in the country, by convict labor in the State Prisons, thus appears to be represented by \$8,122,576, while the annual products of the mechanical industries of the United States amount to *five thousand million dollars*. The wages paid for prison labor, as shown by the statistics, represents a product of \$9,747,090, or less than one

fifth of one per cent. of the products of the United States.

An act was passed "to preserve the purity of elections," which provides that in future only plain white paper similar to the ordinary printing paper may be used for tickets. The ballots must be uniform in size, each one bearing the names of more than three candidates to be four and a half inches in width, or within a quarter of an inch of it, and twelve inches long, or within half an inch of that length. No distinguishing marks or devices are allowable, but the head of the ticket, with the names of the candidates for the several offices, must be printed in plain type with black ink. The names are required to be of uniform size, or so nearly so that no one name shall be in letters less than one half the size of those in which the majority of the names are printed. The printing or writing for distribution, or the distribution at the polls, of any ballot printed or written contrary to these provisions, is punishable by a fine not exceeding \$100, and by imprisonment in the county jail for a term not exceeding sixty days. The act does not forbid the erasure, correction, or insertion of any name by pencil-mark or otherwise upon the face of the printed ballot, nor authorize the rejection of any ballot, after it has been received into the ballot-box, for any want of conformity with the provisions above specified. But in the counting of the ballots, all names printed in type less than half the size of those generally used on the ticket will be passed over and not counted, each ballot being otherwise good.

The efforts to prevent cruelty to animals are well organized in the State. A society was formed eleven years ago. At that time there were three societies for the prevention of cruelty to animals on the continent; now there are ninety-three in the United States and three in the British Provinces. The Massachusetts Society had then a single prosecuting agent in Boston and about twenty others throughout the State. It now employs three prosecuting agents constantly in and about Boston, and has 465 others representing its interests throughout the State. Its officers had then prosecuted a few violators of the law, and investigated something over 100 cases of cruelty. They have now prosecuted 2,073 persons, and investigated and, so far as possible, remedied 21,756 cases of cruelty. Drinking-fountains are placed in the streets; birds and deer on the Common; check-rein signs at the foot of the hills; thousands of the horses driven without check-reins or blinders; extra horses to aid in drawing the horse-cars; horse-car horses worked only six days in the week, where they used to be worked seven. The great dog-fighter of the State has been driven out, one of his principal survivors fined \$250, and others smaller amounts, and dog-fighting and cock-fighting have been substantially stopped in the State. Men are now employed to kill the old and disabled animals in a merciful manner, and prizes have been dis-

tributed by the Governor to pupils of the public schools who had written the best compositions on kindness to animals. There are now five papers published which are devoted to the protection of animals. The humane literature published by the Society is to be found in Oregon and California; France, Spain, Germany, and other European countries; also in Algiers, Calcutta, and Australia. The annual expenditure has been only one half of one per cent. of the amount annually expended by the organized charitable societies of the State; that is, 99½ per cent. is paid directly for the benefit of human beings, and about one half of one per cent. for the welfare of animals.

The Board of Railroad Commissioners, which has been in existence for ten years, is stated to be the only one of all that have been established in the various States that has proved in any great degree a success. The duties of the Board are, first, those of a supervisory character as respects the railroads themselves; second, those which are both supervisory and judicial as between the railroads and the public; and, third, judicial duties as between the different railroad corporations. The supervisory duties include the care of accounts and responsibility for returns, the examination of tracks, bridges, and appliances, and the investigation of accidents; the supervising and judicial duties, so far as the public is concerned, are most extensive in everything relative to the formation, construction, and operation of the roads, and the whole general State legislation of the last ten years is built up on the Board as a foundation. The jurisdiction of the Board between the railroad corporations is both large and final. It is compelled to receive all complaints against the railroads, to investigate them, and find out a remedy. It has no power except to recommend and report, but in practical experience the recommendations of the Board have seldom been disregarded, and they have covered almost all sorts of questions. It is thought that this principle may be developed so as to work a solution of the railroad problem. At present it is an experiment. No small portion of credit is ascribed to the Board for the marked improvement in the tone and character of the railroad management. The material interest which the Board supervises is the largest in the State. It is the interest upon which the whole industrial system hinges, and the tolls and charges the corporations annually levy amount to more than the entire taxation, State, county, and municipal. During the ten years this Board has been in existence its entire cost has in round numbers been \$162,000. During the same time the gross receipts of the corporations have amounted to \$322,000,000. The cost of supervision, therefore, has been almost exactly the twentieth part of one per cent. of the gross receipts. The Commissioners have brought about a uniform system of keeping the accounts of the railroads, which

was done for the first time during the year 1878, with the certainty that the books, papers, and accounts of the railroad corporations are to be as open to public scrutiny as those of the State or any city government.

The business of the Hoosac Tunnel may be considered as having really commenced in 1876. The amount of it and the rapidity of its increase are shown by the following statement:

PARTICULARS.	1876.	1877.	1878.
Total receipts	\$89,625	\$158,141	\$209,410
Total expenses	48,779	60,285	80,679
Net receipts.....	\$37,845	\$97,905	\$128,781
Number of passengers....	68,715	120,579	154,460
Number of tons of freight.	242,266	325,997	539,488

In 1878 the State received \$41,000 as a small contribution toward the interest account.

During the last year the "constant-circuit rail system" was tested on the Fitchburg road. It differs from any other system by using the rails instead of wire for conducting the electric current. The signals have been found to be reliable and to do the work expected of them. The track is divided into sections of a mile, more or less, according to curves and other contingencies. At one end of the section is placed a battery consisting of one cell, and one pole attached to either rail, and at the other end is placed the magnet, one electrode attached to each rail. Thus a constant metallic circuit is established through the rails and magnet. At either end of the section is the standard bearing the signal, which is connected with the circuit. When a train or pair of wheels enters upon the circuit, the wheels and axle instantly short-circuit the current, the magnet is demagnetized, and on leaving its armature the signal is mechanically thrown to danger, where it remains as long as the wheels are on the section. When they pass off, the signal goes back to safety. Thus it will be seen that the rear of a train on a road equipped with the signals will always be safely guarded. It has been found by actual experience that the rails are vastly superior as conductors to any surrounding media, and that the electricity will adhere to them in preference to passing off to earth, even during heavy rain and snow.

The course of instruction in Harvard College has been so far modified in favor of female education, that women who can stand the examinations can be entitled to a course of study under the faculty for the full term of four years, apart from the times and classes of the men.

An important change was made in the public schools of Boston. This consisted in an entire separation of the primary and grammar schools, and the former are made entirely independent of the principals of the districts as regards instruction. The superintendent stated that "he had repeatedly found scholars in the upper classes of the primary schools who belonged in the lower classes, and the reason for

this was that the upper classes of the primary schools were depleted to fill grammar classes, and to fill the classes thus depleted it was necessary to fill them up with pupils from the lower classes. It was in this system of promotion that he found the greatest cause of discontent between the primary and grammar schools. From every point of view this system was an abuse of every sound educational principle, and so precipitated the instruction of the younger pupils as to drag them through it half breathless and wholly unprepared to meet it."

For the details of the State institutions see the volume of last year.

The National Labor party held a State Convention in Boston on September 12th. Horace Binney Sargent was chosen President. The nominations for State officers resulted as follows: For Governor, Benjamin F. Butler; for Lieutenant-Governor, Albert C. Woodworth; for Secretary of State, Michael T. Donohoe; for Treasurer, George Dutton; for Auditor, Davis J. King; for Attorney-General, Horace B. Sargent. The following resolutions were adopted:

Whereas, This government was intended to be a government of the people by the people and for the people, of whom 95 per cent. are interested in enterprise and labor; and,

Whereas, It has, by insidious, usurping, and corruptly selfish legislation, been perverted to be a government of the money power by the money power and for the money power, which has so manipulated the currency and repudiated printed contracts as to enrich 5 per cent. of the people by the robbery of 95 per cent.:

Resolved, That stability in prices can only be secured by maintaining a uniform relation between the volume and the uses of money, and this can be secured only by a full legal-tender paper money, issued by the Government; a volume that shall not decrease while the population is increasing, and thus acquire an increased purchasing power over labor.

Resolved, That legal-tender greenbacks should be substituted for the national-bank notes in circulation, as the issue of money is an essential function of national sovereignty and not a part of legitimate banking.

Resolved, That we favor the immediate use of the coin in the Treasury for the reduction of the bonded debt.

Resolved, That the soldier and sailor should receive a dollar as good as the bondholder; and if, in defiance of the contract, honesty, equity, and national honor require the payment of 100 cents in gold for 40 cents loaned, it is alike demanded by honesty, equity, and honor that the same measure be meted to those who shed their blood in the cause of their country's salvation and received a depreciated money.

Resolved, That the truth of the Greenback philosophy has been grandly vindicated by the adoption of two Greenback measures, viz.: The stoppage of contraction in 1878, thus arresting the further shrinkage of values, and raising of the greenback to par by receiving it at the Custom-House—measures which, if adopted in season, might have averted six years of unexampled distress, and the opposition to which by the money power is the greatest impediment to returning prosperity to-day.

Resolved, That a graduated and progressive tax on incomes exceeding \$1,000, from every source, with a total exemption of small homesteads, is right, and in accordance with the constitutional rule that taxes should be "equal and proportional"; that the ability to bear should govern, rather than a rule of uniform

percentages, which may leave a vast surplus over all taxes in the hands of one citizen, while another must go hungry to pay a poll-tax, after having paid enormous taxes and duties upon his consumption.

Resolved, That the coin resumption of the Republican party is a sham and a delusion, by making paper bank-notes redeemable in paper United States legal-tender notes, and those notes exchangeable for coin over only one counter in the United States in sums of not less than \$50.

Resolved, That the hours of labor shall be shortened, and the employment of young children in exhausting factory labor be prevented; that labor-saving machinery is a boon of God to the sons and daughters of toil, rather than an engine of torture to wring out larger profits for capital by bringing the laborer into heart-breaking competition with the muscles that never tire. The vast powers of nature are not harnessed by invention to secure even six per cent. dividends, but to relieve the human slaves; not hours of toil, but the product of the new partnership of man with natural forces, should be the rule of compensation, and demands a new system of dividing the profits of capital and labor.

Resolved, That free school-books are an important part of the system of free schools. To spend millions in buildings and teachers, and refuse a few dollars in school-books except by enforcing a humiliating confession of poverty upon parent and child, is inconsistent and unwise.

Resolved, That the contract system of convict labor should be abolished, and that the employment of such labor shall be on the account of the Commonwealth alone, which shall be prohibited from selling the production at a price that shall underbid honest labor.

Resolved, That the National Greenback-Labor party will support no candidate for the State Legislature unless he be pledged to vote for a compulsory secret ballot.

Resolved, That we cordially endorse the amendment to the homestead act presented to Congress by Hon-drick B. Wright of Pennsylvania, and for his noble devotion to the cause of labor we extend to him the warm sympathies and hearty thanks of the Greenback-Labor party of Massachusetts.

Resolved, That the shameless legislation of the poll-tax bill, passed at the last session of the General Court, impels us to reaffirm our protest against the outrage on the right of the ballot which that legislation attempts to perpetuate; and we demand that this relic of a property qualification be wiped from the organic laws.

The Republican State Convention assembled at Worcester on September 16th. The nominations for State officers resulted as follows: For Governor, John D. Long; for Lieutenant-Governor, Byron Weston; for Secretary of State, Henry B. Peirce; for Treasurer and Receiver-General, Charles Endicott; for Auditor, Charles R. Ladd; for Attorney-General, George Marston. The following resolutions were adopted:

The Republican party of Massachusetts, at the close of the first quarter of a century of its history, pledging itself anew to the continued performance of the duties in which it originated, and to the defense and maintenance of those principles upon which it was founded, and which are still essential to the peace, security, and prosperity of the republic, makes these declarations:

1. We affirm the doctrine heretofore proclaimed and maintained, that the United States of America is a nation; that, while local self-government in all matters which belong to the States must be fully recognized, the national Government should secure to the citizens from whom it claims allegiance complete liberty and exact equality in the exercise of their civil and political rights; that, whether assailed by political persecution at home or menaced by tyranny abroad,

all citizens of the United States, without distinction of origin, race, creed, or color, must be protected by the national Government in all the rights granted to them by the Constitution and laws; that our institutions rest upon the equality of all men before the law, and that a free ballot, uninfluenced by fraud, intimidation, or force, and honestly counted, is the right of every qualified voter; and we demand that elections shall be free from all interferences by unlawful bodies of armed men, and shall also be free from the interference of the national or State military forces except when employed as a part of a *posse comitatus*. We denounce that fierce partisan intolerance which prevents a free ballot, denies freedom of political opinion and action, and takes from any of the people the right to choose their homes and to control and enjoy the fruits of their labor.

2. We deprecate the course of the members of the Democratic party who have undertaken to revive sectional animosity for the purpose of securing political ascendancy in the Southern States, and who have revived the memories of sectional strife by the defiant declaration of the purpose to repeal laws made necessary by war and enacted to secure the results of the war; and we condemn their attempts to secure by legislation what was not accomplished by arms, namely, the establishment under the name of State sovereignty of those pernicious doctrines which destroy national supremacy, and which in the past have led to secession and civil war.

3. The pledges of the Republican party to maintain the national honor and to preserve the national credit have been redeemed in the face of bitter opposition, by the prompt resumption of specie payments and a reduction both of the principal and the interest of the public debt; and we congratulate our fellow citizens upon the restoration of confidence and revival of business which followed the honest, prudent, and wise management of public affairs under a Republican administration. We are opposed to repudiation in all its forms, either by a "scaling" of debts or a debasement of the legal-tender circulation. We insist that the paper and the coin circulation of the country shall at all times be maintained at par with the gold standard of the commercial world.

4. We applaud the firm and patriotic course of President Hayes in maintaining the constitutional prerogatives of the Executive, and in courageously and successfully resisting all efforts of a Democratic Congress to cripple the functions of the Government. We recognize the earnestness and sincerity with which he has labored to restore harmony and "good feeling" to all sections of the country, to secure purity, efficiency, and frugality in every branch of the public service, and to divorce the civil service from the management of partisan politics, to sustain the financial credit of the Government, and to insist upon free and honest elections; and we will support the President in the responsibility of making nominations to office without dictation from other departments of the Government, and in persistently carrying out the principles relating to the civil service declared in the Cincinnati platform and letter of acceptance.

5. While the Republican party is practically united in demanding a suppression of intemperance by the wisest legislation, it recognizes an honest difference of opinion among its members as to which form of law will best accomplish that end; and the question is therefore referred to the people, to be settled by them in the Legislature organized for the protection of the weak, the relief of the oppressed, and the elevation of all. The Republican party pledges itself anew to these primary objects, and, believing an effectual means of promoting them is the diffusion of full and accurate information of the condition of the people, it heartily sustains our State Bureau of Statistics of Labor, and endorses the establishment of a national bureau of like character. We again demand that our system of taxation shall be so modified that each person shall contribute only in proportion to what he is worth, to the end that there shall be substantial relief from the existing burdens of taxation. In our opinion,

the time has come when the executive officers of the Commonwealth and members of the Legislature should be elected for a longer time than one year, and the adoption of the constitutional amendment providing for biennial elections and biennial sessions of the Legislature would tend to give steadiness to legislation and to the administration of the laws, and add to the importance of the offices and the care of voters in filling them, and would relieve the people from that frequency of elections which is believed to be no longer conducive to the welfare of the Commonwealth.

6. The administration of the State government during the past year has been able, just, and efficient. The pledges made by the Republican party have been redeemed, in that reforms have been initiated and accomplished, the State tax and expenses have been reduced, commissions have been consolidated, and offices now become unnecessary have been abolished. We appreciate the eminent services of the present Chief Magistrate of the Commonwealth, whose prudence, sound judgment, and integrity of character have largely contributed to this result. In the continuation of its work the Republican party will insist, in the words of Governor Talbot, "on a judicious but not penurious economy in State administration, on a discontinuance of the State tax at the earliest date, on increasing no further the State indebtedness, and a speedy liquidation of existing liabilities, and on shutting the door of the Treasury against all attempts to secure public means for private ends."

7. We commend to the voters of the Commonwealth the nominees of this Convention, whose high character, commanding ability, and large experience in public service are guarantees of official rectitude and a wise administration of our State affairs.

The Independent Democrats assembled at Worcester on September 17th in State Convention. Albert Palmer was chosen President. The nominations for State officers resulted as follows: For Governor, Benjamin F. Butler; for Lieutenant-Governor, Albert O. Woodworth; for Secretary of State, Michael T. Donohoe; for Treasurer and Receiver-General, David W. Skillings; for Auditor, Davis J. King; for Attorney-General, William D. Northend. The following resolutions were adopted:

Resolved, That we recognize the fact that differences of opinion exist regarding certain principles of national administration; that while we may differ as to the true policy to be pursued concerning the adjustment of vexed national questions, we are all united upon the common platform of our great leader—equal rights, equal duties, equal powers, equal privileges, and equal protection by the laws to every man everywhere under the Government, State and national.

Resolved, That we are unalterably opposed to the rule of the ring which has fastened itself upon the Commonwealth; that we put the seal of condemnation upon that growing spirit of "Bourbonism" and "caste," which conceals itself under the pretentious title of the "better element," which sets itself upon a high pedestal of preëminent right to dictate and to control the people because of its alleged superior public virtue; that we denounce these pretenders, and in behalf of the great common people of the State arraign the hypocrisy, the arrogance, the much-vaunted self-purity, and the spirit of unwarrantable abuse which characterize the modern political Pharisees who have so long misrepresented the people of the Commonwealth.

Resolved, That we demand that reform in the State government shall be thorough, impartial, and complete; that all useless offices shall be abolished, incompetent officials discharged, economy take the place of extravagance, thrift supplant waste, watchfulness succeed negligence, energy uproot sloth, system re-

place confusion, and honesty prevail everywhere, to the end that our noble old Commonwealth may resume her place among the best governed communities of the civilized world.

Resolved, That the rights of labor, the creator of all values, should be respected, and to this end we commend the establishment of a National Bureau of Labor Statistics; advocate the rigid enforcement of all laws in the State and nation fixing the hours of labor, as well as those for the protection of life and limb, and for the regulation of child-labor in mills and factories; and oppose any system of convict labor in our prisons by which its products are brought into unjust competition with honest labor outside of prison walls.

Resolved, That we denounce the intimidation of voters, whether by force of arms, the more civilized method of social ostracism, of proscription of employees, or of the withdrawal of business patronage, as opposed to the spirit of our free institutions and deserving the condemnation of every true American citizen.

Resolved, That the evils which now afflict the State, morally and financially, may be and should be cured by unflinching firmness and impartiality on the part of the Governor in the administration of the laws.

Resolved, That the creation of commissions to perform the duties of the Executive is dangerous and extravagant, and should be wholly discontinued.

Resolved, That we are opposed to the system of double taxation which now prevails in this State.

Resolved, That all promises made to our patriotic soldiers and sailors should be kept.

Resolved, That a pure suffrage is the life-blood of the republic. No ballot can be pure which is not free. The way to the ballot-box should be direct, easy, unimpeded, and secure from espionage. We demand, therefore, that the laws be so framed as to insure the one without impairing the others, and that the right to vote should not depend upon its purchase by the payment of a tax.

Resolved, That the office of Governor is one requiring the highest executive ability; that General Benjamin F. Butler will fill it with complete success; and we believe the multitude will applaud in General Butler the citizen soldier who abandoned a lucrative position in private life at the first call of his country, who has served her with untiring industry and unflinching zeal, and who has suffered no associations of party or predilections or political pride to blind him to the true character of the struggle in which the nation was engaged. That we recommend the other nominations of the Convention as the representatives of State reform worthy to be associated with our illustrious leader.

The State Convention of the Prohibitionists assembled in Boston on September 24th. A. A. Miner was chosen President. The nominations for State officers resulted as follows: For Governor, Rev. Dr. D. C. Eddy; for Lieutenant-Governor, Timothy K. Earle; for Secretary of State, Charles Almy; for Treasurer and Receiver-General, David N. Skillings; for Auditor, Jonathan H. Orne; for Attorney-General, Samuel M. Fairfield. The following resolutions were adopted:

Resolved, That we are assembled not to support or to defeat a man, but to maintain principles that lie at the foundation of the welfare of our Commonwealth.

Resolved, That we renew our protest against a liquor policy which makes the State an ally of the traffic, which wastes its wealth, enslaves its labor, begets its paupers and its criminals, and destroys its homes.

Resolved, That for the State to merely tolerate such a traffic is dangerous, while to license it is infamous.

Resolved, That to overthrow the dram-shop, which in all its branches and disguises stands as the enemy of the schoolhouse and the Church, is the highest in-

terest of civilization and the most immediate duty imposed upon the people of Massachusetts.

Resolved, That this can be done by nothing else except by votes.

Resolved, That reason and experience teach that nothing is to be hoped in this warfare from men or from parties who compete for the liquor vote, or who fear a manly utterance upon this great issue; and that the traffic can neither be suppressed nor effectually checked except by a party avowing that object and by men elected to do it.

Resolved, That to this end we again present to our fellow citizens the names of men whose election would proclaim that public condemnation of the liquor-traffic which must necessarily precede its destruction. The task before us is hard, the way may lengthen out, but there is no other path for us to follow. We commend our cause and our course to the considerate judgment of good citizens, and invoke the prayers of Christian men and women.

Resolved, That, as intemperance is an enemy to the home and deals its heaviest blows at the heart of woman, we therefore invite her earnest prayers and efficient work in behalf of our cause; and we look forward with eager hope for the day when sex shall be no longer a condition of suffrage, and woman may be permitted to use the ballot, as she surely will, for her own protection, and for the protection of society, against the cruel wrongs of the liquor-traffic.

The Democratic State Convention was held in Boston on October 7th. The nominations for State officers resulted as follows: For Governor, John Quincy Adams; for Lieutenant-Governor, William R. Plunkett; for Secretary of State, Michael T. Donohoe; for Treasurer and Receiver-General, David N. Skillings; for Auditor, Charles R. Field; for Attorney-General, Richard Olney. The following resolutions were adopted:

The Democrats of Massachusetts, in Convention assembled, reaffirm the national Democratic platform of 1876 as an authoritative exposition of the principles of our party, and congratulate our political brethren of the whole country that these principles were endorsed in the national canvass by the suffrages of a decided majority of the American people and of the Electoral College.

We denounce upon the guilty Republican party stern retribution for the great public crime by which the people were defrauded of their right to be governed by a ruler of their choice, and by which the elective principle was wounded in its most vital part.

Our thanks are due to the Democrats in Congress for their efforts to enforce economy in public expenses, to abolish useless offices, and to correct manifold abuses in public affairs, not least of which are the exclusion of intelligent citizens from the jury-box and the levying and maintaining of an army of official hirelings around the polls for partisan purposes.

We believe in self-government by the people, and desire that the polls shall be free from the interference of Federal bayonets directed by the intrigues of a Federal partisan Executive.

We believe the purity of the ballot-box can be better preserved through State authority than by Federal interference.

We protest against laws which authorize the arrest of citizens at the polls without warrant or hearing, and the suppression of their votes by imprisoning their persons until after the election, as upturning the foundation of free government; and we call on Congress to aid the people and rescue the freedom of the elections, undeterred by Republican clamors or Presidential vetoes.

The Democratic party has always denied that any constitutional power existed in the Federal Government to make anything a legal tender in the payment of debts except gold and silver.

We affirm the obligation of public and private contracts, and demand that public money ought to be kept in the Treasury of the United States, free from control or use by speculators or favorite bankers.

We rejoice with the country at the large and renewed prosperity that attends agricultural and manufacturing pursuits, but we deprecate that Republican policy which, having destroyed our ship-building, placed the carrying trade of the products of our soil in the control of foreign flags, and almost banished our flag from the seas, and imperiled the pursuit of the fisheries among our hardy population, has rewarded Great Britain with spoils she never could have conquered, and abandoned the trident of the seas to her hands.

The election, held on November 4th, resulted in the choice of Long, Republican, as Governor, by 122,751 votes, against 9,989 for Adams, Democrat, 109,149 for Butler, Democrat and National, and 1,645 for Eddy, Prohibitionist. The other Republican candidates were elected by votes ranging from 126,252 for Lieutenant-Governor to 129,024 for Secretary of State.

The state of parties in the Legislature was as follows:

PARTIES.	Senate.	House.
Republicans.....	32	185
Democrats.....	8	52

Total numbers for the year.....	11,636	12,475	1,524,006	176,296

Whole number of members and probationers, 1,700,302; number of baptisms during the year, 56,565 of children, 63,218 of adults; number of churches, 19,955, of the probable value of \$62,520,417; number of parsonages, 5,689, of the probable value of \$8,445,092; number of Sunday-schools, 20,359, with 217,967 officers and teachers, and 1,549,315 scholars. Amount of benevolent contributions: for Conference claimants, \$127,002; for the Missionary Society, \$481,199; for the Woman's Foreign Missionary Society, \$62,243; for church extension, \$62,094; for the Tract Society, \$12,070; for the Sunday-School Union,

\$12,575; for the Freedmen's Aid Society, \$34,546; for education, \$27,074; for the American Bible Society, \$25,950. A comparison of the statistics of the Church by decades since 1777 shows that a large increase of members has taken place in every decade, except in the one from 1837 to 1847, when the Methodist Episcopal Church, South, with 462,428 members, was separated, causing an apparent decrease of 22,103 members. The increase of members from 1867 to 1877 was 525,527. The list of educational institutions of the Church includes 34 universities and colleges, 11 theological institutions, and 90 seminaries, academies, and colleges for young women, which return altogether about 21,000 students, and property (including buildings, grounds, furniture, apparatus, libraries, and endowment funds) valued at about \$11,500,000.

The twelfth anniversary of the *Freedmen's Aid Society* was held at Jersey City, N. J., November 11th. The receipts of the Society for the year ending July 1, 1879, had been \$75,260, and the Society closed the year with a debt of \$9,326. The whole amount which had been collected and disbursed for the purposes of the Society in twelve years was given at \$788,892. Sixty thousand pupils had been taught during the last twelve years, and pupils trained in the schools of the Society had taught at least three hundred thousand of the colored race scattered over the South. A quarter of a million dollars had been invested in permanent school property. Of the special work of the year, the report stated that seventy teachers had been sustained, and a missionary movement had been started in behalf of women in New Orleans. Additions and improvements had been made to the property of Wiley University, Claflin University, Cookman Institute at Jacksonville, Fla., and Meharry Medical College. The last institution had graduated three classes of young men, several of whom had distinguished themselves in work among yellow-fever patients.

The annual meeting of the *General Missionary Committee* of the Methodist Episcopal Church was held in the city of New York in November. The report of the treasurer showed that the receipts of the Missionary Society for the year ending October 31st had been \$551,859, or \$494 more than those for the preceding year. Appropriations were made for the ensuing year to the amount of \$678,869.

The tenth annual meeting of the Executive Committee of the *Woman's Foreign Missionary Society* was held in Chicago, Ill., May 23d. The receipts of the Society for the year had been \$67,028. The whole number of auxiliary local societies was 2,172, and the number of contributing members 55,560. "The Heathen Woman's Friend," the periodical organ of the Society, had a subscription list of 13,461 names. Eleven missionaries had been sent out during the year.

The committee which had been appointed

by the General Conference in 1876 to further the design of calling an *Ecumenical Conference of Methodism*, reported on November 6th that it had laid the matter of the proposed Conference before the representative bodies of the Methodist Protestant Church, the Methodist Episcopal Church, South, the American Wesleyan Church, and the Evangelical Association, in the United States; also before the representative bodies of the Methodist Church and the Methodist Episcopal Church in Canada, and the Wesleyan Methodist Connection in Great Britain. Every one of these representative bodies had taken action in favor of the Conference, and had appointed a committee, or provided for its appointment, to act in the business and for the furtherance of the objects of the Conference. The committee now judged it to be necessary that a joint meeting of the committees of these bodies, or of their chairmen, or of some persons authorized to act in their stead, should be held to prepare the call for an Ecumenical Conference, determine the time and place of its meeting, suggest a basis of representation, and provide for essential preliminary details, and proposed that it be held in Cincinnati, Ohio, May 6, 1880. It also expressed the desire that the meeting might be attended, not only by the representatives of the several Methodist bodies which had taken action in favor of the Ecumenical Conference, but also, so far as practicable, by authorized representatives of all other Methodist organizations in every part of the world.

II. METHODIST EPISCOPAL CHURCH, SOUTH.—The following is a summary of the statistics of the Methodist Episcopal Church, South, as they were published in May, 1879: Number of traveling preachers, 3,457; of superannuated preachers, 306; of local preachers, 5,762; of white members, 783,211; of colored members, 1,428; of Indian members, 4,698; whole number of ministers and members, 798,862, showing an increase in one year of 24,120. Number of Sunday-schools, 7,262, with 54,667 teachers and 391,293 scholars. Amount of collections for Conference claimants, \$60,425; for foreign and domestic missions, \$110,551.

The present Book Committee of this Church after their entrance into office in 1878 found that the indebtedness of the Publishing House amounted to \$300,000, of which \$100,000 were in ten per cent. bonds, and the rest consisted of the vender's lien on the real estate and the floating debt. The committee undertook to pay the interest on the bonds as it accrued, and obtained from the other creditors an indulgence until July 1, 1879. On May 1, 1879, the House under this arrangement had paid \$10,500 of interest on its first-mortgage bonds, and had a few thousand dollars in hand, an increased stock in trade, and a constantly growing business; and the committee was convinced of the ability of the House to pay four per cent. on its entire indebtedness, meet all current expenses, and provide an annual fund

for the gradual reduction of the debt. The committee had obtained subscriptions of \$221,000 on its four per cent. bonds, conditioned on the whole amount of \$300,000 being subscribed.

The *Missionary Board* of the Church, at its annual meeting in May, made appropriations of \$79,946 to the support of the foreign and domestic missions, of which \$15,606 were allotted to China, \$27,715 to Mexico and the Mexican Border mission, \$5,800 to Brazil, and \$9,000 to the Indian Mission Conference.

The first annual convention of the *Woman's Missionary Society* was held in Louisville, Ky., in May. The sum of \$3,719 had been collected for the use of the Society.

III. AMERICAN WESLEYAN CONNECTION.—The numerical strength of this denomination was estimated at the General Conference of 1879 to be about 18,000 members. A publishing house has recently been completed in Syracuse, N. Y., at a cost of \$40,000, free of debt. The Connection has a seminary at Waseo, Minn., with about \$20,000 of real estate, \$10,000 in scholarships, and \$4,000 in endowments. The "American Wesleyan," a general weekly religious newspaper, the "Children's Banner," semi-monthly, and the "Bible Standard," a monthly periodical, are published by the denomination at Syracuse. The agent of the Publishing House reported to the General Conference that the establishment had property to the amount of \$37,392, and \$3,000 to the credit of the missionary fund.

The tenth quadrennial *General Conference* of the Connection met at Pittsford, Mich., October 15th. The Rev. N. Warduer was chosen President. The Conference was occupied during the principal part of its session with the revision of the Discipline, and made a large number of changes, one effect of which will be to reduce considerably the size of the book. The denomination being strongly opposed to secret societies on grounds of principle, a resolution was passed that no minister should be introduced to the Conference who was an adhering member of such a society, particularly of the Masonic order. The Rev. T. H. Lynch presented his credentials as a fraternal delegate from the General Conference of the Methodist Episcopal Church; but, as it was understood that he was a member of the Masonic order, his introduction was deferred. A report was made of the vote which had been taken on an amendment to the rule in the Discipline in reference to secret societies, showing that it had been carried; and the amendment was made a law excluding the members of all secret societies from membership in the churches. An invitation was presented from the General Conference of the Methodist Episcopal Church to the Wesleyan denomination to take part in the proposed Ecumenical Council of Methodism. The vote on accepting the invitation resulted in a tie, and the question was decided in the affirmative by the casting vote of the President.

Two delegates were appointed to attend the Council. A minister was elected to serve as a general connectional evangelist for the ensuing four years, and have charge of the evangelistic and missionary work of the Connection. A committee was appointed to take measures for the incorporation of an Educational Association at Syracuse, for the purpose of receiving pledges, funds, and bequests for educational purposes in the Wesleyan denomination. A report accepting the principles of the so-called national reform movement was adopted, in pursuance of which the following article was added to the Discipline of the Church:

It shall be the duty of the ministers and members of the Wesleyan Methodist Connection to use their influence, in every feasible manner, in favor of a more complete recognition of the authority of Almighty God in the secular and civil relations both of society and of government. We therefore require—

1. That all our ministers and members shall favor the use of the Bible in our public schools.
2. That chaplaincies in the army and navy, and in the State and national Congress, be not abolished.
3. That the Sabbath day be observed by cessation of all labor and the permission of no excursions on the Lord's day.
4. That the name of Almighty God as the basis of authority in civil government shall be considered as one of the fundamental principles of the Wesleyan Methodist Connection of America, and that it is the bounden duty of our ministers and members to use all feasible means to secure such amendments in the national and State Constitutions, as that the name of God shall be inserted in these instruments, which lie at the foundation of civil government; as it is Christ by whom kings reign and princes decree justice.

A committee was appointed to take measures for the establishment and endowment of an institution of learning in the West. Three new Conferences, the North Carolina, Western Iowa, and Nebraska, were admitted; and authority was given for the organization of a Conference in Dakota.

IV. THE METHODIST CHURCH.—A new denomination has been formed within the year, which has taken the name of the Methodist Church. The churches and members of the body are as yet mostly at or near Philadelphia. It is not a secession or an offshoot from any Methodist body, although many of its members have been members of the Methodist Episcopal Church, and it holds to many of the usages of that Church. The doctrines of the new body are the same as those of the Methodist Episcopal Church, but its system is different in many respects. It recognizes but one order of ministers, that of elders, to which women are eligible as well as men. It has no presiding elders and no bishops, but the President of the Annual Conference exercises the powers of a superintendent. It is like the majority of the other Methodist bodies in having class-meetings, attendance on which is made a test of membership, quarterly meetings, local preachers, and exhorters. It encourages plainness, opposes display and raising money by church fairs, and attaches importance to the promotion of holiness. It had at the end of

1879 eleven preaching appointments and nine churches.

V. METHODIST CHURCH OF CANADA.—The following is a summary of the statistical reports of this Church, as returned to the several Annual Conferences of 1879:

CONFERENCES.	Ministers.	Circuits and missions.	Members.
Toronto.....	859	255	86,081
London.....	381	224	38,767
Montreal.....	225	165	22,978
Nova Scotia.....	119	61	9,540
New Brunswick.....	198	76	8,187
Newfoundland.....	50	41	6,165
Total.....	1,172	842	128,018

The figures show an increase of 408 over the number returned in 1878. Of the whole number of members, 8,317 are classed as "on trial." Number of Sunday-schools, 1,762, with 16,145 teachers and 123,609 scholars.

The *Missionary Society* reported that its receipts for the year had been \$135,234, and its expenditures \$140,089. It supports missions among the Indians and among the half-breeds in British America, among the French in Quebec and the Germans of the Dominion, domestic missions in the several Conferences, and a mission in Japan, with a total of 414 stations, 400 missionaries, 75 native assistants and teachers, and 36,538 members. Of the members, 3,149 are Indians, 1,412 in the missions to settlers and half-breeds, 488 in the French-Canadian, 199 in the German, and 200 in the Japanese mission.

VI. WESLEYAN METHODIST CONNECTION.—The following is a summary of the statistics of the Wesleyan Methodist Connection, embracing the British and affiliated Conferences, as given in the minutes of the Conference for 1879:

COUNTRIES.	Members.	On trial.	Ministers.	On trial.	Super-num's.
Great Britain.....	877,612	28,984	1,467	175	245
Ireland.....	25,487	719	187	28	89
Foreign missions.....	85,601	10,813	824	185	12
French Conference..	1,853	75	25	1	2
Total.....	490,558	85,091	2,008	384	298

The itinerant preaching work of the Conference is divided into thirty-four districts, with 712 circuits in Great Britain, 135 circuits in Ireland, and 426 circuits abroad.

The annual meeting of the *Wesleyan Missionary Society* was held in London, May 5th. Mr. Richard Haworth of Manchester presided. The receipts of the Society, as shown by the report, had been £124,359, of which £8,974 were contributed from the mission districts; the expenditures had been £157,217. The Ladies' Central Committee for female education in foreign countries and other benevolent purposes had furthermore expended £2,261, besides furnishing school materials, clothing, etc., to many parts of the mission-field. The

numerical returns show an increase of 1,531 church members, with 10,315 on trial, and 1,693 children in the schools above the number reported in 1878. A mission had been begun within the year among the Telugus at Madras, India. The mission on the Gambia had suffered from the effects of the climate upon the missionaries. The operations of a mission at Lagos, Africa, had been suspended in consequence of the death of the missionary.

The *Wesleyan Conference* met in its 136th session at Birmingham, July 22d. The Rev. Benjamin Gregory was chosen President. The previous Conference had appointed a committee to consider financial interests, with the view to providing means for paying the debts of the several funds and preventing the accumulation of debts in the future. This committee had matured a scheme for raising a fund to be called the Wesleyan Methodist Thanksgiving Fund, to be divided among the educational, missionary, and benevolent enterprises, and had organized a series of circuit and district meetings to be held in behalf of the same. The committee reported to the Conference what they had done, and that £175,000 had been subscribed to the fund, of which £50,000 had been paid in, enabling the treasurers to discharge half the connectional debt and pay £12,000 into the hands of the treasurers of the new theological institution. There still remained twelve districts in which central, and 504 circuits in which circuit meetings had not been held. The Conference approved the scheme which the committee had prepared, and advised that the remaining circuit and district meetings be held, and as many local meetings besides as should be practicable. The income of the Home Mission for the year had been £27,011, of which amount the home mission stations had contributed £2,090. The Conference approved of regulations for the employment of district missionaries under the direction of the chairmen of the districts, and for a more general and systematic employment of lay agents. The Sustainment Fund was established in 1874, for the purpose of securing a clear income of £150 per annum to each married minister, and of £80 to each unmarried minister. During the five years of its existence a total increase of £24,477, or an average of £4,895 a year, had taken place in the allowances to ministers. The fund was now established in thirty out of the thirty-three districts, and the number of circuits paying less than the minimum had been reduced from 372 to 217. The Committee for the Extension of Methodism in Great Britain had appropriated during the year £9,538 to 133 chapels. The Committee of the Theological Institute reported that the expenditures of the institution had exceeded its income by upward of £3,000. Measures were adopted to retrench expenses and secure more frequent and larger contributions from the churches for the support of the institution. The new college to be established will be called

"the Birmingham Branch of the Theological Institution." The promises made to the Auxiliary Fund amounted to £100,000, of which £76,000 were paid in. The Schools Fund reported a deficiency averaging £5,000 a year. The foreign missions were prospering in every aspect but the financial one, in which a course of retrenchments had had to be decided upon. The Conference decided to give notice to the Australasian Conference of the termination of the arrangement under which the Australasian and South Sea missions are supplemented by grants from the Wesleyan Missionary Society. In the Pastoral Conference, a proposition made by the General Conference of the Methodist Episcopal Church in the United States for holding an Ecumenical Conference of Methodist Churches was approved. The report on this subject stated, however, that the scheme is on such a large scale, that considerable time must yet elapse before it can be fully carried into effect. A legal question arose during the discussion of the report on the revision of the Liturgy and Book of Offices, on which the discussion was suspended until the next Conference, in order that the opinion of counsel might be taken on the point in doubt. The numerical report showed that the whole number of members within the immediate jurisdiction of the Conference was 377,612, showing a decrease of 3,264 from the previous year, notwithstanding that 61,137 persons had been received on trial.

VII. OTHER METHODIST CHURCHES.—The following is a summary of the statistics of the *Primitive Methodist Church* of Great Britain, as they were reported to the Conference in June, 1879: Number of members, 182,877; of ministers, 1,135; of local preachers, 15,634; of class-leaders, 10,454; of connectional chapels, 4,257; of other places of worship, 2,053; of Sunday-schools, 4,022, with 58,275 teachers, 365,004 scholars, and 4,579 catechumens; present value of chapels, £2,238,787; number of chapels built in 1878, 118, at a cost of £129,389.

The sixtieth annual *Primitive Methodist Conference* met at Leeds, June 11th. The Rev. Thomas Newell was chosen President. Attention was given to the case of the mission in the island of Fernando Po, Africa, which had been broken up through the expulsion of one missionary by the Spanish Government and the death of another. The Conference made a representation of the matter to the British Government, and in answer to its petition a letter was received from the Foreign Office stating that her Majesty's Minister at Madrid would be instructed to ask permission for Mr. Holland, the expelled missionary, to return to the island. The Conference resolved to continue the mission and give it additional force.

The statistical reports of the *United Methodist Free Churches*, presented to the Annual Assembly in July, 1879, showed that the whole number of members was 72,309, of whom 65,-

187 were in Great Britain, and 7,172 at the foreign stations. The number in Great Britain had diminished 477, and the number at the foreign stations had increased 72, during the year. The number of persons on trial was 6,350, and the number of ministers 429.

The following is a summary of the statistics of the *Methodist New Connection*, as they were presented to the Conference in June, 1879: Number of chapels, 478; of societies, 451; of circuit preachers, 180; of local preachers, 1,138; of members, 26,688; of probationers, 4,131; of Sunday-schools, 449, with 10,961 teachers and 77,250 scholars.

The statistics of the *Bible Christians*, as reported to the Conference in July, 1879, were: Number of itinerant preachers, 276; of local preachers, 1,874; of chapels, 938; of preaching-places, 182; of full members, 30,165; on trial, 904; of teachers, 9,758; of scholars, 50,690. The returns showed a decrease of 523 full members, 440 on trial, and 215 teachers, which had taken place chiefly in the Cornwall districts.

The *Wesleyan Reform Union* reported in August, 1879, as follows: Number of chapels and preaching-places, 227; of preachers, 532, with 79 preachers on trial, 17 "ministers," and 434 leaders; of members, 7,240; of Sunday-schools, 180, with 2,896 teachers and 18,521 scholars; of day-schools, 2, with 486 scholars. The statistical returns showed that a decrease of 50 members had occurred during the year.

The annual meeting of the *Free Gospel or Independent Methodist Churches* was held at Ashton-under-Lyne, June 23d and 24th. Mr. W. Oxley of Manchester was elected President. An increase of 385 members had taken place.

MEXICO (ESTADOS UNIDOS DE MÉXICO). The territorial division, area, and population* of the republic are stated in detail in the "Annual Cyclopædia" for 1874 and 1875; and reference may be made to the article GUATEMALA, in the present volume, for measures recently proposed or adopted for the settlement of the boundary question with that country.

The President of the Republic is General Porfirio Díaz, inaugurated in November, 1876; and the Cabinet Ministers are as follows, in order of precedence: Foreign Affairs, M. Ruelas; Interior (*Gobernacion*), Felipe Berriozabal; Finance, Manuel Toro; Justice, Ignacio Mariscal; Public Works (*vacant*); War, General Cárlos Pacheco.

The President of the Supreme Court of Justice (and hence, by the terms of the Constitution, Vice-President of the Republic) is Licentiate Luis M. Vallarta; and the magistrates are Pedro Ogazon, J. de Mata Vásquez, M. Alas, A. Martínez de Castro, M. Blanco, Ignacio Altamirano, E. Montes, S. Guzman, J. M. Bautista, M. Saldaña, E. Avila; with J. E. Muñoz, Attorney-General, and D. de la Garza y Garza, Procurator-General.

* In a report published during the year by the Minister of the Interior, the population is given at 9,636,777.

The Governors of the several States are: Aguas Calientes, F. G. Hornedo; Campeachy, M. Castillo, Chiapas, S. Escóbar; Chihuahua, A. Frias; Coahuila, H. Charles; Colima, D. Lope; Durango, J. M. Flores; Guanajuato, F. Mena; Guerrero, M. Cuéllar; Hidalgo, N. Cravioto; Jalisco, F. Riestra; Mexico, — Mirafuentes; Michoacan, R. Fernandez; Morelos, C. Pacheco; Nuevo Leon, —; Oajaca, F. Meigneiro; Puebla, I. J. C. Bonilla; Querétaro, A. Gayon; San Luis Potosí, C. Diaz Gutierrez; Sinaloa, L. Cañedo; Sonora, L. Torres; Tabasco, S. Sarlat; Tamaulipas, J. Gójon; Tlaxcala, — Lira y Ortega; Vera Cruz, — Mier y Teran; Yucatan, M. R. Ancona; Zacatecas, T. G. de la Cadena; Lower California (Territory), A. L. Tapia.

The Mexican Minister to the United States is M. de Zamacona; and the Mexican Consul-General in New York is Dr. Juan N. Navarro. The United States Minister to Mexico is P. H. Morgan, appointed toward the end of the year, *vice* John W. Foster, transferred to St. Petersburg; and the United States Consul-General at the capital is Mr. Lennox.

The army is composed approximately as follows: 20 battalions of foot, 14,640 men and 765 officers; 10 corps of horse, 4,840 men and 290 officers; 4 brigades (of 4 batteries each) of artillery, 1,315 men and 148 officers; coast-guards, 71 men and 22 officers; and Invalids, 265 men and 19 officers; total, 22,375.* In March, 1879, were published the names of 17 generals of division, with a salary of \$6,000 each, and 45 generals of brigade, with \$4,800 each; and the opposition press made political capital of "such an excessive peace establishment of the army," and of the fact that many of these generals held civil offices. A report was current that the army would be reduced so as to save \$4,000,000 annually. The ordinary expenditures of the Department of War and Marine have for several years past averaged over \$8,000,000, with a navy comprising only four gunboats.

The Archbishop of Mexico is the Rt. Reverend P. A. de Labastida (1863). The predominant faith is the Roman Catholic; but there is no recognized state religion in Mexico. The Protestant denominations (Episcopalian and Methodist) introduced into the republic some years ago have made numerous proselytes, and their services are attended by considerable congregations. It is reported that the Roman Catholic authorities have sanctioned the printing and distribution of the New Testament in Spanish; and a Mexican correspondent regards it as probable that the Bible without notes will before long find its way into the hands of the people. The translation already admitted contains many chapters free of comment, and presents no essential departure from the version commonly used by Protestants. The Mexican

* The Government organ states that, according to the laws of the country, foreigners serving the Government in any official capacity become thereby Mexican citizens.

Protestant Episcopal Church, while it is the offspring and *protégé* of the Church of the same name in the United States, is neither dependent upon nor an exact counterpart of the latter, nor is the Bishop controlled by the House of Bishops, although created by that body. It is called the "Church of Jesus," and dates from 1865. The first steps toward its establishment were taken by a former Roman Catholic priest named Aguilar, and one Hernandez, a layman of the same faith, who adopted as their model the Protestant Episcopal Church of the United States; Benito Juarez, then President of the Republic, a man of liberal views and undoubted religious tolerance, affording them such aid and protection as he had in his power. In 1868 the Rev. Dr. Henry Chauncey Riley, a native of Chili, but of American parentage and educated and ordained in New York, and some time rector of a New York Protestant Episcopal church exclusively devoted to service in the Spanish language, was invited to Mexico "to help the new congregation in their labors," he having become known to them as the author of a volume on the right and duty of all men to search the Scriptures, which, with pamphlets discussing the same and other kindred subjects, were widely circulated in the republic. In 1871 Manuel Aguas, a Dominican friar, who had been appointed to resist from the pulpit the diffusion of the reformed creed, became himself a proselyte and joined Dr. Riley. They obtained from the Government a grant of two recently sequestrated churches in the capital, and extended their missionary labors to various other cities. Aguas was elected to the bishopric in the same year, but died in 1872, before he was consecrated. In 1874 the House of Bishops of the Protestant Episcopal Church of the United States was petitioned to superintend the affairs of the Mexican Church, and seven members of that body were appointed to the charge, from which they were relieved by the election, as second Bishop of the Diocese of the Valley of Mexico, of Dr. Riley, who was consecrated at Pittsburgh, Pennsylvania, in June, 1879. This Church had, according to a report published in the same year, 57 congregations in its charge, with 3,500 communicants and a large number of unconfirmed attendants; 9 day-schools, where over 200 children were taught; and an extensive publication depot.

A Catholic convent and monastery, surreptitiously established at Querétaro, was closed by the State authorities.

In the budget for the fiscal year 1879-'80, the national revenue was estimated at \$16,550,000, exclusive of the yield of the Post-Office Department, the proceeds of sales of national property, and of the branch of public instruction (old fund), etc., which in 1878-'79 aggregated rather more than \$500,000. In the foregoing estimate is included an item of \$500,000 representing the proceeds of a tax on cotton and woolen stuffs of home manufacture. The estimated expenditures for the same year

were set down at \$18,895,198. In general about two thirds of the entire revenue are derived from the custom-house; and the outlook for the yield of that branch in 1879-'80 has been spoken of as rather encouraging, with the mention that the receipts at the port of Vera Cruz, the most important port of the republic, amounted in July, the season at which imports are usually at their lowest ebb, to \$700,000, against \$230,000 for the corresponding month in 1878. A large proportion of that increase might perhaps be accounted for by the stringent measures adopted by the authorities for the prevention of smuggling. Señor Romero, while Minister of Finance, incurred the enmity of the contrabandists by his indefatigable labors to suppress the chronic system of corruption so long deplored in the Mexican customs service; and it was calculated that his internal revenue law would add \$5,000,000 annually to the national revenue. Smuggling and contraband trade occupied the attention of the Congress in the spring session, when an act was passed making evasions of the revenue laws a penal offense. This measure was adopted experimentally, and the question was to be reconsidered at the autumn session, opening in September.

The Supreme Court has decided the existence of custom-houses in the interior to be unconstitutional. With their removal, if it be effected, many grave hindrances to commerce and travel will cease.

As stated in the "Annual Cyclopædia" for 1878, the national debt of Mexico has been estimated by a British writer at \$395,500,000; but these figures include the claims referring to the Maximilian empire, which have never been recognized by the republican Government. We transcribe the subjoined table and remarks from Minister Foster's dispatch to the Department of State at Washington under date of October 8, 1878:

TOTAL RECOGNIZED NATIONAL DEBT OF MEXICO.

British:	
London loan of 1821.....	\$51,203,250
Convention claims, etc.....	4,871,614
Interest due in 1862.....	13,281,798
<hr/>	
Total British debt.....	\$69,356,662
Total Spanish debt.....	9,460,936
Total French debt.....	2,859,917
Sixteen years' interest to date, at \$2,760,022 per annum.....	44,160,852
<hr/>	
Total European debt.....	\$125,792,919
Carbajal-Corlles bonds, 1865.....	2,746,630
American claims awards, balance.....	3,875,128
<hr/>	
Total foreign debt.....	\$131,914,665

In 1851, by a decree of Congress, the payment of interest on all the foreign debt was suspended for two years, although very little interest has been paid since 1854; and since 1861 the Mexican Government has paid no interest on any of its foreign debt up to the present, the transactions under the Maximilian empire not being taken into account. It is a question of interest to the holders of Mexican bonds, a part of whom are American citizens, to form some estimate of the ability and probability of the payment by Mexico of its foreign debt, or at least of the resump-

tion of its interest. A debt of \$180,000,000 is not an excessive burden for nine millions of people, even if it had to be paid in full; but there is reason to believe that it might be reduced from 25 to 50 per cent. by agreement with the creditors, if any reliable assurance could be given of certain and regular payments of interest in the future. But it may safely be predicted that if the country is to be afflicted by a revolution every few years, as has been its past history, there is little or no probability that either principal or interest will be paid. With peace and good government, prosperity and competence would gradually return, and the marvelous natural resources of the country could be developed in such measure as to afford the Government the means, in time, of reestablishing its foreign credit. But justice to Mexico requires that it should be stated that at present the Government is in no condition to resume the full weight of its foreign obligations. The incessant march of revolutions, as Señor Payno expresses it, has consumed the wealth which the colonial order accumulated, paralyzed business and public enterprises, disorganized the economic regulations of the Government, corrupted the revenue collection, and left the country impoverished to an extent hardly equaled in any other Spanish-American country. The national Treasury is just now in no condition to assume obligations additional to the ordinary and necessary current expenses of Government. It has recently been compelled to suspend temporarily the payment of the salaries of the executive and judicial officials on account of the absence of receipts to pay them. It is now owing the United States over \$3,000,000* under the late claims convention, and to the Mexican Railway Company, say, \$2,000,000; and as it appears to act upon the principle of paying the debts last contracted in preference to the old ones, these two are likely to receive attention first; and in the present and prospective state of public affairs and of the Treasury, it is a serious question whether it will not be thought necessary to continue its default on the payment of the last-named of these two. The prospect, therefore, for an early resumption of the payment of interest on the foreign debt does not appear to be very flattering. I have not taken into consideration in this dispatch the large interior debt of the country, which, in addition to the funded part, is made up of a large amount of unadjusted claims, which increase enormously with each succeeding revolution.

According to official statistics, the total value of the exports varies from \$25,000,000 to \$35,000,000 annually, and that of the imports from \$27,000,000 to \$30,000,000; but habitual smuggling renders it impossible to regard these figures as even an approximation to truth. In the opinion of the best informed concerning the foreign trade of Mexico, it would not be rash to estimate the value of the imports at double the amount officially reported; and the same may be said of the value of the bullion sent out of the country. Less than one third of the trade is with the United States, and rather more than one third with Great Britain. Of the exports of 1876, declared at \$25,435,000, silver amounted to about \$15,000,000, copper ore, cochineal, indigo, etc., being among the other leading articles.

The annexed table exhibits the total values of the exports (excluding shipments *in transitu*) to the United Kingdom, and of the imports of British and Irish commodities, during the decade from 1869 to 1878:

YEARS.	Exports.	Imports.
1869.....	\$1,752,850	\$3,158,620
1870.....	1,499,065	4,554,410
1871.....	1,986,670	5,245,065
1872.....	2,217,620	4,215,980
1873.....	2,497,660	5,970,620
1874.....	2,733,250	6,628,065
1875.....	3,609,525	4,424,555
1876.....	8,810,660	2,511,120
1877.....	3,994,285	4,977,560
1878.....	2,535,410	3,566,650

The chief articles exported to the United Kingdom in 1878 were mahogany of the value of \$1,203,865, and unrefined sugar, \$160,450; while the chief imports therefrom were cotton fabrics of the value of \$2,011,785; linens, \$357,660; and iron, wrought and unwrought, \$428,315. The declared value of the silver ore exported to Great Britain in 1869 was \$400; 1870, \$16,750; 1871, \$148,870; 1872, \$128,215; 1873, \$80,095; 1874, \$11,270; 1875, \$39,595; 1876, \$72,760; 1877, \$72,690; 1878, \$25,330.

The exports from the port of Vera Cruz to the United States in the years ending September 30, 1876, 1877, and 1878, were as follows:

The exports from Merida, Yucatan (through the small port of Progreso), for the year ending September 30, 1878, were of the value of \$1,194,277; of which \$907,239 were to the United States, including *heneguen* or Sisal hemp of the value of \$843,123; deerskins, \$11,195; hammocks, \$14,053; hides, \$15,478, etc. The value of the imports was considerably under \$1,000,000.

The aggregate value of the exports from Mazatlan, on the Gulf of California, in the year ending June 30, 1878, was \$3,689,702. The trade of Mazatlan with the United States for that year is shown in the annexed table:

ARTICLES.	Imports.	Exports.
Corn (540 tons).....	\$74,937 00
Dry goods.....	718,000 00
Flour (500 tons).....	120,000 00

Tobacco.....	161 00
Total.....	\$1,182,937 00	\$2,898,493 00

This table is particularly interesting as showing the exchange of articles of American and of Mexican production which constitute the rapidly increasing trade between this port and the United States, mainly through San Francisco. Until very lately Yucatan was the Mexican State which carried on the most extensive trade with this country; but the foregoing table shows that Sinaloa has now taken the lead.

The year 1879 was marked by the continuance of the depression which began to be felt in commercial circles in the second half of 1878, and which was mainly attributable to the decline in silver in the London market. No better explanation of this phenomenon can be given than the following, extracted from the United States Minister's report to the State Department at Washington, under date of October 29, 1878:

The basis of all monetary transactions in this country is silver. Although the double standard of gold and silver is provided by law, and the Government is constantly minting coins of both metals, for a number of years past the gold coinage has commanded a considerable premium over silver, and during the past two or three years gold has not only ceased to be a

circulating medium, but has almost entirely left the country. It is now very difficult to purchase on short notice in this city only a few thousand dollars in gold, and it commands a premium of from 14 to 18 per cent., according to the fluctuations of the London silver market. Silver is by law an unlimited legal tender for all debts, public and private. As indicating the injurious effects on business affairs of the depreciation in the value of silver, I inclose herewith a communication which the Minister of Finance has addressed to Congress, conveying to that body the telegraphic quotations of the London market, which have resulted in placing foreign exchange at a premium of 22 per cent.* For some weeks previous to the recent decline, exchange on New York ruled at 18 per cent. The main object of the Minister's communication was to bring again to the attention of Congress the recommendation of the Executive, submitted to the last Congress, for a repeal of the export duty of 5 per cent. which is now charged by the Government on all silver, coined and uncoined, shipped abroad, which repeal would reduce the price of exchange to that extent. Mr. Romero, the Minister of Finance, has for many years been a strong advocate of this wise measure of the repeal of all duties on the exportation of silver and other natural products; but thus far the necessities of the national and State Treasuries have defeated it. Besides the export duty collected by the Federal Government, there are heavy export taxes by the States, coinage duties and other charges, which add to the depressing influence of the London market. A careful estimate of the taxes, duties, and various charges on silver shows that it costs from 13½ to 15½ per cent. to place the silver produced in the Mexican mines in London or in New York. When it is remembered that silver constitutes four fifths of the entire value of export products of Mexico, the effect of these heavy internal taxes and the decline in value in London upon the general trade and business of this country can be easily estimated. In the present depressed condition of all industries in Mexico, the late decline in silver must be regarded for this country as a great national calamity.

The American industrial deputation, referred to heretofore,† was cordially received at the Mexican capital, and the exhibition of United States manufactures inaugurated by President Diaz, who said:

It is a source of great satisfaction to me to accept the invitation you have tendered me to inaugurate your diminutive exhibit of North American merchandise brought to this country for the purpose of augmenting the commercial relations existing between our two republics. This testimony, rendered to peace, to labor, and to progress, highly honors the Association of Manufacturers of the United States. Far from your having to thank the Government of Mexico for having cooperated in the better discharge of your commission, by offering you those attentions and facilities which were due to you, the Mexican nation is thankful to you for having come on this noble mission with the olive of peace in one hand and the torch of civilization in the other. Ever since she conquered her independence, Mexico has maintained her ports open to the trade of the world. Following up the grand maxim of the great father of your independence, that honesty is the best policy, I must state to you that, although the fiscal legislation of this country still labors in part from the colonial system, and can not be considered as the most liberal in the world, it has continued and is continuing a progressive march of liberality, with the view of stimulating the development of commerce, the fountain of the wealth and prosperity of nations. Our Constitution ordains that there should be no prohibitions. The list of articles free of all duties, which has

been increasing day by day, comprises various objects, such as machinery of all classes, in regard to which the remarkable mechanical improvements in the United States are such that very few countries can compete with them. Although Mexico and the United States are neighboring nations, they are, unfortunately, very little known to each other, and in each of them errors and prejudices prevail in regard to the other. The step that has been taken by the Manufacturers' Association of the Northwest of your country, by sending you on this mission, will doubtless produce, among other good results, that of dispelling some of the many errors that are entertained in the United States respecting Mexico. As regards Mexico, you will always find her disposed to cooperate in this work of civilization. The generosity and nobleness of sentiments of her citizens are proverbial, and she instinctively accepts all that is good. As regards her Government, it suffices to say that all the administrations which have succeeded each other since the triumph of the republic over the foreign intervention of 1867, whatever may have been the points of internal policy on which they differed, have strenuously endeavored to establish permanent commercial relations with the United States. Nine lines of foreign steamers trade to the Mexican ports; of these, four come from European ports and are supported by subsidies from their respective governments or by the profits of their traffic; the other five come from ports of the United States, and are supported by a liberal subsidy paid to them by the Mexican Treasury, which, notwithstanding its impoverishment, devotes a not very inconsiderable part of its revenue to sustain these lines of steamers. Without this aid you would not have been able to come from your country to ours by the route and with the rapidity you have done. Thanks to these lines of steamers, the trade between the two countries has somewhat increased, as instead of \$2,000,000, to which the commerce between the United States and Mexico reached before the war of the intervention, it now exceeds \$10,000,000.

At the end of the year there were 372 miles of railroad in operation in the republic, the principal line being that from Vera Cruz to the capital.* Tidings were received in September, 1879, of the commencement of work on a new line of railroad to cross the Isthmus of Tehuantepec, from the mouth of the Coatzacoalcos River, 110 miles S. E. from Vera Cruz, to the Upper Lagoon, an inland lake on the Pacific coast. The length of the main line will be nearly 150 miles. The grant for the line was made by the Government of Mexico in June last to Edward Learned, of Pittsfield, Massachusetts. It required that the company undertaking the work should deposit with the Government, within six months of the date of the law, \$100,000 as a forfeit, and that it should have imported upon the isthmus, prior to the expiration of that period, railroad material of the value of \$200,000, or have made harbor improvements of the same value, in which case the deposit might be substituted by mortgage bonds of the company. The road is to have a single or double track four and a half feet in width, and is required to be completed within three years from the date of the approval of the contract; the company being required to construct yearly, to the satisfaction of the Government, a section thirty-nine miles in length. The right of way is 229-64 feet along the entire route, and the Government gives the com-

* Exchange on London and on New York was more than once quoted at 23 per cent, premium in the course of 1879.

† See "Annual Cyclopaedia" for 1878.

* For details concerning this line see "Annual Cyclopaedia" for 1873.

pany such a strip of unoccupied public lands as may be required for the line, and in addition one half of the unoccupied public lands that may be found within one league from each side of the railroad. Lands are also granted for the sites of wharves, docks, and other improvements required in the harbor of Coatzacoalcos and the Upper Lagoon, at which point the company is bound to construct and maintain two lighthouses of the first class, which shall, however, be the exclusive property of the Government. The privilege of erecting a line of telegraph is also accorded by the grant. To aid in the construction of these improvements, the Government, in addition to other stipulations, binds itself to give to the company a subsidy of \$12,070.50 for each mile of railroad built, and agrees not to grant a subsidy to any other enterprise of a similar character on the same line for a period of twenty years, although the right is reserved to authorize the construction of a canal. The subsidy is to be paid on each section of five kilometres upon its completion and its approval by the Department of Public Works, 10 per cent. interest to be allowed in cases of any delay in such payments. The grant is limited to ninety-nine years, and at the expiration of that time the railroad and telegraph, with stations, depots, and other works, and the proper complement of rolling-stock, are to be turned over to the Government in good order, upon the basis of a careful appraisal and inventory of the property. The enterprise under the terms of the grant is to remain exclusively Mexican, and the company, though formed abroad, is to be regarded as if created in the Mexican Republic and organized in accordance with Mexican laws; and those engaged in the enterprise in no case will be entitled to plead the rights accorded to aliens, and will have no power to enforce their rights otherwise than before Mexican tribunals. Such of the work as can be conveniently done in this country will be executed here, in order to avoid the expense of more costly labor in Mexico. It is stated that the cost of the entire work will not exceed \$5,500,000, which estimate is believed to be considerably in excess of the actual amount necessary to open the road, well supplied with the requisite appliances for the performance of its business. The climate is represented as salubrious, the thermometer ranging throughout the year between 60° and 80°; the country is productive, has easy grades, and presents no unusual or serious obstacles. The route, it would appear, will materially shorten all lines of communication and facilitate the transmission of traffic between the principal ports of the Atlantic and Pacific Oceans.

A contract was signed on December 2, 1879, between the Governor of the State of Yucatan and Messrs. R. G. and O. G. Canton of Merida, for the construction of a railway from that city to Peto, passing through Ticul and Tekax.

President Diaz, in his message to Congress

at its spring session, which opened on April 1st, alluded to the signing of a contract by the Minister of Public Works for the laying of a submarine and overland telegraph from a Gulf port of the United States, along the Mexican coast, touching at the various intermediate Mexican ports, and crossing the Isthmus of Tehuantepec to the Pacific coast.*

Referring to the United States, General Diaz complained that the instructions to General Ord, to pursue raiders across the border, were still in force, in violation of the treaty of 1848; and expressed the hope that the United States, "in obedience to the dictates of justice and in the interest of commerce," would revoke said instructions, which were at variance with the spirit of international law.

A few symptoms of and one or two overt attempts at revolution occurred in the course of the year. The leader of one of the latter was General Negrete, commander-in-chief of the Mexican army. General Diaz, on learning of the movement, set out at the head of 3,000 men in pursuit of Negrete; and in this, as in all other instances of the kind, Diaz manifested his capacity to quell disturbances as fast as they arise.

The all-important question at issue in political circles was that of the fast-approaching election for President of the Republic. The principal candidates were Sr. Vallarta, President of the Supreme Court of Justice, whose term of office expires two years later than that of Diaz; Senator Bonitez; General Treviño; Gonzales, Minister of War immediately preceding Pacheco, and the Government candidate; Sr. Riva Palacio; Sr. T. G. de la Cadena; and lastly, though unavowedly, General Diaz himself.

Mexico has entered into the Postal Union.

MICHIGAN. The Legislature met in regular biennial session January 1st, and continued, in session until May 31st. The number of public acts passed was 268; of local acts, 408; of joint resolutions, 34; of concurrent resolutions, 19.

The laws regulating the liquor-traffic were revised. The new legislation leaves every dealer to assess himself, instead of, as before, imposing that duty upon the regular assessing officers of cities, townships, and villages.

An act to establish a State Reform School for Girls appropriates \$30,000 for grounds and buildings, and to pay the current expenses. It is to be governed by a board of control consisting of four women and two men. Girls between seven and twenty years of age can be committed to it till the age of twenty-one, who have been convicted of disorderly conduct, or of any offense not punishable with imprisonment for life, and apprenticed to suitable persons on giving evidence of reformation.

An act was also passed to establish a separate school for the blind, appropriating \$35,000 for the year 1879, and \$10,000 for the year

* For other telegraph statistics, see "Annual Cyclopædia" for 1876.

1880. The blind wards of the State are now cared for in connection with the deaf and dumb, and the early separation of the two classes is considered better for both.

Three joint resolutions propose amendments to the Constitution. The first so amends section 12 of Article XIII. as to permit the diversion of fines imposed for breaches of the penal laws from the city, township, or district library fund to the general school fund, as the local school authorities may determine. The second empowers the Legislature to authorize the city of Detroit "to aid in the construction and maintenance of a tunnel or bridge across the Detroit River at or near said city, to an amount not to exceed one per centum of the assessed value of the taxable property in said city." The third increases the annual salary of the Governor from \$1,000 to \$3,000. The second amendment is to be voted upon at the general election to be held November 2, 1880, and the first and third at the election to be held April 5, 1880.

Appropriations were made for the fiscal years 1879 and 1880, to be levied upon the taxpayers of those years, as follows:

For State officers and State government.....	\$1,161,000 00
" Capitol grounds and sewer.....	22,000 00
" University.....	95,000 00
" Normal School.....	43,373 00
" Agricultural College.....	83,080 24
" State Public School.....	57,000 00
" Institution for Deaf, Dumb, and Blind.....	56,800 00
" Michigan Asylum for Insane.....	26,588 00
" Eastern ".....	83,209 00
" State Reform School.....	56,937 51
" School for Blind (new).....	45,000 00
" Reform School for Girls (new).....	30,000 00
" State Prison.....	20,050 00
" State House of Correction.....	8,600 00
" Fish Commission.....	10,000 00
To reimburse military fund.....	25,000 00
Total appropriations.....	\$1,908,667 75

On February 10th Governor Crosswell communicated to the Legislature the resignation of United States Senator Isaac P. Christiancy, whose term of office would have expired March 4, 1881. The election of his successor took place on the 18th, and Zachariah Chandler was elected by 88 votes on joint ballot, against 22 for Orlando M. Barnes, Democrat, and 3 for Henry Chamberlain, National. In 1875 Mr. Chandler was the caucus Republican candidate for Senator, his third term of continuous service being about to expire, but was defeated by Judge Christiancy, who received the Democratic vote and six Republican votes, giving him one majority. Senator Chandler died suddenly at Chicago, November 1st, and Governor Crosswell appointed as his successor ex-Governor Henry P. Baldwin of Detroit.

The biennial election for a Justice of the Supreme Court and two Regents of the University (each for the term of eight years), held on the first Monday in April, assumed unusual importance because of a fusion or coalition of the Democratic and National parties, whose united vote for Governor the preceding November exceeded the Republican vote by 24,536. The two parties met in separate con-

ventions at Lansing on February 28th, and the Democratic Convention appointed a committee to confer with a committee from the National Convention. The joint committee united in reporting to each convention the following resolutions or platform, two members of the Democratic Committee dissenting on these grounds: "First, it is not germane to the issues involved in the pending election; second, it includes financial doctrines and policies which, in the opinion of a minority of your committee, are neither right nor wise":

1. We deprecate the tendency in our national affairs toward centralization of power and its corrupt use.

2. We believe in the strict equality of all the States and all classes of citizens before the law, and that our government should be in truth and in fact a government of the people by the people and for the people.

3. We are opposed to all further allowance of war claims.

4. We demand that all money, whether paper or metallic, shall be issued by the General Government only, and made a full legal tender for all debts, public and private, except as to such contracts heretofore made as were originally payable in coin.

5. We are opposed to all banks of issue, and demand that greenbacks shall be substituted in place of national-bank bills; and that the coinage of gold and silver shall be placed in all respects upon the same footing.

6. We believe that money should be issued in sufficient volume to meet the requisites of business; that the Government should regulate the value of money by preserving a uniform ratio between the supply and demand; and that this delicate and important power should never be delegated to banks, corporations, or individuals.

7. We are opposed to all monopolies, and demand that the public domain be reserved to the tillers of the soil, and not squandered upon railroad or other corporations.

8. We cordially invite all men, without regard to past political affiliations, who favor the principles herein set forth, and who love their country and its prospects more than party, to unite and work with us to save the people from the bankruptcy and ruin to which the policy of the dominant party is speedily and surely tending.

In the Democratic Convention, after a sharp discussion and a failure, by a vote of 140 yeas to 174 nays, to so amend the sixth resolution as to declare that "all paper money should be convertible into coin at the will of the holder," it was adopted by a vote of 188 to 120; and the other resolutions were also adopted with greater or less unanimity. The National-Greenback Convention adopted them unanimously. The committee reported as candidates: For Justice of the Supreme Court, John B. Shipman of Coldwater, Democratic and National; for Regents of the University, George P. Sanford of Lansing, National-Democrat, and Henry Whiting of St. Clair, National-Republican. Pending their nomination by the Democratic Convention, several delegations withdrew from the Convention. The affiliating Convention accepted the ticket by acclamation.

The Republican Convention was held at Lansing on March 6th. The following candidates were nominated: For Justice of the Supreme Court, James V. Campbell of Detroit; for

Regents of the University, James Shearer of Bay City, and Ebenezer O. Grosvenor of Jonesville. The following platform was unanimously adopted :

Resolved, That the Republican party having fulfilled their pledge to make the greenback dollar worth one hundred cents in gold or silver, and having given to the country a safe and flexible currency, well adapted to the industrial needs of the people, we therefore oppose any radical change in our present financial system, and congratulate the country on the successful resumption of specie payments, and the signs of returning prosperity in all branches of business.

Resolved, That we invite in this election the cooperation of all men of whatever former party affiliation who are in favor of financial honesty and a safe and sound basis for the business of the country.

The election resulted as follows :

FOR JUSTICE OF THE SUPREME COURT.

James V. Campbell, Republican..... 132,513
John B. Shipman, Fusion..... 126,270

FOR REGENTS OF THE UNIVERSITY.

Ebenezer O. Grosvenor, Republican..... 131,850
James Shearer, Republican..... 131,794
George P. Sanford, Fusion..... 126,614
Henry Whiting, Fusion..... 126,833

At the same election judges were chosen for two new judicial circuits. In the Twenty-second Circuit, composed of the counties of Monroe and Washtenaw, the vote was: For Gouverneur Morris, Democrat, 5,887; for Ira R. Grosvenor, Republican, 4,987; for Robert E. Frazer, National, 2,741. In the Twenty-fourth Circuit, composed of the counties of Huron, Sanilac, and Tuscola: For Cyrenius P. Black, Fusion, 4,633; for Levi L. Wixson, Republican, 4,987.

The annual report of the State Treasurer makes the following statement for the fiscal year ending September 30, 1879:

Cash balance, September 30, 1878.....	\$400,340 85
Cash receipts for the year.....	2,225,812 77
Total resources for the year.....	\$2,626,153 12
Cash payments for the year.....	2,019,385 59
Balance September 30, 1879.....	\$606,267 53

Of this balance \$604,020.18 belongs to the sinking fund.

The receipts for the year may be classified as follows: For delinquent taxes, sales of State-tax lands, redemptions, State-tax deeds, and tax histories and statements, \$392,276.79; from trust lands and funds, principal and interest, \$234,306.86; from deposit accounts, \$2,009.23; from counties—State taxes of 1878, State-tax land sales, general account, and taxes and redemptions—\$906,130.35; St. Mary's Canal tolls, \$21,000; earnings of convicts in State Prison, \$67,974.56; United States, 5 per cent. on sales of lands in State, \$606.91; escheats, \$640.74; specific taxes—from railroad companies (including street-railway and car companies), \$430,739.42; fire-insurance companies, \$50,415.83; life-insurance companies, \$19,770.65; mining companies, \$26,678.72; other corporations, \$4,135; interest on surplus funds, specific taxes, tax sales, and United States 4½ per cent. bonds,

\$44,845; sales of Michigan reports, statutes, and old furniture, \$9,562.88 fees from State officers and commissions of commissioners of deeds and notaries public, \$5,202.15; trespasses on State lands, \$7,920; rents, licenses, and refunded items, \$596.41. Total, \$2,225,812.77.

Classified expenditures: On bonded debt—principal \$46,000, interest \$59,140; to counties, \$524,357.04; on appropriations, \$589,817.52; specific tax-fund transfers, \$67,815.57; awards by Board of State Auditors, \$167,003.39; salaries of State and judicial officers, etc., \$177,222.10; swamp-land warrants, \$68,431.74; taxes, etc., refunded, \$55,698.38; St. Mary's Canal expenses, \$2,335.58; State House of Correction expenses, \$28,000; State Prison expenses, \$80,702.94; tax sales (advertising and county treasurers' fees), \$42,970.48; expenses of Legislature, \$98,537.47; miscellaneous items, \$9,537.16; special deposits, \$2,170.87. Total, \$2,019,885.59.

The bonded debt of the State on September 30, 1879, was:

Two-million loan, 6's, due January 1, 1883.....	\$591,000 00
War-bounty loan, 7's, due May 1, 1890.....	299,000 00
Non-interest-bearing bonds.....	28,149 77

Total bonded debt..... \$913,149 77

There was on hand applicable to the payment of this debt:

United States bonds (with Fund Commissioners).....	\$300,000 00
Canal fund (total amount of bonds).....	8,000 00
Sinking fund.....	604,000 00

Total..... \$912,000 00

The indebtedness of the State to the several trust funds is as follows:

Primary-school fund.....	\$2,441,734 79
Five per cent. primary-school fund.....	320,427 44
University fund.....	458,635 96
Agricultural College fund.....	139,875 42
Normal School fund.....	55,515 32
Railroad and other deposits.....	3,136 08
Total.....	\$3,419,145 01

On the Normal School fund the State pays 6 per cent. interest, and on the other educational funds 7 per cent.

The annual report of the Commissioner of the State Land-Office for the fiscal year ending September 30, 1879, shows that during the year 6,535-18 acres were forfeited to the State, and 69,044-58 acres sold. The number of acres held by the State September 30, 1879, was 2,801,659-41, of which 2,198,476-39 were swamp-land, 442,510-83 primary school land, and 155,525-68 Agricultural College land. About three fifths of this land, or 1,697,356-43 acres, are not in market—115,358-88 acres being licensed to homesteaders, 52,415-84 reserved on road and ditch contracts, 1,326,965-34 reserved to the Marquette, Sault Ste. Marie, and Mackinaw Railroad Company, 111,752-80 withdrawn for Menominee Iron Range Railroad, 69,745-97 to aid in the construction of a railroad from L'Anse to Houghton, and 20,406-39 acres to aid in the construction of the Days River and Bay de Nor State road. The number of acres

subject to sale September 30, 1879, was 1,104,302.98. The 69,044.58 acres disposed of during the year were sold for \$125,508.32, of which \$95,876.81 was paid and \$29,631.51 is due. The entire receipts of the office during the year were \$246,257.28. The collections for trespass, including those for conveyance, amounted to \$15,878.89. The expense incurred was \$12,803.58. Homestead licenses to the number of 397, covering 27,326.82 acres of land, were issued. The sales of land have been mostly in small parcels, and to parties who will in most instances become actual settlers. The sales of Agricultural College land show a great increase over former years. There is now a large inquiry for State lands from the older portions of the State, from the Middle States, and from Canada.

The two following tables from the annual report of the Auditor-General are of more than ordinary interest. By classes of institutions the receipts and expenditures of the year were:

RECEIPTS.

INSTITUTIONS.	From State Treasury.	From other sources.	Total.
Educational.....	\$228,302 82	\$98,129 52	\$326,432 34
Asylums.....	170,639 29	158,383 86	329,023 15
Reformatory.....	194,904 84	105,770 42	300,674 26
Miscellaneous....	49,500 00	48,139 42	97,639 42
Totals.....	\$648,845 95	\$400,872 72	\$1,049,718 67

DISBURSEMENTS.

INSTITUTIONS.	Current expenses.	Building and special.	Total.

Totals.....	\$778,436 85	\$195,016 92	\$973,453 77

The disbursements from the State Treasury since the organization of the State, for the support of educational and reformatory institutions and asylums, have been as follows:

INSTITUTIONS.	FROM INTEREST PAID BY STATE.		On account of appropriations.	Total to each Institution.	Total by classes.
	On trust funds.	From receipts from holders of part-paid certificates.			
<i>Educational:</i>					
Primary schools.....	\$2,743,519 11	\$1,710,811 17		\$4,454,330 28	
University.....	671,074 49	423,738 42	\$559,671 60	1,654,522 51	
Normal School.....	54,455 13	58,456 68	331,068 22	443,980 03	
Agricultural College.....	62,062 61	53,171 61	505,312 20	628,546 42	
State Public School.....			386,066 00	885,066 00	\$7,516,452 24
<i>Reformatory:</i>					
Reform School.....			724,531 18	724,531 18	
State House of Correction.....			366,964 60	366,964 60	
State Prison.....			926,680 68	926,680 68	2,018,176 46
<i>Asylums:</i>					
For Insane—Eastern.....			510,569 70	510,569 70	
“ “ Michigan.....			1,142,919 71	1,142,919 71	
“ Deaf, Dumb, and Blind, at Flint.....			1,017,752 82	1,017,752 82	2,671,241 73
Totals.....	\$3,531,111 89	\$2,251,222 83	\$6,428,536 21	\$12,205,870 43	\$12,205,870 43

The State taxes for the current year, levied under legislative acts of 1879 and former years, were apportioned to the counties by the Auditor-General on the 4th of October, and were for the following purposes:

University, buildings and aid.....	\$39,750 00
Normal School, buildings and support.....	31,178 00
Agricultural College, building, etc.....	21,040 12
State Public School, maintenance.....	43,950 00
State Reform School, building and expenses.....	48,815 00
Institution for Deaf, Dumb, and Blind.....	46,700 00
Michigan Asylum for the Insane.....	26,588 00
Eastern Michigan Asylum for Insane.....	33,209 00
New School for the Blind (building).....	35,000 00
Reform School for Girls (new).....	20,000 00
State House of Correction.....	8,600 00
State Prison, buildings, etc.....	20,080 00
New State Capitol grounds.....	4,500 00
Military purposes.....	71,691 09
Fish Commission.....	5,000 00
General purposes.....	643,000 00
Total State taxes.....	\$1,153,096 21
Add for indebtedness of counties.....	264,594 69
Aggregate apportionment.....	\$1,417,690 90

The State taxes are apportioned on an aggregate equalized valuation of real and personal estate (made in 1876) of \$630,000,000. The

per cent. is a fraction less than $1\frac{3}{5}$ mill, or a fraction over 18 cents on each \$100.

The fourth annual reports of the County Treasurers, made under the liquor-tax laws of 1875-'77, show 41 wholesale and 2,281 retail dealers in distilled liquors, and 122 manufacturers, 25 wholesale, and 1,734 retail dealers in malt liquors; total, 4,203. Taxes paid:

By manufacturers.....	\$7,922 26
“ wholesale dealers.....	18,758 51
“ retail dealers.....	861,510 83
Interest paid on overdue taxes.....	1,072 93
Total.....	\$874,459 13

Uncollected taxes, \$35,545.61. These taxes do not go into the State Treasury, but belong to the municipalities in which they are collected, and are generally used for the support of the poor.

The preliminary report of the Commissioner of Insurance for the year ending December 31, 1879, shows the financial condition at that date of each of the stock fire and marine insurance companies doing business in the State.

The entire capital stock is given as \$44,487,200; admitted assets, \$116,582,137; surplus as regards policy-holders, \$76,773,743; over capital and all other liabilities, \$32,383,333.44. In the above aggregates the capital stock of all foreign companies is rated (under the construction of a law of 1879) at \$200,000 each, and their financial condition estimated on the basis of their assets and liabilities in the United

States. In stating assets and liabilities of both home and foreign companies, all deposits of funds made in States for the exclusive benefit of policy-holders in such States have been deducted, and also the liabilities in such States — the deposits, the Commissioner says, being in most cases largely in excess of the liabilities. The risks, premiums, and losses of the year (in Michigan) were:

COMPANIES.	Risks written.	Premiums received.	Losses incurred.	Losses paid.
2 Michigan companies.....	\$12,262,679 83	\$115,449 50	\$49,621 29	\$49,026 53
102 companies of other States.....	120,321,680 27	1,350,918 18	762,012 87	780,191 42
2 Canadian companies, United States branches.....	4,484,765 00	52,588 80	40,249 51	83,467 99
16 foreign companies, United States branches.....	20,013,148 82	270,828 84	189,990 74	160,511 03
123 Aggregates.....	\$163,584,263 42	\$1,789,724 82	\$991,874 41	\$1,028,196 97

Michigan has but one life-insurance company, the receipts of which for 1879 were: from premiums, \$226,015.62; interest, \$73,669.02; deposits by policy-holders, \$318.14; total, \$300,002.78. Paid policy-holders (including surrender value, dividends, etc.), \$158,547.21; dividends to stockholders, \$25,000; expenses, \$66,646.74. Assets, December 31st, \$980,396.-

44; liabilities, \$664,966.94; surplus over liabilities, \$315,429.50.

The seventh annual report of the Commissioner of Railroads bears date October 10, 1879, but only covers the calendar year 1878. The following table comprises the leading items of interest, with the same items for the year 1877:

PARTICULARS.	1877.	1878.	Increase.	Decrease.
MILEAGE.				
Length of railroads and branches.....	Miles. 5,436-23	Miles. 5,619-98	Miles. 183-65

Total expenses, interest, and rental.....	\$38,753,761 68	\$37,991,776 77		\$661,984 91
Total net receipts.....	\$1,799,189 72	\$5,114,469 90	\$3,315,380 18	
BUSINESS.				
Total number of passengers carried.....	9,944,848	10,615,504	670,656	
" tons of freight carried.....	16,489,211	19,980,642	3,491,431	
" carried one mile.....	2,292,835,424	2,568,931,239*	566,275,505	
" number of miles run by trains.....	23,274,432	30,093,403	1,818,971	

* The average freight-rate per ton per mile was 1-053 cent, an increase of 0-21 of a mill over 1877, but bringing on the aggregate tonnage an increase of \$600,375.85 in the freight-earnings.

The railroad interests are represented by 41 distinct corporations, but the business control and management of these roads is vested in 27 companies. Two new corporations report—the Menominee River Railroad Company, mileage 27.4, and the Toledo and Ann Arbor Railroad Company, mileage 45.7. Total increase of mileage in the State during the year, 109.16.

The freight tonnage was classified as follows:

	Tons.
Grain	8,881,297
Flour	1,019,659
Provisions (beef, pork, etc.).....	623,663
Animals.....	950,001
Other agricultural products.....	467,501
Plaster.....	74,083
Salt.....	186,594
Manufactures.....	386,728
Lumber and forest products.....	2,711,983
Pig and bloom iron.....	108,811
Iron and steel rails.....	84,092
Other iron and castings.....	170,035
Ores.....	1,029,983
Stone and brick.....	167,134
Coal.....	517,144
Petroleum.....	572,692
Merchandise and other articles.....	2,658,080

But five roads paid dividends: the Chicago and Northwestern, 7 per cent. on preferred and 5 per cent. on common stock; Detroit, Lansing, and Northern, 2 per cent. on common; Lake Shore and Michigan Southern, 10 per cent. on preferred and 4 per cent. on common; Michigan Central, 4 per cent. on common; and Mineral Range, 10 per cent. on common. Of the 11,552 stockholders, 4,550 reside in Michigan, holding \$4,685,819 of the \$147,841,368.37 stock

issued. There were 76 employees and other persons (*no* passengers) killed during the year, and 159 persons (including 42 passengers) injured. In 1879, 58½ miles of road were constructed.

There are 14 State and 14 savings banks operating under State laws. The State Treasurer, in his annual report, gives the condition of each of the former on July 7, 1879, and of each of the latter on October 6, 1879. The following is a condensation of his tables:

RESOURCES AND LIABILITIES.	State banks.	Savings banks.
Loans and discounts.....	\$2,125,195 80	\$4,519,616 61
Bonds and mortgages.....	187,860 62	1,544,022 92
Cash and cash items.....	898,883 82	728,932 25
Real estate and fixtures.....	90,469 56	289,002 00
Due from banks and bankers.....	478,717 65	809,091 60
Expenses.....	9,421 86	65,816 43
Overdrafts.....	30,140 04	4,288 84
Total resources.....	\$3,265,188 75	\$7,958,675 55
Capital.....	\$574,400 00	\$1,100,000 00
Surplus.....	151,559 89	165,798 87
Due banks.....	16,114 81	228,848 04
Due depositors.....	2,107,140 71	6,860,580 08
Profit and loss.....	74,852 64	64,688 88
Re-discounts.....	41,071 20
Interest, premium, and exchange.....	38,820 23
Total liabilities.....	\$3,265,188 75	\$7,958,675 55

The following statistics of the lumber product of the State for 1879 are from the "Annual Review" prepared by Messrs. Lewis and Cowles for the "Saginawian" and East Saginaw "Courier":

LOCATION OF MILLS.	Number of mills.	Men employed.	Lumber cut in 1879.	Lath cut in 1879.	Lumber on hand December 31, 1879.	Logs in mill-booms.
Saginaw River Mills:						
Saginaw City.....	8	575	85,691,832	7,480,600	26,166,887	2,200,000
Florence.....	2	135	23,700,000	3,264,400	9,600,000	2,600,000
East Saginaw.....	12	567	112,265,482	9,541,000	52,491,000	8,800,000
Carrollton.....	4	200	26,800,000	700,000	6,500,000	750,000
Milwaukee.....	4	860	50,265,000	1,706,650	20,286,000	9,600,000
West Bay City.....	18	643	126,789,708	16,900,000	89,787,758	3,600,000
Essexville.....	8	110	31,675,000	7,285,000	500,000
Bay City.....	19	1,418	264,566,488	28,866,350	59,818,000	11,850,000
	64	4,003	717,461,455	67,969,000	221,864,595*	81,700,000
Lake Huron Shore.....	808,393,229	51,258,000	72,480,000	49,480,000
Railroad and interior mills.....	214,504,026	19,112,600
Inland mills, Saginaw County.....	5,615,500	1,023,000
The West Shore:						
Ludington.....	125,812,785
White Hall and Montague.....	83,150,000
Manistee.....	212,532,000
Muskegon.....	514,554,675
Grand Rapids.....	32,023,185
Other points.....	80,000,000
Total.....	2,289,066,855	189,857,600	294,204,595	81,180,000

The cut is greatly in excess of any previous year. The cut of shingles has also been unusually large, the reporting mills giving an aggregate of 685,619,150. The reviewers say that the pine forests of the State are rapidly being denuded, and that large areas of heretofore productive territory are already worked

out. During the latter half of the year there was great activity in the lumber market, "greater than during any season of the previous seven years, the closing prices being \$6.50, \$13, and \$28, with \$7, \$14, and \$30 for exceptionally fine lots."

The State Salt Inspector, in his annual report, gives the following comparative table, showing the total amount of salt inspected for the last three years in barrels:

* Of this amount, 85,647,887 feet is reported as already sold.

QUALITY.	1877.	1878.	1879.
Fine.....	1,580,841	1,770,861	1,997,850
Packers.....	20,889	88,867	18,641
Solar.....	22,949	88,541	18,020
Second quality.....	26,818	82,615	29,027
Total.....	1,660,997	1,885,884	2,058,040

In bushels the product of 1879 is 10,290,200, an increase of 1,010,771 bushels over that of 1878. The price averaged \$1.03 per barrel, against an average of 85 cents for each of the years 1877-'78. The shipments for the year were 1,777,020 barrels, the larger quantity going to Chicago, and Milwaukee coming second.

The iron statistics of 1879 are condensed from tables prepared for the Marquette "Mining Journal": Ore output of 51 mines, 1,414,182 tons, valued at \$6,423,539.50. Add 39,583 tons of pig metal, and there was an aggregate product of 1,453,765 tons, and an aggregate value of \$7,413,114.59. The product is larger than that of any previous year by 215,879 tons (the increase being over 1873), while the valuation is less than that of 1873 by \$3,982,772.41. Of the output of 1879, 1,145,093 tons came from the mines of Marquette County, and 269,089 from the Menominee range.

The following crop statistics for 1878-'79 were compiled for the Lansing "Republican," from the returns made to the Secretary of State in June, 1878, by the supervisors of 981 of the 1,041 townships of the State, the non-returning townships being estimated on the basis of their preceding year's reports:

STATISTICS OF 1878.

Wheat, acres harvested.....	1,576,560
" bushels raised.....	29,311,580
" average number of bushels per acre.....	18.77

Hogs, number of.....	498,109
Sheep, number of.....	1,772,812
Apples, number of acres in orchards.....	229,262.65
Peaches, number of acres in orchards.....	10,771.16

The yield of wheat per acre in 1879 was fully equal to that of 1878, while the quality was greatly superior. At Detroit, the principal market point of the State, wheat was 93½ cents a bushel on January 1, 1879, and on December 31, \$1.36½. The receipts of wheat at Detroit by rail for the year were 11,995,961 bushels, and of flour 309,215 barrels.

For the year ending June 30, 1879, the annual report of President Angell to the Regents of the University of Michigan shows: Students in department of literature, science, and the arts, 445; in department of medicine and surgery, 329; in department of law, 406; in school of pharmacy, 71; in Homœopathic Medical College, 63; in College of Dental Surgery, 62; total, 1,376, an increase of 143 over the preceding collegiate year. Number of women in attendance, 134, an increase of 41. Women students are registered in each and every department. Of the whole number of students, 49 per cent. were residents of the State. There were 433 degrees conferred on examination. The receipts of the year (including \$10,111.89 on hand July 1, 1878) were \$171,113; expenditures, \$142,402.51; balance in treasury June 30, 1879, \$28,710.49. Of the receipts, \$58,256.82 came from students, \$39,226.68 from interest on land-endowment fund, \$765.75 from interest on treasurer's deposit balances, \$1.86 from sale of a book, and \$62,750 from the State Treasury, on account of general or special appropriations.

The President of the Agricultural College furnishes the following summary of the work of the year: Number of students, 232; of graduates at commencement held November 18th (including the pioneer lady), 19; total number of graduates, 205. Income from Congressional land-grant, \$16,602; from all sources, \$45,082.61. Expenditures within the income. Inventory, \$267,617.70. Legislative appropriations for 1879, \$21,040.12; for 1880, \$12,040.12.

The State Normal School was opened in April, 1853, and has produced 800 students. The teaching force numbers 12. Attendance in 1878-'79, 543; graduates, 84. There are four courses: Common school, full English, ancient languages, and modern languages. "The sole aim of this school is to qualify teachers for their work, to increase their teaching power, and send them forth filled with the spirit of their profession." "Graduation from the higher courses entitles those holding diplomas to legal certificates of qualification to teach in any of the public schools of the State (not under special law) without a renewal."

The Superintendent of Public Instruction furnishes (in advance of his official report) the following primary-school statistics for the fiscal school year ending September 1, 1879:

GENERAL.

Whole number of school districts.....	6,243
Whole number of children between five and twenty years.....	456,983
Whole number of children attending public school.....	842,018
Percentage of attendance.....	70.2
Whole number of teachers employed.....	18,616
Total wages of teachers.....	\$1,580,945 24
Average wages of male teachers per month.....	\$83 69
Average wages of female teachers per month.....	\$23 43
Whole number of schoolhouses.....	6,325
Whole number of sittings in schoolhouses.....	441,291
Estimated value of school property.....	\$9,011,454 00
Whole number of volumes in libraries.....	254,133

FINANCIAL.

Amount of moneys brought over from preceding year.....	\$729,744 96
Received from two-mill tax.....	494,011 88
" from primary-school fund.....	229,354 98
" from non-resident scholars.....	84,457 94
" from district taxes.....	2,049,735 29
" from all other sources.....	806,406 81
Total resources for the year.....	\$3,843,790 56
Amount paid male teachers.....	\$712,594 79
" female teachers.....	1,160,865 26
" for building and repairs.....	864,135 83
" on bonded indebtedness.....	829,496 96
" for all other purposes.....	497,576 49
Carried over to succeeding school year.....	779,151 93
Total expenditures, including amount carried over.....	\$3,843,790 56
Bonded indebtedness of the districts.....	\$1,250,700 50
Total indebtedness of the districts.....	1,366,641 53
Amount due the districts.....	273,416 02

The following statistics given by Dr. George C. Palmer, Superintendent of the Michigan Asylum for the Insane, are for the fiscal year closing September 30, 1879 :

Number of patients under treatment October 1, 1873.....	497
" received during the year.....	220
Whole number treated during the year.....	717
Number discharged.....	136
Number remaining in asylum September 30, 1879.....	581

Those discharged are classified as follows: Recovered, 40; improved, 72; unimproved, 3; died, 21. The cost per week per capita was \$4.58. The institution will accommodate 550 patients. The number under treatment at the end of the fiscal year was 31 more than could be comfortably provided for.

Dr. Henry M. Hurd, Medical Superintendent of the Eastern Michigan Asylum, reports as follows: The asylum was authorized in 1873 by act of the Legislature, located at Pontiac in 1874, and the construction of its buildings commenced in 1875. It was completed for the admission of patients and formally opened August 1, 1878, since which time 549 patients have been admitted. The cost of the asylum buildings, grounds, furniture, fixtures, etc., has been \$467,000. The capacity of the institution is 400. Statistics for the fiscal year:

PARTICULARS.	Total.		
	Male.	Female.	Total.
Patients October 1, 1873.....	160	146	306
Patients admitted during year.....	103	81	184
Whole number of patients treated.....	263	227	490
Discharged, recovered.....	14	8	22
" improved.....	23	19	42
" unimproved.....	5	7	12
" died.....	16	8	24

Total discharged, 100; remaining under

treatment September 30, 1879, 390; average number under treatment, 348½; average cost per week per patient, \$4.05.

The number of insane in the two asylums at the close of the fiscal year was 971; number treated during the year, 1,207; estimated number of insane in the State, 1,700.

The statistics for the fiscal year of the Institution for the Deaf and the Blind at Flint are: Number of pupils, 251—137 males and 114 females, 204 deaf-mutes and 47 blind; graduated, 11, all deaf-mutes. Number of instructors in educational department, 13; in industrial department, 9. Printing is taught to the deaf-mute girls and boys, cabinet-making and shoe-making to the deaf-mute boys, basket- and broom-making to the blind boys, and sewing, knitting, and fancy work to both deaf-mute and blind girls, who are also instructed in domestic work. These industries are carried on similar to school-work, to teach the pupils trades and not as a financial investment, though they are nearly self-supporting (except the printing-office and the blind industries). Pupils in the industries alternate with school-work, three hours in each daily, in two divisions. The younger pupils have daily six hours of school-work. Value of buildings, \$375,000; volumes in library, 1,000. Disbursements of the year: Current expenses, \$44,046.68; special purposes, \$4,528.89. Earnings (including those from industries, farm, garden, etc.), \$3,130.70. The institution is an educational one, and in no sense an asylum.

The State Public School for Dependent Children, located at Coldwater, is designed "to provide for all the dependent children of the State, whether in or out of the county poor-houses, who are sound in body and mind, over three and under twelve years of age; to maintain and educate them while temporarily in the school, and as soon as satisfactory homes are found to place them there, under contracts securing good treatment as members of the family, and an elementary education, thus fitting them for good citizenship." The accommodations are for 300 children, with their homes in separate cottages, accommodating from 25 to 30 each, and "presided over by cultivated women, who care for the children as mothers of a smaller family." In the table below the second column gives the statistics for the fiscal year closing September 30, 1879, and the third from May 25, 1874, to that date:

PARTICULARS.	1878-79.	Total.
Number in school October 1, 1873.....	814	...
" received during year.....	106	776
" indentured during year.....	115	807
" returned to counties.....	18	51
" absconded.....	1	5
" died.....	1	83
" sent to Reform School.....	..	4

Average number during the year, 305½; cost of their maintenance, \$34,035.27, or \$111.34 per capita.

The twenty-third annual report of the State Reform School at Lansing shows: Number

committed since opening of school, September 2, 1856, 2,135; in school September 30, 1878, 327; received during the fiscal year, 139; released during the year, 159; remaining in school September 30, 1879, 307; net current expenses of the year, \$31,654.86. The commitments for the year were for the following offenses: Grand larceny, 1; burglary, 6; assault and battery, 11; larceny, 86; attempt to murder, 1; rape, 2; malicious trespass, 4; vagrancy and disorderly, 21; arson, 1; returned, 3. Their ages were from 10 to 16 years, averaging 13½ years. Their social status was as follows: 31 had lost a father, 38 a mother, and 9 both parents; 21 had relatives who had been arrested for crime, 37 had used intoxicating drinks, and 58 had been in jail one or more times; 14 did not know the alphabet, and 67 could not write. Of those leaving the school, 116 were discharged reformed, 7 to go out of the State to reside with parents, 19 given one year's leave of absence, 14 sent to live with farmers, 1 escaped, and 2 died.

The annual report of the State House of Correction at Ionia furnishes the following:

Number of prisoners October 1, 1878.....	233
" transferred from State Prison.....	19
" received on sentence during 1879.....	811
" returned by order of court.....	2
" discharged during year.....	271
" pardoned.....	8
" escaped.....	2
" in institutions September 30, 1879.....	237
Receipts from all sources.....	\$62,578 90
Expenditures.....	\$61,436 60
Gross earnings.....	\$15,363 57
Average net cost of supporting inmates in 1879.....	\$153 53
" daily cost of supporting each inmate....	\$0 43-43

The State Prison statistics for the fiscal year are as follows:

Number of prisoners October 1, 1879.....	804
" received during the year.....	270
" transferred to State House of Correction.....	13
" transferred to Detroit House of Correction.....	2
" discharged.....	247
" died.....	6
" pardoned.....	17
" in prison September 30, 1879.....	777
" of life convicts received during the year.....	2
Average length of sentence of prisoners received (omitting life-prisoners).....	3 y. 10 m. 23 d.
Expenses of prison (net).....	\$34,025 91
Income from convict labor (net).....	85,420 65
Total net earnings.....	88,255 25

The State Board for the general supervision of charitable, penal, pauper, and reformatory institutions report only biennially. For information as to jails, poor-houses, etc., see the "Annual Cyclopædia" for 1878.

MINNESOTA. The Legislature of Minnesota assembled in its twenty-first session at St. Paul on January 8th. In the Senate Lieutenant-Governor Wakefield presided, and in the House Charles A. Gilman was elected by a unanimous vote.

One of the earliest measures was the appointment of a joint committee to investigate certain charges of cruelty made against the officers of the State Prison. The report of the committee subsequently made entirely exonerated the officers of the charges. It also rec-

ommended that the Governor should appoint some one, unknown to the prison authorities, to visit the prison at any time, talk with the convicts, look at the food, or, in other words, constitute himself a detective, and report upon each occasion to the Governor the result of his trip.

An act was passed to regulate the rate of interest, which provides that "interest on any legal indebtedness shall be at the rate of seven dollars upon one hundred dollars for a year, unless a different rate is contracted for in writing; and no person, company, or corporation shall directly or indirectly take or receive, in money, goods, or other things in action, or in any other way, any greater sum or any greater value for the loan or forbearance of money, goods, or things in action, than ten dollars on one hundred dollars for one year; and in the computation of interest upon any bond, note, or other instrument or agreement, interest shall not be compounded. But any contract to pay interest not usurious upon interest overdue shall not be construed to be usury."

The weighing and inspection of wheat were provided for in an act which makes the half-bushel measure the lawful standard. The act also provides that, "if the parties to the sale of any wheat shall consent, it may be lawful to use a two-quart measure to determine the grade of wheat, provided said two-quart measure shall be sealed as herein provided, and so arranged as to easily demonstrate that it is truly balanced with any means of weighing the same, and that such measure is filled in such manner and by such method and device as may be prescribed and approved by the Farmers' Board of Trade of the State." It is then made the duty of the Farmers' Board of Trade, or, previous to its organization, of three men appointed by the Governor, on whom its powers are devolved, to designate what shall be the manner of filling the measures to be used in testing the grade of wheat, and to prescribe such methods as shall best secure uniformity in determining them. The act then goes on to require the Farmers' Board of Trade of the State to designate what shall be the manner of filling the measures to be used under its provisions, in testing the grade of wheat, and to prescribe such methods as shall best secure uniformity in determining the grades of wheat; and they shall require all measures used and means of weighing employed in grading wheat to be sealed and stamped by the lawful scaler of weights and measures. The Board of Trade shall fix and designate the several grades of wheat to be in force each year, after their annual meeting in September, and cause to be published a circular for the use of grain-dealers in the State, defining the rules and regulations to be observed in the grades of wheat, and testing the same, and naming such methods and devices therein to be used in the manner of filling the half-bushel and the two-quart measure, if its use shall be authorized. This

last provision, "to fix and designate the several grades of wheat to be in force each year," it has been suggested, is clearly beyond the legitimate scope of legislative power. If the Board should attempt so to do, it would still find that wheat would continue to be bought and sold by the market grades, and any edicts establishing arbitrary grades different from those of the general markets of the world would be a dead letter from the necessity of the case. But it is entirely within the competency of legislation to create an authority to prescribe the methods by which wheat shall be measured and weighed. The author of the act devised a contrivance attached to the two-quart tester for filling it, which, it was said, obviated all the objections to that instrument of measurement or weighing, by securing absolute uniformity in the pressure of the wheat; and that the contrivance was so simple a one that it expedites instead of retarding the process of inspection.

The Farmers' Board of Trade above mentioned was created by another act. This made it the duty of the judge of each judicial district within the State to appoint one of the most able farmers residing therein, who should be well versed in the theory and practice of agriculture, and who was not an incumbent of any public office of the State, and who was not a stockholder, officer, trustee, assignee, or employee of any banking, moneyed, or savings institution or corporation created under the laws thereof, and one that was not directly or indirectly connected with any association which has for its object the buying and selling of produce. The persons so appointed constitute the members of the Board of Trade for two and four years. It is made their duty to assume and exercise a constant supervision over the agricultural interests of the State, and to make a report to the Legislature presenting such facts, statistics, and suggestions as in their judgment may be necessary to induce legislation for the protection and welfare of the entire agricultural interest.

The sum of \$7,500 was appropriated to aid the owners of drive-wells to test the validity of the patents under which a royalty is claimed. The owners of these wells, against whom the claim of infringement is made, number about thirty thousand in the State.

Another act authorizes the Governor to appoint a commission of three doctors to visit the insane asylums at least once in every six months, and report upon their sanitary condition and general management, the condition and treatment of the patients, and in detail the results of their observations, with recommendations upon the same. If they find any patients that are not insane, the commission is authorized to remove them to the counties from which they came. All idiotic and feeble-minded are to be transferred to the Deaf and Dumb Asylum, after which, in case they can not be benefited, they are to be returned to their par-

ents, or to the county commissioners of their respective counties.

Nineteen towns, cities, and villages, and nineteen counties were authorized to issue bonds for various purposes. An amendment of the Constitution was also adopted, which proposed to prohibit the Legislature from authorizing any county, township, or city to issue bonds for the construction of railroads to any amount that shall exceed five per cent. of its taxable property.

A State tax was ordered to be levied, not to exceed a mill and five tenths.

Persons found guilty of body-snatching were made subject to a penalty of four years in the State Prison.

The subject of temperance received some notice. A bill to prohibit the sale of intoxicating liquor to be used as a beverage was presented in the House, accompanied by twenty petitions having 10,000 signatures. It failed to pass the House by a vote of 22 yeas to 74 nays. The following amendment to the State Constitution was also presented in the Senate without avail:

SECTION 31. The Legislature shall never authorize or license the sale of any kind of intoxicating liquor as a beverage, nor authorize or license houses of prostitution, nor gambling of any kind, nor any lottery or the sale of lottery tickets; and all persons are prohibited from manufacturing, selling, giving, furnishing, having, or in any manner dealing in spirituous, vinous, malt, fermented, mixed, drugged, or intoxicating liquors of any kind, to be used for other than medicinal, mechanical, chemical, and scientific purposes, and for use in the arts. The Legislature shall have power by law to license and control the manufacture and sale of such pure liquors for medicinal, mechanical, chemical, and scientific purposes, and for use in the arts, but not otherwise, and shall have power to enact laws for the punishment of persons engaged in any illicit traffic in such liquors, and for the confiscation, sale, or destruction of contraband liquors, and the vessels and buildings connected therewith.

Some favor was shown to a bill for woman's suffrage in the Senate; and a bill to devote the internal improvement lands to the settlement of the old railroad bonds was received and laid upon the table. In the Senate a resolution to print the Governor's message in the German, Norwegian, Swedish, French, and Bohemian languages was passed. A bill was also reported by the Committee on Retrenchment and Reform to reduce the salaries of the State officers and their clerks about twenty-five per cent. It received some attention in Committee of the Whole, but it transpired upon discussion that most of the salaries are low enough for capable men; and, as the capacity of the officials was not questioned, retrenchment among them was suspended. The Senate, however, passed a bill for reducing the mileage of members at future sessions of the Legislature to five cents a mile.

The session was closed about March 12th. Very few general and important laws were passed, although nearly six hundred bills were presented to the Governor for his approval.

A report was presented to the Legislature by the Public Examiner, who was created by

an act of the previous session. The duties imposed upon him by the act are very comprehensive and very onerous. He is required to examine the accounts of all State and county officers and of all State institutions, and to enforce uniform and safe methods of book-keeping, and to investigate the affairs of all banking or savings institutions, and is a general supervising as well as examining officer. In the discharge of his duties the Examiner (Mr. Knox) had officially visited twenty-seven counties during the seven months since his appointment, and made fifty-eight more or less exhaustive examinations, including the investigation of the Insane Hospital accounts for twelve years, which occupied nearly a month. He found in a considerable number of counties that the treasurers and auditors were excellent and conscientious officers, skilled and experienced accountants, and to them he was indebted for much valuable aid. But in the majority of counties the systems of keeping the public accounts were so wretchedly loose and defective as to be absolutely no check whatever on the misappropriation of the public funds. As the law stands, when a tax is paid the treasurer fills out a blank receipt and a duplicate—parts of the same leaf bound in a book. When the receipt is torn off and delivered to the taxpayer, the duplicate or stub remains as evidence that the tax is paid; and this is the only evidence, if the treasurer permits it to exist, except that he is required to write the word "Paid" against the tax in his books. But he can easily destroy the stub, or write a receipt from another book of blank receipts, not that exhibited as his record of tax receipts, and may entirely neglect or forget to write the word "Paid" against the paid tax in his books. Nor is there any possible way to trace any little fraud or theft of that sort, unless some taxpayer, published as delinquent, presents his receipt—which experience shows he rarely does till the treasurer has retired from office. It was estimated that tens, perhaps hundreds, of thousands of dollars had been lost to the people of the State by this loose system of accounting for tax receipts.

The proposition to use the swamp-lands of the State to aid one or more railroad enterprises served to call attention to the title to those lands and the purposes for which they were devoted by Congress, and the manner in which the State had disposed of them. It thus appeared that all the State grants of these lands were illegal and might be considered void. More or less of these lands were in each of the Western States along the Mississippi River. In 1826 a Senator in Congress from Missouri unsuccessfully sought to obtain a cession to Missouri and Illinois of the swamps within those States respectively. Other efforts of a similar character were made at intervals, but no definite action was had until the passage of the act of March 2, 1849, which was applicable exclusively to Louisiana. This act was the basis of all other acts

relative to swamp-lands, and its language was as follows:

That to aid the State of Louisiana in constructing the necessary levees and drains to reclaim the swamp and overflowed lands therein, the whole of those swamp and overflowed lands shall be, and the same are hereby, granted to that State.

The next section provides for the manner of selecting such lands, and concludes by saying that the fee simple of such lands shall then vest in the State—

Provided, however, that the proceeds of said lands shall be applied exclusively, as far as necessary, to the construction of the levees and drains aforesaid.

The reasons assigned in debate for this magnificent donation were the alleged worthless character of the lands in their natural condition, the great sanitary improvement to be derived from the reclamation of districts notoriously malarial, and the enhanced value of adjoining government property. This legislation contemplated providing a land fund wherewith to enable the beneficiaries, as grantees of the United States, to construct levees to check devastating floods; and further, to make great drains, in swampy regions, for reclamation of lands; and incidentally, although unexpressed except in the debates, to relieve the country from pestilential malaria. The end proposed in the original grant has been attained only to a limited extent. Imperfect works were constructed to limit the waters of the Mississippi to their proper channels; even these were neglected during the war.

The act of 1849 was followed by the general act of September 28, 1850, which act, as expressed by its title, was "to enable the State of Arkansas and other States to reclaim the swamp-lands within their limits." And the language of the act, like its title, says that the lands shall be appropriated for "the necessary levees and drains to reclaim the swamp and overflowed lands therein." The last section of this act extends its provisions to each of the other States of the Union "in which such swamp and overflowed lands may be situated." Minnesota was not then a State; but after she was admitted into the Union March 12, 1860, an act was passed to extend the provisions of the act of 1850 to the States of Minnesota and Oregon. Both in its title and in the body of the law it recites that it is an act to enable these States, as Arkansas, "to reclaim the swamp-lands within their limits." These are the only acts affecting this question. Subsequent acts only refer to and define the manner in which indemnity shall be made. The total amount of such lands selected to the close of 1878 was 69,000,000 acres, an area larger than Great Britain. Surveyor-General Baker of Minnesota, treating of this question, calls attention to the fact that Congress in its statutes has never deviated, in spirit or letter, from the purposes of the original act. The statutory concessions are not couched in indefinite terms. The States themselves, acting upon an implied

sovereignty after the title had been passed to them by the General Government, have assumed a wide latitude in the disposition of these lands. But any disposition of such lands not in accordance with the letter and spirit of the acts donating them must be null and void. It has been held that they were available for purposes of general internal improvements, and it has been the practice of the States having such lands to so appropriate them. Minnesota, however, is perhaps the only State that has sought to appropriate these lands to objects other than those of internal improvement. The report of the State Auditor shows the several grants of swamp-lands made by the State Legislature as follows:

YEARS.	Grantees.	Number of acres in grant.
1861	Lake Sup. and Mississippi R. R. Co..	694,400'00
1861	Lake Sup. and Mississippi Branch....	100,000'00
1861	McLeod Co. Agricultural College.....	4,684'17
1862	Madelia and Sioux Falls Railroad.....	10,000'00
1863	St. Paul and Chicago Railway Co.....	461,440'00
1865	Insane Asylum.....	100,000'00
1865	Deaf, Dumb, and Blind Asylum.....	100,000'00
1865	State Prison.....	100,000'00
1865	Winona Normal School.....	75,000'00
1865	Mankato Normal School.....	75,000'00
1865	St. Cloud Normal School.....	75,000'00
1865	Southern Minnesota Railroad Co.....	85,242'29
1865	Cannon River Improvement Co.....	800,000'00
1865	Soldiers' Orphan Asylum.....	Residuary.
1875	Duluth and Iron Range Railroad Co.....	422,400'00
1878	Minnesota Northern Railroad Co.....	98,000'00
Total.....		2,651,166'46

After the above grants are satisfied, all the residue under the law was to go to the Soldiers' Orphans' Asylum. But this institution is in fact defunct, all the soldiers' orphans having been cared for that desired to avail themselves of its benefits. The Surveyor - General says: "I estimate that from 11,000,000 acres yet to survey, we will receive not far from 3,300,000 more acres of swamp-land, because the percentage of swamp-lands increases as we advance into the unsurveyed areas. Out of these lands already conveyed to the State there have been actually conveyed to various railroad companies by the State 1,037,180 acres. Most of these lands, in the older portions of the State, have already been sold by these companies to actual settlers, and title passed." In his opinion the grants above mentioned do not pretend to be in sympathy with, or in any manner kindred to, the objects of the grant. However meritorious the purposes of such legislation, these acts simply express a betrayal of a trust, a breach of trusteeship. They should be promptly repealed, and the statutes cleared of such worthless rubbish. On the other hand, it is urged in the State that the grants of swamp-lands made by the State are secure from any attempt to shake the title of the grantees by legal proceedings, notwithstanding the grants were made in violation of the trust imposed on the State by an act of Congress, and that the only danger lies in a possible declaration of

forfeiture by Congress. To support this opinion, reference is made to a decision of the United States Supreme Court rendered in 1863 in the case of Baker vs. McGee. A grant of lands had been made by Congress to Missouri to aid in building railroads from Hannibal to St. Joseph, and it required that the lands thus given should be disposed of by the State for the purposes contemplated and "no other." The State granted the lands to a railroad company, but gave a preëmption right to settlers in actual occupancy and who had improved the land prior to the date of the Congressional act. Suit was brought against a preëmtor who claimed land under this provision by a man who had purchased the same land from the railroad company. The latter claimed, among other things, that the State had no right to divert the lands to any purpose not contemplated by the act of Congress granting them to the State, and was expressly prohibited from doing so. Upon this the Court said: "It is contended that the Legislature of Missouri had no power to grant the privilege of preëmption. If this was a contest between the United States and the State of Missouri, the question of power would be a proper subject of examination. But the United States are not complaining, and no other party has the right to complain."

A still later decision of the same Court, filed in October, 1878, is decisive of the illegality of these grants. The case arose in Iowa under an act of the Legislature of March 22, 1858, which authorized counties to devote the swamp-lands to the erection of bridges, roadways, railroads, or other public improvements, provided no such transfer should be made unless the person and company expressly released the State and county from all liability for reclaiming said lands as provided by the act of Congress. Under this statute Adams County sold its swamp-lands to the American Emigrant Company, the company agreeing to erect such public buildings as the county might request. The county brought suit in equity to rescind the contract on the ground of fraud by the company. The case went to the Supreme Court of the United States. The opinion there filed held that the act of the Legislature authorizing counties owning swamp-lands to devote the same to the erection of public buildings and making railroads through the county is contrary to the act of Congress granting such lands to the State, and therefore unauthorized and void; that the provision of the act of Congress that the proceeds of such lands shall be applied exclusively to the purpose of reclaiming said lands by drains and levees was an express trust imposed upon the State to apply the proceeds to the particular purpose for which they were granted; that trust was sacredly binding upon the State, to be carried out and not to be abandoned or repudiated. The transfer by the State of these lands to counties, subject to the act of Congress, and reserving legislative control over them, involved no breach of trust, counties being subordinate

political departments of the State, to facilitate the object for which the State government is instituted; but the act of the Legislature of 1858 authorized the devoting of the lands to widely different purposes than what the original grant was intended to secure. It endeavored to throw off all responsibility of the trust. The purchasers were to relieve the State and county from all liability for reclaiming the lands—that is, release them from their responsibility as trustees of these lands; and this absurd form was adopted in the contracts and conveyances that were made. How could the purchaser release the State and county from an obligation imposed by an act of Congress? It is probable, however, that the Legislature meant that the purchaser should indemnify the State and county for their liability; but how does that better the matter? Can the public officers of Iowa throw off their trusteeship in this easy manner, by taking the indemnity of private parties against the consequences of their breach of trust? The State or county could most certainly sell the lands to purchasers out and out, freed from any lien or trust in relation to the improvements which they were intended to secure; but the State or county would hold the proceeds of such sales as a fund devoted to the purposes of the grant, although the purchasers would not be bound to look to the application of the purchase-money. The public authorities might even waste or misapply the fund without any legal remedy to prevent; but that does not prevent the stamp of illegality from being impressed upon a deliberate scheme of spoliation of the trust fund, conceived in the form of law and carried out with an entire disregard of public obligations.

The valuation of property in the several counties of the State in 1879, according to the local boards of equalization, amounted to \$229,791,042. The returns of personal property by the same boards amounted to \$57,193,455 for 1879 and \$53,665,943 for 1878, showing an increase of \$3,527,512.

The extent of railroad construction in 1878 was 375 miles. This was more miles of new road than were opened by any other State during that year. The number of miles in operation in the State at the close of that year was 2,608, all of which has been constructed within seventeen years. A narrow-gauge road of three feet was opened from Wabasha to Zumbrota, a distance of 60 miles, during the year, which is the only one in the State. The following table shows the comparative business for five years of all the railroads doing business in the State:

YEARS.	Gross earnings.	Earnings over operating expenses.	Passengers carried.	Tons freight.	State revenue from railroads.
1874....	\$6,194,669	\$1,894,800	1,012,506	1,434,918	\$108,825
1875....	4,952,152	1,026,830	996,218	1,350,177	131,559
1876....	6,000,967	1,798,424	1,163,072	2,079,563	145,392
1877....	5,408,039	1,542,586	1,239,428	1,717,923	165,000
1878....	7,481,199	2,958,871	1,590,649	2,496,559	190,000

The sales of railroad lands in 1878 were unprecedentedly large, as shown in the following table compared with preceding years:

YEARS.	Acres.	Receipts.
1875.....	179,250	\$1,817,779
1876.....	808,266	2,155,224
1877.....	242,487	1,309,874
1878 (to December).....	435,629	1,514,900

Total sold to December 1, 1878, 2,144,215 acres. Total receipts to December 1, 1878, \$9,762,258. There was no serious railroad accident on any of the roads during the year. Minnesota railroads have had a remarkable exemption from railroad disasters, the Brainerd bridge accident, by which five lives were lost, in 1875, being the only serious one in the history of the State.

A bill was brought before Congress at its early session during the year for the construction of a sluiceway over St. Anthony's Falls in the Mississippi River, and to regulate and provide for the same. It was not enacted.

An act was passed which grants additional rights to homestead settlers on public lands within railroad limits, not only in Minnesota but in other States. It declares that the even sections within the limits of any grant of public lands to any railroad company, or to any military road company, or to any State in aid of any railroad or military road, shall be open to settlers under the homestead laws to the extent of 160 acres to each settler; and any person who has, under existing laws, taken a homestead on any even section within the limits of any railroad or military road land-grant, and who by existing laws shall have been restricted to eighty acres, may enter under the homestead laws an additional eighty acres adjoining the land embraced in his original entry, if such additional land be subject to entry; or if such person so elect, he may surrender his entry to the United States for cancellation, and thereupon be entitled to enter lands under the homestead laws the same as if the surrendered entry had not been made; and the residence and cultivation of such person upon and of the land embraced in his original entry shall be considered residence and cultivation for the same length of time upon and of the land embraced in his additional or new entry, and shall be deducted from the five years' residence and cultivation required by law.

Suits were instituted against about seventy-five persons for trespass upon the Government pine-lands of Minnesota, and about twenty-five other cases were in process of examination by the agents of the Interior Department. The seventy-five cases alluded to were ready for trial at the June term of the United States Court, but the trespassers succeeded in getting a stay of proceedings, which carried over all suits not otherwise disposed of to the December term. Ten of these cases involved an aggregate stumpage of about \$75,000, mostly if not entirely against the Minneapolis lumber-

men. A commission consisting of the District Attorney and the Surveyor-General of Minnesota was formed by the Secretary of the Interior (Schurz) to investigate and classify the cases of trespass upon the public lands, and to report the facts and suggestions. This undertaking involves a considerable amount of labor, but from the outlook it will enable the trespassers to compromise upon better terms than they would receive at the hands of a jury, and at the same time save the costs of trial, which would be considerable.

An act of the Legislature at a former session required the State Geologist, Professor Winchell, to give an account and accurate chemical analysis of the waters of Minnesota. Soon after a sanitary examination of the wells in the section of Red River Valley extending from Breckenridge to Winnipeg, Manitoba, and also of other wells and springs outside the valley, was made. As reported by him, the wells of the Red River country very generally become offensive after a time from foul gases engendered in them, and when in this condition they originate stubborn intestinal difficulties eventuating in dysentery and various forms of fever. These diseases being identical with those existing in southwestern counties, it has been inferred that the illness incidental to the northern and southern health districts may very probably be induced by the same cause, namely, the use of impure water for domestic purposes.

The effects of the severe cold that prevailed over the middle and northern sections of the country during two or three of the first days in January, 1879, were thus reported by the "Press" at St. Paul:

It is within the limits of candid moderation to say that no region north of Memphis, and between New York and the Rocky Mountains, has suffered so little from the late visitation of cold as that embraced by a radius of one hundred miles from St. Paul and Minneapolis as a center. In this section the thermometer has ranged for a week or more between five and twenty-five degrees below zero; but no individual, enterprise, or corporation has suffered the least pain or inconvenience from the weather. The clear, dry air of our favored prairies has rendered harmless a degree of cold which would make the damp winds of the lower lakes or seacoast messengers of icy death. We have simply exchanged fall for winter overcoats, kid gloves for fur mittens, and gone on hauling wheat and cutting wood in the country, trading and manufacturing in town, without a thought of complaint of the weather. Not a single case of freezing has been reported in St. Paul or Minneapolis. Only one case has been noted in the country, and that was a new-born babe abandoned upon a door-step. Not a single business enterprise has been hindered or suspended. Travel in city and country is facilitated rather than checked by frozen roads, smoother and easier than the most costly Nicolson. Not a railroad train has been stopped or delayed from one end of the State to the other. So far as information goes, not a locomotive has been frozen or a brakeman frost-bitten. This is but a repetition of the experience of last winter, when, from November to March, not a train was delayed an hour by weather in any part of the State, or upon the whole line of the Northern Pacific. While this has been our experience, not for a week nor a month, but for a term long enough to establish a rule, the condition of the so-called milder latitudes in extreme seasons is vividly reflected in

the telegraphic dispatches of the last few days. From the Atlantic to the Mississippi the wail of frost-bitten humanity goes up, where it is not smothered in avalanches of snow. A degree of cold indicated by the zero point of the thermometer is more fatal to New England, New York, Michigan, the Ohio Valley, Illinois, and southern Wisconsin, all the States indeed which are swept by moisture-bearing winds from fresh or salt water, than one of thirty degrees below Minnesota. While not an ear has been nipped here, Chicago, Buffalo, Philadelphia, and New York hospitals are filled with frozen subjects. While not a train has been delayed in Minnesota, there is no continuous travel between Chicago and the seaboard; central New York cities are shut off from the world; thirteen locomotives can not bring a train into Buffalo; it is almost fatal to some for a car-load of passengers to be caught out of a depot; and freight helplessly piles up in warehouses.

The remarkable mildness of the climate in the extreme northwestern region has often been noticed. Mr. J. W. Taylor, the United States Consul at Winnipeg, shows by comparative tables of temperature that during the months of February and March it was seven degrees warmer at Battleford, on the North Saskatchewan, 700 miles northwest of Winnipeg, than at the latter place. He also gives thermometrical records of Battleford, Winnipeg, and St. Paul, for the month of April. From St. Paul, in latitude 45°, to Winnipeg, in latitude 50°, is about 500 miles, and from Winnipeg to Battleford, a little below latitude 53°, is 700 miles—a distance of 1,200 miles between the extreme points, and a difference of nearly eight degrees of latitude. Mr. Taylor gives a table of daily April temperatures for each of these three points, and they disclose the fact that while at Winnipeg it was on the average over ten degrees colder than at St. Paul, it was only three degrees colder at Battleford. In other words, the April weather at Battleford was seven degrees warmer than at Winnipeg, nearly three degrees farther south. The summaries of these tables of daily temperatures for April show the following means: Battleford, 46·70°; Winnipeg, 39·10°; St. Paul, 49·70°. Mr. Taylor has no doubt that the districts 500 miles northwest of Battleford—the valley of the Peace River—are warmer than Manitoba. The experience of a single month or of two or three months would be a slight foundation for any general inference as to the climate of the Saskatchewan Valley; but these thermometrical data are simply confirmatory of the generalizations of the climatologists, based on the observations which have been carried on for many years at the posts of the Hudson's Bay Company, that the line of equal mean temperatures, especially for the season of vegetation between March and October, instead of following lines of latitude, bends from the Mississippi Valley far to the north, carrying the zone of wheat from Minnesota away up to the sixtieth parallel in the valley of the Peace River, and reproducing the summer heats of New Jersey and southern Pennsylvania in Minnesota and Dakota, and those of northern Pennsylvania and Ohio in the valley of the Saskatchewan. A

recent traveler in the Territory of Dakota, and down the Red River of the North into Manitoba, says that, commencing at the Red River and stretching for hundreds, almost thousands of miles in a northwesterly direction, including the fertile valleys of the system of rivers drained by Lakes Winnipeg and Manitoba, is a tract of country so large that States the size of Ohio might be cut out of it almost by the dozen, and which, until within the last few years, has been thought of as a bleak, uninhabitable waste, valuable only for its fur-bearing animals. But the reports of travelers, and now the test of experience, have proven that no quarter of the country excels this region in the quality and yield of its small grain; and instead of its being confined to the valley of the Red, there is every reason for believing that it embraces the valleys of the Assiniboine, Saskatchewan, and other rivers far to the north. It is stated by an officer of the Hudson's Bay Company, who had traveled extensively over the territory controlled by that company, that, beginning fifty or sixty miles west of the city of Winnipeg, and continuing about 900 miles until it disappeared in the deserts that lie next east of the mountains, and extending an indefinite distance to the north, is a rolling plain, in richness of soil the counterpart of the prairies of Illinois and Iowa.

The statistics of public schools in the State show a considerable advance during the year. The total enrollment for 1878 was 167,825; for 1879, 171,945; increase, 4,120 children. Number of common-school districts, 3,922; of schoolhouses, 3,416. Value of school property, \$3,384,026.

An act of the Legislature regulating elections in incorporated cities of over 12,000 inhabitants, required that the ballots should be numbered at the time when they were offered. The question of the constitutionality of this provision came before the Supreme Court, and it was decided to be unconstitutional on the ground that it interfered with and violated the voter's privilege of secrecy.

The National Greenback State Convention assembled at St. Paul on June 10th. Ignatius Donnelly was chosen President, and the following ticket for State officers was nominated: For Governor, Ana Barton; for Lieutenant-Governor, William McGen; for Treasurer, Andrew Nelson; for Secretary of State, A. P. Lane; for Attorney-General, William L. Kelley; for Railroad Commissioner, Ebenezer Ayers. The following platform was adopted by the Convention:

We, the delegates assembled, pursuant to call, at a State National Greenback-Labor Convention, held in the city of St. Paul, on Tuesday, the 10th day of June, A. D. 1879, do adopt the following declaration of principles and policy:

1. We are in favor of the immediate and unconditional repeal of the act of 1869, falsely entitled "An act to strengthen the public credit," believing that it was an unnecessary, dishonest, and radical change of the original contract between the debtor and creditor classes, an act of robbery of hundreds of millions of

dollars from the people, for the benefit of American and European bondholders, and one that was intended to perpetuate the national debt for all time. We therefore demand that all the bonds due by the Government be paid in strict accordance with the letter and spirit of the original terms on which they were issued; and that all the four and four and a half per cent., and all other bonds issued since the passage of that act on long time, subject, as understood, to all the contingencies of subsequent legislation, be immediately paid in non-interest-bearing, full legal-tender currency.

2. We are in favor of the free and unrestricted coinage of silver, upon the same terms and conditions as gold, and its retention as a full legal tender for all debts, public and private.

3. We demand the immediate repeal of the resumption law, believing that its passage at the time was an infamous sin and crime against the debtor classes, whose obligations, contracted in good faith and on a currency basis, were thus more than doubled, while all property was reduced nearly one half. We denounce the whole scheme of locking up in the Treasury-vaults \$400,000,000 or \$500,000,000 of currency subject to redemption, and coin held for the purpose of redemption, while but little more than \$4,000,000 has been redeemed or offered for redemption, as wholly in the interest of a few moneyed men, and suicidal, unjust, and oppressive to the great body of the American people.

4. We regard the whole system of the contraction of the currency, from April, 1868, to the present time, as an act of gross fraud and injustice, subversive of the best interests of the nation, leading to tens of thousands of bankruptcies, the concentration of a large part of the wealth of the people in the hands of a few bullionists and money-holders, and the stagnation and paralysis of almost every industry.

5. After having replaced the entire bonded debt of the nation with legal-tender currency (except where the faith of the Government was originally and specifically pledged to coin payment), we believe that thereafter the circulation should be steadily and gradually increased in exact proportion to the growth of population and wealth and business of the country—the circulation per capita being maintained as nearly as possible the same, so as not to disturb the relative value of money and property.

6. We believe that all private property, and everything that has value, owned or held by individuals or corporations, and all industries and interests in the nation, should bear their equal and legitimate share of taxation for the support of the Government and the protection of the people.

7. We regard the declaration of the Republican party at its last convention in this State, in 1878, that "no constitutional right reposes in the Government to protect the people against monopolies by the powerful, arbitrary, and rapacious," as a most reckless and dangerous heresy, as heartless as it is untrue and anti-republican in sentiment.

8. We are opposed to all unjust and discriminating class-legislation, and in favor of a fair field and open competition for all.

9. We are earnestly opposed to all large landed monopolies, either by railroads, corporations, or private individuals, and believe that the public domain should be held exclusively for actual settlers, in moderate and reasonable quantities. We are opposed to the present or any other national banking system, and in favor of the Government alone issuing all that circulates as money. We are in favor of a graduated and equitable income tax; but one term of office for President and Vice-President; the election of President, Vice-President, postmasters, and as far as practicable all other officers, by the direct vote of the people; the severe punishment by fine or imprisonment, or both, and by disfranchisement and ineligibility to office, of any person who offers to buy or sell a vote, or is guilty of any fraud or intimidation or threats of violence at a ballot-box or election, with a view to prevent the free and

independent vote of any person or persons whatsoever or whomsoever.

10. We regard the old Minnesota railroad bonds as dishonest and illegal in their whole origin and history; a measure conceived in sin and brought forth in iniquity, and one that is not morally binding on the people of this State.

11. We are in favor of the equalization of the soldiers' bounties.

12. We desire to enter our protest as American citizens against the custom which has been followed almost exclusively by the leaders of both the old parties—and especially the Republicans—since the close of the late war of the rebellion, of fostering local prejudices and sectional strife and hatred, whether between the North and South or the East and West, regarding it as unpatriotic, narrow-minded, illiberal, and fratricidal, and one that can not be too earnestly condemned by all good citizens of the Union; indicating the demagogue and partisan, rather than the statesman or patriot, and obviously intended to divert the attention of the people from grave and more important subjects of a practical character.

13. We denounce the boisterous and vindictive discussion for weeks together by the present Congress of an insignificant and inoperative election law, that has not existed at all until within the last few years, at the same time that they adjourned over Monday week after week, to prevent the introduction of any measures of relief in the interest of the people, as wicked and puerile, and beneath the dignity of any honest and reputable body of American citizens.

14. We are opposed to all land-grabs by wealthy corporations in this State, either of swamp-lands, internal improvement lands, or the public domain, in any form whatever. We believe that the swamp-lands ought to be appraised and sold, the same as the school lands and internal improvement lands now are, and the proceeds funded, and the interest, together with that accruing from the internal improvement land, devoted to school purposes and other general current expenses of the State in such a way that all may participate in the benefits, and the burdens and taxes of the people be correspondingly lightened. We are opposed to all useless and unnecessary offices and sinecures, and all favoritism and fraud, or the retention in office of persons guilty of dishonesty or extravagance in the use of public monies; and in favor of the most rigid economy and fidelity in the administration of all State and Federal matters.

15. We commend the public speakers and press of our National Greenback-Labor party throughout the State for avoiding all low, vulgar personalities and slang, and confining themselves closely to the measures and principles before the country, rather than striving to traduce and vilify and misrepresent those who differ from them in opinion; believing that a calm, earnest, dispassionate, courteous, and gentlemanly course will be appreciated by our best citizens of all parties. We also desire to express our admiration and appreciation of our Greenback members in Congress for their noble, earnest, and able advocacy of the rights and interests of the people.

16. We are satisfied that there is an imperative necessity for a weekly central or State organ, in the interests of our party, under the editorial management and control of an able and uncompromising man, and will do all in our power to encourage and sustain such a journal, if started.

17. That we are in favor of the soldiers' and sailors' homestead law being so amended as to remove all unfair and obnoxious restrictions, so as to enable the late brave defenders of the Union, their widows and orphans, to become the actual owners of a homestead without price and without cost other than the district land-office fees, thus placing the poor and indigent ex-soldier and sailor upon an equality with his rich and affluent neighbor. And also we are in favor of all lands belonging to the General Government being placed in the market subject to entry or settlement by actual settlers, including pine-lands.

18. That the labor of convicts shall not be let out by contract to any person, copartnership company, or corporation, and the Legislature shall by law provide for the working of convicts for the benefit of the State, thus preventing convict labor from coming in competition with honest labor.

19. The prohibition of the employment of children under fourteen years of age in manufactories and industrial establishments, inasmuch as their employment in such places tends to public demoralization by enfeebling them physically, mentally, and morally, and deprives them of that education in youth on which so necessarily rests the enlightenment of the masses, which we hold to be the sheet-anchor of republican institutions. We demand the enactment of laws making such employment a criminal offense, and punishable as felony.

The State Convention of the Prohibitionists was held at Minneapolis on June 10th. The following ticket for State officers was nominated: For Governor, Rev. W. W. Satterlee; for Lieutenant-Governor, A. B. Williams; for Secretary of State, I. C. Stearns; for Treasurer, H. H. Brown; for Attorney-General, A. W. Bangs. The following platform was adopted:

Whereas, The old political parties are opposed by resolutions in party conventions passed, and by every public act of their representatives in the halls of legislation, to the prohibition of the traffic in intoxicating liquors, and in favor of the policy of license; and,

Whereas, We, as prohibitionists, are opposed to this policy, believing it to be wrong in principle and a failure in practice; we can not, therefore, cast our votes with these parties without violating our conscience and stultifying our manhood; therefore,

Resolved, That we will follow the policy already marked out by the Prohibition Reform party, and, declaring ourselves free from the old party yoke, nominate true men for office, and, standing by them to the last, turn not either to the right nor the left until we win the victory.

Resolved, further, That we do invite and urge upon our fellow citizens to join in this movement, without regard to past party affiliations.

The Republican State Convention assembled at St. Paul on September 3d. J. V. Daniels was chosen permanent President, and the following ticket for State officers was nominated: For Governor, John S. Pillsbury; for Lieutenant-Governor, C. A. Gilman; for Secretary of State, Fred. von Baumbach; for State Treasurer, George Kittleson; for Attorney-General, Charles M. Start; for Railroad Commissioner, W. R. Marshall. The following platform was then adopted:

The Republicans of Minnesota, in convention assembled, make the following declarations:

1. We adhere to the platform of principles adopted by the last Convention of the Republican party of the United States at Cincinnati. The eminent success which has attended the resumption of specie payments and the refunding of the public debt at a more favorable rate of interest than has ever before been attained by the Government, indicates the safe and enlightened financial policy which has steadily been adhered to by the Republican party. We cheerfully acknowledge the fidelity and ability with which the finances have been conducted by the present Administration, and we especially commend the course of the President in firmly exercising the veto power to uphold the safeguards of the ballot-box.

2. We desire to cultivate feelings of good neighborhood with our fellow citizens of the Southern States, and rely much upon conciliatory treatment and mutually friendly intercourse to produce those good rela-

tions which in all respects would prove beneficial. At the same time we demand that every constitutional means be exerted to maintain that liberty and security throughout the South which all citizens are entitled to under the Government.

3. We adhere to the advanced position heretofore taken by the Republican party in favor of civil-service reform. A true reform of the civil service should among other benefits lead to a reduction in the number of offices and promote economy. Any important measure of civil-service reform in order to be effective should be put into the form of law, and not be left subject to annulment by mere executive authority.

4. We demand retrenchment wherever practicable, and the strictest economy consistent with wise administration in every department of the national and State governments. Without abandoning a just policy of protection, we nevertheless believe the time has come when some reduction should be made in the tariff, especially in the duties on clothing, on books, and on such other articles as enter into industrial and household economy.

5. The Republican party sets its face absolutely against everything that savors of monopoly, and it will always use every possible constitutional means to protect the people against unjust discriminations and combinations by railroad or other corporations.

6. Whereas the duty on wheat-flour exported from the United States into Cuba is at the enormous rate of six dollars and twelve cents a barrel, and the restrictions both in the ports of Cuba and Mexico bear very heavily on the products of the Mississippi Valley, we would therefore request our Senators and Representatives in Congress to use their best efforts to procure an amelioration of our commercial relations with Cuba and Mexico.

7. Our thanks are hereby tendered to the Senators and Representatives of Minnesota for their successful efforts in obtaining appropriations for improving our lake and river navigation.

8. We will generously cooperate with our fellow citizens, without distinction of party, in securing the shortest and cheapest route for transportation to the seaboard.

9. The prudence, efficiency, and practical sagacity in the management of State affairs by the administration of Governor John S. Pillsbury deserve the continued confidence of the people.

The Democratic State Convention assembled at St. Paul on September 26th. John B. Brisbin was chosen chairman, and the following nominations were made: For Governor, Edmund Rice, Sr.; for Lieutenant-Governor, E. P. Barnum; for Secretary of State, Felix A. Borer; for State Treasurer, Lyman E. Cowdery; for Attorney-General, P. M. Babcock; for Railroad Commissioner, William Colville. The following platform was adopted:

We, the Democracy of Minnesota, in convention assembled, pledge ourselves to the support of the following principles of public policy:

1. The United States is an indissoluble union of indestructible States; the Federal Government is supreme within the limits defined by the Constitution and its amendments; the powers not thereby conferred upon it nor prohibited to the States are reserved to the States respectively or to the people; the preservation in their separate integrity of the just powers of the Union and of the States as part of an harmonious whole; the maintenance of national authority and of local self-government as well is essential to the perpetuity of our free institutions; and we shall resist all attempts to dismember the Union by nullification or secession, or to extinguish the States by centralization or usurpation, as alike unconstitutional, revolutionary, and treasonable.

2. The enormous tribute which the producers of the West are compelled to pay to the monopolists of

the East by the present system of protection, is an intolerable burden and a gross injustice. We demand as a right that our people shall be allowed to buy and sell in the markets of the world untrammelled by vexatious and oppressive tariffs. We favor the speedy establishment of free trade as the permanent commercial policy of this country.

3. We demand the thorough revision of our patent laws, to the end that the innocent purchasers of manufactured articles, using the same in good faith, shall be protected from harassing and oppressive suits for the infringement of patent rights.

4. We hold that gold and silver coin is the money of the Constitution; that all paper currency should at all times be redeemable in coin at the option of the holder, and the volume thereof should be regulated by the business wants of the country; that we favor the unlimited coinage of silver coin and its immediate restoration to its original place as money, the same as gold.

5. We favor a genuine reform in the civil service of the country to the end that honesty and efficiency shall alone be the tests of public employment. Such a reform, to be permanent, should not only be put into the form of law, but should also include the abolishment of superfluous offices, and such a wholesome reduction of salaries that the expenses of partisan campaigns can not be paid out of the public funds by the indirect method of political assessments upon official incomes.

6. We hold to the old Democratic maxim, that that government is best which governs least—which bestows upon the citizen the greatest personal liberty consistent with the public peace and welfare, and, while it affords full protection to life and property, leaves the creeds, habits, customs, and business of the people unfettered by sumptuary laws, class-legislation, or extortionate monopolies.

7. We demand a free ballot and an honest count of the votes cast at an election as the inalienable right of American citizens. The presence of armed troops at the polls upon election day, and of partisan officials clothed with arbitrary power to intimidate, arrest, and imprison voters without legal process, is intolerable in a free country, a direct blow to the rights of all adopted citizens, and suited only to the schemes of a desperate party determined to maintain its political power at all hazards. Never again by fraud or force shall the will of the people constitutionally expressed be nullified by treasonable conspiracy of unscrupulous partisans.

Resolved. That the enormous expense attending the administration of the State government by the Republican party demands the most serious consideration of all thoughtful citizens and patriotic men, and that the policy established by that party which has rendered it necessary, in the administration of the State government and the maintenance of the public credit, to wring from the hands of the struggling settlers and producers of our frontier State more than one million of dollars annually, for the purpose of governing less than one million of the most orderly and law-abiding people on earth, is unsound and cruel, and should receive at the ballot-box such a rebuke as will prevent all political parties hereafter from any attempt to repeat the outrage.

We demand that the railroads which the people have chartered and endowed with vast and profitable privileges, shall be operated for their benefit and not for their ruin. And we affirm it to be of the first importance, that the office of Railroad Commissioner in this State should no longer be a political sinecure, but should be intrusted to a man of unchallenged capacity, who is allied to the interests of the people. That while we fully recognize and respect all the rights and privileges legally pertaining to the railroad and elevator corporations of this State, and would discourage any causeless or unnecessary agitation thereof, we nevertheless believe the time has come when the doctrine of the sovereignty of the people over corporations, as expounded by the Supreme Court of the

United States, should find expression in such just and appropriate legislation as will fully protect individuals and localities from extortionate tariffs and injurious discriminations, and that the Legislature of Minnesota should take such action in this behalf as will effectually relieve the producing interest of the crushing burden now imposed upon it.

Resolved, That we condemn the management of our public institutions, and especially the manner in which the public funds were squandered by the trustees and officers of the Insane Asylum at St. Peter, as well as the cowardice of Governor Pillsbury in declining to remove those officers, when their incapacity and mismanagement were reported to him. And we also condemn the action of a partisan Legislature in refusing to pass a bill for their removal. We further condemn the action of a partisan committee of the Legislature, in recommending a settlement of the deficiency of \$4,000, reported by the Senate Committee, on the payment of \$300.

After the nominations made by the Republican Convention, a question was raised respecting the eligibility of W. C. Gilman for the office of Lieutenant-Governor, as he was at the time a member of the House of Representatives of the Legislature. A clause of the State Constitution declares as follows: "No Senator or Representative shall, *during the term for which he is elected*, hold any office under the authority of the United States or the State of Minnesota, except that of postmaster." It was urged that this constitutional provision had been frequently disregarded. The reply was that "it had lain dormant in practice because no occasion has heretofore presented itself where those who understood its effect felt disposed to invoke these latent powers of the Constitution. But a thousand inadvertent violations of the law do not, in the slightest degree, impair its force or effect whenever the occasion comes for its operation"; and a writ of *quo warranto* was threatened if the candidate took office.

The result of the election, on November 4th, was as follows:

FOR GOVERNOR.

John A. Pillsbury, Republican.....	55,918
Edmund Rice, Democrat.....	41,553
W. W. Satterlee, Prohibitionist.....	2,863
— Meighen, National.....	4,264

FOR LIEUTENANT-GOVERNOR.

C. A. Gilman, Republican.....	59,075
E. P. Barnum, Democrat.....	33,554
A. B. Williams, Prohibitionist.....	3,615
J. M. Westfall, National.....	4,148

FOR SECRETARY OF STATE.

F. von Baumbach, Republican.....	59,750
Felix A. Borer, Democrat.....	39,240
I. C. Stearns, Prohibitionist.....	2,507
A. P. Lane, National.....	4,139

FOR TREASURER.

Charles Kittelson, Republican.....	59,950
L. E. Cowdery, Democrat.....	38,988
— Dunham, Prohibitionist.....	2,551
Joseph Gear, National.....	3,964

FOR ATTORNEY-GENERAL.

C. M. Start, Republican.....	60,153
P. M. Babcock, Democrat.....	33,381
A. W. Bangs, Prohibitionist.....	2,588
O. Stephenson, National.....	4,064

FOR RAILROAD COMMISSIONER.

W. E. Marshall, Republican.....	59,995
William Colville, Democrat.....	33,009
—, Prohibitionist.....	2,539
Ebenezer Ayers, National.....	4,043

A constitutional amendment, prohibiting county and municipal corporations from creating debt in aid of railroads in excess of five per cent. of taxable property in them, was adopted—yeas, 55,143; nays, 1,702.

MISSISSIPPI. The Constitution of this State was adopted in 1869, while military rule prevailed. It is the only one of the constitutions adopted at that period in the Southern States which has thus far remained unchanged. The question of holding a Constitutional Convention has of late been often presented. Among the reasons urged in favor of such Convention, it is said that the present Constitution was written and enacted by alien enemies, and the true people of the State had no voice in its formation; the basis of representation in the Legislature is very unequal and unjust; it provides that indictments for penal offenses may be found in any county other than that in which the offense was committed; the judiciary system should be remodeled; the Judges should hold their term of office for four years, and should be elected by the people; the Circuit Courts should be vested with equity jurisdiction; the system of registration should be abolished; the Legislature should have a supervisory power over railroad corporations, savings banks, and insurance companies, by which the people could be protected from their frauds and oppressions; all supernumerary offices, such as chancellors, registrars, and county superintendents of public education, should be abolished, and the duties of the latter devolve upon the Probate Judge; elections should be held only every two and four years (political elections every two years, judicial and ministerial every four years); all special legislation should be prohibited; and any county or city or town forbidden to vote aid to any railroad or corporation, upon the well-recognized doctrine that the majority have no right to tax the minority except for the legitimate expenses of government.

The assessment of real estate was ordered in 1879, and the returns made the valuation amount to \$95,937,398. The State tax for a series of years has been as follows: in 1874, 14 mills on the dollar, \$14 on \$1,000; in 1875, 9½ mills on the dollar, \$9.25 on \$1,000; in 1876, 6½ mills on the dollar, \$6.50 on \$1,000; in 1877, 5 mills on the dollar, \$5 on \$1,000; in 1878, 3½ mills on the dollar, \$3.50 on \$1,000. The tax of 5 mills in 1877 amounted to \$497,686; the 3½ mills in 1878 yielded \$335,789. The decrease in the State tax of 1878 over 1877 on account of realty was \$143,906.10, and on account of personalty \$44,134.05, making a total decrease in State tax of 1878 over 1877 of \$188,040.15.

The statistics of public schools in 1878, made up and reported by the State Superintendent in 1879, show the following results:

Number of educable children in the State :		
White males.....	85,523	
White females.....	72,623	158,156
Colored males.....	97,549	
Colored females.....	92,539	190,088
Total.....		348,244
Number in school during the year :		
White males.....	51,823	
White females.....	48,853	100,676
Colored males.....	52,780	
Colored females.....	51,990	104,779
Total.....		205,455
Average monthly enrollment :		
White males.....	41,576	
White females.....	40,690	82,566
Colored males.....	49,876	
Colored females.....	44,734	68,660
Total.....		171,226
Average daily attendance :		
White males.....	83,128	
White females.....	81,190	64,318
Colored males.....	84,979	
Colored females.....	86,679	71,658
Total.....		185,976
Teachers employed during the year :		
White teachers.....	2,943	
Colored teachers.....	1,513	4,761
Total.....		4,761
Average number of days taught :		
In the country.....	79	
In the cities.....	154	
Average monthly salary paid teachers :		
White teachers.....	\$28 02	
Colored teachers.....	26 92½	
Expenditures :		
Per capita of school population.....	\$1 70	
Per capita in school.....	2 93	
Per capita in average daily attendance.....	3 42	
Total receipts for 1873.....	\$626,268 81	
Total expenditures.....	592,805 13	

The spirit of enterprise appears to be rapidly increasing among the people, and measures to promote success are on foot in various parts of the State. At Vicksburg, the central point of the greatest cotton-growing region of the South, there has been organized the Mississippi Valley Cotton-Planters' Association. Some of its objects are: "to develop all the material interests of the landlord and laborer by the more scientific and economic cultivation of the soil; to urge on all classes interested the absolute importance of a diversity of crops, to the end that we may be a self-sustaining country, and consequently that cotton shall become a surplus instead of as now the only crop; to encourage the introduction of all improved and labor-saving machinery and farming implements for the drainage of land and handling of crops, by competitive trials of the same before competent committees; to promote the selection and improvement of all kinds of planting-seeds; to foster the introduction of the best classes of live stock for breeding purposes; to enter into correspondence at once with various countries for the introduction of additional labor, and to keep prominently before the States

of Tennessee, Mississippi, Arkansas, and Louisiana, embraced in this Association, the absolute necessity of some united, practical plan of immigration in which this Association will cooperate; to be the medium through which parties interested may obtain information in regard to plantations, timber- or cane-lands for sale or rent; and in general, to harmonize and concentrate for the above purposes the efforts of all those engaged in the cultivation and sale of cotton, as well as those engaged in the manufacture of implements and machinery therefor, and for such other purposes as may hereafter be determined." Measures have been likewise taken for the formation of sub-associations in every neighborhood of every county and parish in the Mississippi Valley.

The following estimate of this great industry of the country has been made by the New York "Financial Chronicle" of a crop of about 5,000,000 bales; all crops and land are left out of the question save cotton and the lands cultivated in cotton:

A crop of 5,000,000 bales, averaging three acres to produce a bale, would give 15,000,000 acres, at \$8 per acre, \$120,000,000; one mule or horse to twenty-five acres, 800,000 mules, at \$90, \$72,000,000; implements, harness, etc., and machinery, \$50,000,000; showing permanent investment of \$242,000,000. Averaging three bales per hand would require 1,666,666 laborers, to feed and clothe whom for a year with their dependents would average \$50 each, \$82,666,667. To feed team at \$40 per mule, 800,000 mules, \$32,000,000. Cost of bagging and ties at \$1.40 per bale, \$7,000,000. Cost of marketing crop, at 1½ cent per pound, would give \$25,000,000. Working capital, \$146,777,777. Average price expected for present crop, 11 cents for 2,000,000,000 pounds, \$220,000,000.

Recapitulation.—Permanent investment of planters, \$242,000,000; working capital, \$146,777,777; total capital invested exclusively in cotton cultivation, this estimate being made for the share system and not wages, \$388,777,777.

Amount received for total crop, \$220,000,000, which is divided equally between the planters and laborers. Planters therefore receive \$110,000,000—from which deduct feed for team chargeable to planter, \$32,000,000; half cost bagging and ties chargeable to planter, \$3,500,000; half marketing crop, chargeable to planter, \$12,500,000; 20 per cent. in loss and decreased value of stock, \$14,500,000; 20 per cent. in loss and decreased value of implements and machinery, \$10,000,000; total, \$72,500,000. Repairing fences, houses, etc., at 10 per cent. on permanent investment, \$12,000,000. Taxes on permanent investment, 3 per cent., \$7,260,000. Deduct these amounts from planters' share of crop, \$110,000,000, which shows planters' profit on total investment for cotton alone is about 4½ per cent., provided they get 11 cents for cotton, make 5,000,000 bales, and the laborer pays his accounts in full.

Laborers' share of crop, \$110,000,000; amount chargeable for food and clothes, \$82,666,667; showing a profit for the laborer of \$27,333,333. It will thus be observed that the laborer receives \$27,000,000 on investment in nothing but his muscle, while the planter receives \$18,000,000 on an investment of \$388,000,000 and his services.

Suppose the crop has reached the factory, simply saying that about \$25,000,000 more has been added thereby to the price to be paid by the manufacturer since it landed at the seaport from the planter. The 5,000,000 bales now begin to assume some importance, for they run 12,500,000 spindles, which require say \$1,000,000,000 in buildings, machinery, and working capital, and employ nearly 800,000 operatives and em-

ployees. The manufactured goods are sent to every part of the known world, creating a trade reciprocal business that can hardly be estimated, but without doing which, as can easily be seen, it will reach into the billions.

Early in the year a convention was called at Vicksburg to assemble on May 5th. The object as expressed in the call was "to take into consideration the present agitation of the labor question." The proceedings of this convention are noticed elsewhere (see *EXODUS*). The signers believed that, by united action, "they might be able to adopt such measures as would allay the excitement prevailing, or which at least would enable them to supply the places of those laborers who had gone, or who might hereafter go, to the Western States."

For a short time previous considerable numbers of the colored population had been selling their effects and emigrating to Kansas, under the ostensible anticipation of improving their condition. An emigration so unusual and so extensive had attracted the attention of the people in all parts of the country, and excited some apprehensions of a scarcity or loss of laborers among the producers of cotton and sugar. For full details, see *EXODUS*, and *KANSAS*.

The views entertained in Mississippi relative to the effects of this emigration on the planting interest are very calmly and fully set forth in the following extract from a memorial to the people of the Northern States by the cotton-planters of Washington County, assembled in convention at Greenville on May 28th:

Contracts with the laborers are almost universally of three kinds: 1. Leases for rent payable in cotton or in money; 2. Contracts for work on shares, the landlord supplying land, team, tools, and forage, the laborer supplying his own subsistence and the labor only, with an equal division of the crop to be made; 3. For wages to the laborer. In all cases a free election was given to the laborer as to the class of contract under which he would work. In no known instance was he put under compulsion as to contracting, or as to change from one plantation to another, or as to migration in any direction whatever. Whether the negro elects to rent ground or work upon shares, he always demands and receives from his landlord or his merchant such supplies as he may require during the year. At this season of the year the laborer has generally obtained nearly his year's supply, and the planters are dependent wholly upon the completion of the crop, both for the rents or shares and payment for supplies advanced. It will thus be seen that the loss of even one crop would in all cases seriously injure, and probably in a majority of instances wholly ruin, the sugar and cotton planters, and bankrupt the commercial and business interests of the entire country that are dependent upon the prosperity of those planters. Thus much is embarked upon the faith of the negro's fidelity to his contract, which it is idle and preposterous to assert the planter would impair by unkindly treatment.

In this condition of our planting interests comes this last fearful menace. We do not fear so much the loss of the few hundreds or thousands of negroes who may be carried away by the boats of your benevolent societies, but we know and fear the consequences of the appearance of a single boat dispatched for such purposes. The great body of the colored people have been led to believe by secret emissaries that the United States Government would now make good the hope which they indulged soon after their emancipation, that they

would each be provided with permanent homes upon well-improved farms, equipped with the necessary stock and material, and they would be transported to them in the State of Kansas free of charge; placards and chromos have been freely but secretly distributed among the negroes, designed to influence their imagination and seduce them from their contracts by immediate migration. So successful have such efforts been that in a great many instances negroes who were well established for planting, owning their teams, material, etc., and with their crops in fine condition, and others who were owners of lands nearly paid for, seized with the belief thus impressed upon them that the present opportunity to emigrate might be their only one, have sold their horses and mules for \$8 or \$10 per head, sacrificed their other property, abandoned their lands and crops, and congregated upon the river-bank to await the coming of the Government boat.

Many, and we fear most of the emigrants, exhibit the delusion of a religious mind, and, either of their own conceit or under the machinations of the emissary, believe that the Almighty has called them to go to a "land of Canaan." Added to this the wonderful credulity of the negro—ever ready, as he is, to listen to the marvelous, and hopeful to an absurd degree—it is not surprising that he should be demoralized, enticed from his contracts and crop, and crazed with the fever of emigration. The fact that our crops for several years past have brought low prices, and would not justify the accustomed prodigality of the negro, has, it is true, furnished a pretense to the emissary to assist in discouraging and unsettling the laborers. At this season the loss of ten days' labor would irretrievably injure, if it did not wholly destroy the crop. No substituted labor could be procured.

In view of these facts, we now further state that, if a single boat should make its appearance along our borders and proclaim a free passage to but one load of emigrants, it would confirm the negroes in their delusion, and depopulate every plantation accessible to the river. The Northern philanthropists, whose large-hearted generosity we have had such recent cause to appreciate, can hardly estimate the effect upon the emotional, excitable, and credulous negro of the appearance on the Mississippi River of a single boat whose mission would be to give transportation to the negro Kansasward. While such a steamer could, at the utmost, carry off only a few hundred, the whole country on both sides of the river would become instantaneously aflame with excitement, growing crops would be abandoned, houses left tenantless, the comforts of the laboring man's life would be spurned, the small gatherings of years of labor in the shape of stock and poultry sold for a trifle or thrown away, and the entire negro population would collect on the river-banks, destitute of provisions, means, or the commonest necessities of life, firmly convinced that the promised day had arrived at last; that the Government was at length coming up to its promises, and that a life of ease and plenty was to be theirs in the future. A fleet of transports and months of time would be necessary to effect their removal. In the mean time the loss of the bulk of the cotton-crop and bankruptcy of all dependent on it would result. The final destruction, pilfering, and violence that would ensue can better be imagined than described.

No true friend of the negro could desire such a fearful result, and hence we invoke the true philanthropist to pause and investigate and consider well the effect of this effort before adopting the proposed remedy for an unreal, fanciful wrong; and we invoke the fair-minded, honest people of the North and West, whence this danger emanates, to interpose their condemnation and power to prevent the destruction of the industrial interests of the white and black alike of the Mississippi Valley. It is not true that the negro in the valley of the Lower Mississippi is subjected to the prejudice of race, any personal abuse, any extortion, any denial of political, legal, or social rights, any personal discomforts or want, to which he would not

in his condition be subjected in a greater degree at any other place on the American Continent. At the expiration of the current year, when our crops will have been secured and expenditure and advances repaid, and our business affairs adjusted to so momentous a change, the general migration of the negro would be less injurious and would be based upon more definite information and better preparations upon his part. Any obstacles that may have heretofore been interposed to his free migration have been only in exceptional cases, and have been because of his migration being a violation of his contract, and no such obstacles have been accompanied by anything like violence. It must be borne in mind, in palliation of any such efforts that may have been made, that large amounts have been advanced on the faith of these contracts, which were entered into fairly and honestly at a time when the present exodus was not in any way foreshadowed. The emigration of the negro since the war has been toward this vast, fertile valley, instead of from it; and this exodus has been a surprise to the whole country, neither agitated nor thought of before these contracts for this year were made, and large expenses and advances made upon them.

We believe that the danger of the contemplated movement is not appreciated by the Northern people, and we know that the benevolent are there imposed upon by deception; and we make this, our memorial and remonstrance, not as politicians (for we represent all parties), but as business men and law-abiding people, hoping that it may arouse the friends of peace and order, justice and true philanthropy, to interpose and arrest the threatened invasion of our rights and destruction of our property.

The new industry of growing fruit and vegetables for the Northwestern market advanced rapidly. The central point of this interest is known as Crystal Springs, which is located in the middle of that first pleiocene stratum that crops out at Canton and extends to Woodville, and on which fruits flourish and attain a perfection not found elsewhere in the State. At that point alone there was an acreage of 2,000 in peach-trees, 500 in apples, 250 in plums, 35 in strawberries, and 25 in raspberries. The net receipts from Chicago for the strawberry-crop amounted to \$10,000, averaging nearly \$300 to the acre. A still larger traffic has been growing up in vegetables, and it has been shown that peas and beans with high cultivation will net \$300 to \$400 per acre.

The work of most importance to the prosperity of the State is the protection of its alluvial lands from inundation by the Mississippi River, by the construction of levees, and incidentally therewith the improvement of the stream itself. During the administration of President Taylor in 1849-'50 (himself a Louisiana planter and deeply interested in the question), the first resolutions were passed in the Senate of the United States directing a survey of the Mississippi River, expressly to ascertain the best method of reclaiming the alluvial lands of the Mississippi Valley. This, after many years, resulted in the able and exhaustive report of Humphreys and Abbott, Chief Engineers of the United States Army, who emphatically declare that the levee system is the best method of accomplishing this purpose. In furtherance of this object the United States donated the swamp-lands lying in Arkansas,

Mississippi, and Louisiana, which were of no value without protection from overflow, to these respective States to assist in building up their levees. The funds arising from these lands were small and soon exhausted, and millions of their own money were expended by these States in the creation of levees under State legislation. The levees thus constructed were just being tested, and were more or less successful in different places, when the war came on and large portions of them were destroyed; some by the attrition of wagons and horses, when they were used as a road-bed; some by the erosion of the water, aided by the paddle-wheels of steamers in high tide; and some directly by the army and navy of the United States. Mississippi and Louisiana have expended large sums of money since the war to repair their levees, but experience has shown that they have not the pecuniary strength to accomplish this great work as individual States, and that they are prohibited by the Constitution of the United States from forming combinations with each other or other States to create a uniform system of levees, which is essential to their protection.

The improvement of the stream of the river is incident to this repair of its banks. It is the greatest artery of internal commerce in the world, and yet it is filled with snags and sand-bars that are the deposit of its annual overflows, which not only destroy vessels, but tax the whole commerce of the West with an increase of insurance that is destructive to property. It is claimed by scientific men that when the water of the Mississippi is permitted to spread over a large surface the velocity of its current is checked, it makes deposits of sediment and snags, creates sand-bars, and obstructs navigation; and that, on the other hand, the concentration of the water into a narrow stream will increase the velocity so that it will remove the sand-bars, clean out the snags, deepen the channel, and improve navigation. If this be true, as the reports of scientific engineers declare and as the action of the jetties seems to demonstrate, then the construction of the levees, which would confine into a stream one mile wide water that would spread over forty miles without them, must conduce to the benefit of navigation. The system of rivers of which the Mississippi is the grand trunk comprises 35 rivers and 15,000 miles of waterway, floating the largest inland commerce on the face of the globe. Upon these waters float more than 3,000 vessels, with a carrying capacity of about 500,000 tons. This vast fleet is largely increasing year by year, and pushing its pioneers into rivers of the far West and Northwest that were unknown half a century ago. Over thirty steamers more than a year ago were plying upon the Upper Missouri and the Yellowstone. The Mississippi is the outlet for the enormous agricultural productions of the fruitful West. The exportation of grain and of meat and other products of the farm has gained each year an

enormous increase. Transportation by railroad when agricultural products are cheap, becomes an item disproportionate to the price received in the market. Commerce then reverts to its old waterways, and demands every facility. The means of water transportation have changed. A single tug carries down a fleet of barges whose cargoes would load a train of 500 cars. One tug carried a tow of barges into New Orleans with 600,000 bushels of coal, a freight for 1,800 cars. The export of corn increased from 20 to 70 million bushels in the three years 1875-'77. In 1876 there were exported 550 million pounds of pork, worth about \$70,000,000, 34 million pounds of beef, and millions of bushels of wheat.

This question has been often presented to Congress, and committees of each House have reported bills recommending appropriations for the purpose of protecting the alluvial lands from inundation. In these reports they have been unanimous, but none of them have ever received a favorable consideration until this year. At its late session Congress passed a bill for the creation of a permanent commission for the improvement of the river. It provides for the appointment of a commission consisting of seven members, a majority of whom shall be army engineers, and one of whom shall be an experienced river steamboatman, whose duty it shall be to prosecute and report upon such steps as shall be needed for the greater improvement of navigation on the river. For this commission the following nominations were made by the President: Benjamin Harrison, of Indiana; James B. Eads, civil engineer, Missouri; B. Morgan Harrod, civil engineer, Louisiana; Lieutenant-Colonel Q. A. Gillmore, Major C. B. Comstock, Major C. R. Suter, from the Engineer Corps of the Army; and Henry Mitchell, from the Coast and Geodetic Survey.

The law creating a Board of Health for the State, and authorizing similar bodies in counties and towns, gave to the latter the power to establish local quarantine. This operated so disadvantageously that, upon the creation of the National Board of Health and the publication of its rules and regulations, they were immediately adopted by the State Board and recommended to the local boards.

The provisions of the insurance laws of the State in respect to foreign companies were defined by Judge Hill of the United States Circuit Court, in the case of the Firemen's Insurance Company *vs.* W. L. Hemingway *et al.* After having given a full recital of the statutory provisions, as designed to give to insurance companies chartered and doing business in other States an opportunity to establish agencies in Mississippi, he proceeded to say:

But as a protection to our citizens from fictitious or insolvent companies created and doing business in other States, and to give our citizens an opportunity to examine the law of their creation, and their condition every way, the sworn statement of their condition by their principal officers, with a copy of their charter, is required to be filed with the Auditor, and also in the office of the Chancery Clerk, in each county in which

the companies by their agents may desire to do business; and where liabilities may be incurred upon policies issued through such agents, that the companies may be sued, judgment obtained, and satisfaction had, without the policy-holder having to go out of the State to obtain it; hence, the agreement for service of process and the deposit to be made with the Treasurer, and the mode of reaching the funds so deposited with him; and that those taking risks may know the amount of the risks for which the deposit is liable. In other words, it is to give as far as possible these foreign insurance companies the privileges coupled with the liabilities of companies chartered by this State. Such being the case, the deposit is intended only for those who may obtain their policies through the agents appointed, and doing business in the State and under the provisions of our statutes. No assignment or transfer of the fund so deposited can be made so as to defeat the claims upon it for satisfaction of losses or unearned premiums upon the policies issued by such agents as provided by these statutes. Nor can such company revoke the powers of their agents so as to defeat the remedies provided by the statute, although it may for any other purpose. So that in case such company shall cease to do business in this State, either by withdrawal of agencies or insolvency, any person holding a policy issued through such agent or agents, which has not expired, may cancel the policy or surrender it to the agent, and demand the unearned premiums, which I understand to be the amount of premium due for the unexpired term of the policy. The agent is required to estimate and certify the amount due, and that the policy has been canceled or returned, which has the same effect. This certificate is by law made evidence of the cancellation or return, and the amount of the unearned premiums; but if the agent should refuse to do this duty, the policy-holder, I have no doubt, may cancel or tender the return of the policy and make proof of its value; his redress can not be defeated either by the failure of the agent to do his duty or by the want of such agent. After, however, all these demands have been satisfied, the funds in the hands of the Treasurer are to be returned to the depositor or its assignee. It is the company and not the agent that makes the deposit, although the company acts through its agent, being incapable of any other action. After those are satisfied who have this special lien on this fund, I incline to the opinion that it is liable to other creditors of the depositor or its assignee; but, under my view of the right of the parties to this suit, the decision of this question is unnecessary.

By an act of the Legislature, women were authorized to hold the office of notary public. The question of its constitutionality was submitted to the State Attorney-General. He gave his judgment that the law was constitutional, on the ground that the office of notary public was not such a public office as was contemplated in Section 4, Article XV., of the Constitution of the State.

In another case appealed to the United States Circuit Court from the Southern District of Mississippi, it was decided on March 7th that, under the code of Mississippi, in order to authorize a judgment against a married woman, her liability must be established by showing that she has a separate estate chargeable with the obligation sued on; that a married woman is incapable of being bound either by a contract or judgment except in special cases authorized by law; and that if a suit is against her and her husband, no judgment will be rendered against her unless the liability of her separate property be first established.

An act of the Legislature passed March 5th,

1878, which appropriated a portion of the school fund to certain high schools, was declared by the Supreme Court of the State to be unconstitutional. The Court said that "no portion of the school fund can be diverted to the support of schools which in their organization and conduct contravene the general scheme prescribed. That is to say, the fund must be applied to such schools only as come within the uniform system devised; are under the general supervision of the State Superintendent, and the local supervision of the County Superintendent; are free from all sectarian religious control, and are open to all children within the ages of five and twenty-one years, though this freedom of admission to all will not preclude the classification of the schools according to the ages, sex, race, or mental acquirements of the pupils, provided only they remain free to all who come within the class to which the particular school is set apart."

The Faculty of the University of Mississippi appointed a committee of the professors "to consider the propriety of uniting with other educational bodies in a memorial to Congress for the appointment of a commission whose duty it shall be to inquire into and report upon the desirability of attempting to simplify the English spelling." In a report made on February 11th, the committee state the origin of the proposed reform agitation, the changes contemplated, and the present strength of its friends. So much as relates to the changes contemplated is briefly set forth in these words:

1. There are eighteen Roman letters which commonly represent in English nearly the same elementary sounds which they represented in Latin: a (father), b, c (k, q), d, e (met), f, g (go), h, i (pick), l, m, n, o (go), p, r, s (so), t, u (full).

2. The consonant sounds represented in Latin by i and u are now represented by y and w, and the consonants corresponding to f and s are now represented by v and z.

3. There are three short vowels unknown to the early Romans which are without proper representatives in English, those in fat, not, but.

4. There are five elementary consonants represented by digraphs: th (thin), th-dh (thine, then), sh (she), zh (azure), ng (sing); to which may be added ch (church), g (j).

It seems best to follow the Latin and other languages written in Roman letters, in the use of a single sign for a short vowel and its long, distinguishing these, where great exactness is required, by a diacritical mark. The alphabet would then have thirty-two letters. Twenty-two of these have their common form and power described in 1 and 2. The three vowels in fat, not, but, need new letters. For the consonants now represented by digraphs new letters would be desirable.

The changes recommended are substantially these: 1. Thirty-two letters instead of twenty-six. 2. Of these twenty-three are old ones, viz.: a, b, c, d, e, f, g, h, i, j, l, m, n, o, p, r, s (so), t, u (full), v, w, y, z. 3. Three new vowel-letters for á, ò, ù. 4. That k, q, and x be dropped. 5. That the digraphs now representing single consonants be for the present named and treated as single letters, viz.: th, dh, sh, zh, ng, eh. 6. That e and i be distinguished by diacritical marks.

This is the substance as to the new alphabet proposed; but the committee of the Philological Association in 1878, at Saratoga, made the following suggestions as to spelling:

1. Drop all silent letters, especially silent e after a short vowel, as in have, give; and a in ea when pronounced e short, as in head, health. 2. Write f for ph in such words as alphabet, philosopher. 3. When a word ends in a double letter, omit the last, as in shall, cliff. 4. Change ed final to t where it has the sound of t, as in lashed, impressed.

The alphabet recommended above by the Philological Association was adopted by the Spelling Reform Association in 1877; and the rules for spelling have been since adopted.

The advocates of spelling reform argue thus: 1. The alphabet is redundant, defective, and inconsistent. 2. The spelling hinders our people from becoming readers, (1) by the length of time it takes to learn, and (2) by the dislike of reading it induces. An average German learns, they say, in about one third the time. 3. Civilization and Christianity are both hindered by the difficultness. 4. Vast annual expense is incurred by printing silent letters. 5. In most languages changes in written words rapidly correspond to changes in pronunciation. Why not in ours? 6. The language was made for men, and not men for the language. 7. This system will make it easier for all to read English who read French, German, Latin, Greek, or Anglo-Saxon. 8. It will make the learning of foreign tongues easy. 9. It will settle the school pronunciation of Latin and Greek. 10. Several modern languages have had their spelling reformed by the influence of learned academies, or by government; and surely no language needs reform more than ours, and no race are more ready reformers.

The report to the Faculty concludes with this resolution:

Resolved, That the irregular spelling of the English language is a serious hindrance in learning to read and write, and is one cause of the alarming illiteracy in our country; that it occupies much time in our schools which is needed for other branches of study; and that it is desirable to request our Legislatures, State and national, to appoint commissioners to investigate this matter, and report what measures, if any, can be taken to simplify our spelling.

The elections to be held in the State in 1879 were for approval or rejection of a constitutional amendment, and for the choice of members of the Legislature, district attorneys, sheriffs, Chancery and Circuit Court clerks, and county and municipal officers. The constitutional amendment proposed was as follows:

SECTION 6. The political year shall begin on the first Monday in January; the Legislature shall meet at the seat of government on the first Tuesday after the first Monday in January, A. D. 1882, also on the first Tuesday after the first Monday in January, 1883, and biennially thereafter, unless sooner convened by the Governor. The time and place of meeting may be altered by law.

SEC. 7. A general election, by ballot, shall be held on the first Tuesday after the first Monday in November, A. D. 1880, and biennially thereafter. All officers who go into office on the first Monday in January, 1882, shall be elected at the general election in 1880. All officers who go into office on the first Monday in January, 1880, and all officers who go into office on the first Monday in January, 1882, shall hold their respective offices for three years; but the constitutional terms of their successors shall not be hereby affected. Electors, in all cases, except in cases of treason, felony, and breach of the peace, shall be privileged from arrest during their attendance at elections, and the going to and returning therefrom.

The objection urged against this amendment was, that it would require the State election to be held on the same day with the Congressional elections. If, therefore, the rule of mili-

tary supervision of Congressional elections was to be continued, the State elections would be exposed to foreign interference.

At the commencement of the election campaign some attempts were made to arouse and organize those who had formerly been known as Radicals. The tendency of these efforts seems to have been considered on the part of the whites as likely to array against them the blacks. In their apprehensions they were led to demand the withdrawal from the county of Yazoo of the principal or white candidate for sheriff. This was refused, but the candidate promised to decline the nomination, which was accepted. Subsequently, in the heat of the campaign, personal remarks led to personal encounters, and in some instances a loss of life. There were two cases attended with unusual excitement.

The election was confined to the choice of county officers and a State Legislature. The result of the latter was: in the Senate, 33 Democrats, 2 Nationals, and 1 Republican; in the House, 96 Democrats, 13 Nationals, 5 Republicans, 3 Independents, and 3 vacancies; total, 120.

In addition to the expenditure for public schools, the State has expended during the last nine years for Alcorn (colored) University, \$216,250; the colored State normal school at Holly Springs, \$51,450; that at Tugaloo, \$23,000.

An important invention for the conversion of seed-cotton into yarn was made by L. T. Clements of Smyrna in Tennessee, who died two years ago, without accomplishing anything by his invention. It was taken up by a citizen of Mississippi and improved; new patents were obtained, and it was brought into use in many of the mills in the Carolinas, Tennessee, Georgia, Alabama, and Mississippi, under the name of "the Clements attachment." It is a combination of the gin and the card for converting seed-cotton by one operation into slivers. The machine is thus described:

It consists of a thirty-six inch top-flat, self-stripping card; the attachment (which is a diminutive gin $18 \times 18 \times 36$ inches) is substituted for the licker-in and feed-rollers of the card; its saws are seven inches in diameter, with fourteen teeth to the inch, and revolve from 100 to 200 times per minute. The brush connected with the saws is a cylinder covered with bristles; its periphery revolves little faster than the saws, and has also a traverse or horizontal motion. The periphery of the card travels a little faster than the brush; a feed-table is placed above the card and connected with the attachment by a chute, and gives a regular supply of seed-cotton to the attachment. A stop-motion is used to save waste in case of accident. These, with a small drawing roller between the doffer and calender rollers, to reduce the sliver to the ordinary working size, and a cam-motion to receive said sliver, are all the changes and additions made to the card, and there are none made elsewhere. The seed-cotton is spread upon the endless apron of the feed-table, and passes thence through the chute into the attachment, where the lint is removed from the seed, and while on the fine saw-teeth (after passing the ribs) passes through a set of combing-plates, which removes all extraneous matter, and delivers the filaments to the brush, which delivers

them to the card, and thence, through the doffer, small drawing and calender rollers, they are delivered as perfect sliver into a revolving can. By this process only four machines are necessary to convert any given amount of seed-cotton into perfect yarns, viz., card, as changed, drawing-frame, speeder, and spinning-frame. It is true a cleanser of seed-cotton is used as a preparatory machine. Its size is $22 \times 28 \times 44$ inches; cost, \$75; capacity, 6,000 pounds of seed-cotton per day; power necessary to drive, one half of one horse.

The new process dispenses with fully one half the building, machinery, motive power, and operatives hitherto necessary to convert any given amount of seed-cotton into yarns; causes the card, with the same amount of motive power, to do five times as much work; saves one half the usual waste, and produces stronger sliver, rove, and thread than can be made of baled cotton, which, on account of their extra strength, seldom break or let down, thereby enabling operatives to attend more machinery and each machine to do more work. The thread is equal in every respect to that made of baled cotton, fifty per cent. stronger; and more sheeny. The attachment supersedes the gin, press, and compress, because they are intended and only used to render cotton transportable; the willow-er, lopper, double lopper, breaker, and four fifths of the cards, because they are only used to try to remedy the injury done by the gin, press, and compress; it supersedes the railway, railway drawing-head, also all jack-frames, slubbers, mules, twistlers, eveners, etc., etc., simply because they are costly and unnecessary machines, and perfect thread can be made without them.

The reason why the card will do five times as much, using seed-cotton and the same amount of motive power, as it did by the old process, using baled cotton, is because the filaments are not permitted to leave the machinery, fly, or become tangled, but are kept straight and parallel, and carding is but the straightening of the cotton filaments. The saving of one half the usual waste is because fresh, live cotton is used, and half the usual machinery dispensed with. The extra strength of the thread and skein is owing to the working of the cotton fresh from the seed, the oil of which has kept it alive, light, elastic, and flexible, with all its attenuating qualities perfect; and the fact that it has never been nap-cut or tangled by the gin, pressed, compressed, or permitted to become dry, seasoned, and brittle in this tangled condition, nor has it been injured by the willow-er, lopper, double lopper, breaker, and cards, where the damage done by the gin, press, and compress is sought to be remedied. But these advantages, great as they are, are not half that are claimed for the "new process." The ginning, baling, bagging, and ties are saved; the seed inures to the manufacturers; no loss from falsely packed cotton; no strikes from operatives, for it is the poor man's factory, and his daughters are the operatives. The entire capital necessary for the smallest-sized new-process mills, including building and motive power, is only \$3,500, and will pay a net profit of 30 to 50 per cent. per annum. It saves all expense, loss, waste, dryage, perquisites, general average accounts, stealage and speculation, etc., on cotton in transit from the field to the factory, be that distance 15 or 15,000 miles, as from India to Manchester, England.

MISSOURI. The Legislature of this State assembled on January 8th. In the Senate Lieutenant-Governor Brockmeyer presided, and in the House Mr. Belch of Cole County was chosen Speaker. After a session of 132 days, and the passage of 208 bills, it adjourned on May 20th.

In the House, the following resolution was adopted:

Whereas, There is great financial stringency among the people of the whole country, and especially among the people of Missouri; and,

Whereas, The burdens of taxation are greatly due to our bonded indebtedness, which knows no shrinkage and must be provided for by law; and as the amount of our annual taxation is greatly in disproportion to the value of all agricultural, manufacturing, and other products of labor; and,

Whereas, Coming fresh from the people as we do, to whom we pledged ourselves to be in favor of and aid in all legislation that will tend to lessen the burdens of taxation; therefore, be it

Resolved, That this House is in favor of such retrenchment in all the departments of government as will reduce the burdens of taxation, and in all our legislation we will ever keep before our minds the interests of the great laboring classes of our State.

An election of Senators in Congress took place on January 21st. For the short term, expiring on March 4th, the vote in the Senate was: for General James Shields, Democrat, 26; Charles G. Burton, Republican, 5; T. Z. C. Fogg, National, 2. In the House the vote was: Shields, 102; Fogg, 22; Burton, 12. For the full term ensuing, the vote in the Senate was: for George G. Vest, Democrat, 26; Gustavus A. Finkelnburg, Republican, 5; Henry Eshbaugh, National, 2. In the House the vote was: Vest, 99; Eshbaugh, 25; Finkelnburg, 12.

On January 25th the State Lunatic Asylum, located at St. Joseph, was burned. The fire commenced in the afternoon in the extreme eastern portion of the building, and, the wind being from the east, the flames spread rapidly to the main building, and in half an hour the entire structure was hopelessly destroyed. There were 218 patients in the asylum, and the efforts of the superintendent and officers were immediately directed to the removal of the inmates. Fortunately, their work in this respect was speedily and effectually done. Not a life was lost. An appropriation of \$75,000 was passed at this session to rebuild the asylum.

A constitutional amendment to remove the State capital from Jefferson City to Sedalia was rejected. The Legislature concluded that, with an annually recurring deficiency in the revenues and a serious difficulty in meeting it, it was no time for removals that would call for large extra expenditures.

A bill providing for a trial of the bell-punch in Missouri passed the House by a vote of yeas 85, nays 26, but was lost in the Senate by a vote of yeas 8, nays 15.

An effort was made to repeal the rat-bounty law, but failed. This law, passed in 1877, authorized county courts to offer a reward of five cents each for rat-scalps, delivered in round lots of not less than fifty. It was put in practice in a few counties, and found to work too well for the county exchequer. Rat-hunting became a flourishing business, and the revenues of some counties were severely taxed to pay for the scalps. In Bates County as much as \$1,700 has been paid out, and in Andrew \$3,200. These payments show a slaughter of 34,000 rats in Bates and 68,000 in Andrew; but, as the member from Bates said, it had "nearly bankrupted the treasury," and, as the mem-

ber from Andrew stated, "if it had not been stopped, the treasury would have been completely drained."

A bill was introduced into the House to make the whipping-post one of the penal institutions of the State. It provided for the use of the lash in cases of petty larceny, wife-beating, and cruelty to children. Mr. Anderson, chairman of the Committee on Retrenchment and Reform, was in favor of the bill as an economical measure in the matter of criminal costs. Mr. Gwynne said to whip a man was to destroy his manhood. He was opposed to the bill on principles of humanity. Mr. McIntyre of Audrain said the way of the transgressor was hard, and if men didn't want to be flogged they must not violate the law. Mr. Campbell thought the bill would increase rather than diminish criminal costs; hence he opposed it. Mr. Mudd of Lincoln offered an amendment making the bill apply to embezzlers and those who refuse to return their property to the assessor for purposes of taxation. It was finally lost by a vote of yeas 44, nays 75.

A compulsory education bill introduced in the Senate required all children between the ages of seven and fifteen years to attend the public schools twelve weeks in each year, excepting in cases where it would be obviously improper to compel such attendance. It however failed to become a law.

A delegation of women appeared before the Committee on Constitutional Amendments of the House, to urge upon its members the propriety of reporting a constitutional amendment conferring the right of suffrage upon women. Mrs. Hazard said that if women were permitted to vote, the political pool would not be as muddy as it is. Mrs. Dickinson said that she believed that some of the opposition came from men who feared that women would seek office. Mrs. Starrett said that by mingling with the world and transacting her own business she had come to believe in woman's rights. She did not believe that physical strength was the basis of government. Mrs. Hazard said that in six States women were allowed to vote on school matters. Mrs. Starrett read a communication from the Speaker of the Wyoming House of Representatives, referring in glowing terms to the excellent effects of woman's suffrage in that Territory. Mr. Lackland of St. Charles asked, in case of woman's suffrage, if the husband would not control the vote of the wife? Judge Dryden said that from experience he thought not. Mrs. Hazard said they would be glad to hear the views of the committee, so that they could answer any objections. Judge Dryden said that in behalf of the committee he would be compelled to decline the unequal combat. The committee reported the constitutional amendment to the House, and that body indefinitely postponed its consideration by a vote of yeas 64, nays 61.

A white earth called "tiff" or baryta is an important product of Missouri. It is found in

large quantities in Washington, Jefferson, and Franklin Counties, and the other regions where lead abounds. When ground in oil and mixed with a small proportion of white lead, it makes a cheap paint very useful for many purposes. Much of the so-called white lead in the markets contains more tiff than lead, for large quantities of it are exported from the State. A bill was passed not to forbid the mixture of tiff with white lead, but requiring that the proportion of the cheaper material in the mixture shall be marked on every package sold in the State, whether manufactured there or brought from other States, so that purchasers might know what they were buying. The bill peremptorily forbids the mixture of the earth in bread, confections, and other articles of food, under severe penalties.

A resolution designed partly to secure fair voting, and partly to thwart the Federal supervision of State elections, was offered in the House, directing the Judiciary Committee to inquire into the expediency of changing the present method of voting by ballot for the living-voice method, in which every voter announces the name of each candidate he votes for. This was the fashion that prevailed many years ago, and is still in vogue in the old States of Virginia and Kentucky. In all the other States it has yielded to the system of ballots, the object of which is to prevent any one from knowing how the voter votes except himself. The resolution also directed the committee to inquire into the expediency of holding the State election on a different day from that on which the Congressional election is held.

For five years the State revenues have been falling short of the amount needed to defray the expenses of the State government and provide for contingencies. The public expenditures in some departments have been reduced, but still a deficiency annually occurred, which had to be met with a short loan in the shape of revenue bonds. The explanation of this deficiency is to be found in the increase of the number of recipients of public charity—insane, deaf and dumb, and blind—and the consequent increased cost of the charitable institutions; the large sum necessary to defray the cost of criminal trials; and the decrease of the State valuation of property from which taxes were derived. The State rates of taxation are limited by the Constitution to 40 cents on the \$100—one half for revenue and one half for interest and principal of the State debt. The interest-tax yields enough for payment of the annual interest on the debt, and something more; but the revenue-tax does not yield enough for the demands on that fund. One fourth of the State revenue has to be paid over for the support of the public schools, and this leaves only 15 cents on the \$100 for all other expenses. If it were increased to 20 cents, there would be no deficiency; the revenues would be ample to meet the expenditures, and the Treasury

would be in an easy condition. But as the Legislature has no authority to increase the tax-rates on property, the needed additional revenue must be sought for in special taxes and licenses. Among the schemes devised was the bell-punch tax, the failure of which is mentioned above. A bill for a poll-tax of \$1 was introduced, but failed to become a law. A bill was also passed by the House, authorizing the issue of \$8,000,000 four per cent. State bonds of small denominations, in imitation, except in one respect, of the Georgia law. (See "Annual Cyclopædia" for 1878, GEORGIA.) The intent was to gradually replace the six per cent. State bonds as they fell due with four per cents, and thus save two per cent. in the annual interest. The new bonds were to be 5s, 10s, 20s, 50s, 100s, 500s, and 1,000s, a little larger than greenback bills, with small annual interest-coupons attached. They were to be payable at the pleasure of the State after five years from date, but not due till twenty years, and with the coupons were to be receivable for State interest-taxes. They were to be sold or disposed of at not less than their par value, and to be liable to taxation. Only five votes were cast against the bill. Another bill, to issue \$250,000 small funding State bonds of the denominations of \$5 and \$10, was voted down by the Houses after which the vote was reconsidered and the bill referred to a special committee.

There was quite a difference between the views presented to the Legislature by the State Treasurer and the State Auditor. According to the latter, the State assessment, exclusive of the railroads, for the present year, was \$523,982,773—a decrease of \$2,586,051 from the assessment, and of \$60,736,402 from the equalized valuation, of 1877. Estimating that the State Board would increase the assessment \$10,000,000, the reduction from 1877 would be \$50,000,000. In other words, there would be \$50,000,000 less taxable valuation in the State to raise taxes from during the two years 1879-'80 than there was in the previous two. The tax-rate (40 cents on the \$100) is fixed by law and can not be changed, so that the Auditor estimated that the decrease in the valuation would cause a reduction in the revenues of \$200,000 a year, or \$400,000 for the two years. On the other hand, the State Treasurer submitted to the House, in answer to a resolution adopted on May 6th, an official statement for the four months ending April 30th. It stated that the receipts of the Treasury from January 1st to May 1st were \$1,677,455.02, and the disbursements \$1,213,872.08. The total balance on hand at the latter date was \$936,045.86, of which \$704,383.98 was credited to the interest fund, \$201,372.16 to the school fund, and \$11,502.02 to the revenue fund. He estimated the amounts to be drawn against the revenue and interest funds for 1879-'80 at \$5,100,000, or \$100,000 less than probable receipts. This opinion was finally adopted by the

Legislature, and the measures of relief above mentioned failed of a final passage.

There were, however, modifications made in some of the tax-laws. Thus the revised revenue law of the State as agreed upon by the Legislature, while leaving the general text of the old law undisturbed, made a few changes. In the first place, it extended the exemption from State taxes which certain kinds of property enjoyed to all other taxes, and made such property free from county, city, and school taxes also. The new provision concerning the return of notes and bonds is very rigorous. The old law merely required the tax-payer to return the gross amount of such notes and bonds owned by him or her, and this requirement was easily evaded. To make it more effective, the new provision requires the return to give a detailed statement of all notes and bonds owned—the amount and date of each separate note and bond, and the name of the maker. The tax-payer is to make oath to this list, and to state the value of the notes and bonds so returned; but his valuation is not final, as it is subject to review by the County Board of Equalization. It was thought this provision would secure the return of a large amount of notes and bonds held in the State which the owners have habitually refused to give in for taxation. Another law was also passed which more explicitly regulated the assessment and taxation of railroads.

The matter of the late State Treasurer Gates (see "Annual Cyclopædia" for 1878, Missouri) was before the Legislature during the entire session. A committee of the House reported on the subject. Resolutions were adopted to appoint a committee to propose articles of impeachment, which were reported, and in the end failed to pass. The whole case is summed up in the following statement:

There is no one in the State who wants to wreak vengeance on the State Treasurer. On the contrary, there is among those who believe he ought to be impeached an almost universal sympathy for his misfortunes, and a keen regret that the scheming authors and beneficiaries of his misconduct can not be reached, instead of himself. It is known that he was entrapped into the official malfeasance that constitutes the ground of complaint by others, who sought to pervert him and his public trust to their own advantage, and it would be a relief to the public if these could be punished and he permitted to escape. It is because he is the official agent of the wrong done, and the only figure that disciplinary measures must take hold of, that the demand for proceedings against him is made. It is absurd to deny that the State Treasurer has done anything wrong. He has admitted the very wrongs charged: first, that he refused to obey the constitutional requirement about depositing the State moneys, because there was no penalty for the offense—though this absence of penalty did not prevent him from obeying the requirement after the moneys had been lost; second, that he took \$5,000 out of the Treasury and gave it to persons in Jackson County as indemnity against loss in going bail for him in his individual lawsuit; third, that he deposited \$300,000 in the Mastin Bank, after the owners thereof had virtually confessed to him that it was insolvent—thus using the State's money to keep up a failing bank. There is no disputing these facts. They stand admitted; and

though the State may, after a protracted lawsuit, recover the \$250,000 due from the Mastin Bank, it is for the people's Representatives and Senators to decide whether they can afford to permit a conspicuous malfeasance to pass unrebuked.

Although the Legislature did not make any special provision for bringing suit against the Treasurer, yet there is a general law regulating official bonds, recently passed, which reaches the case. It makes it "the duty of the Governor, whenever, in his judgment, the interest of the State would be promoted thereby, to direct the Attorney-General, in the name of the State, to bring and prosecute any suit or suits, upon any official bond or bonds executed to the State, as to him may seem proper"; and it further empowers the Governor to inspect the books, minutes, papers, and vouchers, or direct the same to be done by the Attorney-General, in any of the State offices, so that he may have a thorough understanding of the affairs of the State office inquired into.

A bill was passed to provide for the establishment of a Bureau of Labor Statistics, appropriating \$5,000 biennially for its support. The Commissioner, appointed by the Governor every two years, is to be some suitable person identified with the labor interests of the State. His duty will be to collect, assort, classify, and publish in annual reports, statistical details relating to all the industries in the State—giving the number of persons employed in the various industries, the rate of wages paid, the amount of raw material used, and the value of the finished product.

A bill was also passed to provide for the establishment of an Immigration Bureau, with three Commissioners. It makes an annual appropriation of \$5,000 for the object, and assigns to the Bureau as a part of its duty to collect and compile, from all available sources, correct statistics and descriptions of the material resources and social condition of the State, and from time to time to prepare and publish pamphlets, with maps of the State, essays, and articles correctly describing its developed and undeveloped agricultural and mineral resources and manufacturing interests, and such other local information as may be of interest to immigrants. It is urged in favor of the State as a desirable location for immigrants, that the land is very cheap; that it has a well-arranged and nearly complete system of railroads penetrating to all sections of the State, while in the newer States the cheap lands lie in regions remote from the few railway lines built; that it possesses both timber and prairie lands, its forests yielding valuable woods for which there is a constant market, and at the same time furnishing a protection against the droughts that afflict unwooded regions. To these may be added an abundance of good water, supplied by both flowing springs and running streams. Missouri is a very large State, more than a third larger than New York, and a considerable proportion of its area has never been brought

into service for any purpose whatever. In the southern and western counties game is more abundant than in Kansas and Texas, and three fourths of the area has never been brought under cultivation.

A revision of the law relative to insurance was adopted. It provides that a life policy shall not be wholly forfeited and the holder lose all he has paid on it by his failure to keep the premiums paid up, but that, in case of such failure, he shall be entitled to that proportion of the original amount assured indicated by the payments he has made—the amount to be payable at his death. As to fire policies, the law provides that the amount insured “shall be taken conclusively to be the true value of the property when insured, and the true amount of loss and measure of damages when destroyed”; but it allows the company the choice of either paying this amount in cash or rebuilding and restoring the building to its original condition as to value, size, plan, and general finish. If the building is partially destroyed or injured, the company must pay a sum of money equal to the damage done, or repair the same to the extent of the damage, at the option of the insured. Heretofore this option has been exercised by the company, but the new law gives it to the insured party.

A fish bill was also passed by the Legislature, which places the matter of stocking the streams of Missouri with choice food-fishes under the supervision of three Commissioners, who are not to receive any compensation for their labors, but are to have their actual expenses paid. An appropriation of \$3,000 is made for a hatching-house, and a suitable agent to have charge of it, the spawn and fry from this establishment to be distributed in the waters of the State. The act contains severe prohibitions against the wanton killing of fish, and the taking of fish by wholesale by means of nets and traps. A Commissioner, who had been acting during the previous year, obtained from Iowa two hundred thousand salmon-eggs, and with the assistance of gentlemen in various parts of the State, distributed them in the Missouri and its tributaries, Spring River and its tributaries, the Lamine and other streams of Cooper County, the streams that head in the neighborhood of Pierce City, and the lakes and streams of St. Louis County.

The temperance movement received more than usual attention in the Legislature, which seemed disposed to assist it by increasing the difficulties in the way of obtaining a license to sell liquors. A bill passed for the government of cities of the fourth class provides that “no license shall be granted to keep a dram-shop or tippling-house until a majority of the tax-paying citizens shall sign a petition for such license to be granted, which petition shall be filed with the city clerk.” Cities of the fourth class are those having a population between 500 and 5,000; they embrace the greater number of considerable towns in the State. In the opin-

ion of the Attorney-General, the term “tax-paying citizen” in the statutes means every person, male or female, who owns property in the block, square, city, or township in which the dram-shop is sought to be located, which is subject to taxation. Whether the taxes on the property have been paid or not is a question that has no pertinence. Persons who pay only a poll-tax are not such “tax-paying citizens.” So that the County Court which grants the licenses has no authority to grant such license unless the petition therefor is signed by a majority of the owners of taxable property in the block, square, city, or township in which the dram-shop is desired. Neither, in his opinion, can the Court make an order for the renewal of a license in anticipation of its expiration. For “the sale of intoxicating liquors is by law illegal; it is not a privilege of the citizen. The right to sell can only be acquired by complying with the law. One who does not possess the qualifications prescribed by the statute can not acquire that right. (*Austin vs. Bate*, 10 Mo., 591; *State ex rel. Kyger vs. Holt Co. Ct.*, 39 Mo., 521.) The qualifications which an applicant for license must possess are, that he has not heretofore sold intoxicating liquors on Sunday or been convicted of any of the violations of chapter 58, or that he has not sold intoxicating liquors to a minor without proper permission, etc. How can the County Court know in December that a person who then has a license to keep a dram-shop will possess them on the first day of February following?”

Several bills were introduced to regulate the sale of liquor by druggists. They had their origin in the complaint that in many towns the suppression of regular drinking-saloons has converted the drug-stores into tippling-places. The withholding of dram-shop licenses by a county court or a town council does not mean any material decrease of liquor-drinking, for the unlicensed drug-stores supply drinkers all the spirits they want. The State Auditor suggested the propriety of requiring the proprietors of drug-stores to take out a dram-shop license. He stated in his report that many drug-stores were “unlicensed tippling-houses.” Mr. Anderson of Marion asserted that “drug-stores were doing more to promote intemperance over the State than the saloons.” Mr. Riley of Buchanan declared that “the drinking of the greater number of young men begins in drug-stores.” It was urged in favor of requiring the license that the sale of spirits by druggists deprived the State of a considerable portion of the revenue it had a right to exact from the sale of spirits; and that it was unjust to dram-shop proprietors who pay for a license to subject them to the competition of druggists who sell without. On the other hand, it was said in reply that it was only a small minority of the drug-stores in the State that were obnoxious to the charge of being unlicensed tippling-houses, and it would be unfair to make

all the others bear the penalty of the offense of these few. Nevertheless, a license bill relating to druggists passed the House by the decisive vote of 93 yeas to 13 nays; but it failed to become a law.

But the most surprising measure acted upon was the proposition to amend the State Constitution by making the well-known "Maine Law" a part of it. A concurrent resolution was reported, which provided for the submission to the vote of the people in November, 1880, of the following amendment to the State Constitution:

That Article XIV. of the Constitution of the State of Missouri be and the same is hereby amended by adding four new sections thereto, which shall read as follows:

"SECTION 13. The manufacture and sale of intoxicating liquors in this State, except for medicinal, mechanical, and sacramental purposes, is prohibited.

"SECTION 14. Every person who shall manufacture or expose for sale or sell any intoxicating liquors, except for medicinal, mechanical, or sacramental purposes, shall, upon conviction, be deemed guilty of a misdemeanor, and shall be fined not less than fifty nor more than five hundred dollars, and by imprisonment for not less than one nor more than six months, for each offense.

"SECTION 15. The Legislature shall regulate such manufacture and sale for medicinal, mechanical, and sacramental purposes, and shall have power to make such other provisions for the enforcement of this article as may be deemed necessary.

"SECTION 16. The judges of all courts having criminal jurisdiction shall give sections 13, 14, and 15 of this article in charge to the grand jury at each term of court."

This resolution passed the House by a large majority. In the Senate it was reported favorably by the Committee on Constitutional Amendments, but was finally lost by a vote of 12 yeas to 10 yeas.

The defaulting of counties, cities, and towns in the payment of their bonds, or in the payment of interest, was undoubtedly greater in Missouri than any other State. The litigation that ensued was immense, and almost every form of question came up in the State and Federal courts. In this state of affairs the Legislature was not inactive. A principal object before it in its action was to prevent or avert the interference of the Federal courts in the financial affairs of the municipalities. One of its earliest measures was the adoption of the following protest, which passed the House by a vote of yeas 94, nays 5:

It being our privilege, as the representatives of all the people of this State, to declare their will, it becomes our duty to do so when, in our judgment, the cause of good government may be thereby advanced; and whereas, as has been truly said, "the jurisdiction now claimed and exercised by the circuit courts of the United States over questions of corporate and individual rights, arising under the laws of the States, tends to oppress and burden litigants to such an extent as to amount to a practical denial of justice in many cases": now, therefore, and to the end that relief may be obtained,

Be it resolved by the House of Representatives of the Thirtieth General Assembly of the State of Missouri, the Senate concurring therein:

That we do earnestly protest against the further ex-

ercise by the Federal courts of such jurisdiction and powers, and demand—

1. The repeal of the existing laws of Congress concerning the "removal of causes" from the State courts to the circuit courts of the United States, known as acts amendatory or supplemental to the "Judiciary Act" of September 24, 1789, and more particularly described as the several acts of Congress, approved, respectively, July 27, 1866, March 2, 1867, and March 3, 1875.

2. The enactment of such laws as will, in all cases not expressly provided for by said judiciary act of 1789, confine the jurisdiction of the Federal courts to such causes as involve the construction, interpretation, or enforcement of some provision of the national Constitution, or of some treaty or law enacted in pursuance thereto, and which will secure to the individual citizen, or to any corporation, private or municipal, an adjudication of all matters of contract, or of other legal rights, and the redress of all legal wrongs, where such Constitution, treaties, or laws are not called in question, in the courts of the State where such contracts were made or wrong inflicted, if made or done by any municipal corporation, and if made or done by an individual citizen or private corporation, then in the courts of the State which may be the domicile of such person, or where such person may be found, or where such corporation may be found to exist.

And further be it resolved, That our Representatives in Congress are hereby requested and our Senators instructed to use their efforts and their influence to the speedy effectuation of the measures aforesaid; and that they may be informed hereof and of our desires in the premises, the Secretary of State is requested to transmit to each of our Senators and Representatives a duly authenticated copy of these resolutions.

An act was also passed providing that the resignation of county officers should take effect from the date of filing in the office of the County Clerk. The previous law required county officers to continue to serve, even after resignation, until their successors were qualified, so that there should be no lapse of the office. The only reason for the act was that it gave county judges an opportunity to evade the process of courts in suits against the county by a sudden resignation, to take effect the moment it was filed. This act was finally vetoed by the Governor.

Another act was passed entitled "An act for the better protection of the county revenue funds of the State." It provides that every county court shall at the May term of every year appropriate "all the revenues collected and to be collected, and moneys received and to be received, for county purposes," in the following order: First, to the pauper fund; second, to the road and bridge fund; third, to the salary fund; fourth, to the jury, witness, and election fund; fifth, to the contingent fund for the other ordinary current expenses of the county not specially provided for, which shall not exceed one fifth of the total revenue. These five funds are to be carefully maintained, separate and distinct; the money in one fund shall in no case be used for any purpose other than its own; and any county officer who shall fail or refuse to perform the duties required of him under the act shall be liable to a fine of one hundred to five hundred dollars, and forfeiture of his office. The real point of the act was considered to be the omission of an interest fund.

A still more important act was approved on March 8th. It is entitled "An act concerning the assessment, levy, and collection of taxes, and the disbursement thereof." Its object is to intrude the judiciary of the State into the dispute between the indebted counties and their creditors, and thwart the judicial collection of these debts by the United States courts. It provides that county courts shall levy only these four taxes, viz., the State revenue-tax, the State interest-tax, the tax for current county expenses, and the school-tax; and that no other tax shall be levied unless ordered by the circuit court for the county, or by the judge thereof in chambers. Any county judge, or other officer, who shall assess, levy, or collect, or attempt to assess, levy, or collect, any other tax without an order from the circuit court, and any county officer "who shall order the payment of any money, draw any warrant, or pay over any money, for any other purpose than the specific purpose for which the same was assessed, levied, and collected, or shall in any way or manner attempt so to do," shall be liable to a fine of five hundred dollars and the forfeiture of his office. This act is known as the "Cotley law," after its author, and was passed with the "emergency clause," and therefore took effect immediately. There existed at this time a sharp and emphatic difference between the Supreme Court of the State and the Supreme Court of the United States on the validity of what are called the township railroad bonds, and also on points involving the validity of some county railroad bonds. If these bonds were invalid, as held by the State court, the county authorities would have no power, under this new measure, to levy a tax to pay them, and the State Circuit Courts, which follow the decisions of the State Supreme Court, would not make orders for the levy of such taxes. And in cases where the United States Court orders the County Court to give a judgment creditor an order on the general fund of the county for the interest on such bonds, this law forbids the County Court to obey, and it also forbids the County Treasurer to make payment of judgments or interest on such bonds out of the general county fund. In short, the measure forbids county courts to pay any bonded debt, or the interest thereon, without an order from the Circuit Court; and it virtually prohibits the payment of all those railroad debts which the Supreme Court of the State has decided invalid, and the United States Supreme Court has decided valid and binding.

The constitutionality of the act was immediately called in question before the courts. The most important case of this kind was discussed before the United States Circuit Court in Jefferson City in March. As the same questions arose in cases pending in the Circuit Court for the Western District of Missouri, the Judge of that Court also sat with the Judges of the Eastern District to hear the arguments. There

were six cases of *mandamus* on judgments against Johnson County on account of bonds issued. Tuesday was the day set for the County Court to make a return to the *mandamus*. It accidentally happened that the "Cotley bill," as it is called, was signed by the Governor on the previous Saturday, and with an emergency clause it went into immediate operation. The returns to the *mandamus*, which were filed on Tuesday by the counsel for the county, set up the Cotley act for a defense.

In the argument on the constitutionality, ex-Governor Reynolds explained the operation of the act, and contended that it was not at all an infringement of Federal jurisdiction, and that, properly construed and with a proper disposition on the part of both the State and United States courts, it would lead to a settlement of the vexed question of the validity of township bonds. The argument against the constitutionality of the act was presented by Mr. Shields of St. Louis, and the points he urged were: 1. That the law was unconstitutional because it impaired the obligation of contracts. 2. That the law under which the bonds in controversy were issued provided for the levy of a special tax by the County Court, in the same manner as taxes are levied for county purposes; that the law was a part of the contract, and the Legislature can not change it by giving the power to the Circuit Court to levy the tax, because it imposed an additional cost and expense on the bondholder and postponed his remedy. 3. That the Cotley law virtually provided that the Circuit Court should levy and assess the tax, thereby conferring on the judicial branch of the government the taxing power, which is essentially a legislative power, and therefore can not be delegated under the Constitution to the judiciary. 4. That the Constitution provides (Article X., section 1) that the taxing power may be exercised by the General Assembly for State purposes, and by counties or other municipal corporations for county and other corporate purposes; therefore the General Assembly can not delegate the taxing power to the Circuit Court. 5. That by section 10 of Article X. of the Constitution the General Assembly shall not impose taxes upon counties, cities, towns, or other municipal corporations, or upon the inhabitants and property thereof, for county, city, town, or other municipal purposes, but may by general law vest in the corporate authorities thereof the power to collect or assess taxes for such purposes. The Circuit Court being in no sense a corporate authority of the county, it necessarily follows that the Legislature has no right to delegate to it authority to levy such taxes. 6. That the Constitution of the United States gives to the Federal Circuit Court jurisdiction to determine controversies between citizens of different States; and that Court having rendered a verdict for plaintiff in the pending case, the Legislature has no authority to provide for a review of such judgment by the Cir-

omit Courts of the State. 7. The judgment in this case was rendered before the passage of the Cottey bill, and the plaintiff is entitled to all remedies under the law which then existed. All the judges agreed in deciding the law to be unconstitutional.

But a directly contrary decision was given in Cass County. The Circuit Court of that county was asked to give an order for a levy of taxes to pay judgments obtained in the Federal Court on township bonds issued under the act for the levy of a special tax. The Court refused the order, on the ground that the township aid act was unconstitutional, and the bonds issued under it invalid. This the Supreme Court of Missouri had decided, and the Judge held that the decision was binding, not only on the inferior courts of the State, but also on the United States courts, since it was a rule laid down and long recognized by the United States Supreme Court that interpretations of a State law given by the Supreme Court of the State must be accepted and adopted by other tribunals. The Judge of Cass County referred to the opinions given in the United States Circuit Court above mentioned, declaring the Cottey bill unconstitutional because it impaired the obligation of contracts, and emphatically dissented from them. The Supreme Court had declared the township aid act unconstitutional; the bonds issued under it, therefore, were void contracts, and it was absurd, he asserted, to say that the Cottey bill was unconstitutional because it impaired the obligation of void contracts.

A judicial order was issued by the same Judge (Givan) in a case from Johnson County which nearly destroyed the force of the "Cottey law." Under the provisions of the law the Johnson County Court made application to Judge Givan for an order for a special tax-levy to pay the interest on the Normal School bonds issued to secure the location of the Normal School at Warrensburg, and to pay certain judgments of the United States Circuit Court against the county on its township bonds. Judge Givan considered the subject of the Normal School bonds first. He held that they were valid, having been decided to be so by every court that had adjudicated them, and the county was bound to pay the interest on them. As to township bonds issued to railroads, he thought they were invalid and void, because the township aid act of 1868, under which they were issued, was unconstitutional. The Supreme Court of the State has positively decided them to be void, which is conclusive in the State's lower courts. The United States Supreme Court had reached a different decision, but this, he thought, was because it misunderstood the ruling of the State Court, which it attempted to follow. If this was an application for a levy to pay the bonds, or the interest on them, he would be bound to refuse it. But it was a very different thing: it was an application for an order to make a levy of taxes to

pay a judgment, and he had no right, in such a proceeding, to go behind the judgment, and inquire whether it was lawful or not. The judgment of a court of competent jurisdiction can not be brought up for review in a collateral proceeding; it can be set aside only upon appeal; an unappealed judgment by a United States Circuit Court was binding and must be obeyed. It was a thing adjudicated. If the county thinks the judgment of the United States Circuit Court in favor of the township bonds wrong, its proper remedy was to appeal to the United States Supreme Court. Having waived this right, it was bound by the judgment. The county was bound to pay both the Normal School bonds and the judgments on the township bonds; and, therefore, he granted the order for the special tax-levy asked for. The distinction made between an unconstitutionally contracted debt and a judgment for that debt obtained from a court of competent jurisdiction was not expected.

Two or three instances will serve to show the proceedings in these numerous defaulting cases. A peremptory *mandamus* was issued by the United States Court against the Judges of the County Court of Knox County, demanding of the Court warrants on the general revenue of the county. In the mean time the "Cottey bill" was passed by the Legislature. The County Judges now found themselves standing between two fires, being threatened by the new State law with fine and imprisonment if they issued the warrants, and by the United States Court with like penalties if they did not. A citizens' meeting demanded that they should refuse obedience to the mandate; but the Judges, after weighing the matter carefully, decided otherwise, and issued the warrants required of them and returned a formal certificate of obedience. The failure of the Judges to rely on the "Cottey law" was significant, as its author lived in their county.

In the matter of Buchanan County, judgments were obtained against the county in the United States Court on its bonds issued to the St. Louis and St. Joseph Railroad, and the county officers were ordered to pay them; but the Treasurer used the money in the Treasury for another purpose, and so the judgments were left unpaid. This the Court held to be an act of contempt, and, as a punishment, fined the Treasurer \$1,000 and ordered him to be imprisoned till the judgments should be paid. Under the "Cottey law" the conduct of the Treasurer was right: a county officer is forbidden to pay judgments against the county, or any other debt, without an order from the Circuit Court of the county; and to obey the order of the United States Court at Jefferson City would have incurred the penalties of the Cottey law for such cases made and provided. The following remark was publicly made on this case: "The imprisonment of Mr. Hull (the Treasurer) does not secure to the Buchanan County bondholders their money, it is true;

and if all county officers in the State should make up their minds to go to prison rather than obey the orders of the United States courts, these courts would be put to some trouble. But the ready obedience of the Knox County Judges, alluded to, shows that voluntarily going to prison can not be relied on to become epidemic in the State." The Treasurer's bondsmen paid the judgment after three months of his imprisonment.

In Scotland County, the County Court, in obedience to an order from the United States Court, levied a special tax to pay the judgments against the county on their railroad bonds. The tax-payers by common agreement refused to pay this tax, and the collector levied upon and seized some sixty or eighty horses and advertised them for sale. The sale came off in Memphis; but, although the town was full of people, there were no bidders for the horses except the owners thereof, each man bidding for and buying in his own animals at five to ten cents a head. The proceeds of the sale at this rate amounted to next to nothing—not enough to pay the collector's fees—and so the judgments remained unsatisfied. The people had agreed among themselves on this course of action, and it was successfully carried out, there being no outside bidders for the property sold. Recognizing that another seizure of property would have a similar result, the county creditors have abandoned this method, and now bring suit against sixteen substantial citizens of the county who were members of the "Tax-payers' Association," to recover from them the judgment and \$3,000 damages besides, on the ground that they, by intimidation and threats, prevented persons from bidding at the sale and thus defeated the process.

The amount of this indebtedness of counties, cities, and townships in the State outside of St. Louis is estimated at \$30,000,000.

A difference has long prevailed in the counties of the State relative to the assessment of crops. In some counties they have been assessed and taxed; in others no account has been made of them. This has led to confusion in the minds of assessors and complaints of injustice on the part of the farmers. To secure uniformity in the assessment, the State Auditor on August 2d issued a letter of instructions in explanation of the provisions of the Constitution and the revenue law. By the law all property, real and personal, is to be taxed, except such as belongs to the State, counties, cities, towns, cemeteries, churches, schoolhouses, and agricultural societies. The term "property," wherever used in the law, is declared by it to mean and include "every tangible or intangible thing being the subject of ownership, whether animate or inanimate, real or personal." Even crops, whether growing or secured, are not exempt; they are to be assessed and taxed, but with this important difference, that growing crops are part of the land, and are to be valued with it. Thus, if the naked land is

worth \$5 per acre, and the growing but immature corn or tobacco crop on it on the first of August is worth as it stands \$1.50 per acre, then the land with the crop is to be valued at \$6.50 per acre. Crops that have been secured from the ground are no longer to be regarded as part of it, but are to be treated as personal property and assessed accordingly, due allowance being made for the unmarketable condition they may be in. Thus, wheat, oats, and other grain, threshed and in shock or stack, must be valued lower than grain in marketable condition at the mill. All assessments are to be made on the first of August of each year, and the condition crops are in on that day must determine their values respectively. As a general thing in Missouri small grain and hay are severed from the land on the first of August, and would therefore be taxed as personal property for what they are worth; while corn and tobacco, the other considerable staples, together with cotton in the southeastern counties, are immature growing crops, still attached to the land, and therefore to be assessed with it.

The railroad assessment made by the State Board of Equalization includes buildings, rolling-stock, and other materials of the roads, and amounts to \$26,270,096. The bridge assessment amounts to \$27,852,350.

The number of pupils in the Deaf and Dumb Asylum is 177. The average cost per pupil for the two years 1877-'79 was \$196.85; number of teachers, 9; average salary paid, \$714.28. Sales of articles manufactured in the institution foot up \$927.02. Total value of the buildings, personal property, etc., \$138,342.50.

The receipts of the Missouri Penitentiary for the first quarter of the year were \$40,346, and the expenditures \$33,889. The number of convicts was 1,332, and the cost of each was \$26.86.

The sum of \$39,000 was appropriated to the State University, which has between 300 and 400 students, representing from 60 to 70 counties and 13 States. They are of both sexes.

Some attention was attracted to silver-mining in Madison County by its favorable prospects.

The latest agricultural statistics of the State yet compiled are for 1878, and are as follows:

ANIMALS.	Number.	Value.
Mules.....	191,900	\$3,824,622
Oxen and cattle.....	1,682,400	24,852,080
Hogs.....	2,817,000	6,226,506
Horses.....	627,800	25,022,997
Cows.....	614,200	9,158,866
Sheep.....	1,296,400	2,061,276
Total value.....	\$75,208,281

Missouri stands first of all the States in number and value of her mules, second in oxen and cattle, third in hogs, seventh in horses, and eighth in sheep. Its chief agricultural products were as follows: corn, 93,062,400 bushels; wheat, 20,196,000 bushels; oats, 19,584,000 bushels; potatoes, 5,415,000 bushels; hay, 1,-

620,000 tons; tobacco, 23,023,000 pounds. In the production of both corn and tobacco, Missouri ranks as the fifth State; in hay, the seventh; in oats and potatoes, the eighth; and in wheat, the eleventh.

MOHAMMEDANISM. While Mohammedanism as a political power is rapidly declining, it is steadily increasing in the number of its adherents. Dr. Döllinger, in an address delivered before the Bavarian Academy of Science on March 28, 1879, estimated the total number of Mohammedans as about one fifth of the population of the earth. According to this, the Mohammedans would number about 288,000,000, a figure considerably higher than any other estimate, and probably too high. The progress of Mohammedanism is especially noted in Africa and India. The following is an approximate statement of its statistics at the close of 1879:

I. In Europe:	
Turkey Proper.....	2,650,000
Bulgaria.....	600,000
Eastern Roumelia.....	350,000
Bosnia and Herzegovina.....	442,000
Roumania.....	120,000
Serbia.....	75,000
Montenegro.....	25,000
Russia.....	2,855,000
Total.....	6,627,000
II. In Asia:	
Russia.....	5,064,000
Turkey.....	13,000,000
Persia.....	6,900,000
Arabia.....	3,700,000
India.....	50,000,000
China.....	5,000,000
Afghanistan and Beloochistan.....	4,630,000
States of Central Asia.....	3,000,000
Indian Archipelago.....	23,000,000
Anam.....	50,000
Total.....	115,144,000
III. In Africa.....	
Total.....	110,000,000
Grand total.....	231,771,000

Dr. Döllinger, in the address above referred to, treated very fully of the recent history of Mohammedanism. The following extracts supplement the article given in last year's "Annual Cyclopædia": The religion of the Arabian Prophet exhibits at present a singular phenomenon. On the one hand it develops throughout Asia and Africa a power of expansion, a fertility of proselytism, in which it surpasses by far the Christian churches; and, on the other hand, there appear symptoms of inner decay, especially a disease which is common to all Mohammedan states and threatens them with dissolution, incompetency to govern. The sultanate is now on the point of dying out, as formerly the caliphate. The old hierarchical state system of Arabia is extinct. The subsequent hermaphroditic creation of the semi-hierarchical, semi-military state system, which has its type in the Osmanic Empire, is now likewise approaching dissolution, and a new third form is not well conceivable so long as the Koran remains the source of all law; for the primitive and loose tribal association which is found among the Bedouins is not well suited for a larger state system. If, on the other hand,

we look at the marvelous power of expansion by which the Arabian religion peaceably, by means of conversion, achieves at present the most rapid and extensive conquest, we stand before an historical enigma. It is becoming a powerful current in Africa; entire nations in the interior of that continent, who but recently were pagans or worshippers of fetiches, have now become believers in the Koran. In China the Moslems have become so numerous that they could risk an insurrection. In Tongking they already number fifty thousand. Among the Malays of the Indian Archipelago they have made even in our days hosts of proselytes. From Sumatra the Islam has spread over Java, and since the establishment of the Dutch rule the entire population of Java (about eighteen millions) has become Mohammedan. The larger portion of Sumatra, and at least one half of Borneo and Celebes, have been gained for the Islam. Wherever in the Indian Archipelago a population hitherto pagan stands under Dutch dominion, the Islam makes rapid progress, while Christianity, on the other hand, in spite of missionaries and missionary societies, either is advancing very slowly or even retrogrades. Pilgrimages to Mecca, which are so greatly facilitated by the introduction of steamships, are said to be one of the principal causes of this rapid progress of Mohammedanism, because the numerous pilgrims or hadjis after their return generally become zealous missionaries of the Prophet of Mecca. The Islam in eastern Asia and Africa derives a great advantage from the fact that the propagation of the faith is not regarded as the work of any particular class or society, but that every Moslem considers himself obliged to take part in the conversion of the infidels. In British India, especially in the Northwestern Provinces, the conversions to Mohammedanism are likewise numerous, and they take place all the more easily because many Brahman ideas and customs have crept into Indian Mohammedanism. Thus the fifty million Mohammedans may become for the British dominion a great support or a great danger. In a conflict between Russia and England they would undoubtedly side with England, for Russia is regarded throughout the East as the hereditary foe of the Islam. Russia threatens Persia, dismembers Turkey, and subjugates the khanates of Central Asia. The Russian people look upon every war with Mohammedans as a religious war, and the number of the Mohammedan subjects of Russia in Siberia has considerably decreased under the influence of the Russian authorities. On the other hand, the Mohammedan faith leaves to the Mohammedan inhabitants of a country ruled over by infidels only the choice of emigrating or establishing by force of arms an orthodox government. This doctrine is especially diffused in India by the itinerant preachers of the Wahabee sect, the puritans of the Islam. Destruction of the English rule and reestablishment of the caliphate are the aims

of these dangerous fanatics, and there is reason to believe that the bulk of their Indian coreligionists openly or tacitly agree with them. The Mohammedan newspapers have therefore of late undisguisedly discussed the question whether rebellion is a duty. Some years ago an assembly of Mohammedan doctors of Lucknow and Delhi, which was held at Rampoor, decided that India with its English government was not *dar ul Islam*, land of the Islam, but *dar ul harab*, land of war; it ought therefore to be reconquered for the Islam, but since a war against the powerful Englishman was for the present without any prospect of success, and a defeat of the Islam would be discreditable in the eyes of the world, it was necessary to remain quiet for the present. The boldness of this declaration frightened the Mohammedan society of Calcutta, which declared through its doctors of law that India was still a land of the faithful, and an insurrection was unlawful. The disquieted Moslems have now procured an opinion of the doctors of Mecca, who likewise declare India, in spite of the English rule, to be a land of the Islam; intimating, however, in a significant manner, that every Moslem is obliged to do everything that is in his power to reestablish the recognition of orthodox regulation and laws, and that anything that a foreign government does or introduces contrary to these laws is invalid. The English have done much of this kind. They have replaced Moslem governors by English; they have removed Mohammedan judges; their entire legislation is more or less opposed to the Koran. Hitherto those who regarded it as a sacred duty in such a situation to emigrate have settled on Afghan territory, and this cloud collecting on the north-western frontier has been one of the causes that drew English armies to the Afghan territory. A small minority of the Indian Moslems try to explain away, by an artificial interpretation of the plain passages of the Koran, the duty of rebellion and of a sacred war against the infidels; but there can hardly be any doubt as to what is thought and believed by the majority of them. The Moslem can never forget that his Indian empire was overthrown by the English. The entire Koran is based on the view that the Moslems are a people who either govern or aim at the government. Moreover, the Mohammedans of India are, though through their own fault excluded from nearly all public offices and positions, most of which are in the hands of Brahmanists.

MONTENEGRO, a principality of south-eastern Europe. Reigning Prince, Nicholas I., born October 7, 1841; declared Prince on August 14, 1860, upon the death of Prince Danilo I. He was married, November 8, 1860, to Milena, daughter of Petar Vukotitch. The children of this marriage are two sons, Danilo Alexander, born June 30, 1871, and Mirko, born in 1879, and six daughters. The area of the country in 1878 comprised 3,642 square miles. Of this, 1,814 square miles was the

area before the war, while the Treaty of Berlin had added 1,167 square miles from Herzegovina and 661 square miles from Albania. The population before the war was estimated at 180,000; to this number were added 54,000 in Herzegovina and 52,000 in Albania, making a total population of 286,000.

For an account of the finances, army, and commerce, see "Annual Cyclopædia" for 1878.

In the beginning of March, Prince Nicholas made a number of reforms which he had for some time considered. He established a ministry, and adopted the principle of ministerial responsibility, while preserving for himself all the rights and privileges of a constitutional monarch. The first Montenegrin Ministry was composed as follows: Bozo Petrovitch, Minister President and Minister of the Princely House; Masha Webitza, Interior, Commerce, and Communications; Stanko Radovitch, Foreign Affairs; Ilija Plamenatch, War; Gjura Tehernovitch, Finances; Ljubomir Wenadovitch, Worship and Education. The principality is to be divided into twenty-three districts, which are each to have a district chief. There are to be twelve lower courts, a court of appeals, and a court of cassation. Elementary instruction is to be gratuitous and obligatory. Every child between eight and fourteen years of age must attend school. Three teachers' seminaries and an agricultural school are to be established. Although it seemed desirable to establish representatives at various courts, especially at Vienna, it was deemed advisable, under the present condition of the treasury, to restrict the foreign representation to an ambassador at Belgrade and an agent at Constantinople.

The negotiations with the Porte for the surrender of the districts ceded to Montenegro by the Treaty of Berlin continued throughout January. Considerable opposition made itself manifest among the Albanians who were in future to belong to Montenegro, but it eventually subsided. On February 7th Podgoritzza, and on the 8th Spuz and Zabliac, were surrendered by the Porte to the Montenegrins without any resistance on the part of the inhabitants. The Montenegrins on their part evacuated the places they still occupied in Turkish territory. The mixed commission for the definite settlement of the boundary soon after met. A slight difference came to light in the latter part of May between the Turkish Commissioners and their colleagues regarding the delimitation on the western side of the Lake of Scutari—a difference caused by a certain indistinctness in the text of Article 28 of the Treaty of Berlin fixing the limits of Montenegro. The article stated that from Plavnitzza, on the eastern shore of the lake, the new frontier should cross the lake near the Island of Gorica-Topal, and, starting thence, ascend in a direct line to the crest of the hills, and thence, following the watershed, descend to the Adriatic at Kruci. The Turks, taking their stand on the words of the treaty

specifying Gorica-Topal both for the line across the lake and the land line starting from the shore, maintained that the latter should begin opposite the island. All the other Commissioners, however, interpreted the article as meaning that the island only fixed the direction of the line across the lake, while the watershed formed by the Topal Mountain, a few miles farther south, was evidently intended to be the line of frontier running from the lake to the Adriatic. The difference in point of substance was quite insignificant, but the decision might be of considerable importance as being the first application of the principle of majority in the commissions of delimitation now in operation.

In the latter part of October, the Montenegrins advanced to take possession of Plava and Gusinje. The Porte instructed the Governors of Scutari, Kassovo, and Monastir to proceed to Gusinje and Plava, and take on the spot all necessary measures for the transfer of those districts to Montenegro. The Porte issued instructions at the same time to the local authorities that they should do all in their power to assist the three Governors in order that the cession of territory to Montenegro might be effected as speedily as possible. Without waiting for the voluntary cession which was about to be made, a strong force of Montenegrins marched on Gusinje, pillaging and burning everything in the neighborhood. In a battle which followed large numbers of Albanians were slaughtered, and even women and children did not escape. The Turkish Governors who had been ordered to Gusinje were prevented by Albanians from entering the town. Fifteen battalions of Turkish troops were then sent to the Montenegrin frontier under the command of Mukhtar Pasha, who at one time was reported massacred by the Albanians. His position was very critical, and he was compelled to ask for reinforcements, when twenty battalions were sent to his relief. In December Russia proposed to the Powers a united effort at Constantinople to accelerate the surrender of Gusinje to Montenegro. The Porte then sent a circular to its representatives abroad reciting the measures taken to secure that object, and expressing the hope that the Montenegrins would not precipitate matters, as some delay was necessary if bloodshed was to be avoided. In view of these explanations Russia withdrew her proposal.

MORAVIANS. The following is a statement of the membership in the three provinces of the Brethren's Unity for 1878, as they were published in July, 1879:

The German Province.....	7,773
Bethel in Australia.....	90
The Russian Baltic Provinces.....	65
Prangins.....	19
Ministers of the Diaspora and their families....	100
—	8,052
The Bohemian Congregations.....	226
The British Province.....	5,705
The American Province, Northern District....	14,256
The American Province, Southern District....	1,989
—	16,245

Brought forward.....	80,219
Missionaries in 17 Mission Provinces, and their children.....	490
Total.....	80,619

The *General Synod* of the Moravian Church met at Herrnhut, Saxony, May 28th. This is the representative body of the Church throughout the world, and is unique among Protestant assemblies as being the only body which exercises legislative authority over all the branches of its communion wherever found. The affairs of the Church in the several nations are cared for by the legislative bodies in each province, besides which the Unity's Elders' Conference, the executive body for the whole Unity, located at Herrnhut, has the charge of the general administration during the intervals between the meetings of the General Synod. The General Synod consists of 54 members, allotted as follows: Members of the Unity's Elders' Conference, 12; bishops, besides 2 in the Unity's Elders' Conference, 5; delegates from the German, British, and American Provinces, 9 each; missionary delegates, 5; members *ex officio*, 5. Its functions are to enact all legislation in reference to the general concerns of the Unity; to examine, correct, and lay down anew the principles on which the Unity is based; to keep watch of the state and condition of the Unity as a whole and of its parts; to make such arrangements as may be needed for its well-being; and to serve as the occasion for the interchange of views between the different parts of the Church. It has power to determine subjects of doctrine, ritual, and discipline; to appoint or provide for the appointment of bishops; to direct all matters pertaining to the foreign missions; to control such educational institutions as belong to the whole Unity; to direct and superintend all financial affairs of the Church; to elect the Unity's Elders' Conference, regulate the formation and times of meeting of the General Synod, and direct all matters which belong to the general constitution of the Church.

Bishop Edmund von Schweinitz, of the American Province, was elected President of the Synod. The business of the body consisted principally of the consideration of the proposals submitted by the Provincial Synods for amendment of the "Synodal Results," as the digest of acts of the Synod is called, or for new legislation. A recognition of the Apostles' Creed was adopted, to be expressed in the words: "The Brethren's Unity of ancient and modern times, though by its constitution and episcopal ordination a separate church, has nevertheless at all times professed to be but a part of the one universal Church of which Christ is the Head, and more especially of the Evangelical or Protestant Church, whose doctrine is derived from the Holy Scriptures and from them alone. It adheres, with all Christendom, to the doctrines contained in the Apostles' Creed," etc. The section entitled "Our Leading Doctrines" was amended so as to read:

Our view of the leading doctrines is set forth more especially in the Confession of Faith, which has been annually declared by the whole Church on Easter morning for more than a hundred years.

We hold that every truth revealed to us by the Word of God is a priceless treasure, and heartily believe that the gain or loss of everything, even of life itself, can be brought into no comparison with a denial of any one of these truths. And we here especially refer to that truth which the Renewed Church of the Brethren has ever regarded as its most important doctrine, and to which, by God's grace, it has hitherto steadfastly adhered, regarding it as a precious jewel: that Jesus Christ is the propitiation for our sins; and not for ours only, but also for the sins of the whole world.

With this our leading doctrine, the following facts and truths, clearly attested by Holy Scripture, are linked in essential connection, and therefore constitute, with this leading doctrine, the main features in our view and proclamation of the way of salvation:

a. The doctrine of the total depravity of human nature: that there is no health in man, and that, since the fall, he has no strength left to help himself.

b. The doctrine of the love of God the Father, who "hath chosen us in Christ before the foundation of the world," and "so loved the world that he gave his only begotten Son, that whosoever believeth in him should not perish, but have everlasting life."

c. The doctrine of the real Godhead and the real Humanity of Jesus Christ: that the only begotten Son of God, of whom all things in heaven and earth were created, forsook the glory which He had with the Father before the world was, and took upon Him our flesh and blood, that He might be made like unto His brethren in all things, yet without sin.

d. The doctrine of our reconciliation with God and our justification before Him through the sacrifice of Jesus Christ: that He "was delivered for our offenses, and was raised again for our justification," and that we obtain forgiveness of sin, and freedom from the bondage of sin, by faith in His blood alone.

e. The doctrine of the Holy Ghost and the operations of His grace: that without Him we are unable to know the truth, that it is He who works in us the knowledge of sin, faith in Jesus, and the witness that we are children of God.

f. The doctrine of good works as the fruit of the Spirit: by which faith manifests itself as a living, active principle, in a willing obedience to the commandments of God, out of love and gratitude to Him who died for us.

g. The doctrine of the fellowship of believers with one another in Christ Jesus: that they are all one in Him, who is the Head of the body, and all members one of another.

h. The doctrine of the coming of our Lord in glory, and of the resurrection of the dead unto life or unto judgment.

The section on "The Public Ministry" was amended by inserting the clauses:

To the Brethren's Church it must be a matter of serious, heartfelt concern, that, as she herself firmly adheres to her declared view of the mystery of Christ, so also in the proclamation of the Word within her borders, and in the Christian instruction of the young, there may be no departure from this foundation. She considers it for herself neither necessary nor salutary, by framing a creed formulated in every single point of doctrine, to bind consciences and quench the Spirit; nor does she expect to see the well-being of the Church promoted by the pledging of her servants to any such creed, inasmuch as she looks, for the attainment of this object, to the revival and establishment of the true spirit of the Church through the grace of God. At the same time, she can not tolerate that within her borders any one teach and preach contrary to the Holy Scriptures, and, specially, to the declarations

which we, according to our view, regard as the leading doctrines of Holy Writ.

Sunday-schools were recognized as constituting a proper sphere of exertion in the Church, and were commended to the coöperation and intercessions of members, and to the guiding supervision of ministers and elders as a part of their official labor. On the subject of missions, resolutions were adopted discouraging the attempt to educate in Europe native youth from the mission-fields; approving the action of the mission department in declining, principally on account of the lack of funds, seventeen invitations to begin new missions; sanctioning the organization of a new mission in Demerara and additions to the missions in South Africa; and recommending the continuance and, if possible, the extension of the work in the West Himalaya district. The archivist of the Unity reported that the archives contained a collection of historical manuscripts, a library including pamphlets, and a collection of paintings and curiosities referring to the history of the Church. A number of valuable manuscripts had been secured within the last ten years. The Synod made provision for the appointment of a theologically educated person who should qualify himself for the work of thoroughly examining and compiling the existing sources of the history of the ancient Brethren's Church, particularly between the years 1620 and 1722, and who, it was understood, should qualify himself to study the original documents of the Bohemian Church. Measures were decided upon to obtain contributions for the erection of a new and suitable building as a depository for the archives. Three new bishops were chosen: H. L. Reichel, Henry Müller, and T. Wunderling. A new department was added to the Unity's Elders' Conference, to be called the Unity's department, to consist of six members, and be charged with the duty of maintaining and strengthening the bonds of union between the three provinces of the Unity.

The year 1889 was fixed upon as the time for the next meeting of the Synod at Herrnhut.

MURCHISON, CHARLES, M. D., F. R. S., was born in Jamaica in 1830. His father was a physician, a descendant of an old Aberdeenshire family. In 1845 Charles Murchison matriculated at the University of Aberdeen. The first year he bore off the prize in Greek, although his tastes were scientific rather than classical. He was an ardent botanist, winning the Balfour gold medal for plant dissection, and the Thompson prize. In 1848, while studying medicine, he lectured before the Botanical Society of Edinburgh on the "Glandular Structures found on the Leaves of Various Plants." In 1851 he graduated with the highest honors, and was appointed physician to the embassy at Turin. In 1852 he returned to Edinburgh as resident clinical physician at the Infirmary. After this he studied both in Dublin and in Paris, until he was appointed Professor of Chemistry to the Medical College of

Calcutta. Later he was placed on the medical staff of the army of Burmah, where he studied the climate and diseases of that country, on which he wrote a valuable treatise. On his return in 1855 he passed his examination for membership of the Royal College of Physicians, London. He worked indefatigably as physician to the Westminster General Dispensary, as demonstrator of anatomy at St. Mary's Hospital, lecturer on botany, assistant physician to King's College Hospital, and physician to the Middlesex Hospital and to the London Fever Hospital. After six years' service in the last-named hospital he wrote his great work on the "Continued Fevers of Great Britain," which has passed through numerous editions and reached the rank of a classic. His experience in Middlesex Hospital is embodied in his work on the "Diseases of the Liver." A second edition of this volume was published in 1877. His practice was enormous and ever increasing, yet he never pretermitted his studies or literary labors, as attested by his contributions to the "Lancet" and the "Edinburgh Medical Journal," and his numerous treatises on scientific as well as professional subjects. Like his distinguished relative, Sir Roderick Murchison, he was passionately fond of geology, and he undertook and accomplished the Herculean task of editing the geological works of Dr. Falconer.

It was as a teacher that he reached the highest expression of his powers. In 1871 he was appointed Professor of the Principles and Practice of Medicine. His singular brilliancy

and clearness proved a powerful attraction to students. In 1877 he was made President of the Pathological Society. His inaugural is a model exposition of the method and limits of such researches.

In 1872, while in the midst of this life of toil and usefulness, with the honors and rewards of his profession pouring thick upon him, he discovered that he was the subject of serious heart-disease, induced by an attack of typhus contracted in the Fever Hospital. He was advised that cessation of labor would probably delay a fatal termination. After mature deliberation he decided that to him a life of idleness would be the greater evil. Having made the minutest preparations for impending death, he resumed the arduous career of a London physician in full practice, and died in the harness. A patient had just left his consulting-room. He leaned forward to note on a diagram a fact concerning this case when the fatal stroke fell. On the 26th of April he was buried in Norwood Cemetery. Dying thus in the forty-ninth year of his age, in the prime of his powers, he was a loss to science and to the world. He was especially beloved by the students and junior members of his profession. He never spared himself when their interests could be advanced. The sympathy and aid they were sure to evoke were all the more valuable because they came from a man of few words and of a cold and reserved demeanor, who had himself passed unblemished through the ordeals they must undergo.

N

NEBRASKA. The Legislature of this State opened its regular session on January 7th, and closed it on the 27th of February in the morning, after a protracted sitting from the previous day.

A joint resolution was adopted instructing the Nebraska delegation in Congress "to procure legislation to prohibit for ever the payment of the Southern war claims."

An act creating a Reform School at Kearney was passed.

A game law was enacted, fixing the days on which expires the time allowed for the killing of certain species of animals, as follows: of quail and wild turkeys, the first day of December; of wild buffalo, elk, mountain-sheep, deer, or antelope, the first day of January; of wild grouse, the first day of February. It prohibits the transportation of the various classes after the above-mentioned dates respectively; and provides that "it shall be unlawful for any person, agent, or employee of any association, corporation, railroad company, or express company, to receive, carry, transport, or ship away any such animal or bird at any other time of the year."

An act was passed appropriating the sum of

\$75,000 for the erection of an additional wing in the State-house building. This appropriation, for which the sum originally asked in the bill was \$100,000, was greatly opposed in the Legislature, and by the people generally, as unnecessary.

The prohibition bill, so called, forbidding the manufacture and sale of all drinks that may inebriate, failed to pass. This measure, while it was acted upon by the Legislature, engrossed the interest of the people generally in a high degree, a great number advocating and a greater opposing it on several accounts. Two mass meetings, the one for and the other against the passage of the bill, were held at Omaha on February 2d and 3d respectively.

During this session of the Legislature strong efforts were made by a large number of its members to secure after its final adjournment an extraordinary session. Democratic and Republican members met in caucus jointly for that purpose on February 17th, when, after a lengthy discussion, it was resolved, by a vote of 36 to 27, "that the best interests of the State demand an immediate called session to complete the revision laws." No special session, however, was convened within the year.

The general election in November was limited to the choice of an Associate Justice of the Supreme Court, Judges of District Courts, and two Regents of the State University.

The Democrats held their State Convention at Lincoln on September 10th. The nominations made were as follows: For Associate Justice of the Supreme Court, Eleazar Wakely; for Regents of the State University, Andrew J. Sawyer and Alexander J. Bear; for Judges of the District Courts: First District, Warren P. Conner; Third District, James W. Savage; Fourth District, William H. Munger; Sixth District, James W. Crawford. For the Second and Fifth Judicial Districts no nominations were made. The following platform was adopted:

The Democratic party of Nebraska, in convention assembled, reposing its trust in the intelligence, patriotism, and discriminating justice of the people, and standing upon the Constitution with all the amendments thereto, on the foundation and limitation of all the powers of government and the guarantee of the liberties of the citizens, do resolve:

1. That we reaffirm all the old time-honored principles of the party, and take no steps backward.

2. That we deprecate the action of Republicans in making treaties with the various tribes of Indians, and then violating the same, and driving them from the lands conveyed to them, and thereby turning loose upon our frontier organized bands of outraged savages, seeking revenge on our inhabitants for the wrongs perpetrated upon them by Republican administrations.

3. The Democratic party maintains, as it has ever maintained, that the military is and ought to be in strict subordination to the civil power in all things. It denies, as it ever has denied, the right of the Federal Administration to keep on foot at the general expense a standing army to invade the States for political purposes, to control the people at the polls, to protect and encourage a fraudulent count of votes, or to fraudulently under the form of law inaugurate a candidate who has been defeated at the polls by a lawful majority both of the people and the Electoral College as provided by the Constitution.

4. That the right of free ballot is the great right of the American people, the right preservative of all other rights—the only means of redressing grievances and reforming abuses. The presence of the military at the polls, and of a host of hireling officials claiming the power to arrest and imprison voters without warrant or hearing, destroys all freedom of election and overturns the very foundation of self-government. We call upon all good citizens to aid us in preserving our institutions from destruction by these imperious methods of supervising the right of suffrage and coercing the popular will, and in keeping the way to the ballot-box open and free as it was to our fathers.

5. We demand the strictest economy in the management of the affairs of government, national, State, and county. We arraign the Republican party of the State for its extravagance in the management of the affairs of the State; for wasteful and corrupt appropriations of the public funds of the State, whereby certain partisans have been enriched at the expense of the tax-paying public of the State. We demand that the system of abuse and misappropriation of the public funds should cease, and we call upon all good citizens, without regard to former party affiliations, to aid us in hurling from power the party that have so long abused the trust reposed in them.

The Republicans held their State Convention at Omaha on October 1st, and nominated the following ticket: For Associate Justice of the Supreme Court, Amasa Cobb; for Regents of

the State University, Joseph W. Gannett and John L. Carson; for Judges of the six District Courts: First District, Andrew J. Weaver; Second District, S. B. Pound; Third District, Charles A. Baldwin; Fourth District, George W. Post; Fifth District, William Gaslin, Jr.; Sixth District, John B. Barnes. The platform adopted was as follows:

We, the Republicans of the State of Nebraska, again renew our pledges of fidelity to the principles of freedom and right for which we have ever contended; and now in convention assembled it is resolved:

1. These United States are a nation, and not simply a league of States.

2. We watch with apprehension the arrogance and reasonable utterances of the rebel brigadiers now in Congress, as a threatening danger to this nation. And, further, the Republican party of Nebraska proclaim that we have no concessions to make to unrepentant rebels; that we still adhere to the principles for which our brave soldiers have fought.

3. That we again offer the principle of freedom of the ballot-box, and demand at the hands of the Executive of this nation protection for the voters of the South, such as is accorded to all political parties in the North.

4. As the same issues are again being presented for decision at the ballot-box for which our armies contended so long and faithfully, with confidence we call upon the soldiers to vote as they fought, for the preservation of the life and purity of the Government.

5. That we welcome with much pleasure the signs of returning prosperity, as evinced by the increased activity of every department of industry, the general revival of manufacturing interests, and the additional confidence exhibited by all departments of business.

6. That we congratulate the country upon the successful resumption of specie payments, ever pledging the support of the Republicans of Nebraska to all efforts of the Republican party in the nation's counsels to protect the credit of the nation, and make the promises as good as gold.

7. That we demand at the hands of all Republican officials the utmost economy in the administration of all affairs of the Government; and that we pledge ourselves as a party to a careful supervision of the expenditures in all the departments of our State.

8. That we as Republicans of the State of Nebraska welcome back to the shores of America the champion of our Union, the protector of our nation's honor, and the hero of the great rebellion—General Ulysses Grant.

The election resulted in the choice by the Republicans of the Associate Justice of the Supreme Court, the two Regents of the State University, and five out of the six Judges of the District Courts. The aggregate number of votes polled by all parties in Nebraska at this election was 84,514; and the highest number cast by the adherents to either party was for one of the two Regents of the State University, as follows: Republicans, 46,376; Democrats, 23,127; Greenbackers, 5,011.

The whole amount of the taxable property in the State is estimated at about \$80,000,000. The collection of State taxes for two years will produce, under existing laws, \$360,000 for 1879, at four mills on the dollar, and \$120,000 for 1880, at two mills. To meet the current and incidental expenses of all the departments of the State government for the said two years, including \$122,200 for the erection of public buildings and \$112,625.33 for the payment

of claims, the Legislature appropriated the aggregate sum of \$760,619.33, or \$280,629.39 more than the amount to be raised by taxation during the same two years.

Among the appropriations for educational purposes and the support of charitable institutions are the following: For the State University, \$50,000; State Normal School, \$25,800; State Hospital for the Insane, \$67,700; Institute for the Deaf and Dumb, \$11,280; Institute for the Blind, \$15,000; State Reform School, \$10,000.

The Hospital for the Insane is located about three miles from Lincoln. The average number of patients in the institution for the year ending November 30, 1878, was 111; and the whole number treated during that year was 182.

In the Deaf and Dumb Asylum at Omaha, the pupils under instruction at the end of the year 1879 numbered 64, 12 more than in the preceding year. Of the boys, 8 are learning the art of printing and 12 the carpenter's trade. In the female department, 22 girls receive instruction in needlework.

The Nebraska State Prison, situated about the same distance from Lincoln as the Hospital for the Insane, in a different direction, is under excellent management in all respects. The prisoners are kept steadily employed in manual work of various kinds, their labor being under contract for a long term, and the contractor personally superintending the convicts at work in the prison. He furnishes them with clothing and supplies, and pays all the current expenses of the prison, and a stipulated yearly sum to the State for each prisoner. This method seems to have been found of mutual advantage to the State and the contractor. By act of the Legislature, the contract for the convicts' labor has been renewed for ten years, till 1889. During the year 1879 the number of convicts in the penitentiary was gradually increasing. On March 15th it was 207; at the end of November, 266; and on Christmas day, 271. Of the 207 confined there in March, 145 were residents of the State of Nebraska, and 50 of Wyoming Territory; 7 were United States prisoners, and 5 were county prisoners, detained in the penitentiary for safe-keeping. The classes of gravest crimes for which they had been respectively sentenced, and their proportional numbers, were as follows: Murder, 25; manslaughter, 3; malicious cutting, 6; arson, 2; grand larceny, 43; burglary, 18; robbery, 6; horse-stealing, 23.

The grain-crops in Nebraska for 1879 were plentiful and of fine quality. In many counties north and south of Platte River, out to the Republican Valley, the yield for the several crops in bushels per acre ranged as follows: Wheat, 12 to 18; oats, 30, 40, 45, and 50; barley, 25, 30, and 40. The crop of corn, which had been very extensively planted, appears to have been better than that of other grain; the average being 40, 50, and 60 bushels per acre,

according to localities. In Otoe County alone there were 110,000 acres planted, the average yield being reckoned at 60 bushels per acre; and the same was the case with Hall County.

Nebraska seems to be more subject to devastation from grasshoppers than some other Western States. Active measures have been taken to exterminate them. The Legislature has authorized road supervisors throughout the State to order out all voters in their respective precincts to do twelve days' work each in killing grasshoppers, for which each person is to be paid at the rate of two dollars a day in county warrants. Grasshopper clubs, so called, have also been organized everywhere in the State for their destruction.

The cattle-drives which pass through the State are a growing source of material prosperity. The drive of 1879 from Texas and the southwestern ranges is reckoned at 250,000 head, and that from Montana and Oregon at 100,000. Kansas used to be the northern limit of the drive, which gave to Kansas City a considerable advantage as a market. For several years before 1879 the proportion of the stock remaining in Kansas has been steadily diminishing, while that remaining in Nebraska and Wyoming has been increasing. The great rendezvous of cattle-drovers, which formerly ended at Abilene on the Kansas Pacific road, is now to be found at Ogallala on the Union Pacific road in Nebraska, which point, it is predicted, will soon become the greatest stock thoroughfare on the continent.

The internal revenue collections for Nebraska during the year 1879 amounted to \$980,105.52, of which sum the Willow Springs distillery at Omaha paid nine tenths.

The most noteworthy event of the year 1879 in Nebraska relates to the writ of *habeas corpus* issued in behalf of Indians by the Judge of the United States District Court for Nebraska, and by him decided in their favor against the United States Government. It was the first case of that kind ever brought before a judicial tribunal in this country. The Ponca Indians, a peaceful tribe and most friendly to the white man, said also to be to a great extent civilized in their habits, and Christianized, were in the possession and occupancy of their own domain in southern Dakota, when, by a treaty dated March 12, 1858, they ceded to the United States Government all of their lands, excepting a certain tract whose limits are accurately described in the treaty, which they reserved for their own use and the permanent place of their homes. In consideration of this cession the United States Government agreed "to protect the Poncas in the possession of the tract of land reserved for their future homes, and their persons and property thereon, during good behavior on their part." Annuities were to be paid them for thirty years, houses to be built, schools to be established, and other things were to be done for

them by the Government, in consideration of the cession. On this reserved tract the Poncas were peaceably living three years ago, when the United States Government determined to remove them to a place eleven hundred miles distant in the Indian Territory. In the general Indian appropriation bill passed by Congress on August 15, 1876, there is a provision authorizing the Secretary of the Interior to use \$25,000 for the removal of the Poncas to the Indian Territory, and providing them a home therein, with the consent of the tribe. This consent they persistently refused to give; whereupon the Government removed them from their homes by force, and, under guard of United States troops, they were transported to the Indian Territory. During the long march a great number of the Poncas died, and were buried along the route. The new place also proved so malarious and unhealthy that out of 581 Indians whom the Government had taken away from their reservation in Dakota, 158 died within about a year, i. e., at the rate of one in every three and a half. A large proportion of the survivors also were sick and disabled. It was probably on account of this unexampled mortality that in 1878 the Government took measures to remove the Poncas from that place and locate them elsewhere; as in the Indian appropriation bill passed by Congress on May 27, 1878, a provision authorizes the Secretary of the Interior to expend the sum of \$30,000 for the purpose of removing and locating the Ponca Indians on a new reservation near the Kaw River. This second reservation is said to be no less unhealthy than the first. Under these circumstances one of the Ponca chiefs, Standing Bear by name, "to save himself and the survivors of his family, and the remnant of his little band of followers, determined to leave the Indian Territory and return to his old home in Dakota, where he might live and die in peace and be buried with his fathers." He informed the agent of their fixed purpose to leave, never to return, and that he and his followers had finally, fully, and for ever severed his and their connection with the Ponca tribe of Indians, and resolved to cut loose from the Government, go to work, become self-sustaining, and adopt the habits and customs of a higher civilization. In execution of this determination, Standing Bear with his family and followers left the reservation in the Indian Territory at the beginning of January, 1879, and, after sixty days' travel across strange lands for fifteen hundred miles in midwinter, reached the reservation of the Omaha Indians in Nebraska. The Omahas, who speak the same language and have been long connected with the Poncas by intermarriage, welcomed the wayfarers and bade them remain, offering them land at their choice to cultivate for their support. While thus staying at the Omaha reservation, Standing Bear and his followers were arrested by Brigadier-General Crook, commander of the military department of the Platte, and detained under his

charge, for the purpose of being taken back to the reservation in the Indian Territory, which they were alleged to have left without permission of the Government. General Crook acted in this matter upon express orders issued to him by his superior officer, the General of the Army, at the request of the Secretary of the Interior.

On April 8, 1879, when these prisoners were on the point of being marched back to the reservation in the Indian Territory, Mr. H. Tibbles, assistant editor of the "Omaha Herald," applied to the Judge of the United States District Court, then in session at Lincoln, for a writ of *habeas corpus* in their behalf, to be served on General Crook. The writ was issued the same day, and made returnable on the 18th. It was duly returned, and an answer filed by General Crook as respondent, stating the authority on which he acted in the arrest and detention of the relators. The case was argued on the first two days of May, G. M. Lambertson, United States District Attorney, appearing for the Government, and A. J. Poppleton and Jonathan L. Webster, two eminent lawyers of Omaha, for the prisoners, whose defense they assumed gratuitously. The main point in question before the Court was not the justice or injustice of the treatment met with by these Indians at the hand of the United States Government concerning their forcible removal from their lands in Dakota to the Indian Territory, but whether the United States District Court had the power to issue the writ of *habeas corpus* in behalf of the prisoners, and hear and determine the case made therein. The District Attorney maintained the negative on the grounds, among others, that an Indian can not appear in Court, is not entitled to the writ of *habeas corpus*, and is not a citizen, and that Indian tribes are not independent, but dependent communities. The prisoners' counsel showed, on the contrary, that the petition of their clients, besides being just, was perfectly legal; that, whether they were considered as still belonging to the Ponca tribe of Indians, an independent community, or as Indians individually, severed from all former connection with that tribe, as they claimed to be, they were legally entitled to the writ of *habeas corpus*, and the Court had the inherent power both to issue such writ and hear and determine the case made therein. They showed also that the Omaha Indians had a perfect right to give the relators part of the land in their reservation, it being their own, as they could give it to an alien coming to them from any nation or government on earth; the United States Government having no legal power to interfere with either. After the argument had been closed on the second day of the hearing, Standing Bear, by an express permission of the Judge, personally addressed the Court in a short speech, stating in plain terms some of the hardships and the mortality of his tribe and family since their compulsory removal from

their homes in Dakota, whither he expressed his wish to return. Judge Dundy, in his decision, on May 12th, answered the reasons and objections set forth by the District Attorney against the Indians' right to the writ of *habeas corpus*, and the jurisdiction of the Court in the case; established the principles on which he rested the determination of the matter; and concluded with the decision of the following points, and the appropriate order:

1. That an Indian is a person within the meaning of the laws of the United States, and has therefore the right to sue out a writ of *habeas corpus* in a Federal court and before a Federal judge, in all cases where he may be confined or in custody under color of the authority of the United States, or where he is restrained of liberty in violation of the Constitution or laws.

2. That General Crook, the respondent, being commander of the military department of the Platte, has custody of the relators under color of the authority of the United States, and in violation of the laws thereof.

3. That no rightful authority exists for removing by force any of these Poncas to the Indian Territory, as General Crook has been directed to do.

4. Indians possess the inherent right of expatriation as well as the more fortunate white race, and have the inalienable right to life and liberty and the pursuit of happiness so long as they obey laws and do not trespass on forbidden ground.

5. Being restrained of liberty under color of the authority of the United States and in violation of the laws thereof, the relators must be discharged from custody, and it is so ordered.

In consequence of this decision, and in execution of its mandate, the Secretary of War at Washington issued immediate orders, on May 13th, that Standing Bear and his followers, twenty-five in number, should be released; upon which they were set at liberty.

This case has excited great sympathy for the Poncas among the people of the country generally, and a strong inclination to assist them in the recovery of their own land and homes in Dakota, by bringing the matter before the Supreme Court for adjudication. Well-known lawyers of Omaha and Chicago have offered their gratuitous services in defending the Poncas' rights; and efforts are being made for the purpose of raising a fund sufficient to cover the other expenses of the suit. To this end, public meetings have been held in the principal cities of the Union, which have been addressed, among others, by Standing Bear and an educated Ponca girl called Bright Eyes.

NETHERLANDS, THE, a kingdom of Europe. King, William III., born February 19, 1817; succeeded his father March 17, 1849. He was married first to Sophie, daughter of King William I. of Wurtemberg (died June 3, 1877), and secondly to Emma, Princess of Waldeck-Pyrmont. He has but one son living, Alexander, Prince of Orange, born August 25, 1851.

The area of the kingdom is 12,731 square miles. The population in December, 1878, was estimated at 3,981,887. The area and population of each of the provinces were as follows:

PROVINCES.	Area.	Population.
Brabant.....	1,980	468,667
Gelderland.....	1,965	463,540
South Holland.....	1,167	796,109
North Holland.....	1,053	667,946
Zealand.....	687	180,666
Utrecht.....	634	191,970
Friesland.....	1,232	273,572
Overyssel.....	1,232	273,770
Groningen.....	857	249,124
Drenthe.....	1,028	117,926
Limburg.....	851	240,377
Total.....	12,731	3,981,887

The movement of population in 1878 was as follows: Marriages, 30,710; births, 150,493; deaths, 98,486. (The births and deaths include the still-births, numbering 7,747.)

In the budget for 1879, the expenditures and revenue are estimated as follows:

EXPENDITURES.

	Dutch florins.
1. Royal house.....	750,000
2. Cabinet, supreme state authorities.....	615,459
3. Ministry of Foreign Affairs.....	635,990
4. Ministry of Justice.....	4,488,778
5. Ministry of the Interior.....	6,891,615
6. Ministry of the Navy.....	13,188,662
7. Ministry of War.....	21,644,900
8. Public debt.....	28,435,920
9. Ministry of Finance.....	17,892,659
10. Colonies.....	1,696,086
11. Public works, commerce, and industry.....	22,544,892
12. Unforeseen.....	50,000
Total.....	118,781,491

REVENUE.

1. Direct taxes.....	24,300,057
Land-tax.....	10,618,657
Poll-tax.....	9,750,000
Patent-tax.....	3,942,400
2. Excise.....	88,595,000
On spirits.....	22,400,000
On other liquors.....	16,195,000
3. Taxes on stamps, registration, inheritances..	28,460,000
4. Customs.....	4,611,040
5. Taxes on gold and silver wares.....	366,200
6. Domains.....	1,695,500
7. Post.....	8,600,000
8. Telegraphs.....	800,000
9. Lottery.....	480,000
10. Taxes on game and fisheries.....	143,000
11. Pilotages.....	900,000
12. Taxes on mines.....	2,265
13. State railroads.....	1,626,000
14. Miscellaneous.....	11,290,135
Total.....	111,824,697
Deficit.....	6,956,000

The financial estimates are always framed with great moderation, mostly exhibiting a deficit, which in the final account becomes a surplus.

In 1879 the national debt was represented by a capital of 964,004,052 florins, divided as follows:

DIVISION OF DEBT.	Capital.	Interest.
Debt bearing interest at 2½ per cent.	632,092,902	15,802,322
Debt bearing interest at 3 per cent.	91,322,750	2,789,683
Debt bearing interest at 3½ per cent.	11,157,000	382,620
Debt bearing interest at 4 per cent.	219,431,400	8,771,256
Miscellaneous.....	58,439
Total.....	964,004,052	27,760,819
Bearing no interest.....	10,000,000
Amortization.....	675,600
Total 1879.....	964,004,052	28,435,919
Total 1878.....	921,721,853	26,718,673

The army of the Netherlands in Europe in 1879 consisted of 2,039 officers and 61,486 men; the East Indian army numbered 1,458 officers and 38,905 men.

The navy on July 1, 1879, consisted of 100 steamers, with 398 guns, and 14 sailing vessels, with 102 guns; total, 114 vessels, with 500 guns.

The merchant navy on January 1, 1879, consisted of 1,100 sailing vessels, of 806,279 metric tons, and 79 steamers, of 160,114 metric tons; total, 1,179 vessels, of 966,393 metric tons.

The aggregate length of railroads in operation on January 1, 1879, was 1,967 kilometres

(1 kilometre = 0.62 English mile), of which 1,089 were state railroads.

The aggregate length of the state telegraph lines on January 1, 1878, was 3,519 kilometres; aggregate length of wires, 12,882 kilometres; number of offices, 346; number of telegrams carried in 1878, 2,452,725; revenue, 791,000 florins; expenditures, 1,181,160 florins.

The number of post-offices in 1878 was 1,299. The number of inland letters was 40,704,846; of foreign letters, 11,698,212; of postal cards, 12,672,744; and of newspapers, etc., 32,797,742.

The movement of shipping in 1878 was as follows:

ENTRANCES AND CLEARANCES.	LADEN.		IN BALLAST.		TOTAL.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
SAILING VESSELS:						
Entered.....	3,354	2,581,210	226	8,755	3,580	2,618,765
Cleared.....	1,295	689,503	2,576	1,985,206	3,871	2,685,009
STEAMERS:						
Entered.....	4,353	6,041,483	104	141,973	4,462	6,183,461
Cleared.....	3,233	4,253,600	1,516	1,951,441	4,449	6,185,041

The imports and exports in 1877 were as follows (in florins):

COUNTRIES.	Imports.	Exports.
Great Britain.....	205,779,000	181,512,000
Zollverein.....	186,103,000	216,672,000
Hanse towns.....	7,826,000	12,868,000
Austria-Hungary.....	157,000	23,000
Belgium.....	100,611,000	99,293,000
Russia.....	56,573,000	7,526,000
Denmark.....	474,000	2,347,000
Sweden and Norway.....	11,955,000	7,550,000
France.....	16,023,000	7,014,000
Italy.....	2,857,000	7,853,000
Spain.....	5,324,000	222,000
Portugal.....	1,592,000	737,000
Other countries.....	4,433,000	1,340,000
1. EUROPE.....	605,234,000	496,024,000
United States.....	89,059,000	3,976,000
Cuba and Porto Rico.....	323,000	402,000
Brazil.....	433,000
Rio de la Plata.....	1,539,000	570,600
Peru.....	6,322,000
Other American countries.....	1,914,000	1,197,000
2. AMERICA.....	49,670,000	6,145,000
British East Indies.....	14,749,000	251,000
China.....	87,000
Japan.....	1,397,000
3. ASIA.....	16,233,000	251,000
4. AFRICA.....	4,622,000	1,014,000
5. OTHER COUNTRIES.....	538,000	16,000
Total foreign countries.....	676,297,000	498,450,000
DUTCH COLONIES:		
Java.....	74,169,000	117,720,000
Dutch West Indies.....	469,000	217,000
Total Dutch colonies.....	74,638,000	47,937,000
Grand total.....	750,935,000	541,887,000

The colonies of the Netherlands are considerably larger and more populous than the country itself. Their area is estimated at 661,400 square miles. In the East Indies, Java and Madura have a population of 18,515,414. The

native population of the other colonies is not known. The foreign population was as follows in 1876: Europeans, 54,230; Chinese, 319,137; Arabians, 14,983; Hindoos and others, 9,853. In America, Surinam, or Dutch Guiana, had in 1877 a population of 68,531; and the island of Curaçao, 41,870.

The budget estimates of the Dutch colonies for the year 1879 were as follows:

COLONIES.	Revenue.	Expenditures.	Deficit.
	Florins.	Florins.	Florins.
East Indies.....	141,439,166	150,145,753	8,706,587
Surinam.....	1,234,600	1,682,293	447,693
West Indies.....	367,596	640,025	272,129

The commerce of the East Indian colonies in 1876 was as follows: Imports, 121,511,000 florins; exports, 218,519,000. The movement of shipping in the East Indian ports in 1876 was as follows: Entered, 7,363 vessels, of 1,529,458 tons; cleared, 7,550 vessels, of 1,596,083 tons. The commercial navy in the same year consisted of 1,384 vessels, of 130,266 tons.

Java had 371 kilometres of railroad in 1879. The length of telegraph wires in operation on Java and Sumatra in 1877 was 6,953 kilometres, and of lines 5,654 kilometres. The total number of dispatches sent in 1877 was 360,322; number of stations, 67. The number of letters sent through the East Indian mails was 3,550,401; number of papers, etc., sent to the different islands, 1,777,389; weight of the papers sent abroad, 48,784 kilogrammes (1 kilogramme = 2.2 pounds); number of postal cards sold, 295,263.

M. de Roc van Andewerelt, the Minister of War, died on December 30, 1878, and in February, 1879, Lieutenant-Colonel den Beer Poortugael was appointed in his place. M. van Bosse, Minister of the Colonies, who died on February 21st, was replaced in March by Otto van Rees, the former President of the Council

for India. In July the entire Ministry resigned. The reason for this step was that serious differences had arisen between the Ministry and the King on an important constitutional question. The Ministry desired to increase the number of members of each Chamber, and also to change the qualification of voters, and resigned because the King did not favor the plan. On August 18th a new Ministry was formed, as follows: Lynden van Sandenberg, President and Minister of Foreign affairs; Six, Interior; Modderman, Justice; S. Vissering, Finance; Taelman Kip, Navy; Colonel Reuther, War; Van Golstein, Colonies; Klerek, Commerce and Industry.

The budget of the Ministry of War, which occupied the attention of the Chambers during the spring session, was passed on May 28th by 59 to 14 votes. It proposed extensive fortifications on the coast.

In opening the Chambers on September 15th, the King dwelt upon the distress under which industry, commerce, and navigation were laboring, and upon the poor harvest. These causes, it was to be feared, would result in a decline in the yield of some of the imposts, and a necessity for strengthening the resources of the Treasury. He announced that, for the purpose of promoting the prosperity of the country, the Government would maintain the salutary principles of free trade, and would propose measures for the improvement of the means of communication.

The fall session of the Chambers was occupied with the discussion of the budgets of the kingdom and of the East Indian colonies for 1880, which were both voted by the Chambers. The former showed a deficit of 8,000,000 florins, and the latter of 6,000,000 florins, which was, however, reduced to 2,500,000 florins by the increased sale of tobacco. The duty on sugar was slightly increased.

On January 7th the King was married to Princess Emma of Waldeck-Pyrmont, at Arolsen in the principality of Waldeck. She is the third daughter of Prince George of Waldeck, and was born August 2, 1858.

The war in Acheen was declared by the Government to be virtually at an end at the close of the year, but the Batavian journals described the condition of the country as being far from satisfactory.

NEVADA. The Legislature of this State opened its session of 1879 in the first week of January, and closed it by adjourning *sine die* on March 6th, when the time of its duration expired by constitutional limitation.

On January 14th the two Houses separately voted for the election of a United States Senator, the official term of the present incumbent, John P. Jones, expiring on March 3d. Mr. Jones was reelected, the vote being as follows: In the Senate—Jones 19, A. M. Hillhouse 6; in the House—Jones 41, Hillhouse 8.

On January 21st W. W. Bishop, T. N. Stone, and J. S. Mayhugh were elected Regents of

the State University by joint ballot of the two Houses.

The most important of the numerous acts of a public character passed at this session were the following: To pay the State debt proper, and to purchase Territorial bonds; fixing the State tax at fifty-five cents on every hundred dollars; exempting from taxation widows' property to the amount of one thousand dollars; to create a State Board of Equalization; to redistrict the State; to encourage the growing of trees; appropriating ten thousand dollars for the relief of the sufferers of Reno. Among the joint resolutions were the following: Instructing the State Representatives in Congress "to support the bill limiting the number of Chinese to be brought to the United States to fifteen for each vessel and voyage," and others tending to discourage the employment of Chinese in the State, and give white men a better chance; asking of Congress an extension of time (ten years) in which to comply with the provisions of the act respecting the use of lands granted the State for educational purposes.

In order to give uniformity to the legislative action relative to railroads, a resolution was adopted by the Lower House appointing a select committee of one member from each county "to prepare a bill to regulate fare and freight rates on railroads"; and a concurrent resolution was adopted by both Houses on February 6th, "referring all railroad bills to a joint select committee of fourteen." On February 25th the committee presented a majority report against the railroad bills, which was sustained. A bill to prevent discrimination in fares and freights on railroads operated wholly or in part within the State passed the House of Representatives on January 30th by an almost unanimous vote; it passed also the Senate on February 4th, with an amendment, which applies the provisions of the act to the local roads of the State, considered as independent and having no connection in the sense of their being a continuous line with the Central Pacific. It provides that their fares and freights shall be regulated directly by the laws of the State, and not indirectly by "schedules, rates, agreements, or contracts" of any outside railroad company whose line operates also within the State. The charges of transportation, especially for merchandise, have been thereby greatly reduced. The reduction on the Virginia and Truckee road, as appears from a detailed statement made by its freight agent in March, 1879, ranges from one fifth to 28 per cent., running through almost all the intermediate numbers between these two extremes, according to the various classes of goods transported, and the distances between the several points on the line. The company estimates the decrease in its gross earnings at 12½ to 15 per cent., which is considered equivalent to a diminution of over 30 per cent. in the net proceeds.

The mines of precious ores, which form the most important among the material resources of Nevada, seem to be increasing in number as well as extent of operations, they being generally under able and energetic management.

The following official abstract statement, relating to mines in Storey County for the quarter ending June 30, 1879, will give an idea of their yield, expense, proceeds, and of the taxes collected on them by the State:

NAME OF MINE OR OWNERS.	ORE EXTRACTED.	Gross yield or value.	Total cost.	Net yield or value on which taxes are levied.	Total amount of tax.
	Tons.

Totals.....	\$1,618,500	\$1,732,400	\$3,350,900

On June 30th the Sutro Tunnel was actually opened to discharge the water of the flooded mines, and the day was celebrated with extraordinary festivities. The following particulars of the opening were written by a newspaper correspondent on the same day:

The final completion of the Sutro Tunnel, for the reception of the water from the Comstock mines, was celebrated in the Carson Valley to-night. After ten years of ceaseless labor day and night, and the expenditure of \$6,000,000, the powerful engine of the combination shaft of the Hale and Norcross and Savage mines was started up this morning at precisely 6 o'clock, discharging the water into the Sutro Tunnel, at the mouth of which it made its appearance in one hour and twenty minutes, showing a temperature at first of 101°, which gradually increased to 118° in eight hours. The water in the long-drowned-out mines was lowered one hundred feet. Everything worked well. The wooden boxes, constructed of three-inch tongued and grooved Sierra Nevada pine, did not show a leak. No steam escaped from them, so that the tunnel showed

barely an increase of temperature after the hot water was turned on.

Among the natural resources of Nevada, the great forests which cover a large proportion of her surface appear conspicuous; and, of all trees that grow on her soil, the most noteworthy is the nut-pine, for its utility on account both of the wood, which may be put to a great variety of uses, and of the fruit, which is of exquisite taste. The following is an account of it:

It furnishes fuel, charcoal, and timber for the mines, and together with the enduring juniper, so generally associated with it, supplies the ranches with abundance of firewood and fencing. Many a square mile has already been denuded in supplying these demands, but, so great is the area covered by it, no appreciable loss has as yet been sustained. Besides its general uses, this tree yields edible nuts, which are excellent as food, and in fruitful seasons the pine-nut crop of Nevada is perhaps greater than the entire wheat-crop of California. The Indians alone appreciate this portion of nature's bounty, and celebrate the harvest-home with dancing and feasting. The cones, which are a bright grass-green in color, and about two inches long by one and a half in diameter, are beaten off with poles just before the scales open, gathered in heaps of several bushels, and lightly scorched by burning a thin covering of brushwood over them. The resin with which the cones are bedraggled is thus burned off, the nuts slightly roasted, and the scales made to open. Then they are allowed to dry in the sun, after which the nuts are easily threshed out and are ready to be stored away. They are about half an inch long by a quarter of an inch in diameter, pointed at the upper end, rounded at the base, light brown in general color, and handsomely dotted with purple, like birds' eggs. The shells are thin, and may be crushed between the thumb and finger. The kernels are white and waxy-looking, becoming brown by roasting, sweet and delicious to every palate, and are eaten by birds, squirrels, dogs, horses, and men. When the crop is abundant the Indians bring in large quantities for sale; then they are eaten around every fireside in the State, and oftentimes fed to horses instead of barley. Long before the harvest-time, which is in September and October, the Indians closely examine the trees, and as the cones require two years to mature from the first appearance of the little red rosettes of the fertile flowers, the scarcity or abundance of the crop may be predicted more than a year in advance. When the har-

vest season arrives, the Indians abandon all other pursuits, and, assembling at some central point, scatter in all directions to gather the nuts. Old and young are busy, and in a few weeks they obtain enough to last them all winter. These nuts are their main dependence, their staff of life, their bread.

NEW HAMPSHIRE. The official term of Bainbridge Wadleigh, one of the United States Senators from New Hampshire, having expired on March 3, 1879, and the election of his successor by the State Legislature being necessarily delayed till its meeting for the regular session in June, Governor Prescott appointed Charles H. Bell of Exeter to fill the vacancy in the mean time. The Governor's letters having been duly presented in the United States Senate, that body referred the matter to its Committee on Privileges and Elections, which reported against Mr. Bell's admission, by a vote of 6 to 3. The Senate, however, admitted Mr. Bell—yeas 35, nays 28.

The regular June session of the Legislature, the first of the biennial sessions, commenced on June 4th. Jacob H. Gallinger was elected President of the Senate, and Henry H. Huse Speaker of the House of Representatives. Both were Republicans. The votes stood 15 to 3 in the Senate, and 163 to 101 in the Lower House.

A ballot was taken by the two Houses for the election of United States Senator on June 17th; the candidates were Henry W. Blair of Plymouth, Republican, and Harry Bingham of Littleton, Democrat. The votes were 20 for Blair and 4 for Bingham in the Senate, and 161 and 98 respectively in the House of Representatives.

On June 18th, in joint convention, the Legislature elected the following State officers for the term of two years by ballot: Secretary of State, A. B. Thompson; State Treasurer, Solon A. Carter; Commissary-General, Benjamin F. Rackley; State Printer, John B. Clarke.

On June 20th the following joint resolution was introduced in the Senate, and made a special order:

Resolved, by the Senate and House of Representatives in General Court convened:

1. That in all cases and at all times the military ought to be under strict subordination to and governed by the civil power.

2. That we approve the several vetoes by the President of the United States wherein he has firmly upheld his constitutional power against the threat and attempt to withhold necessary supplies to the Government, unless he should approve legislation that he does not approve; and we pledge him our continued support in maintaining the rights of the Executive and the national supremacy.

3. That we approve the action of the Republican Senators and Representatives in Congress in exposing and resisting the scheme of the majority to deprive the national authority of all power to keep the peace and secure free and honest voting at national elections; and we pledge them our continued support in resisting all such disorganizing and revolutionary designs.

4. That we condemn as unpatriotic, destructive, and revolutionary all attempts of the majority in Congress to revive the dogma of State supremacy, to rekindle the flames of sectional animosity, and to stop and

starve the Government by withholding necessary supplies, because the President will not approve of legislation that he is constitutionally bound to veto if he does not approve of it. "A refusal to vote the appropriations is revolutionary; it is worse, it is revolution."

5. That a copy of these resolutions be promptly forwarded to the President and to each of our own delegation in Congress.

The June session was closed on July 17th.

Two acts were passed in the interest of children, entitled "An act prohibiting the employment of children under ten years of age by manufacturing corporations," and "An act to provide for the better protection of destitute and abused children."

"An act to protect the rights of citizens of this State, holding claims against other States," has been commented upon by the press of the country generally, being regarded as leveled against the so-called repudiating States, to make them pay any bond once issued by them, though afterward repudiated; the State of New Hampshire assuming, under certain conditions, to personate any private holder of such bonds among her citizens, and in his interest to sue any other State in the Union before the Supreme Court of the United States for that purpose. The main provisions of the act are as follows:

SECTION 1. Whenever any citizen of this State shall be the owner of any claim against any of the United States of America, arising upon a written obligation to pay money issued by such State, which obligation shall be past due and unpaid, such citizen so holding such claim may assign the same to the State of New Hampshire, and deposit the assignment thereof, duly executed and acknowledged, together with all the evidence necessary to substantiate such claim, with the Attorney-General of the State.

SEC. 2. Upon such deposit being made, it shall be the duty of the Attorney-General to examine such claim and the evidence thereof, and if, in his opinion, there is a valid claim which shall be just and equitable to enforce, vested by such assignment in the State of New Hampshire, he, the Attorney-General, shall, upon the assignor of such claim depositing with him such sum as he, the said Attorney-General, shall deem necessary to cover the expenses and disbursements incident to, or which may become incident to, the collection of said claim, bring such suits, actions, or proceedings in the name of the State of New Hampshire, in the Supreme Court of the United States, as he, the said Attorney-General, shall deem necessary for the recovery of the money due upon such claim; and it shall be the duty of the said Attorney-General to prosecute such action or actions to final judgment, and to take such other steps as may be necessary after judgment for the collection of said claim, and to carry such judgment into effect, or, with the consent of the assignor, to compromise, adjust, and settle said claim before or after judgment.

A bill to abolish capital punishment was long and warmly debated, and at last indefinitely postponed by the House of Representatives at the sitting of July 17th, by a vote of 166 yeas to 86 nays.

The measure asking relief of the people from the exorbitant rates and unjust discriminations in the conveyance of passengers and merchandise, practiced by the railway companies operating in New Hampshire, was considered

as the most important of the session. The act failed to pass, because of the strong opposition of a large number of members in both Houses; and its failure is reckoned a discredit to the General Assembly.

The Commissioners appointed under an act of the Legislature of 1877 to compile the public statutes of the State then in force, including those of that year's session, and to make such changes and alterations in the existing laws as they might deem necessary on account of the constitutional amendments shortly before adopted, and also on account of any change that might be made in the time of holding the election of town officers, or in the tenure of office of such officers, reported the result of their labors to the Legislature at this session. Their report, after examination and slight modification, was approved by both Houses, and on their order published before the end of the year as the Revised Statutes of New Hampshire. In this new body of State laws Governor Head, in his message to the Legislature of 1879, avers not only that "numerous verbal mistakes occur," but also that "certain statutes have been left incomplete, ambiguous, or in seeming conflict with each other," requesting them to correct its many imperfections, of which he mentions some particular instances. A law was accordingly enacted for that purpose.

The State income and expenditures during the fiscal year ended May 31, 1879, were as follows:

Receipts from all sources, including \$13,337.09 cash on hand at the beginning of the year, June 1, 1878.....	\$1,173,104 10
Disbursements on all accounts.....	1,109,847 20
Cash on hand June 1, 1879.....	\$63,756 90

The revenue from State tax, railroad and insurance taxes, and other sources, for the same year, was \$525,884.43. The expenses were:

Ordinary.....	\$222,393 65
Extraordinary.....	133,236 77
Interest paid.....	203,069 84
Total.....	\$569,205 26
Excess of expenses over revenue.....	\$43,360 83

Among the items of extraordinary expenses last year was the sum of \$94,704.40 paid on account of the new State-Prison building.

The valuation of property and apportionment of State tax in the various counties, as made by the State Board of Equalization, are as follows:

COUNTIES.	Valuation.	Apportionment.
Rockingham.....	\$23,771,269	\$139 04
Strafford.....	22,404,603	103 26
Belknap.....	3,607,196	41 53
Carroll.....	7,053,061	34 10
Merrimack.....	31,733,642	184 84
Hillsborough.....	51,533,017	249 06
Cheshire.....	21,240,939	102 62
Sullivan.....	10,407,670	50 25
Grafton.....	13,667,670	90 20
Coos.....	6,527,686	31 52
Total.....	\$206,959,017	\$1,000 00

Number of ratable polls, 86,704.

The valuation in 1876 was \$198,660,359, showing an increase of \$7,298,696. This increase in the value of property within the State is considered to be wholly or mostly the result of the inventory law enacted in 1878, for assessment purposes.

The public debt of New Hampshire on June 1, 1879, was as follows:

Liabilities.....	\$3,633,608 20
Assets.....	65,052 30
Net indebtedness.....	\$3,578,550 90

On June 1, 1878, it was:

Liabilities.....	\$3,544,508 24
Assets.....	14,318 17
Net indebtedness.....	\$3,530,190 07
Increase of debt during the year 1879.....	\$43,360 83

On the principal of the State debt the sum of \$183,400 was paid in 1878, namely: State bonds, \$101,000; State notes, \$82,400.

"An act to amend the existing law in relation to the annual invoice of polls and taxable property" was passed. The substance of its chief provisions is as follows: Every person or corporation liable to taxation is required to return under oath an inventory of his or their taxable property, and its value, by filling blanks distributed by the Secretary of State for that purpose. The oath required of the tax-payer is to the effect that the inventory returned by him contains a true statement of all his property liable to taxation. If this sworn inventory is found by the assessors, on examination, to be honestly made and exact according to law, they shall assess the tax-payer's property upon the basis of the value set down for it by himself; but "if any such person or corporation shall willfully omit to make such inventory or to answer any interrogatory therein, as required, or shall make any false answer or statement therein, or in relation to the estate or property for which he is taxable, or if such selectmen or assessors shall be of opinion that such inventory so returned does not contain a full, true, and correct statement of the estate and property for which such person or corporation is taxable, according to the requirement of such interrogatories, and that there has been such willful omission or false answer or statement on the part of said person or corporation, the selectmen or assessors shall ascertain as nearly as they may be, and in such way and manner as they may be able, the amount and value of the property and estate for which, in their opinion, he is liable to be taxed, and shall then set down to such person or corporation, by way of doamage, four times as much as such estate and property, if honestly inventoried and returned, would be legally taxable."

The condition of the savings banks, in regard to the amount of deposits, number of depositors, and other particulars, for the last year, is as follows:

Whole number of savings banks in New Hampshire..	66
Number of depositors.....	67,357
Decrease in the number of depositors the past year..	4,294

LIABILITIES.

Total amount of deposits.....	\$26,292,136 09
Decrease in the amount of deposits during the past year.....	2,507,412 91
Surplus, 1879.....	1,145,567 91
Guarantee fund, 1879.....	704,284 27
Temporary loans, 1879.....	20,978 04
Total liabilities, 1879.....	\$23,152,961 81

RESOURCES.

Loans by note on real, personal, and collateral security.....	\$14,521,719 46
Investments in bonds and stocks.....	11,578,746 45
Real estate, bank fixtures, and miscellaneous items.....	1,222,051 86
Cash on hand.....	890,444 04
Total assets.....	\$28,152,961 81

The operations of insurance companies of various descriptions doing business in the State appear to be exceedingly large. The gross amount of premiums paid to fire-insurance companies in 1878 was nearly \$445,000, of which \$417,764.92 was paid to stock companies of other States and countries licensed in New Hampshire, and the remainder to mutual companies in the State. The following is a summary of the operations of the stock companies for 1878: Total risks written in 1878, \$33,816,838; risks in force on December 31, 1878, \$50,646,552; amount of premiums received, \$417,764; amount of losses paid, \$366,848; proportion of losses to premiums, 86 per cent. The receipts of life and accident insurance companies upon their policies in New Hampshire were \$260,383.77, and the amount paid by them to representatives of insured persons was \$219,484.28. These sums do not include the receipts and payments of the "mutual relief associations" organized among the members of secret societies and others in the State.

The education of youth in the State appears to continue in its healthy condition. The State Normal School at Plymouth is said to be in a more satisfactory condition than ever before.

The State Asylum for the Insane, at the beginning of June, 1879, contained 275 patients. Besides these there are a great number of that unfortunate class in the State, a large proportion of whom are kept by their respective families at home, because they can not afford to pay the weekly rate for board and attendance at the asylum.

The indigent deaf-mutes, blind, and feeble-minded of New Hampshire are kept at the charge of the State in institutions or schools in Connecticut and Massachusetts. Their number in New Hampshire is increasing rather than diminishing. For their support, clothing, and education, the Legislature of 1879 appropriated the annual sums of five thousand, four thousand, and one thousand dollars respectively.

The State Penitentiary continues under excellent management in all respects, the convicts being constantly employed in profitable work, which is the making of bedsteads. There were 68,000 bedsteads manufactured

there last year, 15,000 of which were sold to the New England States, 20,000 to New York, New Jersey, and Pennsylvania, and 33,000 to Maryland, Virginia, and other Southern States and California. The earnings of the prison for the year were \$23,618.05; the expenses, \$17,492.51; leaving \$6,126.54 as net earnings. This seems to be a remarkably large sum, considering that the price received for prison-labor is now 46½ cents a day per man, whereas the rate obtained for it a few years ago was 95 cents. The number of convicts in August, 1879, was 190, or 14 less than were reported in 1878.

The State militia, under the appellation of "National Guard," as ordained by the Legislature of 1878, is composed of thirty companies of infantry, four sections of artillery, and two troops of cavalry; all of these being organized into three regiments. Three new companies were organized last year.

The members of the New Hampshire Temperance Association met in State Convention at Manchester on February 19th, and adopted the following resolutions:

Resolved—1. That moral suasion is one of the great instrumentalities for promoting the advancement of the cause of temperance to be constantly used and never abandoned.

2. That to the end that there may be any complete triumph of the temperance cause, the places of temptation must be closed, the principles of prohibition must be recognized, and the prohibitory law now on our statute-books must be rigidly enforced.

3. That we do most heartily approve of the detective system in enforcing the law, and recommend the organization of legal-suasion clubs in all parts of the State, and their cooperation in the detective system of enforcing the law, until such time as it shall be enforced by the regularly constituted authorities.

4. That the interests of the temperance cause imperatively demand that the local-option clause of the lager-bier law, passed at the last session of our Legislature, should be repealed.

5. That we condemn the practice of prosecuting officers in "hanging cases up" over the violators of the prohibitory law, and earnestly request the full execution of the law in these as in all criminal cases.

6. That we believe the temperance movement can not complete its work till the manufacture as well as the sale of intoxicants is prohibited by law.

7. That a general mass convention of all who believe in the prompt and rigid enforcement of the law be held, and that a committee of seven be appointed to make all necessary arrangements for the same.

With regard to the main object of the Convention, which was the adoption of some method to secure the enforcement of the existing liquor laws, arrangements were made for the holding of another meeting, in which better-matured plans of action might be presented and decided upon. In accordance with this determination, they assembled again at Concord on March 27th, when they formed themselves into a "State Temperance League." A constitution was adopted, which provides for the formation of a "State Temperance League," in which every church and temperance organization is entitled to seven members; and for a board of prosecuting officers, whose duty it shall be to prosecute all violations of the liquor law. The

resolutions previously adopted at the Manchester meeting were reaffirmed. A resolution was also adopted, "that officers seeking reelection in 1880 shall give pledges that the law regarding the sale of liquors shall be rigidly enforced."

Among the industries pursued by the people of New Hampshire, the manufacture of "leather-board," or artificial leather, holds no inconsiderable place. A visitor thus describes the process of manufacture:

Passing down into the manufacturing room and threading our way through machinery and piles of leather-board, we first stand before an immense tub, filled with a dirty-looking, pulpy mass, which is flowing slowly around it. This shows the first step of the manufacture, which consists in grinding the stock, mixed with water, between eight and twelve hours, until it attains the proper consistency. At this stage may be perceived the fact that leather has as distinct a fiber as cotton or flax, one very much resembling that of wool. Taking up a piece of the half-digested leather, this can be seen very plainly. The best stock for leather-board is technically known as "pancake," from the fact that it consists of the cuttings of sole-leather, which is made by gluing layers together. From the tub the pulp is pumped into an ordinary paper-machine, such as is used in making the coarser kinds of paper, and after passing through this is wound upon a metal drum with a groove running lengthwise. While watching this, suddenly the man in charge touches a handle, runs a sharp knife along the groove, and takes off a sheet of leather-board in much quicker time than I can write it. After this there is nothing to be done but dry and pack; and from here we go into a well-lighted room, having in the middle a large stand which looks very much like a gigantic egg-hatcher. Investigation, however, shows that the tiers of broad shallow drawers contain leather-board. Under each drawer is placed a steam-coil, and in this particular drier there are in all five miles of piping. Straw-board is made in very much the same way, but the straw is treated with lime before grinding; the manufacture takes less time and the board is much softer.

It is undoubtedly true that the use of leather-board in making boots and shoes is a form of adulteration, and especially is this the case when employed in making soles; for, as soon as wet, it comes to pieces. This, however, is not wholly the fault of the manufacturer, since he is obliged to produce a softer article by mixing the stock with other and inferior material, in order to meet the demand of the shoemaker, as leather-board made wholly of leather injures the dies used in cutting it. On the other hand, it may be said in its favor that by means of it a cheaper shoe is produced, of a better material than would otherwise be used, and it consumes a waste which was before of little value. Like all others, the business has suffered from competition and over-production; but some idea may be conveyed of its importance when I say that in this State there are five mills, in Maine ten, and in Massachusetts four.

NEW JERSEY. The sessions of the Legislature of New Jersey are held annually. The one hundred and third commenced on January 14th and closed on March 14th. In the Senate, William J. Sewell was chosen President, receiving 11 votes, to 10 given to George C. Ludlow. In the House, Schuyler B. Jackson received 33 votes for Speaker and was elected, and George S. Duryee 26.

An "act to provide for the election of delegates to a Constitutional Convention" was reported upon adversely in the House, and the

report adopted. A motion to reconsider was lost—yeas 16, nays 34.

An adverse report was made to the passage of an act to equalize assessments and establish a uniform system for the valuation of real estate in this State. The report was adopted and the bill indefinitely postponed.

An act was passed authorizing the appointment by the Governor of a special Tax Commission. This Commission is required to make a full and thorough investigation of the manner in which the different kinds of property and the various industries and occupations of the people of the State are affected by existing laws relating to taxation, together with any defects, discrepancies, or irregularities in such laws. It is also required to advise such changes and improvements in the laws relating to taxation as to them shall seem most likely to promote the agricultural, commercial, manufacturing, and other interests of the people of the State.

In the Senate, George Dayton of Bergen, G. W. Atkinson of Middlesex, N. T. Stratton of Gloucester, John Hopper of Passaic, and John P. Jackson of Essex were appointed in executive session as Commissioners. In order that the investigations of the Commission might be as thorough and comprehensive as possible, they invited information or suggestions from every person who was willing to offer either in writing. The points to which they called special attention, as indicated in the law authorizing their appointment, were the following: 1. The manner in which different kinds or forms of property are affected by existing tax-laws. 2. The manner in which different industries or occupations are affected by existing tax-laws. 3. Any defects, discrepancies, or irregularities in such laws. 4. What changes in the tax-laws are needed—as respects, for example (a), the things to be taxed or exempted from taxation; (b), the rate of taxation; (c), the time or mode of assessment or collection.

Another act was passed authorizing the appointment by the Governor and Senate of five judicious persons to prepare a system of general laws for the government of cities now or hereafter to be incorporated. The persons appointed were John Clement of Haddonfield, Barker Gummere of Trenton, William J. Magie of Elizabeth, Frederick H. Tesse of Newark, and Leon Abbott of Jersey City. They determined to visit various portions of the State, for the purpose of securing the views of citizens in regard to the subject generally, and formulated the following queries, which they addressed to the public and to prominent men: 1. The general subject of legislation necessary or proper in respect to counties. 2. The general subject of legislation necessary or proper in respect to townships, including boroughs and incorporated towns. 3. The general subject of legislation necessary or proper in respect to cities. 4. The expediency of passing a general law

adapted to all municipalities, leaving to each the option of making use of the whole or portions of the powers granted, or of passing different laws adapted to different classes of municipalities. 5. The best mode of limiting expenditures for municipal purposes within proper bounds, and of securing a proper accountability on the part of all officials. 6. The expediency of prohibiting municipalities from incurring debts or obligations not immediately provided for by tax. 7. The best mode of dealing with the existing debts of municipalities. The propriety of providing for the payment of existing debts by establishing a sinking fund under the control of the State. The propriety of creating a State Commission for the adjustment of debts between defaulting cities and their creditors. 8. The propriety of prohibiting assessments for improvements based on the special benefit derived therefrom. If the system of assessments for special benefits be considered desirable, how to provide for the payment of the expenses of improvements and the collection of assessments. 9. The best mode of providing for the collection of taxes within municipalities. 10. The best mode of providing for the control of public schools within municipalities. 11. The proper extent of municipal regulations respecting matters of public health.

An act to provide for the establishment of schools for industrial education passed the Senate by yeas 34, nays 3. It had previously passed the House. The act provides that the State Board of Education may in their discretion establish schools for industrial education upon the application of not less than ten citizens of the State, who shall agree to pay part of the cost of maintaining any such schools; and the Board of Education shall have power to prescribe and cause to be enforced all rules and regulations necessary for carrying into effect the provisions of the act. That such schools, when organized, shall be for the training and education of pupils in any industrial pursuits now established in the State, including agriculture, so as to enable them to perfect themselves in the several branches of industry which require technical instruction. That there shall be a board of trustees of each of such schools, to consist of five members, who shall have control of the buildings and grounds, and the power to prescribe the studies and exercises of the school and rules for its management, and to grant certificates of graduation; they shall report annually to the State Board of Education their own doings and the progress and condition of the schools. That any city, town, township, or county shall have the power to appropriate for the support of any such school such amount as they may deem expedient and just. That the said school shall be supported (1) by the amount received from tuition fees; (2) by the money contributed by the petitioning citizens; (3) by the amount appropriated by the city, town, township, or county;

and (4) by the amount contributed by the State Board of Education; provided, however, that the sum annually contributed by the said Board for any one school shall not exceed the sum of five hundred dollars; and the Treasurer is authorized to pay upon the warrant of the Comptroller, approved by the Governor, such sum, not exceeding the amount above specified, as may be called for by the trustees.

An act relative to tramps was passed. It provides that any person going from place to place begging, asking or subsisting on charity, and for the purpose of acquiring money or a living, and having no fixed residence or lawful occupation in the county or city in which arrested, shall be deemed a tramp and guilty of misdemeanor, and on conviction sentenced to imprisonment at solitary confinement at hard labor in the county jail or workhouse for a term not exceeding one year. It also provides that one who enters a dwelling, or kindles a fire on the highway or on the land of another, without first having obtained permission, or who is found carrying firearms, shall be liable to arrest and imprisonment at hard labor not exceeding three years.

An act providing for the summary investigation of county and municipal expenditures was also passed. By its provisions, on the petition of twenty-five freeholders of any municipality to a Justice of the Supreme Court, setting forth that they have reason to believe that the public moneys are being unlawfully or corruptly expended, such Justice may appoint experts to investigate such expenditures. The public officers shall facilitate such investigation, and the expenses shall be paid by the municipality.

After the Federal census was taken in 1870, it became the duty of the Legislature to redistrict the State for members of the House. In 1871 the Legislature, in which the Republicans had a majority, passed an act which the Democratic minority asserted to be unfair in its award of representation. In the session of 1878 the Democrats repealed the act, and passed another in accordance with their views of fairness. At this session the Republicans, being again in a majority, suspended the rules and repealed the districting act of the previous session and reenacted that of 1871. The vote in the House was—yeas 32, nays 27.

By an amendment of the State Constitution the Judges of the Courts of Common Pleas, both law and lay Judges, are nominated by the Governor and approved by the Senate. Governor McClellan, in the exercise of this duty imposed upon him by the Constitution, nominated certain gentlemen as law Judges for the counties of Essex, Mercer, Middlesex, and Monmouth, and as lay Judges for the counties of Burlington, Camden, Hudson, Hunterdon, Warren, Union, Bergen, Morris, Cape May, Cumberland, and Gloucester. At the same time he sent to the Senate with these names the following letter:

STATE OF NEW JERSEY, EXECUTIVE DEPARTMENT, }
TRENTON, January 27, 1879. }

To the Senate :

The amendment to the Constitution which removed the appointment of the lay Judges of the Inferior Courts of Common Pleas from the joint meeting of the Legislature, and committed their selection to the Governor, with the advice and consent of the Senate, was intended to elevate the character of those courts, and to remove the appointment as far as possible from merely partisan influences. The feeling of the great mass of the people of this State is, I believe, strongly against a strictly partisan composition of the courts. Our Supreme Court and that of Errors and Appeals have long, if not always, been non-partisan in their character, and it is not unreasonable to suppose that the high reputation they so justly enjoy is in no small degree due to this fact. It is my firm conviction that one of the greatest evils which can befall a community, especially in a republic, is a strictly partisan judiciary. Something more is necessary than that the judiciary should be really pure, impartial, and just; it is also requisite that the people should believe them to be so, and that they should be convinced that no unintentional or unconscious party prejudice should work injury to any seeking justice. I believe that, if the judiciary of any nation or state is entirely composed of any one political party, it will often be difficult to convince members of the adverse party that they can always obtain even-handed justice.

The Inferior Courts of the Common Pleas are now composed of two members of one political party and of one member of the other, and it happens that it now for the first time falls to the lot of a Governor of this State to decide whether this condition of affairs shall continue, or whether only one party shall be represented in these courts. With a deep sense of my duty as the Chief Executive of this Commonwealth, whose province it is to render exact and equal justice to all its people, I have determined to preserve the non-partisan character of the judiciary. I do this with the confident hope and expectation that both political parties will maintain this policy in the future, and that the precedent will be approved and followed by my successors in office, to whatever political party they may belong.

Very respectfully,

GEORGE B. McCLELLAN, Governor.

The nominations and letter were referred to the Judiciary Committee of the Senate, a majority of whom subsequently presented a report to the Senate, approving in strong terms the views of the Governor. They then proceed to say :

Agreeing so fully as we do with the sound public policy expressed by the Governor in his admirable message, your committee feel constrained, in order to fully carry out his views, to recommend that his Excellency's nominations for law Judges of the Courts of Common Pleas in the counties of Essex, Monmouth, Middlesex, and Mercer be not confirmed by the advice or consent of the Senate.

The Governor may have overlooked the fact that by an act of 1878 the number of lay Judges was reduced in all counties having not more than 50,000 inhabitants, and that reduction takes effect in the three counties last named during the present year; and were the nominations confirmed for these counties, the bench in each would be unanimously of one political party, and must so remain for some time to come. Such a result his Excellency the Governor would doubtless deplore, for the reasons given in his message that "one of the greatest evils that can befall a community is a strictly partisan judiciary, and that in such cases it would be difficult to convince members of the adverse party that they could always obtain even-handed justice." Your committee believe that the courts, whose administration so directly affects the personal interests

of the people as the Courts of Common Pleas, Quarter Sessions, and Orphans' Courts, should be especially free from the slightest suspicion that any unintentional or unconscious party prejudice shall work injury to any one seeking justice therein. We believe earnestly in the principle of a non-partisan judiciary, and in its fair and practical application to the counties named and to all others.

The judiciary at the present time in said counties of Monmouth, Middlesex, and Mercer is non-partisan, and your committee have failed to see or learn any reason why that condition of affairs should be changed by appointments which set the principle of a non-partisan judiciary at defiance upon the very moment of its promulgation.

The nomination for law Judge of Essex County is largely open to the same objections already stated. The administration of justice in that largely populated county, at least in criminal matters, devolves almost entirely upon the Court of Quarter Sessions, which would become, by the appointment made by the Governor, entirely of one party, were this nomination confirmed.

While your committee, therefore, have deemed it wise to adopt the expressed views of the Governor and to cooperate with him in whatever proper appointments he may make in accordance therewith, they are constrained, for the foregoing and other satisfactory reasons, to advise the rejection of the nominations made for law Judges of said counties of Essex, Monmouth, Middlesex, and Mercer, as inconsistent with the letter and principles of the message.

The nominations of the Governor for lay Judges in the counties of Burlington, Camden, Cape May, Cumberland, Gloucester, Hudson, Hunterdon, Warren, Union, Bergen, and Morris, making a minority Republican representation in each of said counties respectively, and being entirely in accord with the principles enunciated in his message, it is recommended that they be confirmed.

The minority of the committee at the same time presented a report on the subject to the Senate, of which the following is an extract :

By usage and of right, the nomination of persons to hold these several judicial offices belongs to the Governor, the Senate having only the power to reject or confirm his nominations. The Governor, together with his message communicating these nominations, also presented a special message, laying down certain principles which he considered should govern the Executive in making judicial appointments, which were an enlargement upon the policy adopted by previous Democratic Governors, looking toward a non-partisan judiciary in this State. This fact is alluded to simply because the majority of the Judiciary Committee, to whom were referred as well the special message as the nominations, have seen fit to use words carefully culled from that message, as the basis of their report advising the rejection of the nominations of the four Democrats for law Judges and the confirmation of the eleven Republicans for lay Judges. If the dominant party in the Senate are willing to accept the principles laid down by the Governor as the correct one, and by which they hereafter intend to be guided, they should at least be fair and accept it as he announced it.

Governor McClellan, in his special message to this Senate, refers *solely* to the lay Judges of the Common Pleas, and his language is so plain that none can be deceived, save willingly. He says, "The Inferior Courts of the Common Pleas are now composed of two members of one political party, and of one member of the other, and it happens that it now for the first time falls to the lot of a Governor of this State to decide whether this condition of affairs shall continue, or whether only one party shall be represented in these courts." To what can this language, which is the keynote of the message, be construed to apply, save to the lay Judges? Of whom can it be said that two members are now of one political party, and one of

the other, except the lay Judges of the Common Pleas, and of them alone? The message of the Governor speaks for itself, and having by it enunciated a policy by which he proposes to govern his action, it will be admitted by all fair-thinking men that he should be allowed to develop and perfect that policy at such time and in such manner as he may consider best for the interests of the people; and if, at this time, at the very outset of his undertaking, he does not find it in his power to bring it at once to completion, his message most clearly commits him to its consummation whenever and as the opportunity affords.

I respectfully insist that if the policy of the Governor, as expressed by his nominations, is to be adopted by the Senate, it should be adopted as a whole; and it remains for the representatives in the Senate of the party in power to say whether the principle of a non-partisan judiciary shall fall still-born, or whether it shall go on broadening and extending itself until it includes all classes of the judicial branch of the government.

But, aside from all this, despite all factious criticism that may be made upon the message of the Governor, the fact remains that, in the exercise of an undisputed right, the Governor of this State has sent to this Senate nominations which, with the advice and consent of that Senate, will become appointments. It matters not what impelled the Governor to make those political nominations; that is beyond the question or cavil of the Senate. The only question properly before it is, Are the persons named proper persons to hold the offices for which they are named? The majority of the committee do not even pretend otherwise.

For these reasons I respectfully dissent from the report of the majority of the committee, and recommend that the nominations for lay Judges and for lay Judges of the Courts of Common Pleas, now before the Senate, be confirmed in their entirety.

The Senate concurred in the views of the majority report, and voted against the lay Judges nominated. The Governor made no more nominations previous to the adjournment of the Legislature. Subsequently the same persons were commissioned to fill vacancies in the four counties, under the following provision of the State Constitution: "When a vacancy happens during the recess of the Legislature in any office which is to be filled by the Governor and Senate, or by the Legislature in joint meeting, the Governor shall fill such vacancy; and the commission shall expire at the end of the next session of the next Legislature, unless a successor shall be sooner appointed."

A bill was introduced to the House requiring the Governor to withhold commissions from justices of the peace chosen by the people until they have passed an examination and obtained certificates as to their capacity and moral character. A question arose as to the constitutionality of the bill, and it was submitted to the State Attorney-General (Stockton), who said:

The Constitution imparts to the legislative, executive, or judicial department of government no power to annex any other qualification to this office than those already prescribed by the Constitution itself as a prerequisite to the exercise thereof. Such a course would be inconsistent with the fundamental principle upon which is founded the whole structure of our political institutions, viz., all political power, not otherwise delegated, is inherent in the people.

Eligibility to public trusts is a constitutional right, which can not be abridged or impaired. The Constitution establishes and defines the right of suffrage, and gives to the electors as well as to other departments of

government the power to confer public trust. It prescribes in respect to certain officers particular circumstances, without which a person is not eligible; and provides that persons holding certain offices shall hold no other public trust. Excepting particular exclusions thus established, the electors and the appointing authorities are by the Constitution wholly free to confer public stations upon any person according to their pleasure. The Constitution giving the right of election and the right of appointment, these rights consisting essentially in the freedom of choice, and the Constitution also declaring that certain persons are not eligible to office, it follows from these powers and provisions that all other persons are eligible.

Eligibility to office is not declared as a right or principle by any express terms of the Constitution; but it results, as a just deduction, from the express powers and provisions of the system. The basis of the principle is the absolute liberty of the electors and the appointing authorities to choose and to appoint any person who is not made ineligible by the Constitution.

Eligibility to office, therefore, belongs not exclusively or specially to electors enjoying the right of suffrage. It belongs equally to all persons whomsoever not excluded by the Constitution.

I am of the opinion that this bill is unconstitutional: 1. Because it attempts to limit the body from which the officer may be chosen, thereby excluding from this office a class of persons constitutionally eligible, and establishing a qualification which the State Constitution does not require. 2. Because it attempts to control the Governor in the exercise of a duty confided to him exclusively, and enjoined upon him by the Constitution.

A bill was passed in the House to prohibit the manufacture of shoes in the State Prison, by a vote of yeas 36, nays 19. A motion to reconsider the vote was lost—yeas 14, nays 44. The Committee of the Senate to whom the bill was referred when it reached that body reported that they had deemed it their duty, in examining the question, to take an enlarged view of the subject, and not merely to see what its effect might be upon a single class; and they therefore endeavored to ascertain what action, if any, was necessary to promote the general welfare of the people of the State, and also to inquire what effect the abolition of the system would have upon the prisoners themselves. The cause of the depression in the shoe business as well as in other branches of trade is ascribed to the introduction of machinery into the manufacture of shoes, which has within a few years almost revolutionized the business; and constant improvement have been made, until the perfection of machine-made work and the rapidity of its construction are marvelous. This of itself must tend to throw upon the market a vast amount of work; and, when the market becomes overstocked, the machines must stop and the employees for a time cease to labor. That this is a true reason is proved by the fact that more than two thirds of the convicts themselves have, since the termination of old contracts, been in a condition of enforced idleness. It is assumed by those who desire the abolition of prison labor, that the price paid by the contractors for the labor employed greatly injures similar business by unfair competition. If it be true that an inadequate price is paid for this labor, it would result in

making these contracts so profitable that the former contractors, who are supposed to have been filling their coffers, would not only have gladly renewed their contracts, but the present contractors would find employment for every idle man in the prison. And yet the fact is, that during the past year all the old contracts were terminated without renewal, and new contracts have only been made for about one third of the whole number of convicts. Then, again, the quantity of work made in the New Jersey State Prison, and thrown upon the market, when compared with the vast amount demanded by forty millions of people, can be scarcely sufficient to create a ripple in the current rate of prices. Basing the calculations upon the assertions of the different parties who have appeared, it is estimated that not less than 10,000 persons are employed in New Jersey alone in the manufacture of boots and shoes, while the whole number of convicts employed at the present time is 270—not quite 2½ per cent. Complaint has also been made that a greater amount of work was secured from the prisoners, because of severe punishments which were inflicted in case of failure to perform their allotted tasks. A synopsis of the record of prison-shop number three, which is a fair sample of all the others, shows that from the 1st day of August, 1878, to the 21st day of February, 1879, a period of six and two thirds months, the daily average of men employed in this shop has been 41. During that period the whole number reported to General Mott on account of work was *seven*, and for other causes *eight*, which is an average of one man in 28½ days on account of work, and of one man in 25 days for other causes. For all causes, this is less than one fourth of one per cent. for the whole number of days' work done, and of itself refutes the idea that the competition of prison-labor is unfair because of the amount of work forced from men by punishments. If the change now demanded is sanctioned, it must result in depriving the State of all the revenue which of late years has been received from the labor of the prisoners. The earnings of the prisoners for the past nine years, ending October 31, 1878, have reached the sum of \$685,721.68, being a yearly average of \$76,191.30. The earnings for the past year have been \$63,258.-25, or about \$9,000 more than sufficient to meet the current expenses of the maintenance of the prisoners.

Looking at the other aspect of the case, which is the effect upon the prisoners if labor ceases in the prison, it appears from a schedule prepared by the hospital steward of the New Jersey State Prison, showing the number of cases requiring treatment when the prisoners have been fully employed, partially employed, and entirely idle, that on the 31st of May, when all the prisoners were employed, only 21 were unfit for work out of 664; on the 1st day of December, 1875, after six months of idleness, there were 50 unfit for work out of

717; on the 31st day of December, 1877, when 500 convicts were working, there were 38 unfit for work out of 835; and during the month of January, 1879, when only 270 men were employed, 107 men had been under treatment. The record of insane persons in the prison on the 31st day of May, 1875, was *five*, while on the 31st day of December, same year, after six months of idleness, the number was increased to *eighteen*! The number of deaths year by year tells the same story. The number of deaths during 1874, when all were employed, was 3; in 1875, when the convicts were idle six months, the deaths were increased to 13; in 1876, when a small number only were employed, the deaths were 20; in 1877, when 500 were employed, the deaths were only 8; while in 1878, when only 200 were employed, the deaths were increased to 19.

From such considerations the committee reported adversely to the bill. A debate sprung up in the Senate on a motion to place the bill on the calendar. Senator Marsh attempted to show that the amount of work done in the prison had no appreciable influence upon the market, and to this end brought forward the following statistics of the extent of the manufacture in this country:

Neither do I believe that the quantity of work made by prison-labor, and especially that made in the New Jersey State Prison, does to any appreciable extent affect the market injuriously to the outside manufacturer. A writer in the "Shoe and Leather Reporter," after enumerating the firms throughout the country who have contracts for prison-labor, thus proceeds: "This completes the list of contracts for convict-labor in the United States, and shows the total number employed to be 5,325 hands. There are some small jail contracts and some boys employed in houses of refuge, protectories, etc., through the country, but the entire amount would make the number about 5,500 hands. Allowing 310 days' labor a year, and an average of three pairs a day made by each man, would give 5,115,000 pairs made yearly by prison-labor. The average value of the boots and shoes will be about \$1.25 a pair for large and small, which will give the total value of such manufacture at \$6,393,750 for the year. There are *four* manufacturers in New England (three in Massachusetts and one in Maine) who make more pairs and goods in money value than are made in all the prisons of the United States. Now, when it is understood that the total value of boots and shoes made in the United States in 1876 is estimated by competent authority to reach the sum of \$189,974,922, it will be seen that all the prison-labor of the country combined is less than ⅓ per cent. of the whole. I compare with 1876 because I have not been able to get later figures, but have no doubt that the combined production for 1878 is even greater than in 1876. It is an easy matter to ascertain with accuracy the number of boots and shoes made in the United States by machines. Each pair has a stamp, which must be purchased of the patentee, and the statistics for 1876 show that 67,500,000 pairs were made during that year. Add to this the quantity of such work made by hand-labor, and it is estimated that the whole product of the United States in that year was 82,962,461 pairs, without estimating custom-work at all. And this estimate only gives an average of two pairs yearly to each man, woman, and child in the country, which is certainly not an over-estimate. Of this vast quantity there were made in Massachusetts 52,687,461 pairs, in New York 9,060,009 pairs, and in Pennsylvania 5,000,000 pairs. The city of Philadelphia alone is cred-

ted with having 106 factories, making of all varieties about 4,500,000 pairs. The city of Baltimore produced 1,400,000 pairs, Cincinnati 2,000,000 pairs, and Chicago 9,000,000 pairs. It is needless to enumerate more. Sufficient has already been done to convince this Senate of the vastness of the boot and shoe interest in this great country of ours.

But the legislation now proposed would not decrease the number of boots and shoes made except in New Jersey, and it is important, therefore, to know how many shoes are made in the New Jersey State Prison, and to compare this production with that of the whole country. There are at present employed in the New Jersey State Prison 270 convicts, and I am informed that they average four pairs per man each day, a total of 1,080 pairs per day, and for a year (allowing 300 working days as before) 334,800 pairs. Estimating the average value of this work at \$1.50 per pair, this production would reach the sum of \$502,200, an amount utterly insignificant when compared with \$200,000,000, the production of the whole country! Whether prison-labor ceases utterly or continues, it can have no perceptible effect upon the vast market of this country, or upon the price paid for labor. As well might you expect to affect the supply of the city of Trenton by taking from or adding to its reservoir a hogshead of water!

Although the bill failed to pass, yet its discussion probably led to the adoption by the Legislature of a joint resolution providing for the appointment of a Commission of seven by the Governor, three of whom may be citizens of other States, to make careful inquiry into the question of prison-labor, as to whether it comes into competition with free labor; to state the best means to prevent such competition, and at the same time to supply employment to the convicts. The Commission will receive no compensation, but may employ a clerk at \$300, and must make a report to the Governor before the next session of the Legislature. The Commission appointed by the Governor consisted of the following persons: Edward Bettle of Camden, William R. Murphy of Burlington, A. S. Meyrick of Middlesex, Schuyler B. Jackson of Essex, and Orestes Cleveland of Hudson.

The efforts made to secure a better religious observance of Sunday by the enforcement of laws enacted at a former period caused more active opposition in Newark than in any other part of the country. Early in the year the Law and Order Association began to prosecute the dealers who sold liquor on Sunday. As an offset to the action of the Society, the Germans began to insist on the enforcement of the old Sunday law, which for years had been considered as obsolete. On the first Sunday when the German Protective Association attempted to enforce this law, all the liquor-saloons were closed, and ordinary business was suspended. The object was to make the Sunday laws offensive to the citizens, but the result was to create a public sentiment against the liquor-dealers. The question of repealing the law against the selling of lager-beer on Sunday, which was first agitated in Newark, gradually spread all over the State, and from the Citizens' Protective Association of Newark sprang the Liberal League of New Jersey. This body held a State Convention in Newark in September, and adopted the following resolutions:

Whereas, The founders of our government invited the oppressed of all nations to come here and to participate in a free government for free men; and,

Whereas, In compliance with this invitation people from every land have flocked to our shores, and, blending their nationalities together have formed a mighty nation; and,

Whereas, Of late there has been manifested in certain quarters, and among certain religious bodies, a disposition to exercise extraordinary powers and to prostitute the forms of law for the furtherance of their peculiar views, and to the manifest injury of the civil rights and personal liberties guaranteed to all of our people, and to the contrary of the well-being of the State; therefore, we, a part of the people of the State of New Jersey, in mass-meeting assembled, do resolve:

1. That every man has an indisputable claim to life, liberty, and the pursuit of happiness.

2. That the liberty of action in the pursuit of happiness gives to every man the right to carve his life in his own way, so far as that way is consistent with the same rights of others.

3. That we proclaim ourselves law-abiding citizens, but that we renounce the spirit of reaction and of bigotry as opposed to the genius of our free institutions, and as contrary to the progressive spirit of the age.

4. That we denounce the attempts recently made by some of the officers of the law in this State, through the instigation of a few fanatics, to revive and enforce obsolete laws, repealed by the consent of three generations, as wrong in principle and vicious in practice, tending to weaken popular respect for all law and to bring the administration of justice into disrepute.

5. That we call upon the Legislature of New Jersey to so modify existing laws as to secure enlightened liberty of action to all classes of our citizens; and we ask that the Legislature shall see to it that New Jersey shall no longer be the laughing-stock of the civilization of the nineteenth century.

6. And we do hereby pledge ourselves to vote only for such men for the Legislature as will guarantee to us their adherence to the above principles.

This was followed on the same day by an immense procession, the line of which embraced in its different sections not only the representatives of the brewers, and all the trades which contribute to the lager-beer business, but delegations from almost every branch of business which is carried on in the State of New Jersey. At the charter election in Newark in October, the Protectionists were successful by a large majority. This success was not regarded as expressing objections to the Sunday laws as a whole, but as asserting that they needed modification.

At the opening of the Oyer and Terminer in that city in March, Judge Depue thus defined a "disorderly house" under the law of the State:

A disorderly house is defined in law to be a place where the law is habitually violated; and if in the course of investigation of this subject you find any place in which the law is in either of the respects mentioned habitually violated, such places are disorderly houses within the meaning of the law.

At the last and preceding term of Court indictments were found for keeping disorderly houses, based on the habitual sale of liquor without any license, and at times when the public authorities were forbidden to grant licenses for the sale of liquors. A question having arisen, one of them was made a test case and taken to the Supreme Court, and the indictment was there sustained. So, with regard to that subject, it has been adjudged by the Supreme Court, and there now remains no doubt as to the law on this subject.

Under an act of the Legislature to prevent the spread of contagious or infectious pneu-

monia among cattle in the State, the Governor appointed William H. Sterling to carry out its provisions. At the time of his appointment the disease, so far as known, existed only in the northern and eastern portions of the State. Wherever it was known to exist, veterinary surgeons were sent to make a correct diagnosis, and the cattle were preserved in all cases where it could be done, and none destroyed except it was absolutely necessary in order to save the herd, or to prevent the spread of the contagion. In all cases a strict quarantine was maintained. All cattle entering or leaving the State were also inspected.

A plan was adopted by Governor McClellan, the object of which was to so improve the efficiency of the militia of the State as to secure a body of troops that would in many respects bear comparison with the regular army. The estimate of the number of reserve militia of the State, based on the census returns of 1875, is 248,127. The number organized in regiments, companies, and battalions is 3,180. These compose two brigades, divided into one battery of artillery, two Gatling-gun companies, and seven regiments and one battalion of infantry. A school for commissioned officers and another for non-commissioned officers were instituted, and attendance was stimulated. Very soon a commendable increase in promptness of attendance of the enlisted men at the drill-rooms began to be noticed. An effort was then made, although hitherto without success, to obtain from Congress a larger appropriation of arms, etc., for the militia. Meantime much attention has been given to rifle-practice, in order to improve the marksmanship of the troops. An officer was sent through the State to instruct the National Guardsmen in the use of the rifle in their armories preparatory to practice on the ranges, of which there are two in the State. In order that he should do this successfully, it had been necessary previously to devise a way of making armory practice essentially similar to that on the range. It was necessary that the same rifles, with the same sights, should be used in both instances; yet 75 feet was as long a range as could be constructed in most of the armories. The targets were easily reduced to a size that would make it as difficult to hit them at 75 feet as it would be to hit a target on a range at 200 yards. To prevent accidents in the armories from the premature pulling of triggers, screens that could not be perforated by a rifle-bullet were set up at a distance of about 25 feet from the firing-point. These had holes cut in the center, just large enough to give to the marksman a full view of the target. Lest the continual crack of the rifles should prove a nuisance to persons residing in the neighborhood, it was found necessary to reduce the charge of powder in the cartridges from 70 grains, the ordinary range-charge, to 6 grains. This was found sufficient to drive the bullet—reduced from 420 to 230 grains—to its work. The same

cartridge-shell was used, but it was filled nearly to its mouth with a brass cylinder perforated from end to end to allow a train of powder to extend back to the percussion-powder at the base of the cartridge. In this way practice in the armories was made to take the place of range-practice. After this style of shooting was introduced it became popular. Officers and privates were eager to practice. The practice in the armories, however, had two defects. The reduced charge of powder reduced the force of the recoil, and the rifle was the more easily held to the bull's-eye, and nothing had to be allowed for windage. A marksmen's badge was established, which any National Guardsman could win by making 25 out of a possible 50. Reckoning by the number of marksmen's badges won, there has been an increase in marksmanship this year over last year of more than 300 per cent. This has encouraged the General Inspector (Sterling) to institute a contest at long ranges, the distances to be from 800 to 1,200 yards. He has also in view, should this long-range contest give favorable results, to attempt shooting at 1,500 yards. This distance would lack only 260 yards of a mile, yet he is of opinion that the effect on the men would be beneficial, because it would aid in teaching them to judge of distances, and because it would be properly preparatory to another object he has in view. This is to teach them to shoot at objects they can not see, as, for example (in actual warfare), at soldiers behind a battery, when the elevation of the rifle must be such that the bullet, having passed over the intervening object, will descend toward the objects to be hit.

The work done by the Fish Commissioners during the year previous to April consists of 58,000 landlocked salmon hatched and liberated in lakes in the northern part of the State; 2,500 black bass distributed to lakes and ponds; 1,665,000 shad hatched and liberated in the Delaware River; 225,000 California salmon distributed early in 1878; 500,000 California salmon hatched and partly distributed; 43,500 brook-trout purchased and distributed; 200,000 brook-trout hatched and nearly ready for distribution; 100,000 whitefish in the hatching-house. The Commissioners deem the introduction of black bass into the State an event of the utmost importance. Their presence in the Delaware has aroused some opposition from those who feared that they would seriously diminish the number of young shad. Bass live mainly above tide-water, and the young shad, after being hatched in the headwaters of the rivers, must, in making their way to the sea, pass through the regions inhabited by the bass. It is not now generally believed, however, that any considerable number of infant shad are sacrificed to the voracious appetite of the bass. It is true that bass prey upon other fish, and it is equally true that they will eat young shad; but it is the opinion of close observers that they will not

eat young shad if they can get any other kind of small fish. The Commissioners have frequently seen a black bass in full chase after a fleeing minnow, while the water was fairly alive with young shad with which he could have gorged himself had he been so disposed; and they have repeatedly found the stomachs of bass filled with other kinds of food, when the fish has just been taken from water in which young shad could be seen in thousands. The brook-trout and California salmon have been placed in the waters of Somerset, Camden, Passaic, Morris, Sussex, Hunterdon, Warren, and Essex Counties. In accordance with the recommendation of Professor Baird, the United States Commissioner of Fisheries, who says that California salmon will thrive in waters where there is no access to the sea, but will be smaller, a large number of young salmon have been introduced into the deep, cold lakes in Morris, Sussex, and Warren Counties.

Nine cases for violation of the "act for the preservation of fish" were argued on *certiorari* before Judge Reed of the Atlantic County Circuit Court. The convictions were of two classes—the first class for the violation of the first section, and the second class for the violation of the second section of the act. The first section of the act provides generally that it shall not be lawful for any persons to fish with a net in any of the waters of this State (except as hereinafter provided) between May 15th and July 15th. The second section provides that it shall not be lawful for any person to fish with a net, etc., in the counties of Atlantic and Burlington, between June 1st and September 1st. It was contended that the second section was local as to its character, and that, being within the body of a general law, it is, first, void in itself, and second, its presence occasions the invalidity of the first section, because it is in contravention of the 4th paragraph of section 7 of the amended Constitution, which provides, "No general law shall embrace any provision of a private, special, or local character." The Judge said that he did not know of a similar provision ingrafted into the Constitution of any other State; that the distinction between those acts which may be considered general or public and special or local acts, as used in the Constitution, has received no direct judicial consideration. The question has been considered in the courts of New York, under the constitutional provision that "no private or local bill which may be passed by the Legislature shall embrace more than one object, and that shall be expressed in its title." There it was held that an act is local, within the meaning of the Constitution, which in its subject relates but to a portion of the people of the State or to their property, and may not, either in its subject, operation, or immediate and necessary results, affect the people of the State or their property in general (43 N. Y., 11). "The test is not whether it applies to acts to be done in a particular lo-

cality, but whether the operation of the act is restricted to the people of that locality. This act does not impose a specific and exclusive penalty for the punishment of the people of Atlantic County, but upon all the people of the State who fish in that locality within a restricted time. I think the statute is constitutional." The other objections raised were to the formality of the proceedings and the right of a trial by jury. The Judge held that the defendants were not entitled to a jury trial, and that the statement of the facts charged brought the defendants within the operation of the statute. The convictions were affirmed with costs.

Two of the cities of the State, Elizabeth and Rahway, are in a condition of bankruptcy. Both have been crippled by the depreciation of values. In the former the debt has been increased by decisions of the Supreme Court which reversed a former decision with regard to assessments for improvements, and thus threw on the city a large amount of obligations of private citizens. The people do not say they will repudiate, but assert that they are unable to pay. There is no authority for compromising the claims against the city, and both the citizens and the bondholders are at a loss what to do.

In 1869 the township of Bernards, in the county of Somerset, issued \$123,000 worth of bonds to aid in the construction of the New Jersey West Line Railroad. Eleven miles of the road was built, from Summit to Bernardsville, at a cost of \$5,000,000. The road went into the hands of a receiver, and was sold under foreclosure to the Delaware, Lackawanna, and Western Company. Suit was brought on the bonds of the township. They were signed, but not sealed, and were issued in that condition. A plea that the bonds were not valid by reason of such omission was set up in defense. But Judge Nixon, of the United States District Court, granted a perpetual injunction restraining the township from making use of this defense. The principal and interest amount to \$200,000.

The great railroad question, as regarded in New Jersey, was briefly and summarily presented on a festive occasion at Long Branch, by the Vice-President (Smith) of the Pennsylvania Railroad, in these words:

The system has to-day outgrown the limits of State sovereignty, and the iron band holding this country together reaches from the shores of the Atlantic to those of the Pacific. Has not the time arrived when the General Government should enact general laws that would be applicable to all the interstate railways of this country, which, among other things, should provide for full reports to be made of their organization, working, and financial condition, as often as might be required, with a power of verifying reports of examiners, which would regulate the proportion of stock to bonds, make the forms of mortgages uniform, forbid the contraction of floating debts by railways for other than supplies, and provide that the railways shall publish their rates of freight, based on certain principles, and make any evasion of such rates an in-

dictable offense? The rates should be fixed for each class of goods, the classification to be made by the companies per hundred pounds per mile, and when determined might be published as a tariff by which all transportation on each line of railroad should be regulated. These lists of rates should be accessible to every person, and should not be permitted to be changed without reasonable notice. The effect of such provisions as to a fixed basis of rates, with a prohibition for any railroad officer to charge less than the public rates under a severe penalty, would do much toward making the business of the country more stable, the traffic on the railroads more remunerative, and lessen burdens now placed on the public through the agency of secret discriminating rates. The great cardinal principle which should pervade this question of rates is, that the rate on the same class of goods for the same quantity for the same distance should be the same to every one.

The public press, or the number of daily, weekly, and monthly publications in the State, is as follows: Daily, 22; tri-weekly, 1; semi-weekly, 2; weekly, 146; bi-weekly, 1; monthly, 1; total, 178. These are classified politically, etc., as follows: Democratic—daily, 7; tri-weekly, 1; weekly, 41; total, 49. Republican—daily, 9; weekly, 44; total, 53. Greenback—daily, 1; weekly, 3; total, 4. Independent—daily, 5; semi-weekly, 2; weekly, 56; total, 63. Temperance—weekly, 1; monthly, 1; total, 2. Mechanical—weekly, 1. Literary—monthly, 1. Law—monthly, 1. College—bi-weekly, 1; monthly, 2; total, 3. Of the above journals, 1 daily, 9 weekly, 2 semi-weekly, and 1 tri-weekly are published in the German language—all of the others in the English language.

By the report of the Insurance Commissioner it appears that there are fifty-seven insurance companies authorized to do business in New Jersey, other than accident and life insurance companies. Twenty-six of these are joint-stock fire and marine, thirty are purely mutual companies, one is a plate-glass company; and eighteen are companies of foreign countries. The total capital stock of all the stock companies is as follows: New Jersey companies, \$4,897,070; of other States, \$28,317,979. Total assets: New Jersey companies, \$9,445,260.74; of other States, \$74,432,160.87; foreign companies, \$20,560,484.04. Total liabilities: New Jersey companies, \$6,651,163.78; of other States, \$53,386,905.02; foreign companies, \$3,886,803.91. Total net surplus: New Jersey stock companies, \$2,795,406.23; of other States, \$21,054,583.19; foreign companies, \$11,673,680.13. There are twenty-seven life companies operating in New Jersey, of which twenty-five are from other States, and one is a friendly society. The number of policies in force in New Jersey increased from 28,545 at the close of 1877 to 39,512 at the close of 1878; but this increase was entirely due to the numerous small contracts of the friendly society, 10,627 in 1877 and 22,303 in 1878.

The condition of the savings banks in the early part of the year showed the following results: Resources—Real estate, total value, \$841,979.93; loans on bond and mortgage,

\$7,991,543.63; United States bonds, \$3,622,221.33; other stocks and bonds, \$1,840,632.79; call loans on collaterals, \$653,181.92; other assets, \$1,640,339.90. Total resources, \$16,589,899.50. Liabilities—Due depositors, \$15,749,319.76; other liabilities, \$62,098.80. Surplus over liabilities, \$778,480.94. Number of open accounts January 1, 1878, 53,254; number of open accounts January 1, 1879, 62,990; number of accounts opened or reopened during the year 1878, 29,127; number of accounts closed during the year 1878, 19,391.

Cranberries are an important product of the State. The crop in 1878 was estimated at 300,000 bushels.

The geological survey of the State has brought into notice the oak and pine lands in its southern part. The area of the district southeast of the marl-belt is 1,580,000 acres, or two fifths of the area of the State. The survey has classified the soils of this district in two great general divisions. One is the gravelly loams, upon which oak and pine grow; the other is the more sandy soils, whereon pine alone thrives; and from these trees the groups are designated as oak-lands and pine-lands. There is another division, but of limited extent, and generally found along the sea-border, which is more loamy and supports a more mixed growth of timber. The best of the oak-lands are more commonly known as "white-oak bottoms." All travelers through that part of the State have observed these "bottom-lands." The wastes of white sand, with their fire-scarred and stunted yellow pine, are familiar. An extract from the report of the survey briefly sets forth the advantages of this portion of the State:

The climate is salubrious, and has been especially noted for its entire freedom from malarial influences. It is specially liked by those who suffer from asthmatic and pulmonary diseases; and many come here for the relief they obtain for such ailments. The seaside resorts are continually increasing in number and enlarging in size, and throngs of visitors come to enjoy the delightful air.

The water of this country is pure and soft. It is drained by many large rivers, which are chiefly remarkable for their full and equable flow, being very little affected by storms or by droughts. They furnish excellent water-power for manufacturers' purposes. Those at Mays Landing, Weymouth, Batsto, Atsion, Millville, Bricksburg, Manchester, and Toms River are of this kind, and there are a great many other good ones.

The soil is light but easily cultivated, and when well managed is productive. Mr. Hay's farm, at Winslow, is a model of productiveness for all South Jersey. The improved lands at Vineland, Hammonton, and Egg Harbor City are yielding large crops and promise well for the future. The staple productions are wheat, rye, oats, Indian corn, hay, potatoes, and sweet potatoes. Melons are raised in abundance. Apples, pears, peaches, grapes, blackberries, raspberries, strawberries, and currants grow remarkably well.

The means of communication are good. There is an abundance of gravel for road-making, and the benefits of good roads are highly appreciated. Cumberland County claims to have more good roads than any other county in the State. The West Jersey Railroad, the Glassboro and Millville, the Millville and Cape May, the New Jersey Southern, the Camden and Atlantic, the Philadelphia and Atlantic City, the Mays Landing

branch, the Pemberton and Manchester, the Tuckerton, the Toms River branch, the Toms River and Warrenton, and the Freehold and Squankum branch to Squan, are all railroads in this district; and every point in it is within an easy drive of railway communication, and, by this, is within three or four hours' ride of the best markets on the continent.

The various public institutions of the State are in a prosperous condition. Their details may be found in the volume for 1878.

NEW YORK. The annual session of the Legislature commenced on January 7th and closed with the month of May. In the Senate the Republican vote was about 20 out of 33, and in the Assembly about 100 out of 128. The Senate was called to order by the Lieutenant-Governor. In the Assembly Thomas G. Alvord was elected Speaker by 95 votes, against 24 for Erastus Brooks.

This session of the Legislature was held in the new Capitol. An effort was made on the evening of February 12th to signalize the change both historically and officially. The two Houses assembled in joint convention; the Judges of the Court of Appeals and the State officers were present by invitation; and speeches were made by the President of the Senate, Lieutenant-Governor William Dorsheimer, the Speaker of the House, Thomas G. Alvord, and one of the distinguished members of the Assembly, Mr. Erastus Brooks. The report of the New Capitol Commissioners was made to the Legislature on January 23d. The amount expended in 1878 on the building was \$1,026,463. The finished portion was about one quarter of the area of the whole building; but it contains two of the three great rooms, one of three staircases, one half of the heating apparatus, five of the seven elevators, one third of the furniture, one half of the plumbing, the entire water-supply, the whole exterior drainage, and one half of the basement; also, the walls of the court and the south center section have been built up to the roof-line. The amount of additional appropriation required for the completion of the building and the payment of existing liabilities was estimated by the Commissioners at \$4,200,000, in a period of two years. Being asked by the Legislature how much it would cost to administer the new Capitol after it was completed, the Commissioners replied that it could be kept clean, lighted, and warmed "for a moderate sum"; but to accomplish this result it is necessary that its administration should be kept free from partisan influence. They then proceed to say: "A force of forty-three men has been organized, to serve during the session of the Legislature, who take care of the machinery, attend the fires, run the elevators, and do all the work of cleaning the building, and also perform all police duty. The appointments to this force have been equally divided between the political parties, and it is proposed that the men shall serve during good behavior. We believe that upon a system like this the cost of maintaining the new Capitol, when the same

shall be completed, may be brought within \$75,000 a year, and our estimate for maintenance during the year 1879 is \$25,000."

The election of a Senator in Congress, to fill the vacancy arising by the expiration of the term of Mr. Roscoe Conkling, was made on January 20th. Mr. Conkling received in the Senate 19 votes, and Mr. Dorsheimer 12. In the Assembly Mr. Conkling received 95 votes, Mr. Dorsheimer 23, and Mr. Peter Cooper 2. Mr. Conkling was chosen. A caucus of the Democratic members of the Legislature was held, in which it was proposed to make a protest against the granting of any certificate, or the making of any declaration, that Roscoe Conkling had been duly elected Senator. The grounds for this protest were, that the Constitution of the State requires that, at the next session after every State census, the Senatorial districts shall be altered so as to contain as nearly as may be an equal number of inhabitants, and that the members of Assembly shall be apportioned according to population; that a census was duly taken in 1875, but no alteration of the Senate districts and no reapportionment of the members of Assembly has been made by the Legislature since the said enumeration; that the effect of such neglect has been that large numbers of the people of the State have been and are misrepresented in the Legislature; that its political complexion has been thereby changed from one party to another, the legal result whereof is that the present Legislature is a Legislature *de facto* and not *de jure*. This protest the caucus refused to adopt, but they resolved upon an address to the people. The complaints of the address rest upon the grounds set forth above. As an evidence of the justice of the complaints, the following statements were set forth as facts taken from the census returns of 1875:

Under a just apportionment in the Senate, New York City, with Richmond County, is entitled to seven Senators, while but five represent that city. Kings County is entitled to three members, but allowed only two, and this with a surplus population of 46,000. New York City, by the lawful count, is entitled to twenty-seven members of Assembly, instead of twenty-two; Kings County is entitled to fourteen members instead of nine; Monroe County to four members instead of three. These additional members, all belonging to Democratic districts, are now awarded to the following counties, and entirely represented, except one district, by Republican members of the Legislature, viz.: Madison, Delaware, Ontario, Cattaraugus, Columbia, Washington, Niagara, Wayne, Oswego, Oneida, St. Lawrence.

The Assembly representative population also gives the following unequal record:

COUNTIES.	Districts.	Population.
Kings.....	Ninth.....	85,029
New York.....	Twentieth.....	78,688
Monroe.....	Second.....	65,558
New York.....	Twenty-first.....	64,556
".....	Seventeenth.....	64,896
".....	Eighth.....	60,054
Kings.....	Fourth.....	63,976
".....	Eighth.....	58,112
".....	Sixth.....	54,485
New York.....	Fifteenth.....	50,920

And this with the following in contrast to the above in single districts :

COUNTIES.	Representatives.	Population.
Delaware	2	41,526
Madison	2	41,114
Oswego	3	75,720
St. Lawrence	3	78,082
Ontario	2	45,403
Cattaraugus	2	45,771
Columbia	2	46,313
Washington	2	46,374
Wayne	2	47,323
Niagara	2	47,391
Otsego	2	49,084

SENATORIAL DISTRICTS.

DISTRICTS.	Counties.	Representative population.
Twentieth	Herkimer and Otsego	89,338
Eighteenth	Jefferson and Lewis	90,596
Twenty-sixth ..	Ontario, Yates, and Seneca ...	91,064
Sixteenth	Clinton, Essex, and Warren ...	101,327
Twenty-sixth ..	Cayuga and Wayne	106,120

With the following districts showing a most unjust contrast :

DISTRICTS.	Counties.	Representative population.
Thlrd.....	Kings.....	292,253
Eighth.....	New York.....	235,432
Seventh.....	New York.....	173,225
Second.....	Kings.....	172,725
Ninth.....	New York.....	167,530

These large districts have but one Senator each, and the record given is not upon the gross, but upon the representative population.

Subsequently an apportionment bill was passed by the Legislature, which gave to New York City twenty-four members of Assembly, a gain of three, and to Kings County twelve members, a gain of three. The following counties lost each a member : Columbia, Delaware, Madison, Oneida, Ontario, and Oswego ; and the other counties remained as under the previous apportionment. The bill was sent to the Governor, who allowed it to become a law without his signature. In a message of explanation to the Legislature he said :

As I peruse its provisions, I find that a proper regard for my own official duty forbids me to approve it. For not less explicit than the command to apportion is that other provision that the apportionment shall be made as nearly as may be according to the number of the respective inhabitants of the different localities.

The Senate districts are to be so apportioned that they shall consist of contiguous territory, and contain, as nearly as may be, an equal number of inhabitants ; and the members of Assembly are to be allotted to the several counties, as nearly as may be, according to the number of their respective inhabitants. This bill does not comply with these provisions of the Constitution. The first Senate district contains 128,267 inhabitants ; the second, 160,000. The nineteenth district contains 101,633 ; the fourteenth, 150,204. The thirty-second district contains 106,522 ; the adjacent thirty-first district, 180,000. Some slight inequalities of population were doubtless necessary in the arrangement of the districts from contiguous territory, but a glance at the map will show that the rank injustice done in almost every district west of the Hudson River had some other cause than a desire for geographic fitness. For instance, the twenty-sixth district stretches from

the Pennsylvania line to Lake Ontario, and others are scarcely less incongruous. To specify the localities which are wronged either in the location or in the population of the Senate districts, would be to call the roll of half the counties in the State. That these wrongs were in nearly every case unnecessary is the common testimony of all who are familiar with the subject.

In the distribution of members of Assembly the bill is still further from meeting the requirements of the Constitution. I find that Cattaraugus County, with 45,737 inhabitants, has two members ; while Suffolk, with 50,330, is given but one. Orange, with 82,225 inhabitants, has but two members, while St. Lawrence, with only 78,014, gets three. Nor can I understand the philosophy which gives to the latter county, with 78,000 inhabitants, the same representation as Monroe, which exceeds it in population by nearly 50,000.

These discrepancies are not to be explained. They admit of no apology or excuse. They are of the same class as the so-called necessity which entirely deprives 150,000 inhabitants in New York and Kings of their proper representation.

While for the reasons stated I am not willing to sign the bill, it is permitted to pass into a law by lapse of time, as a lesser evil than a continued neglect of the entire constitutional direction on the subject.

The following act to regulate the rate of interest was also passed, receiving in the Assembly only seventeen negative votes :

SECTION 1. The rate of interest upon the loan or forbearance of any money, goods, or things in action shall be six dollars upon one hundred dollars for one year, and after that rate for a greater or less sum, or for a longer or shorter time. But nothing herein contained shall be so construed as to in any way affect any contract or obligation made before the passage of this act.

SEC. 2. All acts or parts of acts inconsistent with the provisions of this act are hereby repealed.

SEC. 3. This act shall take effect the first day of January, 1880.

The vexatious question of the taxation of mortgages was brought forward, but no final action was taken upon it. The form in which it was presented is expressed in two sections of the bill for the equalization of taxation, as follows :

SECTION 1. When any debt due or owing by any owner of land is secured by mortgage thereof, the amount of the debt shall be assessed upon the owner of the land as trustee for the creditor ; and such amount shall be deducted from the value of such real estate, and the residue of such value only shall be assessed upon the owner of the real estate. The sum paid by such owner as trustee for taxes on such debt shall be a legal set-off against such debt.

SEC. 2. When, for any reason, real estate be not assessed at its full valuation, such part of the value of real estate as is assessable to the owner of the land as trustee, according to the preceding section, shall be assessed at the same percentage upon said full valuation as is assessed upon the part of the value of the said land assessable to the owner of the lands.

Resolutions for biennial sessions of the Legislature were adopted. They will be presented to the next Legislature, and if adopted will then be submitted to a vote of the people.

Some important questions touching the vast subject of the State charities, and facts respecting the institutions, were brought out in reports to the Legislature. There is a State Board of Charities, one of whose duties is to visit charities with a State foundation, those of counties and cities, and those of benevolent organiza-

tions. The aggregate financial statistics of these institutions for the year are as follows:

VALUATION.	
In real property.....	\$28,415,509 28
In personal property.....	5,561,253 60
Total.....	\$33,976,762 28
RECEIPTS.	
Cash balance from last year.....	\$448,809 94
Received from State.....	1,047,969 86
Received from cities.....	3,510,217 16
Voluntary donations.....	798,337 02
From all other sources.....	2,109,457 74
Total.....	\$7,909,791 22
EXPENDITURES.	
For buildings and improvements.....	820,778 67
For supervision and maintenance.....	6,587,975 04
Total.....	\$7,408,753 71
Leaving balance of.....	\$501,037 51

The Board sent an urgent appeal to the Legislature for further provision for the chronic insane poor. They say, "The tide of insanity has swollen beyond the proportions of former years, and unexpected numbers of chronic cases are now on our hands, overflowing the supposed liberal provision heretofore made for them." This increase is shown in the report of the Commissioner of Lunacy for the same period, made during the session to the Legislature. It embraces the previous year, and is summarily as follows:

SUBJECTS.	Males.	Females.	Total.
INSANE.			
In State asylums.....	1,284	1,315	2,599
In county asylums and poor-houses..	2,185	2,923	5,058
In private asylums.....	191	264	455
Total.....	8,610	4,502	8,112
IDIOTS.			
In State asylums.....	173	119	293
